ACCELERATED TAX AMORTIZATION CERTIFICATES IN THE PACIFIC NORTHWEST

Mr. GOLDWATER. Mr. President, during the past week I have made several insertions in the body of the RECORD listing the accelerated tax writeoffs which have been granted in the Pacific Northwest. Inadvertently I neglected the State of Washington. I do not wish to be in the position of neglecting any of our good States. I therefore ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an item on this subject from the Idaho Sunday Statesman of Boise, Idaho, of May 19, 1957, listing the writeoffs for Washington.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOEING LEADS WRITEOFFS LISTED FOR WASHINGTON

WASHINGTON.—Approximately 400 corporations in the Pacific Northwest have been granted certificates—or so-called tax write-offs—during the last 7 years for an accelerated rate of depreciation on construction for tax purposes.

The Office of Defense Mobilization said the effect of the program is to allow the companies to take larger than normal depreciation deductions during the first 5 years.

This is offset by smaller-than-usual deductions after the first 5 years. A committee of the Senate currently is studying repeal of this provision of the tax laws in favor of a more limited program.

In Washington, the Boeing Airplane Co. in Seattle got 45 of the 223 Washington certificates up to the first of this year. Boeing was authorized to amortize $45,669,000 on facilities estimated to cost more than $70 million.

ODM listed these other certifications for Washington, with corporations, estimated cost of facilities and amounts subjected to amortization in parentheses:

American Smelting and Refining, Stevens County, $1,711,000 ($1,015,000), Tacoma, $612,000 ($398,000), $892,000 ($714,000), $207,000 ($145,000); Skagit Steel & Iron Works, Sedro Woolley, $370,000 ($166,000), $22,000 ($17,000), $165,000 ($107,000);

J. Niels Lumber, Klickitat, $125,000 ($69,000); Columbia Veneer, Kalama, $508,000 ($254,000); Washington Veneer, Olympia, $111,000 ($56,000); Sylvan Products, Centralia, $413,000 ($186,000); West Coast Plywood, Hoquiam, $195,000 ($78,000); Weyerhaeuser Timber, Everett, $20,442,000 ($13,287,000), Longview, $16,282,000 ($8,955,000), Snoqualmie, $650,000 ($260,000);

Pacific Paperboard, Longview, $27,000 ($14,000); Simpson Logging, Lowell, $3,901,000 ($1,365,000); Pacific Coast Paper Mills, Bellingham, $659,000 ($264,000); Scott Paper, Everett, $27,240,000 ($10,896,000); Allied Chemical & Dye, Hedges, $1,611,000 ($805,000); Columbia River Chemicals, Pasco, $11,121,000 ($5,004,000);

Rayonier, Inc., Port Angeles, $874,000 ($568,000), Shelton, $1,412,000 ($918,000), Hoquiam, $1,508,000 ($908,000); Union Oil Company of California, Edmonds, $1 million ($700,000); General Petroleum, Whatcomb County, $38,550,000 ($20,477,000); Shell Oil, Anacortes, $55,860,000 ($28,743,000), Aberdeen, $144,000 ($57,000), Seattle, $470,000 ($188,000), $277,000 ($111,000), $129,000 ($51,000), Harbor Isle, $106,000 ($43,000);

Straits Refining, Bellingham, $26,430,000 ($20,614,000); New England Industries, Bellingham, $14,305,000 ($11,624,000); Pacific Grinding Wheel, Everett, $26,000 ($17,000); Keokuk Electro Metals, Rock Island, $238,000 ($202,000); Reynolds Metals, Longview, $9,999,000 ($7,999,000); Continental Can, Walla Walla, $99,000 ($59,000).

Castle Industries, Everett, $52,000 ($34,000); Decoto Brothers, Yakima, $74,000 ($33,000); Bellingham Shipyards, Bellingham, $295,000 ($207,000); Commercial Ship Repair, Winslow, $76,000 ($38,000); Great Northern Railway, Everett, $63,000 ($25,000); Spokane-Portland-Seattle Railway, Goldendale, $7,000 ($3,000); Vancouver, $44,000 ($17,000), $88,000 ($35,000).

Northern Pacific Railway, Pasco, $4,592,000 ($2,296,000); Graingrowers Warehouse, Wilbur, $189,000 ($75,000); Odessa Trading, Wheeler, $40,000 ($16,000); Garfield Union Warehouse, Walters, $50,000 ($25,000), $34,000 ($13,000); Kenyon Zero Storage, Grandview, $67,000 ($37,000); Pacific Power & Light, statewide, $63,426,000 ($41,227,000); Clark County, $5,071,000 ($3,296,000).

Valley Junk, Yakima, $12,000 ($8,000); Standard Oil of California, East Pasco, $75,000 ($37,000); Tidewater Terminal, East Pasco, $464,000 ($186,000); Crown Zellerback, Camas, $1,287,000 ($515,000), $320,000 ($128,000); Food Machinery and Chemical, Vancouver, $4,320,000 ($2,160,000); Carborundum, Vancouver, $3,319,000 ($2,158,000).

Aluminum Co. of America, Vancouver, $48,242,000 ($38,594,000), $3,400,000 ($1,700,000), $3,077,000 ($1,539,000); Berger Engineering, Seattle, $16,000 ($10,000); Pacific Car and Foundry, Renton, $51,000 ($33,000), $119,000 ($60,000), $20,000 ($13,000); Western Oxygen, Seattle, $52,000 ($30,000); United States Oil and Refining, Seattle, $3,467,000 ($2,200,000); Permanente Cement, Seattle, $137,000 ($41,000).

Gladding-McBean, Renton, $67,000 ($50,000); Bethlehem Pacific Coast Steel, Seattle, $136,000 ($75,000), $137,000 ($82,000), $152,000 ($91,000), $1,441,000 ($865,000); Northwest Steel Rolling Mills, Seattle, $236,000 ($118,000); Seidelhuber Steel Rolling Mills, Seattle, $1,404,000 ($772,000); Washington Iron Works, Seattle, $70,000 ($46,000), $14,000 ($9,000), $40,000 ($26,000).

Industrial Plating Works, Seattle, $13,000 ($6,000), $99,000 ($59,000); Broderick and Bascom Rope, Seattle, $40,000 ($24,000); Pacific Wire Works, Seattle, $10,000 ($7,000); Lamson Products, Seattle, $58,000 ($46,000); Northwest Bolt and Nut, Seattle, $430,000 ($151,000); Nelson Iron Works, Seattle, $15,000 ($8,000), $6,000 ($4,000); Sternoff Metal and Iron Works, Seattle, $46,000 ($30,000).

Western Gear Works, Seattle, 10 totaling $172,000 ($131,000); Stetson Ross Machine, Seattle, $100,000 ($75,000); Hydraulic Supply Manufacturing, Seattle, $31,000 ($21,000); Stack Steel and Supply, Seattle, $146,000 ($73,000).

Coates Electric Manufacturing, Seattle, $100,000 ($30,000); Ravenne Metal Products, Seattle, $25,000 ($17,000), $199,000 ($149,000); Carter Machine Shop, Seattle, $10,000 ($7,000); Certified Manufacturing, Seattle $11,000 ($000); Korry Manufacturing, Seattle, $103,000 ($51,000), $30,000 ($14,000), $9,000 ($6,000).

Kenworth Motor Truck, Seattle, $62,000 ($47,000), $65,000 ($42,000), $72,000 ($47,000); Pacific Car and Foundry, Renton, $38,000 ($25,000), $35,000 ($23,000); W. C. Nickum & Sons, Seattle, $5,000 ($3,000); Columbia Electric Manufacturing, Spokane, $687,000 ($378,000); Long Lake Lumber, Spokane, $100,000 ($40,000); Kaiser Aluminum and Chemical, Spokane and elsewhere in Washington, 11 totaling $24,686,000 ($18,546,000).

Inland Oxyacetylene, Spokane, $63,000 ($29,000); General Machine, Spokane, $35,000 ($23,000), $18,000 ($13,000); Oregon-Washington Railroad and Navigation, East Spokane, $2,359,000 ($1,028,000); Great Northern Railway, Hillyard, $575,000 ($288,000).

Milwaukee Railroad, Spokane, $452,000 ($181,000); West Coast Fast Freight, Seattle, $30,000 ($18,000), Spokane, $324,000 ($227,000); Alaska Junk, Spokane, $21,000 ($13,000) Seattle, $30,000 ($23,000); Petroleum Terminal, Spokane, $604,000 ($242,000); Continental Oil, Spokane, $1,009,000 ($403,000); Carter Oil, Spokane, $510,000 ($204,000).

Oscar Perry, Seattle, four totaling $84,000 ($52,000); Rohr Aircraft, Auburn, $807,000 ($484,000); Sulak Manufacturing, Seattle, $20,000 ($15,000), $9,000 ($6,000); Puget Sound Bridge Dredging, Seattle, $200,000 ($160,000); Capital Industries, Seattle, $24,000 ($17,000); Todd Shipyard, Seattle, $590,000 ($295,000); Alaska-British Columbia Transportation, Seattle, $350,000 ($210,000); Stokley-Van Camp, Seattle, $205,000 ($113,000); Puget Sound Tug and Barge, Seattle, $500,000 ($300,000), $45,000 ($27,000).

Western Airlines, Seattle, $250,000 ($150,000); Pan-American World Airways, Seattle, $700,000 ($420,000); Seattle Iron and Metals, Seattle, $25,000 ($19,000); Dulien Steel Products, Seattle, $87,000 ($56,000), $15,000 ($10,000); Tidewater Associated Oil, Seattle, $214,000 ($86,000), $91,000 ($36,000); Tacoma, $81,000 ($33,000); Puget Sound Plywood, Tacoma, $238,000 ($83,000); St. Paul and Tacoma Lumber, Tacoma, $435,000 ($283,000).

West Tacoma Newsprint, Steilacoom, $4,774,000 ($2,148,000); Pennsylvania Salt Manufacturing, Tacoma, $445,000 ($223,000); Hooker Electrochemical Co., Tacoma, $2,735,000 ($1,368,000), $1,895,000 ($948,000); Hooker Detrex, Tacoma, $337,000 ($169,000).

Stauffer Chemical, Tacoma, $320,000 ($144,000); Ohio Ferro Alloys, $78,000 ($66,000); Atlas Foundry, Tacoma, $428,000 ($321,000); Tacoma Junk, $75,000 ($49,000); Simon Junk, $6,000 ($4,000); and Washington Water Power, Spokane, $46,107,000 ($29,970,000).

DEPARTMENTS OF STATE AND JUSTICE AND THE JUDICIARY APPROPRIATIONS—CONFERENCE REPORT

Mr. JOHNSON of Texas. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 6871) making appropriations for the Departments of State, Justice, the judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes. I ask unanimous consent for the present consideration of the report.

The VICE PRESIDENT. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings pp. 8058–8059, CONGRESSIONAL RECORD.)

The VICE PRESIDENT. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

FLOODS IN THE SOUTHWEST

Mr. JOHNSON of Texas. Mr. President, the tragedy of raging and devastating floods is still taking place in the great Southwest. In my own State, death and damage are the order of the day.

Flash floods struck just 2 days ago at scores of towns west and south of San Antonio all the way to Corpus Christi. Cloudbursts deluged the Nueces watershed.

Mr. President, we cannot sit idly by without fighting back against the forces of flood and storm. There are priceless lives at stake.

It is too late to build the great works that would prevent this damage in time to meet the current floods. They are works that should have been built years ago.

Mr. President, I ask unanimous consent that a United Press dispatch dealing with this subject, carried on the news ticker this morning, be printed in the RECORD this morning at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DALLAS.—Torrential rains battered south and southwest Texas with up to nearly 8 inches of rain today as about a fourth of the 6,000 evacuees in flood-battered Fort Worth and Dallas returned to their homes with a wary eye on new thunderheads.

Flash flooding struck suddenly at scores of towns west and south of San Antonio all the way to Corpus Christi as new cloudbursts deluged the Nueces River watershed.

Meanwhile, in Fort Worth, where the Tarrant County sheriff's office estimated the flood damage at $5 million, water completely receded in the Richland Hills section and dropped 3 feet along the West Fork of the Trinity River.

But, thunderstorm clouds were piling up to the west of the city and forecasters called for more scattered thunderstorms tonight and tomorrow.

Mr. FULBRIGHT. Mr. President, the Governor of my State of Arkansas, the Honorable Orval E. Faubus, has recently written to me to plead for the implementation and acceleration by the Congress of the upstream watershed control program. The flooding Arkansas River which has ravaged our adjoining State of Oklahoma is now threatening the lowlands of my State, and its destructive waters will flow into the Mississippi River to threaten the neighboring States of Mississippi on the east, and Louisiana on the south.

It is my pleasure to bring to the attention of the Senate Governor Faubus' request, and I heartily second his statement that if this program is speeded up, "its benefits will be felt not only now, but for generations hence."

Mr. President, the Senate heard Monday of last week an excellent report by the senior Senator from Oklahoma on the damage wrought to his State by the Arkansas River, and his evaluation of the savings in land, money, and lives that would have been realized if the flood control structures which have been authorized had been constructed. I anticipate with pleasure the day when I can report to the Senate the completion of the vast development program for the Arkansas River Basin and the savings it has effected not only in Arkansas but also in Oklahoma and the lower Mississippi Basin.

There were many of us in this Chamber last Monday who were gladdened by the statement of the Senator from Louisiana to the effect that the Subcommittee on Public Works of the Committee on Appropriations, of which he is the capable chairman, is taking steps to make additional funds available during this session of the Congress for the construction of many needed flood-control projects that have been delayed by budgetary vacillation and procrastination, by an inability to distinguish between public welfare and penurious economy.

The ambitious program envisaged by the Senator from Louisiana, and the omnibus flood control bill which the Senate has passed and which is now the object of hearings before the Committee on Public Works of the House of Representatives, provide the only guaranty which we of this generation can give future Americans that the precious land which is so vital to their welfare will not be washed down the river.

Mr. President, the Arkansas River Basin is the last undeveloped major river basin in the United States. In times of flood, it becomes a monster that captures newspaper headlines across the country. In times of drought, it provides a trickle of water insufficient for those who depend upon it. For many years, the people of Arkansas and Oklahoma—and I want to say that the Senator from Oklahoma has been in the vanguard—have worked together to press the Arkansas River Basin program through the Congress and past the executive branch. This year, the Senate has again approved the omnibus bill which authorizes additional projects for the river-development program. It is hoped that the President will approve the bill as it is presented to him. But it takes very little power of observation to realize that whatever we in the Federal Government have done in the way of flood control, has been too little and too late.

I have often made pleas in the Senate for measures to control flood conditions, and have heard assertions that the floods that have terrorized the people of the Southwest and the Great Plains are freaks of nature that cannot be economically taken into consideration; that the normal condition of these regions is drought. These fallacious arguments do not impress me, for I maintain that flood control and drought control is the same thing. When man leashes rivers and confines them to their banks for his protection, man can also unleash them for his benefit to provide water when he needs it, where he needs it, and in the amount he needs.

My own State of Arkansas includes five great river basins. These are the Arkansas, the White, the St. Francis, the Red, and the Ouachita. Everyone of these rivers crosses a State boundary, either coming intc Arkansas or leaving Arkansas, so the problems that beset my friends and neighbors are the same problems that bedevil the people of seven other States—Colorado, Kansas, Oklahoma, Missouri, Texas, Mississippi, and Louisiana. This eight-State region is too valuable an area of America to be left undeveloped to its greatest extent because projects that have been found to be feasible are allowed to gather dust as blueprints and reports.

As an example, I cite the Arkansas River Basin program. The present schedule now being followed by the Corps of Engineers calls for the completion of the program in Arkansas and Oklahoma in 1969. That is 12 years away, or, to put it another way, 12 floods or droughts away. The Corps of Engineers has said that an additional appropriation of only $775,000 for fiscal 1958 would enable them to complete the entire program 2 years ahead of schedule. I ask my colleagues if an investment of $775,000 is exorbitant for a 2-year bonus of protection and adequate supply of water.

Furthermore, the Senator from Oklahoma has said that if adequate funds are provided at this time that three major dams in the system—Keystone, Eufala, and Dardanelle—can be completed in 1966, 3 years ahead of schedule, and that if the corps were to apply itself with extreme diligence to this program an additional year could be saved, so that the benefits of the projects could be realized in 1965.

Four years—or even 3 years or 2 or 1 year of disastrous flood or devastating drought—is a big price to pay for a budget reduced by a few thousand or a few million dollars—dollars that represent, not real savings but real waste.

Let me turn now from the flood-control program administered by the Corps of Engineers to the upstream-watershed-control program administered by the Soil Conservation Service, for, basically, we know that the great rivers of the Nation must be controlled by bridling them at their sources. Presently there are some 40 projects on file in my State awaiting Federal approval. Only 3 have been authorized for planning and survey. And yet a pilot project—Six Mile Creek in Franklin and Logan Counties—has been completed and has proved its worth. This project embraces an area of 250 square miles and includes 26 dams and reservoirs. It has demonstrated its worth in the conservation of water and soil and in alleviation of damage from floods.

The prevention of small floods upstream prevents or substantially reduces major floods downstream. The retention of soil upstream through bank stabilization prevents silting downstream with its attendant problems of channel dredging and water purification.

This is not pork barrel legislation, and I scorn those who habitually attack flood-control and public improvement legislation by their indiscriminate use of that term. I can say with conviction that those who have borne the brunt of the recent flood disasters in the southwest—those who have witnessed the death, destruction, and devastation wrought by rampaging rivers left uncontrolled—do not take kindly to the use of the term "pork barrel" as it is bandied about indiscriminately by those sitting high and dry and far removed from those scenes.

Mr. President, the day has come when we recognize that water has become a major natural resource that cannot be taken for granted. Many States, even entire regions, are faced with water shortages that materially affect their economies. Our ever-expanding and ever-changing industries demand more and more water, and in their search for new plant sites, make the availability and dependability of water one of their prime requirements. Those regions which have no water must find a way to replace it. Those regions which have an abundance of water must not waste it, or we shall find that America will waste away at the same time. As we have conserved our other natural resources, let us conserve water, and let

us not put off until tomorrow what we have the opportunity to do today.

So, Mr. President, I take this opportunity to plead with my colleagues in the Senate to heed the wise words spoken on Monday last by the Senators from Colorado, Oklahoma, Louisiana, and by our Majority Leader, urging acceleration of our river development programs. I am confident that the Senate will act this year to insure sufficient appropriations to speed completion of our water resources development program, so that we may sooner enjoy the dividends which will inevitably accrue from these prudent investments in the future of our Nation.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point an editorial entitled "Flood," published in the Arkansas Gazette of May 25, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FLOOD

The turgid Arkansas has already wreaked disaster on thousands of acres of bottomland farms this year and as it crests at Little Rock over the weekend it is expected to cause additional damage in the agricultural lowlands up and down the valley.

The situation, of course, could have been far worse. If some of the upstream dams in Oklahoma had not been completed the crest would now be at least several feet higher. Indeed, in the previous rise this year those dams cut as much as 5 feet from the river level in some areas. Moreover, a levee system now guards most of the 360-mile reach of the river which lies within Arkansas. If that system had not been built, many thousands of additional acres would have been inundated and the flood threat to the towns and cities of the Arkansas Valley would have been much greater.

Most of the flooded farmland lies outside the levees and is farmed with the full realization that the operation is a gamble and that ever so often a crop is going to be lost. The damage inside the levees was caused in large part by flash floods set off by local rains. It is easy to visualize the catastrophe which might have occurred if there had been no levee system and the river had been completely uncontrolled.

At Little Rock the system of levees and seawalls on both sides of the river is now adequate to protect the two cities against almost any conceivable flood threat. Twelve years ago a river level of 30.4 feet flooded east side areas, and in the worst flood in history, that in 1927, far bigger areas were inundated by a crest of 33 feet. Now, however, the engineers say the level would have to rise to 37 feet to top the protecting riverworks in the metropolitan area.

This, however, is negative. Major damage from the flooding river can be prevented in heavily populated areas but the swollen stream right now is carrying hundreds of thousands of dollars worth of rich soil down to the Mississippi. We only wish that all those Congressmen who have scorned the Arkansas in its low water summer stages could see it now—and recognize its vast potential for harm, and for good when the river is finally harnessed by dams and locks.

THE LATE SENATOR McCARTHY

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the body of the CONGRESSIONAL RECORD the eulogy of Senator McCarthy delivered by Roy Cohn at the award luncheon to Senator William F. Knowland and Rabbi Michael Aaronsohn, Waldorf-Astoria Hotel, New York, N. Y., on May 5, 1957. Roy Cohn, a well-known New York attorney, was a counsel of the Committee on Government Operations during the period of Senator McCarthy's chairmanship. Because of his close work with Senator McCarthy on that committee, he had a most thorough knowledge of the Senator's objectives and activities in regard to the Communist infiltration of our Government. I know of no one better qualified to express himself regarding the late Senator.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

EULOGY OF SENATOR MCCARTHY DELIVERED BY ROY COHN AT AMERICAN JEWISH LEAGUE AGAINST COMMUNISM AWARD LUNCHEON TO SENATOR WILLIAM F. KNOWLAND AND RABBI MICHAEL AARONSOHN, WALDORF-ASTORIA HOTEL, NEW YORK CITY, MAY 5, 1957

Senator Joseph R. McCarthy was built on greatness. He was great in mind, great in heart, great in understanding. He possessed many of those human qualities which are so rarely found on this earth. His story, which is legend, is the great American success story, that of a poor boy who had nothing handed to him on a silver platter, but rather who worked his way from an humble beginning to national distinction. During his spectacular rise, he never lost his love for people. He never engaged in fanfare or pretense. He loved average people. He would never leave an affair at which he spoke until he had shaken hands with everyone present. He would sit in a restaurant for hours talking with people, who came over to his table. His patience never wore thin, and he never wearied of talking to people. People reciprocated that love for him.

During the past 2 or 3 days wherever I have gone, people have stopped me to express their sorrow—average people, people devoted to the country, people who loved him for the fight he made. In addition to his love for people, he had a tremendous personal magnetism which endeared him to friends and which was capable of converting enemies after one personal meeting. He had the type of charm that was virtually irresistible. He was deeply religious. He loved God and was devoted to his faith. He was a believer.

As we went through many things together, I would often look up and down at some of the participants and feel that they were play actors, conscious of being under observation, but never Senator McCarthy. He was completely dedicated, regardless of the personal consequences. I recall being in his office when an important decision was being discussed. He had decided to make a major speech. One of his assistants said, "Senator McCarthy, please don't do that. It will have a bad reaction against you. It will antagonize people in the most powerful quarters." Senator McCarthy replied, "Look, that is one argument I never want to hear again in this office. The question is not whether it is good for me or bad for me, but whether it is right or wrong, as that is the only thing that matters to me in my life."

As sincere and straightforward as he himself was, he was the first person in the world to forgive insincerity, unkindness, and duplicity of the worst type on the part of other people. I recall during the Army-McCarthy hearing that one member of the committee, who shall remain nameless, did everything he could do to destroy Senator McCarthy privately during the course of the hearing. Shortly after it was concluded, this Senator came across us in a corridor and appeared quite embarrassed. Senator McCarthy walked over to him, greeted him cordially and extended his hand to him. I later asked the Senator how he could shake hands with a man who had done so much to hurt him. Senator McCarthy said, "He is politically ambitious and felt if he picked a fight with me it would help him politically. He didn't mean anything personal and if that is the way he wants to do things, I don't want to hold it against him."

This is the type of man to whom 10 years ago a group of loyal patriotic Americans came, bearing incredible information that due to dishonesty and disloyalty in our own State Department and other highly influential organizations working with the State Department, the downfall of Nationalist China had been brought about. This group had gone to Capitol Hill to get some Senator to raise a voice and lead the fight. They wanted the situation brought to an end before further damage was done. One of the participants said that they went to the office of 2 or 3 other Senators. These other Senators refused to take up the fight, saying it would be personally embarrassing or that the subject was too controversial. They went to Senator McCarthy. He studied the records and the files and decided he would lead that crusade.

In the course of leading that crusade, specifically he brought about exposure and elimination of leftist elements from the State Department, Defense Department, from the Government Printing Office, and from many other Government agencies. He brought about the exposure and elimination of countless Communists and fellow travelers from defense plants, from school systems, and other positions of trust in America. Far beyond his specific achievements, there was the awareness which he created in the minds and hearts of each and every American of the atheistic Communist menace. He made the American people aware of what communism was, what it was trying to do, the way in which it was trying to do it. And he rallied the American people to fight it.

In his fight he stood alone in many instances and even when he did not, his friends and colleagues will concede that he had no peer in courage and devotion to the United States of America.

While leading this fight, instead of enjoying the support and confidence of all Americans, instead of being protected against the insidious attacks of Communists and fellow travelers, he was himself subject to a type of persecution and abuse, the like of which we have never before seen in the United States of America. While trying to combat this menace of communism, he was forced to spend one-half of his time defending himself. He was abused and humiliated by the Tydings committee until the fight was taken to the people, and Tydings was defeated for reelection. The Hennings committee investigated his finances. There were allegations that he cheated on his income tax; years later, upon completion of an investigation by the Treasury Department, he was given a refund.

The great personal sacrifice to his own health is now obvious to one and all. A human being can stand so much punishment. His was a great fight, not only because of its affirmative aspects, but because he had to fight these bitter, unjustified, and unprincipled attacks.

I know if he were here he would not want sorrow, but would want renewed effort from those millions of Americans who believed with him that international communism is the greatest threat our civilization has ever known. He would want those people to carry forward constructively and try to display the same type of courage shown in his life.

In the past 2 or 3 days, I was dismayed to note in 1 or 2 papers that bad judgment had

added to another feature—bad taste. Some papers can find in their hearts a kind word for only the like of Harry Dexter White or E. Herbert Norman.

I would say to you that long after those papers have ceased to circulate, and long after the Zwickers, Achesons, and Stevensons have been forgotten, Senator Joseph R. McCarthy will be remembered as a giant of our times, an outstanding patriot of our generation, and as a man who lived and died for his country.

OUTSTANDING WORK OF INTERNATIONAL RESCUE COMMITTEE IN HUNGARIAN RELIEF

Mr. WILEY. Mr. President, I was pleased to receive today the text of the report of the emergency campaign for the Hungarian people which had been conducted by the International Rescue Committee.

I had previously brought to the attention of the Senate the outstanding job which had been done by the IRC.

In my judgment, there is probably no American or, indeed, foreign private organization, which did greater credit to its record of instantaneous humanitarian assistance than the IRC did on the occasion of the historic Hungarian revolution of October 23, 1956.

Within days of the first electrifying news of the Hungarian revolt, Angier Biddle Duke, president of IRC, and Leo Cherne, chairman, were in Vienna to make an on-the-spot study of relief requirements of Hungarian refugees.

On October 29, they sent a cable to IRC, New York, which was reproduced as a full-page advertisement in the New York Times, and which served as a clarion call to the American people for massive assistance of relief supplies.

On October 28, with the Soviets still controlling large parts of the country, Leo Cherne and Marcel Faust, director of the Vienna office of the IRC, left for Budapest. They were among the first Americans to reach the city from the outside, and Leo Cherne was the very first American to meet Cardinal Mindszenty after the latter's liberation.

A supply of indispensable antibiotics was left with the cardinal.

But, then, on November 4, came the day of tragedy, when the Red army tanks struck against Budapest. The rest is history.

I know that copies of the IRC's report of what was done before and after this historic sequence of events have been submitted to my colleagues, and I earnestly hope that they will read in full the IRC's report.

I send to the desk several extracts from the report which represent a few of the highlights.

I precede them with a list of the distinguished officers and members of the board of directors of the committee, and then with the text of the telegram which was sent by the late Rear Adm. Richard E. Byrd on Monday, March 11.

The telegram was sent to the last mayor of free Budapest, Josef Koevago, who was then touring the United States under the sponsorship of the IRC.

That very evening, this great spirit—Adm. Richard E. Byrd—passed on.

Admiral Byrd's association with IRC had been a long and outstainding one. Back in 1949 he was the founding chairman of the IRC's Iron Curtain refugee campaign.

Incidentally, on Friday of this week it will be my pleasure to introduce with many cosponsors legislation for the Richard E. Byrd Antarctic Commission.

I send to the desk also extracts from the IRC report. I ask unanimous consent that they be printed in the body of the CONGRESSIONAL RECORD. I hope they may serve as a reminder to all of us that there is still a tremendous job which can and must be done for the valiant people of Hungary.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

INTERNATIONAL RESCUE COMMITTEE, INC., 255 FOURTH AVENUE, NEW YORK 10, N. Y.

Leo Cherne, chairman; Joseph Buttinger, vice chairman; Hon. Angier Biddle Duke, president; Claiborne Pell, vice president; Eric M. Warburg, treasurer; Mrs. Kermit Roosevelt, secretary; Gen. William J. Donovan, chairman, national committee; Herman W. Steinkraus, chairman, national finance committee.

Board of directors: Joseph D. Ardleigh, Abraham G. Becker, Adm. John J. Bergen, Harry A. Bullis, Christopher Emmet, H. William Fitelson, Samuel Goldwyn, Sheba Strunsky Goodman, Allen Grover, William J. Vanden Heuvel, A. E. Jolis, James Lawrence, Jr., Joseph L. Mankiewicz, Ellen Lehman McCluskey, Adm. Neill Phillips, John Richardson, Jr., Richard R. Salzmann, David F. Seiferheld, David Sher, George P. Skouras, Gen. Carl Spaatz, Sterling D. Spero, Milton Starr, Mrs. A. Ronald Tree, Msgr. Bela Varga, Adm. Ellis M. Zacharias, and Charles S. Zimmerman.

Overseas offices: Belgrade, Berlin, Bonn, Brussels, Geneva, Laos, London, Munich, Nuremberg, Paris, Rio de Janeiro, Saigon, Stockholm, and Vienna.

ADMIRAL BYRD'S LAST MESSAGE

BOSTON, MASS.

Mayor JOSEPH KOEVAGO,
International Rescue Committee,
New York, N. Y.:

If opportunity offers itself, I would ask you to convey the following message to the brave people of Hungary:

Your great October revolution has stirred the spirit and encouraged the generosity of the Free World. Indeed I am certain that history will recognize your uprising as one of the most heroic popular revolutions of all time.

The Soviet despots, by throwing against you the massed might of the Red Army, have achieved a military victory and succeeded in imposing their Communist puppet government. But the ultimate victory is already yours. When I was 12 years old, I made a trip around the world alone. It was in the course of this trip that I made what perhaps is my greatest discovery. I learned that all men are basically alike, all are brothers, all have the same craving for freedom, all react in the same way to kindliness or to tyranny.

The historic significance of your revolution is that you have demonstrated for all time that communism can never suppress the eternal longing for freedom which is basic in every human being. You have also shown the whole world how deeply hated communism is by the masses of the people who have been oppressed by it, and how utterly without support it will be when the time for freedom comes.

Other revolutions in history have been characterized by fierce and long drawn out civil wars between the contending groups or classes. It is something to ponder that, with the exception of the hated AVO, the Hungarian people almost to a man were united in support of their revolution. Had it not been for the bayonets and tanks of the Red Army there would have been no doubt as to the outcome of your struggle.

International communism may have achieved a tactical military victory, but morally it has received a blow from which it will never recover. I am therefore confident that the time is not far distant when the Hungarian people and the other peoples who today groan under the yoke of the cruelist despotism in history, will once again be able to live in freedom, peace and brotherhood with the other free nations of the world.

Across the barrier of the Communist Iron Curtain, the Free World hails you and embraces you.

RICHARD E. BYRD,
Honorary Chairman, International Rescue Committee.

THE HUNGARIAN REVOLUTION AND IRC'S EMERGENCY CAMPAIGN

(By Hon. Angier Biddle Duke, president)

The pages that follow present the account of the International Rescue Committee's response to the events of the Hungarian revolution—its immediate reaction, its emergency program at the Austrian frontier, its role in mobilizing American public opinion, its ongoing program for the scores of thousands of Hungarian refugees remaining in Europe as well as those who have come to the United States.

Since its formation 24 years ago the International Rescue Committee has been dedicated to the belief that those who have suffered for the cause of freedom have a special claim to the support of all freemen. Indeed, in the world situation that exists today, those who have the moral courage to resist and to sacrifice constitute an elite upon whom depends the very future of the human race.

The International Rescue Committee asks no man's race or religion; nor, within the very broad spectrum of democratic viewpoints, is it concerned with his political affiliation. Its only criteria in giving assistance are the need of the individual, the fact of his escape from oppression and his dedication to human liberty.

As the conflict between communism and democracy has ebbed back and forth, leaving its victims in its wake, the IRC, through its field offices on the periphery of the Iron Curtain, has always endeavored to react to each new situation without loss of time and with maximum flexibility.

The Hungarian revolution broke out on October 23. The IRC office in Vienna, which had been in operation since the end of World War II, immediately mobilized for all-out action, and called on the other European offices for reinforcements. Five days later, on October 28, two national officers of the IRC were on their way to Vienna and Budapest, to find out what could be done to help. And on November 1, the committee launched its Emergency Campaign for the Hungarian People.

On November 4, the Red army launched its surprise attack on Budapest. After bloody fighting, the victorious revolution was suppressed. The reestablishment of Soviet tyranny in Hungary resulted in a flood of refugees into Austria. Food, clothing, medicine, shelter, had to be made available almost overnight. Plans for resettlement in other countries had to be carried forward as rapidly as possible. It was a titanic problem—one which demanded the combined efforts of the governments and of the major American and European relief agencies.

By the time the Red army returned to Budapest, IRC had on its way a $200,000 shipment of vitally needed antibiotics. (The story of the shipment was told in a Readers

Digest article entitled "The Man Who Wanted to Help Hungary.") At the frontier, a dedicated corps of IRC professional workers and volunteers waited to assist the refugees as they reached freedom—and frequently helped them to reach freedom. It provided beds for refugee centers established by the Austrian Government. To thousands of the refugees it gave emergency cash and "Freedom Packages" containing essential personal and clothing items. Since each one of these refugees was an individual with problems of his own, additional assistance assumed a variety of forms.

At the suggestion of the Austrian Government and in cooperation with the Austrian Student Coordinating Committee and World University Service, IRC undertook to devote special attention to the students and intellectuals—an area in which it has traditionally specialized. In cooperation with the city of Vienna, it operated 2 hostels accommodating 600 students. For several months it provided weekly cash allowances for as many as 5,000 refugee Hungarian students. It gave assistance to the entire faculty and student membership of the University of Sopron, which had escaped to the frontier as a body. It organized special classes, provided counseling, arranged scholarships. Its other offices—in France, Switzerland, Germany, Belgium, Sweden, and Canada and in the United States—were all placed on an emergency footing, to cope with the work of resettlement and rehabilitation.

Although the Hungarian refugees are no longer in the headlines, the work is far from finished. Long-term planning for the very substantial number of refugees who still remain in Austria or who have simply moved on to another European country is still of the utmost importance. Among other things, for example, it is important to provide educational facilities for the many thousands of students and young people. To cope with this problem, IRC has sponsored a number of educational programs in several European countries; and it has suggested to the UN High Commissioner a joint project for schooling and vocational training in Austria, toward which IRC would be willing to contribute $100,000.

IRC's Emergency Campaign for the Hungarian People brought in cash contributions totaling $2,500,000 and contributions in medicines and other forms of material aid valued at $418,000. (I am happy to report that our fund-raising costs were kept to approximately 7 percent). During the 5-month period November 1, 1956 to March 31, 1957, our cash disbursements for Hungarian relief, in Europe and the United States, totaled $839,000—this, in addition to the distribution of $418,000 worth of material aid. Over the entire period of 1957, our total budget for Hungarian relief, in cash and material aid, has been set at $1,840,000—$1,390,000 in Europe and $450,000 in the United States.

While some 30,000 Hungarian refugees have come to this country, it must be remembered that more than 150,000 of them have remained in Europe. That is why the larger part of our funds have been allocated to our Hungarian refugee programs in European countries.

Personally, I cannot overemphasize the collective nature of the effort. CARE, the Red Cross, the great American religious agencies, World University Service, and the various European agencies all performed on a heroic scale. It is, however, the purpose of this brochure to tell the story of one agency—The International Rescue Committee—in its own special areas of the Hungarian refugee operation.

THE FUTURE

For the last 2 months of 1956 the problem of the Hungarian refugees received headline attention from the world press and radio. Over the past several months, however, there have been only occasional references. From this there has resulted the rather widespread impression that the problem has been liquidated—or at least that it has been reduced to the point where it no longer requires major attention.

We cannot emphasize too strongly to our friends and supporters that this impression is completely erroneous—that there is, in fact, a vast work that remains to be done, a work that will extend through the whole of 1957 and probably through 1958.

First, there is the continuing work of resettlement. Each of the thousands of refugees who have been brought to this country and to other countries is an individual, with personal and occupational problems that have been rendered more acute by their sudden projection into lands where ways and language are strange. And each case must be followed through painstakingly, with support and counseling, until we are sure that they are firmly resettled.

Then there are the special problems of the students and teen-agers. To help take care of these over the coming period, IRC has initiated or given its support to a number of projects described in this brochure.

Finally there is the problem of the 60,000 Hungarian refugees who still remain in Austria and Yugoslavia. Austria is a small country with a population of 7,000,000 and a national income of $2,620,000,000. It courageously mobilized its resources to provide an immediate haven for the refugees. It did so on the assumption that they would be permanently resettled through the combined efforts of the Free World. But now they find their country with more than 40,000 refugees on hand, while the United States of America and the other western countries appear to be approaching the end of their Hungarian immigration programs.

President Eisenhower, in his message to Congress, recommended legislation permitting the annual admission of 60,000 to 65,000 refugees from Communist oppression.

The Free World cannot abandon the Hungarian refugees. In their plight, they personify the glory of the Hungarian revolution—the proof that the human spirit and the human desire for freedom cannot be broken even after a decade of totalitarian oppression. In remembering the Hungarians, we must also not forget the scores of thousands of refugees of other nationalities who, in the years that followed World War II, sacrificed all they possessed to escape to freedom—and then made the terrible discovery that the Free World, at least until now, appeared to have no place for them.

To cope with the problems that remain will require the combined efforts of all the free nations and of the voluntary agencies engaged in relief and resettlement.

SALARIES AND YEARS IN OFFICE OF AMERICAN LABOR LEADERS

Mr. BRIDGES. Mr. President, the current investigation into labor racketeering being carried on by the Select Committee on Improper Activities in the Labor or Management Field deserves, and has received, great commendation.

The strict impartiality of the chairman, the methodical procedure of the committee members, the unremitting industry of the staff, are evidence of effort admirable indeed.

Of course, this investigation never would have been undertaken unless long standing abuses had required it, unless the accumulation of grievances had reached a point where Congress had to intervene.

But no matter how diligent the committee may be, they cannot hope to cover every phase of the labor question.

Conversation and correspondence have revealed to me widespread confusion in the public mind.

The affairs of one union may become, in general opinion, jumbled up with the affairs of another.

When it is shown that a union leader has misused his authority or has acted corruptly, it is all too easy for many people to draw the conclusion that such corruption is characteristic of labor unions in general.

This tendency makes me uneasy. We know very well that in numerous instances the rank and file of a union have found themselves powerless to control their leaders.

We must not, in the face of the current revelations, lose sight of the fact that an alert, vigorous, and honest labor movement is of very vital importance to our society. If we discover that union officials are engaged in racketeering or dubious political practices, it is our duty to help the unions, as much as we can, in correcting the situation.

Some union leaders may have been dishonest, but not all.

Some union officials may have exploited their union treasuries, but not all.

Full publicity of the facts is a great curative.

It has seemed to me that a start ought to be made in getting together an orderly collection of fact matter about the unions that would help us and the public. Sometimes we cannot see the forest for the trees.

Since the Select committee, at the moment, is primarily concerned with the operations of certain union leaders, it may well be that this is one place where such a collection of facts might begin.

With this in mind I have had the staff of the Republican policy committee of the Senate prepare a table showing the salaries and length of time in office of the presidents of 146 American labor unions.

I ought to say that the salary figures are not derived from an investigation by either lawyers or accountants, but are rather figures furnished by the unions themselves.

If the total remuneration received by the president of any of these unions is greater or less than the figure shown in the table, I do not know of any such difference. I repeat, these salary figures are as stated by the unions themselves.

This is the first time, so far as I know, that such a summary has ever been prepared or publicized. In view of the current situation, it might be exceedingly interesting to have such information published in the RECORD, and I therefore ask unanimous consent that the table be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SALARIES AND YEARS IN OFFICE OF AMERICAN LABOR LEADERS

The following table lists the salaries and the length of time in office of the presidents of 146 American labor unions.

SOURCES

I. Salaries:

Under the terms of the statute (U. S. C., title 29, sec. 159 (f) and (g)) unions desiring to avail themselves of the service of the National Labor Relations Board must file with the Department of Labor, every year, a report.

This report must include, among other things:

(a) The names, titles, and—if the aggregate compensation and allowances of each exceeded $5,000 during the preceding year—compensation of the union's 3 principal officers;

(b) The initiation fees payable by new members;

(c) The dues payable by members;

(d) A schedule showing all of the union's receipts during the preceding year, its total assets and liabilities as of the end of its last fiscal year, and the disbursements made by it during such fiscal year, including the purposes for which the disbursements were made.

With the few exceptions noted in the table, the salaries of the union presidents listed below are as the unions themselves state them in the reports. The final column in the table headed "Date of Salary Information" lists the dates given by the unions in the most recently available reports.

A number of important unions do not file reports (for example, most of the railway unions). This is either because their transactions are carried on independently of the NLRB or because other machinery is employed for the purpose.

In the reports filed with the Department of Labor the range of detail is extremely wide. In some instances the salary of the president is given with his expenses and allowances listed separately. In other instances no mention is made of expenses or allowances at all. In still other instances the figure given, running to an odd dollar and an odd cent, imply that salary and expenses are lumped together. Yet again, in the case, for example, of the Brotherhood of Railroad Trainmen the salary of President W. P. Kennedy is given as $19,771.75 not including compensation received from Brotherhood of Railroad Trainmen Insurance Department, Inc., a corporation, but what that compensation may be is not stated.

II. Total membership, number of locals, and union address: Directory of National and International Labor Unions in the United States, published by the Bureau of Labor Statistics, United States Department of Labor.

III. Dates of first election as president: Legislative Reference, Library of Congress; Who's Who in America.

Union	President	Years as president	When first elected	Salary	Date of salary information
Agricultural Workers Union; National (AFL), 2140 P St. NW., Washington 7, D. C. Membership: 7,136; local unions, 326.	H. L. Mitchell	13	1944	$5,433.34	Feb. 4, 1957.
Allied Industrial Workers of America (formerly Automobile Workers of America; International Union, United (AFL), title changed as of Mar. 14, 1957), 8670 Wilshire Blvd., Beverly Hills, Calif. Membership: 120,000; local unions, 325.	Earl Heaton	3	1954	$14,999.92	Mar. 14, 1957.
Aluminum Workers International Union (AFL), 119 North 7th St., St. Louis, Mo. Membership: 18,900; local unions, 35.	Eddie R. Stahl [1]	(2)	(2)	$9,100	Apr. 16, 1956.

Brick and Clay Workers of America; United (AFL), 1550 West 95th St., Chicago 43, Ill. Membership: 23,000; local unions, 325.	Harold R. Flegal	(2)	(2)	$14,808.44	Sept. 12, 1956.
Bricklayers, Masons and Plasterers International Union of America (AFL), 815 15th St. NW., Washington 5, D. C. Membership: 147,157; local unions, 927.	Harry C. Bates	21	1936	$30,000 plus "expenses and allowances."	June 8, 1956.
Broadcast Employees and Technicians; National Association of (CIO), 80 East Jackson Blvd., Chicago 4, Ill. Membership: 4,100; local unions, 32.	George W. Smith	1	1956	No information	No information.
	Arthur Hjorth (secretary-treasurer).			$10,395	Aug. 17, 1956.
Building Service Employees International Union (AFL), 318 West Randolph St., Chicago, Ill. Membership: 206,692; local unions, 355.	William L. McFetridge	17	1940	$20,000.01	June 15, 1956.
Carpenters and Joiners of America; United Brotherhood of (AFL), 222 East Michigan St., Indianapolis 4, Ind. Membership: 804,343; local unions, 2,895.	M. A. Hutcheson [5]	5	1952	$34,800 plus $2,555	Dec. 31, 1955.
Cement, Lime, and Gypsum Workers International Union; United (AFL), 3329 West Washington Blvd., Chicago 24, Ill. Membership: 38,246; local unions, 223.	Felix C. Jones	3	1954	$9,766.84	Aug. 10, 1956.
Chemical Workers Union; International (AFL), 1659 West Market St., Akron 3, Ohio. Membership: 90,000; local unions, 396.	Edward R. Moffett [6]	4	1953	$18,402.09	Sept. 18, 1956.
Cigar Makers' International Union of America (AFL), 1003 K St. NW., Room 604, Washington 1, D. C. Membership: 9,640; local unions, 68.	Mario Azpeitia	9	1948	$10,243.41 plus $3,707.72 expenses.	Feb. 25, 1957.
Cleaning and Dye House Workers; International Association of (AFL), 1771 East 12th St., Cleveland 14, Ohio. Membership: 20,000; local unions, 31	W. S. Gross	20	1937	No information	No information.
Clothing Workers of America; Amalgamated (CIO), 15 Union Square, New York 3, N. Y. Membership: 385,000; local unions, 636.	Jacob S. Potofsky	11	1946	$20,385.10	Mar. 26, 1956.
Communications Association; American (Ind), 5 Beekman St., New York 38, N. Y. Membership: 7,000; local unions, 5.	Joseph P. Selly	16	1941	$7,922.40	Feb. 29, 1956.
Communications Workers of America (CIO), 1808 Adams Mill Rd. NW., Washington 9, D. C. Membership: 300,000; local unions, 717.	Joseph A. Beirne [7]	14	1943	$23,950.47	May 31, 1956.
Coopers' International Union of North America (AFL), 120 Boylston St., Room 527, Boston 16, Mass. Membership: 3,300; local unions, 46.	James J. Doyle	32	1925	$9,867	May 14, 1956.

[1] The figures on Mr. Stahl's remuneration are not clear. His salary is stated to be $175 per week ($9,100 per annum) plus $105 per diem per week.

[2] No information.

[3] Mr. Bright served as president from October 1953 to June 1955, when he was appointed national administrative secretary.

[4] Mr. MacGowan was president of the boilermakers for the years 1944–54.

[5] Mr. Hutcheson's father, William A. Hutcheson, served as president of the carpenters from 1915 to 1952.

[6] According to the union's headquarters Mr. Moffett served as president from Sept. 28, 1953, to Dec. 3, 1953, and again from Nov. 16, 1954, until Dec. 31, 1956.

[7] The term served includes the years when Mr. Beirne was president of the antecedent Telephone Workers Union.

[2] No information

[8] Mr. Carey was one of the founders of United Electrical and served as president of the union from 1936 to 1941. In 1941 he was defeated by Albert Fitzgerald. Subsequently, the union split over the Communist infiltration issue. That portion which remained with the CIO was reorganized as the International Union of Electrical, Radio and Machine Workers with Mr. Carey as president (1950). Mr. Carey was also secretary-treasurer of the CIO. Nation's Business for July 1955, reported (p. 48) that his salary was $18,000, half paid by his union and half by the CIO. The union's report for Sept. 27, 1956, simply says "$14,250 paid by IUE-CIO, balance paid by national CIO."

[9] Mr. Markwood committed suicide in 1956. Mr. Owen was elected to succeed him and took office Feb. 11, 1957.

[10] The figures on Mr. McCurdy's remuneration are not clear. His salary is stated to be $259.61 (per week?). His allowances are stated to be "$13 per day, $25 per week."

[11] Mr. Boucher was succeeded by Glen McCabe as president, Jan. 12, 1957.

[12] Mr. Ming was also president of the antecedent American Federation of Grain Processors Council, elected to that office in December 1940 and then, in 1948, elected to the presidency of the American Federation of Grain Millers.

[13] The figures on Mr. Dixon's remuneration are not clear. Salary is simply stated to be "$50"; that of Mr. Thomas Reed, the general secretary, is given as "$300."

[14] John Blackburn was president from 1948 to 1955.

[2] No information

[15] The most recent available information on the Locomotive Engineers is dated August 1953. As of that date J. P. Shields was grand chief engineer with salary of $24,879.79 plus $3,801.36 expenses.

[16] Joseph P. Ryan, President Bradley's predecessor is stated to receive a pension of $10,000.

[17] The source of Mr. Carroll's salary figure is Nation's Business for July 1955.

[18] Sources: Who's Who in America and Nation's Business for July 1955. The UMW do not file reports with the Labor Department.

[19] The same periodical states that Mr. Petrillo's total salary is $40,000 and that half of salary is paid by his local union in Chicago.

[2] No information.

[20] The salaries received by the presidents of the potters appear to vary from year to year. As of June 1, 1951, the union stated that President J. M. Duffy received $29,471.58. A year later Mr. Duffy was said to have received $20,698.77 and, a year after that, $19,533.57. In the following year Frank Hull, as President, received $18,803.11 and in 1955 $20,831.47. Figures showing the remuneration received by Mr. Wheatley are not available.

[21] The report of the Brotherhood of Railroad Trainmen states that the president's salary of $19,771.75 "does not include compensation received from Brotherhood of Railroad Trainmen Insurance Department, Inc., a corporation."

[22] It appears that until 1955 the secretary-treasurer was the chief executive officer of the retail clerks. The presidency was more or less an honorary position. Mr. Suffridge was elected president in 1944; in 1947 was elected secretary-treasurer. To correct this anomalous situation the union recast its officer group in 1955, making the president, in fact as well as name, the chief executive officer of the union. With this change Mr. Suffridge once more was made president.

[23] Harry Lundeberg was elected president of the Sailors Union in 1938 and held the office for 21 years until his death on Jan. 28. 1957. Paul Hall succeeded Lundeberg.

[24] During the year 1956 George Fecteau was elected president to succeed Mr. Taylor.

[25] The report gives Mr. Fleete's salary as $754.60 per month and $16.28 per diem expenses.

Woodworkers of America; International (CIO), 418 Governor Bldg., Portland 4, Oreg. Membership: 105,058; local unions, 275.	A. F. Hartung	5	1952	$14,785.13	Aug. 20, 1956.

[?] No information.

[26] The nature of Mr. Leary's remuneration is not clear. He would scarcely be paid $120 a month for a full-time job as president of an international union of 110,000 members. If this $1,440 is simply an honorarium and the executive job is held by someone else with higher salary, the report does not so state.

[27] It is not clear from the report whether or not the presidency is a full-time job.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF A COMMITTEE

The following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

Llewellyn E. Thompson, of Colorado, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary to the Union of Soviet Socialist Republics;

Francis White, of Maryland, to be Ambassador Extraordinary and Plenipotentiary to Sweden;

John M. Cabot, of the District of Columbia, a Foreign Service officer of the class of career minister, to be Ambassador, Extraordinary and Plentipotentiary to Colombia;

Earl E. T. Smith, of Florida, to be Ambassador Extraordinary and Plenipotentiary to Cuba; and

Ivan B. White, and sundry other persons, for appointment and promotion in the foreign and diplomatic service.

The VICE PRESIDENT. If there be no further reports of committees, the nominations on the Executive Calendar will be stated.

DEPARTMENT OF THE AIR FORCE

The Chief Clerk read the nomination of Malcolm A. MacIntyre to be Under Secretary of the Air Force.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

DEPARTMENT OF THE NAVY

The Chief Clerk read the nomination of Rear Adm. Robert E. Dixon to be Chief of the Bureau of Aeronautics in the Department of the Navy.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

PUBLIC HEALTH SERVICE

The Chief Clerk proceeded to read sundry nominations in the Public Health Service.

The VICE PRESIDENT. Without objection, the nominations in the Public Health Service are confirmed en bloc.

IN THE ARMY

The Chief Clerk proceeded to read sundry nominations in the Army.

The VICE PRESIDENT. Without objection, the nominations in the Army are confirmed en bloc.

IN THE NAVY

The Chief Clerk proceeded to read sundry nominations in the Navy.

The VICE PRESIDENT. Without objection, the nominations in the Navy are confirmed en bloc.

SUNDRY NOMINATIONS IN THE ARMY AND THE AIR FORCE

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the nominations in the Regular Army and the Air Force which were placed on the Vice President's desk, as shown on page 4 of today's executive calendar, be considered and confirmed en bloc.

The VICE PRESIDENT. Without objection, the sundry nominations in the Army and the Air Force are confirmed en bloc.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the nominations confirmed today.

The VICE PRESIDENT. Without objection, the President will be notified forthwith of all nominations confirmed today.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

DEPARTMENTS OF STATE AND JUSTICE AND THE JUDICIARY APPROPRIATIONS — CONFERENCE REPORT

The Senate resumed the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 6871) making appropriations for the Departments of State, Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a comparative statement on the State, Justice, Judiciary, and related agencies appropriation bill for fiscal 1958.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Summary of bill

Department	1957 appropriations (adjusted)	1958 estimates	1958 House allowances	1958 Senate allowances	Conference action
State	$221,700,072	$227,714,552	$180,382,743	$193,478,243	$189,024,243
Justice	216,343,650	234,580,000	227,855,000	226,380,000	226,705,000

Salaries	(1,233,500)	(1,699,000)	(1,699,000)	(1,699,000)	(1,699,000)
Expenses	(1,874,200)	(2,210,700)	(2,199,700)	(2,199,700)	(2,199,700)
Total, other courts and services	33,181,800	37,424,650	35,143,650	35,218,650	35,143,650
Total, the judiciary	36,321,435	40,855,250	38,562,050	38,637,050	38,562,050

TITLE IV—UNITED STATES INFORMATION AGENCY

UNITED STATES INFORMATION AGENCY					
Salaries and expenses	$113,000,000	$140,000,000	$105,000,000	$89,100,000	$95,100,000
Acquisition and construction of radio facilities		4,000,000	1,100,000	1,100,000	1,100,000
Total, United States Information Agency	113,000,000	144,000,000	106,100,000	90,200,000	96,200,000

TITLE V—FUNDS APPROPRIATED TO THE PRESIDENT

Refugee relief	$8,500,000				
President's special international program	9,900,000	[4] $18,500,000	$10,900,000	$14,390,000	$12,400,000
Total, funds appropriated to the President	18,400,000	18,500,000	10,900,000	14,390,000	12,400,000

TITLE VI—FEDERAL PRISON INDUSTRIES, INCORPORATED

DEPARTMENT OF JUSTICE					
Federal Prison Industries, Incorporated	($950,000)	($1,000,000)	($1,000,000)	($1,000,000)	($1,000,000)

[3] Includes $75,000 proposed transfer from Department of Justice, general administration, salaries and expenses, S. Doc. 35.

[4] Includes a reduction of $1,500,000 as contained in H. Doc. 116.

The VICE PRESIDENT. The question is on agreeing to the conference report.

Mr. JOHNSON of Texas. Mr. President, the issue before the Senate in connection with the conference report on the State, Justice, Judiciary, and Related Agencies appropriation bill is essentially that of a compromise between two conflicting views. A conference report is not expected to be completely satisfactory to both sides, but merely acceptable to both sides. If the report is a reasonable compromise, one which takes into account and properly weighs the judgments of both sides, it is a good report. If it seeks to ride roughshod over the views of one or the other, it is a bad report.

Within that definition, I believe the report before the Senate today is a good one.

The fact that it met such hearty approbation by the Members of the House, and took only a few mintues to be acted upon this morning, is further evidence of that fact.

The point of contention between the two Houses was basically a division of the money which would be placed into the agencies that deal with our foreign policy. There were two receptacles, the State Department and the United States Information Agency.

It was the view of the Senate, a view in which I strongly concurred, that the greater weight should be placed in the State Department. It was the view of the House, a view which I did not share, that there should be more weight in the USIA. It was and remains my belief that at every opportunity we should strengthen the career foreign service. As an American, I like to think that we have done everything reasonably possible to strengthen the position of the men who represent this Nation overseas.

In the course of our hearings the State Department, through Secretary Dulles, Under Secretary Henderson, Assistant Secretary Robertson, the budget officer, Mr. Crouch, and many other witnesses, presented to us facts and figures which I thought were convincing. The USIA, on the other hand, in my viewpoint, was unable to provide us with a clear picture of what it was doing, why it was doing it, or where it was going to do it. I was somewhat saddened by the latter development.

Mr. President, I am convinced of the necessity for the strongest kind of information program. Unfortunately, I have a difference of opinion with the officials of the agency as to the proper definition of the word "strong." They seem to believe that the word means "lavishly supplied with funds." To me the word means "effective," "consistent," "coherent," "persuasive." That difference, however, may be past history. The task before the Senate today is to complete our work on this bill and then proceed to the job of rebuilding an information program of which we can all be proud.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. The remainder of my remarks will take only about 2 minutes. I should like to finish them; then I shall be glad to yield to the Senator from New Hampshire and other Senators for questions.

Mr. BRIDGES. Very well.

Mr. JOHNSON of Texas. The facts of the conference report can be simply stated. The House retreated by $9,900,000 from its position on the USIA. In return, the Senate retreated from its position by $1 million on State Department personal services; by $3,200,000 on the international education exchange program, and by $1,990,000 on the Brussels Fair.

I regret the retreat from the Senate position on the Brussels Fair. But in view of the concession made by the House, there was no other reasonable path for reasonable and fair men to pursue.

There is one point of great importance. There is in the conference report clear and specific language directing the USIA to avoid any possibility of competing with the private enterprise news agencies, film agencies, and picture agencies. I shall not pass judgment on the extent of such competition, if it exists. The point is that there is a definite apprehension of such competition from one of our largest and most respected agencies and such apprehensions should be removed. The language in the report is a protection both to the private agencies, and to the USIA and its reputation. Although the language in the conference report is not in the bill—as comparable language was in the bill reported to the Senate—the adoption of the report will carry sufficient force to assure Congress that its intent will be met.

The overall total of the bill is $562,891,293. It is unusual in that the figure in the conference report is below the total as passed by the House or the Senate. This sum would be apportioned as follows: $189,024,243 to the State Department, $226,705,000 to the Department of Justice, $38,562,000 to the Judiciary, $96,200,000 to the USIA, and $12,400,000 in funds appropriated to the President.

Mr. President, as I said earlier, I believe in a strong and effective information program for our country. Had I been convinced of the strength and the effectiveness of the present structure, I could have supported a larger appropriation for it, as I did last year. The Committee on Appropriations was unanimously of the opinion, without a single dissenting voice from Senators of either party, that this agency should be placed back in the State Department. I hope that can be done quickly.

I thank my colleagues who have been so helpful to me. I believe we have achieved the best possible measure under all the circumstances, and I recommend the adoption of the conference report.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the distinguished Senator from New Hampshire, the ranking member of the subcommittee.

Mr. BRIDGES. I concur in the statement made by the distinguished Senator from Texas, the chairman of the subcommittee. I think the conference report indicates an area of agreement which perhaps is not completely satisfactory to the various interested parties, but certainly is as nearly favorable as can be had in a case where it was necessary to reach an agreement. In general, I concur in the statement which the Senator from Texas has made.

I believe wholeheartedly that the State Department, in a very real sense, is our first line of defense, and that appropriations for it must be sufficient to maintain top quality personnel on the firing line in the various countries of the world.

I believe wholeheartedly in the student exchange program as a very effective means of creating international good will.

I am in favor of the Brussels Fair. The only thing about which I am a little worried is whether sufficient funds have been provided for United States participation in the Brussels Fair to enable us to go first class. I think the Senate recognized that. In my opinion the House figure was too low. I do not believe the United States can participate effectively in an international fair to be held in Belgium, a fair which will be attended by millions of people, and have our exhibit immediately next to the Russian exhibit, unless we can put on a good show, one which will be equal to or better than that of the Russians. For that reason, I wish to ask the Senator from Texas his conception of the handling of this matter, so that the Senate may be apprised of it.

Does the Senator from Texas think the conference report provides sufficient funds to enable the United States to participate effectively? The amount is not as large as both he and I felt was necessary.

Mr. JOHNSON of Texas. I am in general agreement with the statement of the Senator from New Hampshire concerning the Brussels Fair. I should have preferred that the United States have no representation at all rather than second-class representation.

It was the opinion of the Senator from Texas that the President and his coordinator, Mr. Larson, should have a minimum of $3,500,000 for the Brussels Fair Exhibition over and above the amount allowed by the House. As the Senator from New Hampshire is so thoroughly aware, the House felt that that sum was excessive. After more than 5 hours of give and take and negotiation across the table, we were forced to accept a lesser figure, a figure of $1,500,000, in lieu of the $3,500,000 which was in the bill as passed by the Senate. If the $1,500,000 is inadequate, I suppose the President or his proper agents will make necessary representations, and Congress can then consider them.

Mr. BRIDGES. I understand.

Mr. JOHNSON of Texas. I should not want to bind myself as to what I would do under those circumstances. But my opinion is the same as that of the Senator from New Hampshire. I think the exhibition should be first class, or not be presented at all.

Mr. BRIDGES. I agree.

Let me say that I also agree with what the Senator from Texas says about the United States Information Service. I think there is need for a strong United States Information Service and a strong program of that kind. But I do not think any member of the committee was happy about some of the situations which came to light.

One matter which came to my attention—and I wish to ask the Senator from Texas whether he was aware of it—was the information appearing in the House hearings about the rather universal hiring of writers on various American newspapers. I was shocked by that. It is one more indication that the congressional committees must keep in very close touch with the United States Information Service, because it seemed to me that it ran wild in hiring key editorial writers and key newspaper correspondents, who in turn are very enthusiastic about the United States Information Service.

Mr. JOHNSON of Texas. There is available in the House hearings, for the information of all who may care to read and to learn, a list of the special correspondents selected by the USIA in various regions of the country, serving various daily newspapers, who from time to time have been engaged to write special articles. The name of each such person is given, and also the name of the newspaper by which he is presently employed, the subject of the article, and the amount of public funds he has been paid. All that information is available in the House hearings.

Mr. BRIDGES. I appreciate that.

In closing, I wish to cemmend the Senator from Texas, and to say that although the conference report does not reflect my personal thinking in every respect, nevertheless, I believe it is a good result on the part of the conferees within the general area in which the agreement of both the House and the Senate could be obtained; and the report should be adopted. I commend the distinguished Senator from Texas.

Mr. JOHNSON of Texas. I thank my friend.

Mr. GORE. Mr. President, will the Senator from Texas yield to me?

The PRESIDING OFFICER (Mr. CARLSON in the chair). Does the Senator from Texas yield to the Senator from Tennessee?

Mr. JOHNSON of Texas. I yield to my friend, the Senator from Tennessee.

Mr. GORE. I wish to refresh the Senator's memory, by stating that during the hearings held by his subcommittee, he questioned witnesses from the State Department about the number of persons in the island of Formosa, on the United States Government payroll. That questioning by the able chairman of the subcommittee followed a statement which I had made on the floor; namely, that in November Ambassador Rankin had told me and other Members of the Senate and Members of the House of Representatives that in his opinion the interests of the United States could be adequately cared for in Formosa with one-half the number of persons then employed there by the United States Government.

I understand that the Senator was not able to verify for the public record the number of persons on the United States Government payroll in Formosa, because he was informed that that information was classified.

I wish to call to his attention the fact that only last Friday a very distinguished and affable gentleman from the State Department called upon me in my office, room 342, Senate Office Building, to discuss the matter. He then told me the exact number of persons who had been added to the United States Government payroll in Formosa since the time when some of us were in Formosa. But he informed me that that information was confidential. So, Mr. President, in relating the facts to the Senate, I did not state the exact number, but only referred to the fact that several hundred had been added to the United States Government payroll in Formosa since the time when

our Ambassador there said our Government had there twice as many as were actually needed.

From the front page of today's issue of the Washington Post and Times Herald, I notice that the State Department has now publicly given a breakdown of its personnel in Formosa or of United States Government military personnel in Formosa. I wish to ask the Senator from Texas why it was that only last Friday that was confidential information, not available for public use by a United States Senate committee, and not available for public use by an individual Member of the United States Senate, whereas now the security of the Nation is not involved and is not hindered, apparently, in the judgment of the State Department, by making these figures public. I am glad they have been made public, and I am glad the State Department is now considering a reduction in the number of the personnel there.

In that connection let me read the following statement:

> It was said that reductions in the United States population have been under consideration for some time.

I do not know what that means; neither do I know how long a period is meant by the use of the words "for some time," or whether the reference is to 2 hours or to 2 months. I call to the attention of my colleague the fact that this matter was called to the attention of the State Department last fall, but that hundreds have been added since then.

My principal question of the Senator from Texas is this: How can he justify the publication today of information which only a few days ago was considered confidential to the United States Senate?

Mr. JOHNSON of Texas. Mr. President, I cannot justify the action of the State Department in this instance. I am not responsible for the action of the State Department. When the Senator from Tennessee brought this situation to my attention, I made appropriate inquiries of the State Department and the defense agencies, and I received information and was told that it was in the national interest that the material be classified, and that we could not publish it in our hearings.

However, I am under no illusions; I recognize that not only the Washington Post but also other newspapers for some time have had access to information which frequently is unavailable to the Senator from Texas and to others. I do not attempt to explain, justify, or condone such conduct.

Mr. SALTONSTALL. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. SALTONSTALL. Let me inquire whether the Senator has completed his remarks on the subject matter previously under discussion. I wish to ask a question regarding another subject.

Mr. JOHNSON of Texas. If the Senator from Massachusetts desires to explain the matter to which the Senator from Tennessee and I were referring just now, I shall yield to the Senator from Massachusetts.

Mr. SALTONSTALL. No.

Mr. GORE. Mr. President, I wish to ask another question of the Senator from Texas.

Mr. JOHNSON of Texas. Very well; I yield first to my friend the Senator from Tennessee.

Mr. GORE. If that be true in the case of United States Government employees in Formosa; and if, in fact, there are in Formosa a great many more United States Government employees than the head of the United States Government agency there thinks necessary; and if at the present time, after several hundred have been added, the State Department is now considering making a severe reduction in the number, I wonder whether it is true that such an experience would be helpful in the case of our representatives in other countries.

Mr. JOHNSON of Texas. Undoubtedly I think it would. I hope it will not be necessary to have a riot in every place where the United States has personnel stationed, in order to obtain a reevaluation of the numbers of our personnel there.

Sometimes I have been concerned with the attitude of our own people. They are tolerant people, and they are fair people, and they are understanding people. But, if they ever form the opinion that all that it is necessary to do is riot in order to cause a reduction in the number of our Government's unnecessary personnel, they may start rioting in this country.

The Senator from Tennessee and other Senators have cited the great surplus of United States Government personnel in Formosa, and they have confirmed their remarks by the statement of the distinguished United States Ambassador.

When the distinguished Vice President of the United States returned from one of his frequent trips abroad, he warned the executive branch and the entire country that the United States had too many of its people stationed in too many places.

The distinguished Senator from Louisiana [Mr. ELLENDER], whose knowledge of the operations abroad of our Government is not exceeded in my opinion by that of any other Member of the Senate, last year visited 32 countries. He has written a detailed report on his visit to each one, and has submitted it to the Department.

The Department had an opportunity to take action. It did not even reply. At the insistence of the chairman of the subcommittee of the Committee on Appropriations, the Department finally agreed reluctantly to reread the report of a Member of this body, to examine it, and to make appropriate reply.

I hope it is not going to be necessary for the American people to be humiliated by having incidents—and I hope it is the only one—such as occurred in Formosa the other day in order to bring about a reevaluation of our personnel in these various places.

Mr. CAPEHART subsequently said: Mr. President, I ask unanimous consent that my remarks and my questions may appear in the RECORD as a part of the colloquy between the Senator from Tennessee [Mr. GORE] and the Senator from Texas relating to Formosa.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CAPEHART. Are there any facts or any proof whatsoever that the number of Americans on Formosa had anything whatsoever to do with the riot there? I do not know whether there are too many Americans there, or too few. An investigation might well prove the fact. At the moment, do we have any information—any facts—to prove that the number of Americans had anything whatsoever to do with the riot?

Mr. JOHNSON of Texas. So far as the Senator from Texas is informed, no expert witness has testified in the case. All the Senator from Texas knows is what he has read in the newspapers. He observed, in the newspapers, comments that one of the reasons for the impatience demonstrated and for the unheard-of and uncalled-for conduct was that the United States had too many people in Formosa.

Mr. CAPEHART. Let me say this, Mr. President——

Mr. JOHNSON of Texas. I may say, I was not there. The only information I have is what the Senator from Tennessee [Mr. GORE] gave, in quoting a conversation he had with the American Ambassador, who had stated last fall we had twice as many people as we needed there.

This riot occurred, and reports of it have been available to all Senators. I do not wish to pass judgment. I do not wish to become involved in a question of whether the news reports are accurate. The news reports came, I may say, after our hearings were concluded and after our bill had been acted upon.

I think it is the general feeling of a good many Senators who have heard the evidence about the various services, that when we spend between 40 and 50 percent of the approximate $100 million appropriation for the USIA on purely personal services and salaries, that is excessive.

Mr. CAPEHART. Mr. President, will the Senator yield? Of course, the Senator from Tennessee was not talking particularly about the USIA.

Mr. JOHNSON of Texas. The Senator can debate the question with the Senator from Tennessee.

Mr. CAPEHART. I wish to say that, in my opinion, one of the most encouraging things is the fact that Senators on the other side of the aisle, after spending, it has been estimated, anywhere from $60 billion to $90 billion from the end of World War II up until the time President Eisenhower took office, are now very, very much concerned with reducing expenditures, which I am 100 percent in favor of.

Mr. JOHNSON of Texas. Why should the Senator be discouraged? I should think the Senator would not be.

Mr. CAPEHART. I did not say "discouraged"; I said "encouraged."

Mr. JOHNSON of Texas. I thank the Senator.

Mr. CAPEHART. I am very much encouraged that Senators are doing that, because many of us for years, when the Government was spending these huge sums, of course were very, very much worried about it, and talked about it.

Now that we have Dwight Eisenhower as our President, he is continually reducing the amounts. He has reduced the amounts greatly. In the last 3 years under President Truman we spent approximately $22 billion.

Mr. JOHNSON of Texas. Mr. President, I do not wish to yield for a political speech. I will yield if the Senator wishes to ask me a question. The Senator has plenty of time, and if he wants to use it he can speak in his own right.

Mr. CAPEHART. My question is, then—and I shall put it the other way—is it not a fact that the able Senator from Tennessee [Mr. GORE] injected politics into his expressions?

Mr. JOHNSON of Texas. The Senator from Tennessee can speak for himself.

I will say this: Senators on both sides of the aisle are seriously concerned with the size of the present budget. They are ready to appropriate every dollar that may be required. They wish to scrutinize carefully all proposed expenditures, and then I think they will act in what they conceive to be the national interest. I do not think the patriotism in this body is limited to one side of the aisle.

If the Senator from Indiana has received any encouragement from our performance, then I am very much pleased, because he is a delightful person, and I am glad to have him encouraged.

Mr. COOPER rose.

Mr. JOHNSON of Texas. I now yield to my friend from Kentucky [Mr. COOPER].

Mr. CAPEHART. That is what I thought the Senator wanted, to cut off the debate.

Mr. JOHNSON of Texas. Mr. President——

Mr. CAPEHART. That is one nice thing about being the majority leader. One can cut off debate any time one wishes to.

Mr. JOHNSON of Texas. Any Senator can cut off debate with any Senator who does not conduct himself in accordance with the rules.

Mr. President, the Senator from Texas is convinced that there should be a shift of emphasis in our information program. He is convinced for example that we are taking money that it is not absolutely necessary to spend and spending it in an attempt to teach the English culture. If the people of England cannot find out from the 600 libraries in London all they need to know, I fail to see how we are going to be able to teach them by establishing one of our own.

Mr. GORE. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. GORE. The Senator knows, from our joint service in the other body of Congress and from our joint service in the Senate, that neither he nor I has ever been a member of any isolationist bloc. He knows that he and I have vigorously supported programs of international cooperation which, in the view of ourselves and of others, were necessary adequately to promote and safeguard the interests of the United States Government, and to protect and safeguard the interests of the free world. But holding those opinions does not require one to support unnecessary, extravagant, and perhaps even hurtful use of the American taxpayers' funds. Our foreign-aid programs must be on a practical basis and must be on a sensible basis.

I join with the Senator in supporting expenditures which are necessary, which can be used to the advantage of this country and of the free world; but we know that excesses have been engaged in, and I join with the Senator in an effort to eliminate the excesses, and congratulate him upon the vigor of his action.

Mr. JOHNSON of Texas. I am indebted to my friend for his generous expression.

Mr. CAPEHART and Mr. SALTONSTALL addressed the Chair.

Mr. JOHNSON of Texas. I yield first to the Senator from Massachusetts, who has to leave the Chamber. Then I shall yield to the Senator from Indiana. The Senator from Massachusetts asked me to yield before the Senator from Tennessee made his last statement.

Mr. SALTONSTALL. Mr. President, the conferees on the bill took 5 hours and 10 minutes in their deliberations. There were 37 points of disagreement. There was much discussion on a great many points in disagreement. There were, in my opinion, four principal items which were of importance.

The first was the maintenance of the State Department at an adequate level. The Senate increased the House amount by $6,300,000. The final adjustment was a $5 million increase, instead of $6,300,000.

To me, this was the most fundamental question before the conference, because the State Department, as the distinguished majority leader has pointed out, is the first line of our defense, the first line of our security, and the first line of our leadership of the free nations of the world.

Mr. JOHNSON of Texas. Mr. President, if the Senator will yield at that point, for the information of those who may think the State Department was not properly represented in the conference, I may say the Senate proposed $6 million for salaries and expenses of the State Department. We fought 5 hours to maintain every dime of the $6 million, as the Senator knows. Finally, when the situation became hopeless, we compromised by getting five-sixths of our request. We did that only after others had been informed, without the knowledge of the chairman of the subcommittee who was carrying on the fight, that the State Department was willing to accept $5 million.

Mr. SALTONSTALL. What the Senator from Texas has said is correct. The State Department believes it can get along on a $5 million increase, although it stated it would be difficult to do so.

The next most important item, in my opinion, was the educational program. The Senate had increased the House provision for this item by approximately $6 million. This was very bitterly resisted by the conferees on the part of the House. We finally, as the Senator from Texas has said, in order to get an overall compromise, had to accept an increase of $2,225,000 for this item.

The next most important item, in my opinion, was the Brussels Fair. If the United States is to be properly represented, it should do a good job. It should do a job that is comparable with the efforts of other countries. The Senate had provided an increase of something over $4 million for this item. We had to take an increase of $1,500,000.

Whether this amount will be sufficient, I am not certain. The building will cost more than $5 million. Whether the total appropriation will be sufficient to equip the building properly is a question which must be determined after further examination by those in charge. If the amount is not sufficient, then we shall have to consider the matter again.

The fourth most important item was the Information Service. There was a difference of opinion as between $105 million and $90,200,000. That matter was discussed at great length. Finally, the appropriation was increased by $6 million.

So that whereas the Senate won five-sixths of the amount it asked for with respect to the State Department, the House won a little less than one-half on the Information Service. All told, the agreement was a compromise. I do not approve of all the items. I would like to have had larger increases in several items, as the distinguished Senator from Texas knows; but there was great resistance on the part of both sets of conferees, and they stood by their opinions as doggedly as they could.

The conference started at 2 o'clock in the afternoon, and was finally settled at 10 minutes past 7. I can say the majority leader kept his patience and kept the conference going at great speed. The final result, I believe, was the best we could get under all the circumstances.

I hope the conference report will be accepted as a reasonable compromise between two legislative bodies with firm opinions on many subjects, but a conference report of great importance to our Nation.

Mr. JOHNSON of Texas. I should like to say in response to the statement just made by my friend from Massachusetts that no one made a greater or finer contribution to the results finally achieved than the distinguished statesman from Massachusetts. I am deeply in his debt for his patience, for his understanding, and for his wise suggestions.

I now yield to the Senator from Indiana.

(Mr. CAPEHART addressed the Senate and asked a number of questions. On his request, and by unanimous consent, his remarks were ordered to be printed in the RECORD following the colloquy relating to Formosa.)

Mr. COOPER. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. COOPER. In connection with the conference report, if I may, I should like to ask the Senator from Texas a question. I note that amendment 33 proposes to delete the language on page 34 which would prohibit any part of the appropriation being used in a Government information activity, if it competes with a private enterprise, engaged in such an activity.

Mr. JOHNSON of Texas. Mr. President, I did not hear the question of the Senator from Kentucky. Another Senator was asking me a question, and my attention was distracted. Will the Senator repeat the question, please?

Mr. COOPER. I invite the attention of the Senator from Texas to amendment 33, which proposes to delete the language on page 34 of the bill as passed by the Senate. I think the Senator from Texas will remember that in a discussion of this language, during the debate on this bill, he pointed out that its purpose was to prohibit any overseas Government information activity which might compete with private enterprise, and that it was particularly directed to the news service of the USIA.

Under the language which was contained in the bill, as passed by the Senate, I think the question of whether or not there was any competition was to be determined by a finding of the director of the United States Information Agency. That language has been stricken.

Mr. JOHNSON of Texas. I understand the Senator's point.

Mr. COOPER. I should like to ask this question in order to bring it to an issue: In what manner can there be a determination, under the conference report, as to whether a certain activity in which the USIA might wish to engage, is in competition with private enterprise?

Mr. JOHNSON of Texas. First, in the opinion of the Senator from Texas, the Director of the Agency, when he received information of competition or when a complaint was made, would immediately conduct an investigation and make a finding. If he found that the law was being violated, I am sure he would take proper action.

I will say to the Senator that after the bill passed the Senate, the Deputy Director, Mr. Abbott Washburn, in between his various interviews, while we were trying to consider the bill in conference, found time to sign a letter which said:

> In the absence of any evidence on the question of competition such as a complaint, this places the Director in the position of having to make an estimate as to whether competition will or might develop in the future. As I am sure you will agree, guessing the future is never easy. I would, therefore, like to suggest a change in the above provision which will, I believe, give effect to your committee's intent but which will be much more workable from the viewpoint of the Agency. The suggested provision is as follows:

Does the Senator have that provision before him?

Mr. COOPER. No.

Mr. JOHNSON of Texas. I will read it.

> *Provided, further,* That no part of the appropriation made by this title shall be used to carry on any Government information activity in any country overseas after complaint by a private United States concern or individual to the Director of the United States Information Agency that such activity prevents such concern or individual from selling corresponding information services or products in such country, unless the Director of the United States Information Agency finds, after investigation, that the activity complained of does not prevent the sale of corresponding information services or products by the complainant, and the Appropriations Committees of the Senate and the House of Representatives shall be promptly notified in writing of each such complaint and finding.

Mr. President, we thought there was considerable merit in that suggestion. We did not desire to impose upon the Director the requirement that he notify the Appropriations Committees. We have some differences of opinion at the Capitol about that matter. Some think the Speaker and the Vice President should be notified, rather than committees, and let them handle it from there, on their own. But it seemed to us that the thought expressed, namely, that the Director should not have to give us information unless a complaint was made, but would act after complaint, was proper.

The key to the whole matter was the word "complaint." We further decided that instead of legislating on an appropriation bill—and the House felt very strongly on the matter—we would make reference to this situation, and express the unanimous opinion of all the conferees from both Houses of the Congress that no part of this appropriation should be used to duplicate or compete, and that the Agency was directed to investigate and act promptly upon any complaint, and, of course, to determine whether or not there was merit in it. If there should be merit, of course, the proper action would be taken.

Mr. COOPER. Does the Senator consider that there would be no obligation upon the USIA to take any action, either pro or con on activity, unless a complaint should be filed by a private agency?

Mr. JOHNSON of Texas. No; the Senator from Texas does not so consider. I do not have before me the exact language of the basic law. However, in that law the Agency is directed not to duplicate or compete with private enterprise. There has been much criticism of the Agency because it was felt that the intent of the act was not being carried out.

It was the intent of the conferees to reemphasize what was in the basic law, and to point up the fact that any complaint which is made should be acted upon promptly. We do not intend by this language to repeal the provision in the basic law, but rather to reemphasize it, and insure that each specific complaint is investigated and determined.

Mr. COOPER. Mr. President, I should like to ask the Senator this question. What action would the Senator consider appropriate under the state of facts which I shall describe, to determine if competition did exert and thus require a prohibition against USIA?

We know that the United States Information Agency is now sending its news service to many countries. The service goes to hundreds, even thousands, of small newspapers in many countries. It is obvious that many of those newspapers could not purchase the services of the AP, the UP, the INS, or other news agencies, much as we would like to have them purchase such services.

Mr. JOHNSON of Texas. The Senator is a very able lawyer. Under the state of facts which he has outlined, I am sure the Senator would agree with me that if that were the situation, the United States Information Agency would not be competing, because the foreign newspapers would not be able to purchase such service elsewhere.

Mr. COOPER. On the other hand, the private agencies might say, "Because of the fact that you are furnishing this news service, we are practically prohibited from contracting or negotiating with those newspapers for our services."

Mr. JOHNSON of Texas. I have no doubt that if the language in the basic act remains intact, and if the language in the conference report remains intact, we can entrust to those responsible for this operation the duty of carrying out the intent of the Congress. I believe that, generally speaking, this provision is in keeping with their expressed views, and their statements as to what they hope to do.

Mr. COOPER. My interest is in seeing to it that if our private news agencies cannot sell their services to newspapers in other countries because of their inability to purchase such service, some news service is afforded such newspapers by the USIA.

I conclude, then, from what the Senator has said, that if newspapers, news services, and information services in the respective countries cannot actually buy the services of our private agencies, news service may be furnished through the United States Information Agency.

Mr. JOHNSON of Texas. If they had no funds, and could not purchase such services elsewhere, I do not think there would be any competition or duplication.

Mr. DWORSHAK. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. DWORSHAK. In Newsweek magazine for May 27 there appeared the following article, in the "Periscope" column:

> Republicans gave powerful backstage support to Democratic majority leader JOHNSON during the debate over cutting USIA funds by some $54 million. Senators SCHOEPPEL of Kansas and DWORSHAK of Idaho sent JOHNSON word "Make a motion to kill it entirely and our side will rush to your aid like Coxey's Army."

Mr. President, I brand that statement as completely inaccurate and false. It is typical of the worst kind of irresponsible reporting, which we occasionally encounter in the Nation's Capital.

Mr. JOHNSON of Texas. The Senator from Idaho at no time made any such statement to me.

Mr. DWORSHAK. I thank the Senator.

Mr. President, will the Senator further yield?

Mr. JOHNSON of Texas. I yield.

Mr. DWORSHAK. The Senator from Idaho was not a member of the subcommittee which handled the budget for the State Department or the USIA, and consequently did not participate at any time in the questioning or attend any of the hearings on the USIA budget.

As a member of the full committee, the Senator from Idaho was in accord with the unanimous action taken by that group in recommending an appropriation of $90 million for USIA for next year.

The Senator from Idaho also wishes to point out that in the debate on the floor concerning the USIA budget, which

was quite extensive, he did not participate in any way, although he might have been justified in doing so on the basis that during a trip he made behind the Iron Curtain and in Europe in 1955, and while visiting 12 countries in the far Pacific in the fall of 1956, the Senator from Idaho made it his particular business to inspect the operations of the USIA. He reported that in many instances efficient and outstanding work was being done by that agency, particularly in the Philippines, at Manila, where the publishing is done for all the USIA activities relating to Asia. The Senator from Idaho was impressed by the efficiency of that operation.

Mr. President, I ask unanimous consent to have printed in the RECORD as a part of my remarks a few brief remarks which I made on March 29 at a hearing before the Senate Committee on Foreign Relations, on the subject of USIA operations. This statement constitutes all the comments I have made during this rather controversial debate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

One other point I should like to emphasize is this: In my travels in the far Pacific last fall I was particularly concerned about making inspections of the United States Information Agency.

In our discussions before the Appropriations Committee on the funds which have increased from a few millions annually to $113 million this year, the budget is requesting, I believe, $140 million for the next fiscal year, it is obvious that the President and the Congress realize the potentialities of the USIA in disseminating accurate information and in selling our American ideals abroad.

But it seems to me that the USIA needs sort of an overhauling or reappraisal to overcome some of the abuses which have developed over the years.

In one special instance there has been some concern about the money necessary to maintain a wire bulletin, which is comparable to the press services rendered by the Associated Press, the United Press, and International News.

There has been a difference of opinion whether it is necessary for USIA to maintain this rather costly operation instead of relying abroad upon the available services of these various press bureaus.

It is my opinion as a former newspaperman, that while we must engage in the promotion of publicity favorable to the United States to combat the somewhat unethical Soviet activities in behalf of their own way of life, I think that it is not necessary to maintain costly press agencies or services within the framework of the USIA.

I think that we must have some activity in the promotion of worthwhile publicity through this agency, but not in any way in competition with existing press services, because I made it my business abroad in places like Japan and elsewhere to see what was available in the way of press services.

Mr. DWORSHAK. Mr. President, it is unfortunate that when responsible journals like Newsweek wish to ascertain what Senators think about any controversial issue, members of their Washington staff do not avail themselves of the opportunity to make a telephone call and find out what a Senator thinks, instead of reporting indirectly such false information as that to which I have referred, which is very unfair to a Member of this body.

Mr. JOHNSON of Texas. Mr. President, I am an expert in that field. If I wished to discuss all the misleading ideas which have appeared in public print concerning the action taken in connection with this bill, I would require all day.

I believe that the best judges of our actions in the committee are our colleagues in this body. Every Senator is within his rights in expressing his views and casting his vote in accordance with what he conceives to be the interest of his nation and the interest of his State. So far as the Senator from Texas is concerned, he will express his viewpoint, and will permit other Senators to express theirs. When the roll is called, we can divide as we determine best.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. ELLENDER. Mr. President, I compliment my good friend from Texas for the fine work which he did in the conference. At one time I felt that we would not be able to accomplish what we finally succeeded in doing.

The distinguished Senator from Texas exhibited the same high caliber of leadership last year as he did this year, in his efforts to deal with the United States Information Service. The only difference was that last year he used his efforts to increase the amount from $87 million plus to $113 million plus.

Of course, after looking into the matter thoroughly, he acknowledged to both the Committee on Appropriations and the Senate that an error had been made last year in increasing the amount of money for the operation of this Agency.

Be that as it may, Mr. President, the Senator from Texas deserves high credit for his handling of this measure. We acted on it as quickly as possible after giving it the kind of study which it certainly required. It is always a pleasure to work with my distinguished colleague, the majority leader, but especially so when I have been able to win him over to my viewpoint.

As I have said on many occasions, the Agency has grown into a strong and powerful bureaucracy. An example of this great strength is the fact that USIA has been able to induce the President of the United States to recommend that it be made a permanent organization. A bill is now before the Committee on Foreign Relations, known as S. 1583, giving the people working for USIA what amounts to the full status of Foreign Service officers, with full recognition under the Foreign Service Act of 1946. I refer Senators to pages 7 through 10 of that bill where the following language is found:

UNITED STATES INFORMATION OFFICERS

SEC. 1013. (a) There is hereby established a category of officers of the United States Information Agency to be known as United States Information Officers who shall, except as provided in this section, be subject to the provisions of the Foreign Service Act of 1946, as heretofore or hereafter amended (hereinafter referred to as the Foreign Service Act), and any other provisions of law which are or may become applicable to Foreign Service Officers: *Provided*, That no person shall be eligible for appointment as a United States Information Officer unless he meets standards and has passed examinations substantially equivalent to those required for appointment as a Foreign Service Officer under the Foreign Service Act.

(b) Such authority as is or may become available by statute to the Secretary of State with respect to Foreign Service Officers, shall be available on the same basis to the Director of the United States Information Agency (hereinafter referred to as the Director) with respect to United States Information Officers, except as otherwise provided in this section, and except for the following sections of the Foreign Service Act or portions thereof which shall not apply to United States Information Officers: 201 (Director General of the Foreign Service), 211 (a) (Board of the Foreign Service), 401 (1) (Chiefs of Mission), 411 (Chiefs of Mission), the first three sentences of section 412 (classes of career ambassador and career minister), 421–422 (officers temporarily in charge), 431 (Chiefs of Mission), the last sentence of section 443 (designation of hardship posts), 501–502 (principal diplomatic representatives), the second and third sentences of section 517 (lateral entry), 518–519 (career ambassadors, career ministers, and chiefs of mission), 571 (b) (eligiblity of Foreign Service Offices to serve as Director General), and section 631 (retirement of career ambassadors and career ministers).

(c) There are hereby established in the United States Information Agency (1) a board composed of four senior officers of the Agency designated by the Director, and one officer of the Department of State designated by the Secretary of State, one of whom shall be designated Chairman by the Director, and (2) a board of examiners designated by the Director, which board shall carry out with respect to foreign service personnel of the Agency the functions vested by the Foreign Service Act in the Board of the Foreign Service and the Board of Examiners for the Foreign Service, respectively.

(d) The Secretary of State may, upon request of the Director, recommend to the President that United States Information Officers be commissioned as diplomatic or consular officers, or both, in accordance with section 512 of the Foreign Service Act. The Secretary of State may, upon request of the Director, assign United States Information Officers, commissioned as diplomatic or consular officers, to serve under such commissions in accordance with sections 512 and 514 of the Foreign Service Act.

(e) The Director shall establish and administer an independent retirement and disability system for United States Information Officers in accordance with the provisions of the Foreign Service Act.

(f) Regulations prescribed by the Director with respect to appointments, promotions, assignments, separations, and the general administration of the United States Information Officer personnel system, shall at all times be compatible with, and to the extent practicable, similar to those applicable to the Foreign Service Officer Corps.

(g) Nothing in this legislation shall be construed to authorize the Director to establish a Foreign Service Institute as provided in title VII of the Foreign Service Act.

(h) Nothing in this legislation shall be construed to make permanent the separation of the overseas information program from the Department of State.

UNITED STATES INFORMATION SERVICE

SEC. 1014. The Agency established by section 1 of Reorganization Plan Numbered 8 of 1953 shall hereafter be known as the "United States Information Service" and all references in such reorganization plan or in any statute, regulations, agreement, or other legal instrument to the "United States Information Agency" shall be construed to refer to the "United States Information Service." Nothing in this section shall be construed to alter

or affect in any way the functions, authorities, or responsibilities of the Agency.

As the Senator from Texas has well stated, it was the unanimous conviction of the members of the Committee on Appropriations that this Agency be made a part of the Department of State, instead of maintaining it as a separate and distinct organization.

The distinguished Senator from Indiana asked, I believe, a very pertinent question as to how anyone can know that the riots in Formosa were caused by the hordes of American there.

For the last 3 years I have each year visited Formosa, Korea, and the Republic of the Philippines, and many other countries in Southeast Asia. On all occasions I concluded that Uncle Sam has his nose much too far into the affairs of the people of too many countries.

In T'ai-pei, Formosa, the International Cooperative Administration pays the salaries of 810 persons—680 local and 130 Americans who are engaged in trying to balance industry with agriculture, and they have nothing to work with in the way of raw materials. In addition to ICA and miiltary personnel there are too many people representing the United States in connection with the United States Information Service on Formosa. Those Americans occupy the finest of residences in T'ai-pei. They drive the finest automobiles around the streets of T'ai-pei, dressed in the best of clothing. They exude wealth. That causes the people of Formosa—and the same thing is true in Korea—to believe that all Americans are rich, that they enjoy the best of everything, that they "come among us and try to do the same thing here." That is the cause of a good deal of the trouble that has occurred recently in Formosa.

I predicted last February that this would happen, not only in Formosa, but in the Middle East.

While visiting the capitals of Syria and Lebanon, I tried to take a few moving pictures of some people in the streets. They tried to stop me when they learned that I was an American. In Damascus, the police had to come to my rescue, because I was doing things that I had done previously—taking a few pictures and talking to a few citizens, trying to learn something about those countries.

I say we have too many Americans abroad who go about the poorer countries and live like kings in comparison with how the poorer people live. I would not be at all surprised if we had more Formosa-type outbreaks in many other areas of the world, particularly in southeast Asia.

The Information Service can talk all it wants to, it can spout propaganda, maintain plush libraries, and print leaflets by the bushel, but unless and until we get our aid down to the masses, and Americans abroad—including Information Service employees—stop flaunting their wealth, their cars, their fancy clothes in the faces of hungry people of underdeveloped lands, the threat of Formosa-type riots is always there.

Let me say, too, that there are too many employees on USIA payrolls; the entire USIA staffing pattern is wasteful.

It is my hope that the Information Service will reevaluate its work. They should extol the virtues of democracy among the people behind the Iron Curtain. If they did this in an objective manner, a great deal of good could be accomplished. They can also tell the people of Western Europe—although I do not think they need it—what our foreign policy is, but on a smaller scale. Most of that work should certainly be done by the State Department, in consultations with our so-called allies, who have access to United States news services as well as their own. I am in thorough agreement with the position taken by the distinguished Senator from Texas with regard to the large libraries that we are maintaining all over Western Europe. In Italy alone we are spending many thousands of dollars for rent in order to maintain libraries in 11 cities in Italy. That amount does not include maintenance and the cost of operating the libraries in that country.

I have been advocating that the books in these libraries be turned over to Italian libraries, operated by the Italian people. The same thing goes for France. The local libraries operating in France should get the books that we make available at our own lavish installations. They should be placed in libraries operated by the French people themselves.

Of course, the identical formula could and should be followed in the United Kingdom, Belgium, and the other Western European countries.

I am satisfied that the United States Information Service could live with much less than we have provided in the conference bill. I reluctantly signed the report because it involves an increase in the Information Service funds of $6 million. I am convinced that if those who operate the Information Service take a new look and confine their work to that originally contemplated by Congress in creating the agency, it will find the amount approved in conference more than adequate.

Let the agency cut down on the number of employees in Western European countries—cease propagandizing our friends so assiduously and begin doing more work in areas where it will do the most good. I would suggest that more emphasis be placed on spreading the messages of truth behind the Iron Curtains—objectively, without rancor or bias. The most powerful weapon the free world has is truth; this shining sword should not be tarnished by fiction or dulled by bias. In addition, the Agency might pass the word among its employees in all countries, particularly those in areas recently released from colonialism and still underdeveloped, that the course of prudence involves eliminating lavish displays of individual affluence. Let us deal with the peoples we contact as we would want to be dealt with if we were in their place.

Mr. JOHNSON of Texas. Mr. President, I yield now to the Senator from Arkansas, a member of the conference committee, who made a distinct contribution to our deliberations.

Mr. FULBRIGHT. I have a short statement that I wish to make. However, I do not want to delay the Senator. I know he has been on the floor for some time now.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that I may yield to the Senator from Arkansas without losing my right to the floor.

The PRESIDING OFFICER (Mr. CASE of New Jersey in the chair). Without objection, it is so ordered.

Mr. FULBRIGHT. Mr. President, before I make my statement, I want to be sure that the Senator from Texas will put into the RECORD the information with regard to the employment by USIA of persons employed by newspapers. Did he agree to do that in his colloquy?

Mr. JOHNSON of Texas. I will say that the information appears on page 345 of the House hearings. That information relates to approximately 475 writers, many of them employees of newspapers throughout the country, from the Pacific coast to the Atlantic coast. These persons have been employed by the USIA for special articles from time to time. I believe the period in question extended over 18 months.

Approximately 475 persons were involved, and approximately $70,000 was spent. One individual, employed by a St. Louis newspaper, received approximately $1,800 in a little more than 1 month for special articles. I do not know the conditions under which these persons are employed, that is, whether the director reserves to himself the right to employ them, or whether it is the assistant director. I know that the information is available. If the Senator desires it, I shall ask unanimous consent to have it printed in the RECORD; or he may ask unanimous consent to insert it in the RECORD.

Mr. JOHNSON of Texas subsequently said: Mr. President, earlier in the day, in a colloquy with the distinguished Senator from Arkansas [Mr. FULBRIGHT], through inadvertence, I stated that an individual employed by a St. Louis newspaper received approximately $1,800 in a little more than 1 month for special articles he had written for USIA.

The facts are that a St. Louis newspaperman received $1,800 in 18 months, whereas another individual, Mr. Michael Lever, received $1,800 in a little more than 1 month.

In a rapid exchange, the two separate facts became merged into one, and I wish now to make the record abundantly clear. I do not know where Mr. Lever resides. The record shows that he is a writer who received $1,800 in a little more than a month; whereas a St. Louis newspaperman received $1,800 over a period of 18 months.

I desire the record to be clear, so that no false impression will be left and no one will be done an injustice.

Mr. FULBRIGHT. In line with the suggestion of the Senator from Texas, I do ask unanimous consent to have the information printed in the RECORD, because it seems to me to be a most unusual action.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Free-lance services procured from July 1, 1955, to June 30, 1956

Date	Name and address	Title of use	Amount
July 22, 1955	Charles Adkins, director, public relations, Colgate University, Hamilton, N. Y.	Stories on 7th Annual Colgate University Foreign Policy Conference	$80
Apr. 24, 1956	Victor Alba, care of American Embassy, attention USIS, Mexico City, Mexico.	Article: Communist strategy and tactics in Latin America	200
Aug. 16, 1955	Robert J. Alexander, department of economics, Rutgers University, New Brunswick, N. J.	Article on Communism in Brazil	180
July 19, 1955	Thomas Allen, Bridgeport Herald, Bridgeport, Conn	Story on American Shakespeare Theatre Festival at Stratford, Conn	20
Feb. 28, 1956	Hollis Alpert, 513 6th Ave., New York 11, N. Y	Article on motion pictures	75
Apr. 26, 1956	Henry L. Alsmeyer, Jr., Caller-Times, Corpus Christi, Tex	Stories on Vice President Jose Goulart of Brazil	40
Oct. 14, 1955	David Anderson, Chicago Sun-Times, Chicago, Ill	Story on group of Russian architects, building officials	20
Aug. 4, 1955	Dwight Anderson, 2550 Valletta Lane, Louisville, Ky	Article on the Louisville Philharmonic Society	60
Sept. 7, 1955	James K. Anderson, Detroit News, Detroit, Mich	Story on group of Dutch men and women headed by Jan H. B. Niemeyer	20
Nov. 14, 1955	do	Stories on advance preparations, preparation committee statements, officials on visit of Guatemalan President; Guatemalan President emphasizing color, dignity of reception, summary speeches and significant reaction excerpts of important speeches.	40
Dec. 12, 1955	Margery Anneberg, Far Eastern and Russian Institute, University of Washington, Seattle, Wash.	Article on literature in Communist China	50
Sept. 23, 1955	John T. Appel, the Register, New Haven, Conn	Story on Sir Owen Dixon, Chief Justice of Australia at Yale Law School receiving University's Howland Prize.	20
Dec. 19, 1955	do	Story on the visit of Chief Venerable Vira Dharmawara at Yale University	20
Mar. 9, 1956	do	Story on United States Ambassador to India John Sherman Cooper	20
Apr. 13, 1956	do	Story on U. Maung Maung Gyi	20
May 31, 1956	do	Story (backgrounder) on Yale University. The backgrounder is to coincide with the visit to the United States of German Chancellor Konrad Adenauer.	25
June 21, 1956	do	Stories on United States and foreign statesmen who have received degrees from Yale University; degree ceremony at Yale University.	40
Nov. 4, 1955	Gerald Ashford, San Antonio Express, San Antonio, Tex	Story on musical salute to Vienna	20
July 27, 1955	Dean C. Avery, New London Day, New London, Conn	Story on the dedication ceremonies of second atomic submarine	20
July 14, 1955	Wilbur Baldinger, 1239 National Press Bldg., Washington, D. C	Research and preparation of story outline for cartoon book—Communist techniques in capturing control of ULS labor unions—How they can be ousted once they have gained control.	375
Sept. 2, 1955	Frank Bauer, Press Register, Mobile, Ala	Story on Louis Jordan, musician	20
Nov. 21, 1955	Orren Beaty, Jr., Arizona Republic, Phoenix, Ariz	Stories on the World Symposium on Applied Solar Energy	100
Nov. 3, 1955	John Beaufort, drama critic, Christian Science Monitor, 588 Fifth Avenue, New York, N. Y.	Series of articles on the American Theater	600
Sept. 2, 1956	Lester Bell, San Diego Union, San Diego, Calif	Story on the Joint United States-Mexican Trade Union Commission meeting in San Diego, Calif.	20
Sept. 9, 1955	Fluvio Bellini, attention Alan J. Funch, care of American Embassy, USIS, Rome, Italy.	Article on Communism in Italy	400
July 19, 1955	Leslie H. Bennett, New Orleans Item, New Orleans, La	Story on Lebanese vocational teachers training study group	20
Aug. 11, 1955	do	Story (interview) on Edgar Engelhardt, Deputy Mayor and City Administrator, Hamburg, Germany.	20
Sept. 1, 1955	do	Story on Renato Cellini	20
Sept. 22, 1955	do	Story on Mallam Abubakar, Nigerian Minister of Transportation	15
Oct. 6, 1955	do	Story on Freiherr Goeler von Ravensburg, Regierungs-director, Ministry of State; adviser for Federal-State relations.	20
Oct. 14, 1955	do	Story on Dr. Gebhard Mueller, Minister-President of Baden-Wuerttemberg (West Germany).	20
Nov. 4, 1955	do	Story on musical salute to Vienna	20
Nov. 7, 1955	do	Story on Dr. Herbert Moses, president of Brazilian Press Association	20
Nov. 14, 1955	do	Story on plans for an exhibit in connection with Vienna Opera opening	20
Do	do	Stories on advance preparations for visit of Castillo Armas; events 1st day of visit; events 2d day of visit.	60
Nov. 15, 1955	do	Stories on the Inter-American Press Association meeting	70
Jan. 3, 1956	do	Story on Mrs. A. Abas Manopo	20
Mar. 5, 1956	do	Stories on Mrs. Ingrid-Gisela Bohle-Hattje and (advance) on Latin American Press Seminar to be held in New Orleans.	40
Mar. 15, 1956	do	Story on Dr. Wilhelm Ansorge, Kurt Hoffman, and Dr. Gerhard Wilke	20
Mar. 16, 1956	do	Story on Japanese electrical industry study group	20
Do	do	Story on the Latin American Press Seminar	20
Mar. 29, 1956	do	Story on Hideisugu Hisano, Chief of Youth Education, Social Education Section, Ministry of Education, Tokyo, Japan.	20
Do	do	Story on Douglas Kim Lee, chairman of the Malayan-Chinese Association Youth Section, Kuala Lumpur.	20
Apr. 3, 1956	do	Story on the Uruguayan Industrial Productivity Study Team	20
May 1, 1956	do	Story on Dr. Ferdinand Bloetz, civil court judge, Hamburg, Germany, visiting New Orleans, La.	20
May 3, 1956	do	Story on the New Orleans Philharmonic Symphony Orchestra	20
May 31, 1956	do	Story on Miguel Jose de Almeida, visiting New Orleans, La	20
Do	do	Story on Jorge Pinto de la Torre, president, La Paz Bar Association	20
Aug. 11, 1955	Raymond E. Benson, 405 West 117th St., New York, N. Y	Research, editing and typing of manuscripts for Problems of Communism	150
Nov. 22, 1955	do	Editing and condensation of article by J. Glikeman	75
June 6, 1956	Meyer Berger, the New York Times, New York, N. Y	Writing article on New York	300
Mar. 16, 1956	Archie Bruce Birtwell, Malden Evening News, Malden, Mass	Story on Mexican shoe industry productivity group	20
Sept. 23, 1955	Louise Blachard, Miami News, Miami, Fla	Stories on Moncef Kedadi, teacher at Sadiki College, Tunis, Tunisia, North Africa, and Farid Kozma, president of the Lebanese Bar Association.	
Feb. 7, 1956	do	Story on Vice President Richard M. Nixon	20
Nov. 3, 1955	Robert Bellman, Waterbury American, Waterbury, Conn	Story on Mrs. Krishnalad Shridharani, Indian dancer	15
Dec. 23, 1955	Sando Bologna, Waterbury Republican, Waterbury, Conn	Story on Liudas J. Koncius, who has assumed duties as a district executive for Boy Scouts in the Waterbury, Conn., area.	20
Mar. 22, 1956	do	Story on the Indian Centenary Choir and Orchestra	20
Apr. 27, 1955	do	Story of Michele Chiusano who was brought to Waterbury, Conn., from Italy for an operation for deformed feet.	20
June 14, 1956	do	Story on Rt. Rev. Msgr. John Carroll-Abbing and Boys Town of Italy	25
Feb. 28, 1956	Dominic D. Bonafede, Miami Daily News, Miami, Fla	Story on Battle Berres, President of Uruguay	20
Feb. 15, 1956	Robert Breen, Baltimore Sun, Baltimore, Md	Story on Claus and Hansjoerg Helmig, German baseball players imported by the Baltimore Orioles Baseball Club.	20
Feb 29, 1956	do	Story on backgrounder on Italina-Americans in Baltimore	25
Sept. 30, 1955	R. H. Buchanan, Ottawa Citizen, Ottawa, Canada	Story on United States Secretary of State John Foster Dulles	20
Nov. 29, 1955	William Burke, State Journal, Lansing, Mich	Story on speech of Assistant Secretary of State George V. Allen	20
June 20, 1956	J. D. Burton, Herald-Telephone, Bloomington, Ind	Story on Miss Wang Taun-ying, member of the Foreign Affairs Committee, Legislative Yuan.	20
July 5, 1956	Mrs. Josephine Campbell, 4202 Kaywood Dr., Mount Rainier, Md	Stories on the Third Annual Convention of Pakistan Students in the United States.	105
June 8, 1956	Ashmead C. Carson, Columbia Record, Columbia, S. C	Story on German Ambassador Heinz L. Krekeler	15
Apr. 24, 1956	Father Henri Chambre, 15 Rue R. Marcheron, Vanves, Seine, France	Review of Continuity and Change in Russian and Soviet Thought	50
Dec. 21, 1955	Colin Clark, 4 Keble Rd., Oxford, England	Article on the standard of living in the U. S. S. R	200
Apr. 2, 1956	Charles Clay, Raleigh News and Observer, Raleigh, N. C	Story on 62 students, they have been accepted for enrollment in 3d session of School of Nuclear Science and Engineering.	20

Mr. FULBRIGHT. Mr. President, I did not know that this was going on until the very last stages of the conference. I had overlooked it. I thought I had looked at most of the House hearings, but I did not see it until the conference. Although I had known that the USIA was employing former newspaper employees, persons who had left the employ of newspapers, I certainly did not know that they were employing persons who were working with newspapers. To employ persons who are still working for newspapers and influencing the publication of newspapers, strikes me as a rather questionable practice. That may have some bearing on the universally favorable press for USIA that I have observed during the last few days in which this matter was under debate in the Senate.

Mr. JOHNSON of Texas. Mr. President, this is an illustration. It may be extreme, or it may not. I should like to have every Senator aware of it, particularly Senators who would insist on increased appropriations.

On October 19, 1955, Arthur Daley, of the New York Times sports department, was paid $100 for a story on Casey Stengel and the New York Yankees baseball club.

On May 31, 1956, a Mr. Walter W. Cunningham, who seems to have written many articles for USIA, one for as high as $400, for press coverage on a Salute to Rome, was paid $20 for a story about the Harvard Glee Club.

I do not pass judgment on the propriety of such employment, or the necessity for the articles in connection with our foreign policy. I simply say that I was startled; that my attention was arrested, and that I became determined to go to the bottom of it. I am very fearful that if we pursue such a policy and place in a propaganda agency or in any one man, whether he be a modern Democrat or a modern Republican, the power to go out and employ people from various newspapers throughout the country and pay them so much a piece to write articles about glee clubs, about the New York Yankees, and other things; it might lead to having a Government-kept or, at least, a Government-directed press to the tune of perhaps 500 or 600 writers.

Mr. FULBRIGHT. Mr. President, I am glad the Senator from Texas has placed that information in the RECORD. Of course, this bears upon the basic principle of the free press under our constitutional system. To some extent, when the Government begins to subsidize the press or the writers for it, the press is no longer free.

This reminds me of a provision which was in the RFC law. The RFC, in its heyday, would not make loans to radio stations or newspapers because it did not care to be placed in such a position that it could be accused of dominating them. It was contrary to good public policy to allow a newspaper to influence the policies of the RFC, but not because newspapers are not good from an economic point of view.

I think this practice ought to be stopped, and Congress ought to stop it, if the administration will not. The situation is quite different if the employee is someone who formerly was with a newspaper. That is his profession, and such employment would be legitimate.

But to employ a person who is now employed by a newspaper and to have him working in a dual capacity by having him, in a sense, on the Government payroll and accepting pay from the Government at the same time he is on the staff of an important newspaper, is, I think, contrary to good public policy.

Although I am not a member of the Committee on Appropriations, I participated in the hearings on this bill as a representative of the Committee on Foreign Relations. I may say that this was the first time I ever had such an experience. It was certainly an experience, especially as a member of the committee of conference. I do not think I have ever had an experience like it.

For days I sat with the Senator from Texas, who is the chairman of the subcommittee, and watched him conduct the hearings. He certainly deserves the congratulations and commendations of the Senate and of the country. I have never seen anyone exhibit such patience. I do not believe I would be capable of showing the patience which the Senator from Texas exhibited as chairman of the committee of conference. He was careful and very earnest in the conduct of the hearings, in trying to get at the facts. I am not at all certain that he got the facts, in spite of all his efforts.

For example, there was the matter of the newspapers. It never occurred to me that the practice we have been discussing had been engaged in. As the majority leader has already stated, it did not come to his notice. The hearings in this matter covered, I suppose, a thousand pages. Somehow we overlooked the question of the employment of newspapermen. I wish we had had the opportunity to cross-examine the Agency on that matter.

Mr. JOHNSON of Texas. I assure the Senator that we intend to pursue the subject and go into it thoroughly.

Mr. FULBRIGHT. I thank the Senator.

I myself have had other experience in trying to elicit elementary facts in connection with other matters. Therefore, I know how difficult it is, when a controversial matter is at issue, to get the facts.

But we have now reached the stage of considering the conference report. I believe it is safe to say that it is about as good as we could get, and in essence represents a compromise between conflicting views.

Personally, I did not believe the USIA should have been accorded the extra $6 million over the Senate figure. The conference report shows that I did not approve of the 2 amendments, No. 14 and 29, I believe are the numbers, one of which was to increase the USIA funds by $6 million. I would rather have had that money distributed among the permanent members of the State Department, the career personnel who are so vital to our country.

I was opposed to taking $1 million from the Senate figure on the Department's personnel needs. I was opposed to lowering the Senate figure on the international-exchange program. I was opposed to lowering the Senate figure on the Brussels Fair. In my judgment, an investment in those areas would yield far greater returns than an investment in USIA.

As the Senate well knows, we were confronted with a virtual agreement on the part of everyone that we would not raise the total amount. So the question was virtually how we should distribute a certain amount of money.

As a relative matter, I think an investment is far more preferable in the activities I have mentioned—that is, the student-exchange program and the Brussels Fair. But, in any case, it was necessary to reach an agreement, and there were others whose judgment differed from mine. The conference report represents a middle ground, and as such I reluctantly urge the Senate to adopt it, because I do not think there is any alternative.

Meanwhile, I shall also urge the quickest possible action to place the USIA under the State Department. As an independent agency, I believe it is out of control, and I do not believe it can be effective in presenting America to other nations. An information agency designed to explain American foreign policy to the rest of the world should be an instrument of the department which makes the policy; it should not have a life of its own, completely detached from the sobering responsibilities of policymaking.

The Senator from Texas has done outstanding work in helping us to find a proper course. It is my hope that the report may be adopted quickly; then we can settle down to the task of remolding

and reshaping the USIA into a truly effective instrument.

Mr. President, I ask unanimous consent that an editorial entitled "Unbalanced Budget," published in today's Washington Post and Times Herald, be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNBALANCED BUDGET

House and Senate conferees have agreed to restore $6 million of the savage cut made by the Senate in the appropriation for the United States Information Agency. In some measure, this is a triumph for sober second thought. It is marred, however, by two considerations. First, the sum of $96 million agreed upon falls about $10 million short of the appropriation voted by the House and is less than the Agency needs to carry out its vital job with full effectiveness; second, the money restored to USIA was taken out of appropriations previously approved for the State Department. Robbing Peter to pay Paul is not a rational method of budget making.

The USIA appropriation was considered in a package with the appropriations for the State and Justice Departments and the judiciary. The grouping was arbitrarily contrived for legislative convenience; and the ceiling set upon the combined appropriations was contrived to meet a doctrinaire demand for economy. The State Department appropriation ought to be judged in terms of the State Department's needs and functions, not in terms of the needs and functions of other agencies which are complementary and not competing. To pay USIA, the Congressional conferees took $3.2 million from the valuable educational exchange program and $5 million from the funds requested by the State Department for salaries and expenses.

Clipping the educational exchange program seems to us to make no sense at all. The program has brought immense if intangible benefits to the United States in the very field in which USIA operates; it promotes understanding of this country abroad in an extraordinarily effective manner by giving foreign intellectual leaders a chance to see it at firsthand and by sending American scholars abroad as good will ambassadors. Impairment of this operation simply makes USIA's job more difficult. The same may be said concerning the reduction of funds for American diplomatic representatives. The United States is already represented in too many places by men whose principal qualification seems to be that they are rich enough to pay out of their own pockets for official entertainment indispensable to the discharge of their duties.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that a more extensive statement upon the two matters which I have mentioned, dealing particularly with the student-exchange program, be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR FULBRIGHT

I wish to clarify further my position regarding the conference on the State Department appropriation bill. I signed the report, except for amendments Nos. 19 and 24, the amendments concerning the item for the exchange of persons and the item for the USIA. I believe that it is a serious mistake to decrease the Senate figure of $24 million, plus $3½ million of section 480 funds. This decrease was voted by the conferees over my strong opposition. The conferees apparently believe that the Information Service is as important, if not more important, than the exchange program. There is no evidence in the record, nor outside of the record, to my knowledge to support such a position.

The United States has, I believe, a great opportunity to influence the non-Communist world to regard favorably the political and social values of the democratic system of society. The best way so far developed to achieve this very important purpose is the exchange program, according to all the best evidence.

Thoughtful Americans in all walks of public and private life are in agreement that the educational exchange program is the best way for the United States Government to invest its money to achieve our foreign-policy objectives.

The President's United States Advisory Commission on Educational Exchange, composed of private citizens confirmed by the Senate, recommended $35 million for 1958. Three of its five members have inspected this program overseas during the past year, so they spoke from first hand experience when they said that the potential value of the exchange program "is not being realized because of lack of financial support."

The President's recommendation of $30 million plus more than $3½ million in non-appropriated foreign currencies substantiates this opinion of the advisory commission.

The Foreign Relations Subcommittee under the chairmanship of Senator HICKENLOOPER investigated this program abroad in the fall of 1952 when over $22.2 million was appropriated for these activities. This committee made a survey of opinions of ambassadors overseas as to the comparative value of the exchange program as against other media and found that "* * * the exchange programs are reported to be the most effective * * *."

At the same time the committee obtained the opinions of 55 United States foreign correspondents in 41 countries outside the Iron Curtain.

The committee reported that these trained professional observers stated that the exchanges "are perhaps the most important * * * because they involve exchanges of people * * * a nucleus of persons who see with their own eyes and can dispel many misconceptions about the United States. It has been, on the whole, one of the most successful of our activities * * * is worth considerable expansion."

The Hickenlooper subcommittee also reported "in a survey of Cabinet officials of member countries of the United Nations conducted * * * for Time magazine, it was reported that among various media * * * 'the largest vote was given to the exchange of students and visitors as the most effective. Such exchanges were out in front on every continent. In fact, running through most of the questionnaires, there was a constant theme that face-to-face contacts are the best way to gain greater mutual understanding around the world.'"

President Eisenhower is solidly in favor of the educational exchange program. During the 1952 campaign, he stated, "I firmly believe that educational exchange programs are an important step toward world peace. It is my personal hope that this activity, so important in the future of the world, will continue to expand in the coming years."

His personal interest is further evidenced by the fact that the only private activity of any kind to which he lends the endorsement of his name is an educational exchange program, the Eisenhower Fellowships, Inc., which exchanges some 15 to 20 people a year.

In 1956, both the Republic and Democratic platforms included endorsement of educational exchanges.

Theodore Streibert, former Director of USIA, said only last year that "the amount available for exchanges might well be doubled as against its present level."

The National Education Association, representing some 700,000 American teachers, officially endorsed the program in a statement to the Senate Appropriations Committee and urged that "Federal support of international educational exchange be expanded."

A representative of the American Council on Education, an organization of 1,113 educational institutions, supported the full $30 million request before the Senate Appropriations Committee, not only as an essential governmental investment in peace, but because "American universities and colleges have invested heavily" in such programs and "the success of their investment is dependent in large part on an adequate Government program."

Such endorsements are not restricted to governmental officials and educators. In a recent survey, the National Planning Association, numbering among its members many prominent American business and industrial executives, noted that "the fostering of more extensive and meaningful people-to-people contacts is important beyond the purposes of the military and economic aid programs. It is a worthwhile activity in itself, a vital element of a well-conceived foreign policy."

The tremendous popular interest in this program is evident from the great number of people who want to take part. For example, over 5,000 Americans apply for the approximately 1,000 scholarships offered for study abroad annually. Overseas, some 15,000 people apply for the nearly 1,500 scholarships offered for study in the United States each year.

Six and three-quarters million dollars of the appropriation will be in foreign currency. Therefore, of the House allowance, which provides fewer dollars than in 1957, will be particularly damaging to dollar programs. This program must have dollars for (1) stateside expenses of the foreign currency projects and (2) all projects with some 54 countries.

If this program is to operate the needed dollar projects in Latin America, the Near East, Africa, and Asia, we must appropriate more dollars than in 1957, not less, as provided by the House.

The leader(s) and specialist program under which such important people as those listed below, and on pages 564–567 of the Senate hearings, come to the United States are such dollar programs and should be expanded:

El Mehti Ben Barka, Morocco, speaker of the Consultative Assembly, member of the executive committee of the Istiqlal Party and of the Royal Commission on Education.

Sir Roy Welensky, Central African Federation, elected Prime Minister after his return from the United States of America, and former Minister of Transport, Communications and Posts.

Manochehr Eqbal, Iran, formerly rector of Tehran University, after his return from this country named Prime Minister by the Shah.

Tsui Shu-Chin, Formosa, chairman of the Central Planning Committee of the Kuomintang, member of the Legislative Yuan, and professor of international law and diplomacy at the National Chengchih University in Taipei.

Sam Sary, Cambodia, Vice Premier and High Counselor to the King.

While both the House and the Senate have allowed a total of about $10 million in foreign currency, these currencies are only available for use in the countries in which they are located—some 33 countries—and they cannot be transferred or be used for the foreign leaders program anywhere. The additional $6.4 million which the Senate allowed will be used approximately as follows:

	Million
Latin America	$1.5
Far East	2.3
Near East and Africa	2.6

This is wise in view of the need for this type of program with these important areas. It is interesting to see that none of it will be put into Europe where over $5 million in foreign currency is available.

In summary, although the Senate could not, under current critical budgetary limitations, accept the $30 million figure, it is clear that the $24 million figure which the Senate approved was the rock bottom for a balanced program.

The report of the House of Representatives was very critical, if not sarcastic, about the sending of a single tennis coach to Haiti, and used this example in an effort to discredit the entire leader grant program. The truth of the matter is that American athletes make excellent representatives and create a favorable reaction abroad.

The State Department has sent abroad, from Tanganyika to Singapore, from Lima to Reykjavik, outstanding American athletes such as Bob Mathias, twice Olympic decathlon champion; Bob Richards, the pole-vaulting preacher; Jesse Owens, alltime track and field champion; Dr. Sammy Lee, Olympic diving champion, and many other champions, in response to the great clamor in countries all around the world for the visits of these oustanding Americans.

The primary purpose has not been to teach people to run any faster or jump any higher, but rather it has been that of employing the tremendous worldwide interest in athletics to tell the American story. Sports, as a common denominator and with a language which is universal, has proved to be an excellent medium for telling that story.

The Communists have inspired many unfavorable stories abroad that American youth are irresponsible and degenerate; and of course, Hollywood movies have not always done a good job of depicting our youth in their true light. A Bob Mathias, a Sammy Lee, can do wonders in negating Communist lies. Further, by genuinely trying to help the youth of other lands, they have won abundant respect and understanding for our country.

Dr. Sammy Lee, a medical doctor, an eye, ear, nose, and throat specialist, a former major in the United States Army, and of Asian ancestry, probably did more to win friends for the United States on a State Department planned tour than any other single American in recent years. He was a living refutation to Communist-inspired lies about opportunity for members of minority races in the United States. Significantly, the Los Angeles Times of April 4, carried an announcement that the Los Angeles Sales Executive Club named Dr. Sammy Lee "Salesman of the Year" for "his outstanding contribution in selling people throughout the world the basic principles, ideals, and true significance of the American way of life."

Bob Mathias and all our athletes and coaches were idolized everywhere they went. For example, in Cambodia, the Government declared a national holiday—Robert Bruce Mathias Day (while Bob was there)—and all the youngsters were excused from school to see this great American champion, a wholesome production of our educational structure.

In Burma, when the ministry of education planned a farewell party for Bill Miller, so many thousands wanted to attend they had to hold it in the stadium. A Burmese Government official, before thousands of well-wishers, gave Bill a silver bowl as a gift, and said, "Bill, when you remove the lid from this bowl, you will find in it the hearts of all Burma."

When an internationally known figure like Olympic Champion Rev. Bob Richards, the pole-vaulting preacher, in speeches before youth groups, university assemblies, crowds in stadiums, quotes our Bible and their Koran and points out our common desires for peace—as he did in Asia—millions, yes millions, hear of it, because the masses of sports enthusiasts in all countries number in the millions. And surprisingly (perhaps to some people) chiefs of state, governors, mayors, and top influential leaders have been among those appreciative audiences.

The abundant understanding and good will which was won for our country through these athletes and coaches was won because the aid they rendered was an aid that did not injure the pride of the recipients. No self-respect was lost in accepting that kind of assistance, since the giving was genuine and because no ulterior motive could be ascribed to that giving.

As a matter of fact, the pride of whole nations was lifted as the result of the inspiration and encouragement our athletes and coaches gave their youth to compete in the Olympics and at other international games. Gratitude to our country has been freely expressed, again and again, by governmental officials, school and youth leaders from nations all around the world because of the aid and encouragement our athletes and coaches so nobly gave. In an article which appeared in Bob Addie's column of the Washington Post on May 17 that reporter described an interview he had with Mr. Archie Evans, East African sports officer—an interview in which Mr. Evans warmly expressed his country's appreciation for the visits of great American athletes and coaches to his land, where recently the Mau-Maus were so active with their acts of terror. The East African sports officer concluded with "The American athletes you sent us made a lasting impression on our people."

It strikes me that the State Department's International Educational Exchange Service has exercised outstanding imagination in employing the tremendous worldwide interest in athletics as a medium for telling the American story, and the Department deserves our praise for that effort, rather than derision.

The case which aroused such severe criticism by the House was that of Mr. Albert Ritzenberg, formerly tennis coach at Georgetown University in 1953–54, who was sent to Haiti last year. Mr. Ritzenberg was born in 1918, in Washington, D. C., and resides in Montgomery County, Md., with his wife and four children.

He served as a captain in the United States Air Force from 1942–45 in Australia, New Guinea, and the Philippines; and was civilian athletic director for the Air Force in 1955–56 at Tripoli, Libya.

Ritzenberg attended Central High School in the District, received his A. B. degree from the University of Maryland, and his M. A. in sociology from George Washington University. He also took additional graduate work at the University of Maryland toward his Ph. D. He won his first tennis championship in the District at the age of 10 years; at the age of 13, he was District of Columbia junior champion and went on to win the Middle Atlantic junior championship at the age of 14.

While at the University of Maryland, he was an outstanding star and was selected by that University to its Hall of Fame. He is a past president of the Middle Atlantic Professional Lawn Tennis Association and was tennis coach at Georgetown University during 1953 and 1954.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield to the Senator from Oregon.

Mr. NEUBERGER. I must confess that I am somewhat disturbed by the moral and ethical implications of the points raised about newspapermen being employed by the United States Information Agency. One reason why I am disturbed is that there is a definite inference that a member of the American press would, ipso facto, give favorable coverage to the United States Information Agency because he received $100 for writing about the New York Yankees, or $80 for writing about the Harvard Glee Club, or $150 for writing about the national forests in Idaho. It is difficult for me to believe that the members of our journalistic profession are thus readily contaminated.

Let me explain to the Senator what I mean. I doubt if it is consistent to raise this point on the floor of the Senate when most Senators have been elected to their positions with contributions made from the political-education funds of trade unions or with very substantial contributions from the owners of banks, private utility companies, sawmills, and all kinds of corporations which may have dealings with the Government.

I decline to believe that any Member of the Senate has his viewpoint contaminated because he may accept thousands upon thousands of dollars from big business or trade unions. But I do not see how the Senate can say its Members are not influenced by campaign contributions, while some newspaperman will have his attitude and his coverage affected because he may take $80 or $100 from the United States Information Agency for actually composing a piece of prose or any essay which the Agency can use in disseminating information about the United States to countries abroad.

Perhaps I am wrong, but I think morality is indivisible. I do not see how we consistently can erect any higher standard for the representatives of the press than is established for those who hold the highest offices in the Government.

It costs millions of dollars to elect the President of the United States. His campaign managers, in his name, accept tens of millions of dollars for campaign purposes from private groups of one kind or another.

I should not like to think that the President would be influenced in any way by sums which completely dwarf those that are paid to newspapermen by the United States Information Agency.

Mr. FULBRIGHT. The Senator is raising, of course, a question of ethics and morality, which I think is a very subtle and difficult one to deal with offhand.

In such a case, I think the public policy properly prohibits the Federal Government, by means of the RFC, from lending money to newspapers. Newspapers have a very special protection under the Constitution and under the traditions of our democratic society; and the other day I drew a distinction between newspapers and the United States Steel Co. or any other company, in the case of such a special relationship. The newspapers create news and mold public opinion. A free press is considered essential to the healthy and lively functioning of a democratic system.

I do not make any charges that the New York Times, in response to this particular payment of $100 to one of its employees, altered its editorial policy, or anything of the kind. I only say that as a general principle, it is bad public

policy for a Government agency with large amounts of money to spend to be permitted to employ existing employees of newspapers, and to do so on more or less a permanent basis.

This matter is not simply a "one-shot" affair. In the hearings we see the names of literally dozens of employees and representatives of important newspapers in the United States. I think there is absolutely no analogy at all between such payments to newspaper writers and contributions to the campaign of the President of the United States or to the campaign of the Senator from Oregon.

On the other hand, if the Senator from Oregon were to become a paid employee of a particular, narrow, interested group, and if he regularly accepted pay from that group, I think an analagous situation might begin to be approached. However, I doubt that the Senator from Oregon would do such a thing, although he properly can accept contributions from persons within his constituency who are interested in his campaign. I am sure all Members of the Senate have accepted contributions from persons within their constituencies who are genuinely interested in their campaigns. But I believe such contributions are different from payments which a Government agency might make to a newspaper employee or to reward that part of the press. If a Government agency is to be permitted to purchase unlimited quantities of Life magazine for an indefinite period of time, does the Senator from Oregon think that is a proper relationship? But this Agency has been doing that.

Mr. NEUBERGER. Mr. President, my point is that I think the morality of the individual members of the press is equally as good as the morality of individual citizens who are in politics. I should like to emphasize the contention that it is my opinion there are no more members of the press corps who are subject to improper influence by accepting fees for writing for the United States Information Agency, than there are citizens in politics who are subject to improper influence in political life by accepting campaign contributions.

Mr. FULBRIGHT. I did not make such a comparison; I did not make such a statement.

Mr. NEUBERGER. But indication was made on the floor of the Senate that such payments or fees to newspaper writers might result in a favorable, slanted attitude by members of the press in regard to the United States Information Agency.

Mr. FULBRIGHT. It is purely incidental; but let me say that so far as I could observe, every such newspaper which was brought to my attention "went overbroad" in its attitude regarding the United States Information Agency. That matter was brought to my attention.

I believe that the article, which was placed in the RECORD, about the State Department was a very fair one. However, for some reason it did not occur to the writer of the article that other Government interests were involved in that matter. Not only the article by Mr. Childs, but the articles by all the others who wrote in that newspaper during the last 10 days—and this is especially true in the case of the interview with Mr. Washburn, which was carried by the press on Monday morning—were slanted in such a way as to make it appear that almost the only Government agency involved was the USIA, and in the articles practically nothing was said about the other Government interests involved, whereas it was well known that under the gentlemen's agreement, so to speak, the question was one of allocating a limited amount of money between 3 or 4 different Government interests or agencies.

The Senator from Massachusetts [Mr. SALTONSTALL] made that point very clear several days ago, and he did so again this morning. His position happens to be the same as mine. I agree with him about the relative importance of the activity. But I did not see a single newspaper present clearly that that was what we were confronted with, although I would say that this morning the Washington Post did a good deal to explain the situation.

Mr. NEUBERGER. I would say there is no more direct relationship between the attitude of various segments of the press in regard to the United States Information Agency and the payments made to members of the press by the United States Information Agency, than there is between the voting by Members of Congress on the issue of tidelands-oil disposal and campaign contributions which may have been made by very wealthy persons in the oil industry.

My claim is that I believe it is not fair to raise the ethical and moral question—which goes to the very heart of a person's integrity—about the American press and to imply that there is a conflict of interest because members of the press receive certain payments—which do not seem excessive or very large—for writing for the United States Information Agency, and not to imply, similarly, that the Members of the Senate and the Members of the House of Representatives and the Governors of the various States are influenced by the infinitely larger campaign contributions they receive when they run for public office.

Mr. FULBRIGHT. Mr. President, I am not quite clear about the point the Senator from Oregon seeks to make. If he means to say that we should not discuss this matter on the floor of the Senate, and that we canont change this situation, then I cannot agree with him. I think it is bad public policy; and so far as I am concerned, I think it should be stopped. I do not believe that a Government agency with very large appropriations should be permitted, as a practice, day after day and month after month, to employ newspaper writers with public funds. That is the point I am making.

I make no implications; but I say that is bad public policy—just as I have said that the RFC, at the time when I had something to do with it, did not make loans to newspapers. It could be said that newspapers are as good as any other organizations; and they are. But under our policy, we did not approve of having the RFC make loans to newspapers. No one suggested that the making of loans to newspapers might undermine their moral standing.

Mr. NEUBERGER. But in this case, the names of individuals have been mentioned.

Mr. FULBRIGHT. I was talking about the newspapers.

Mr. NEUBERGER. I cannot believe that the attitude of these journalistic men toward public policy is for sale, or that it is influenced by having them write for the United States Information Agency.

Mr. JOHNSON of Texas. Mr. President, first of all, let me say that I do not want the RECORD to indicate that either the Senator from Texas or the Senator from Arkansas has said that anyone is for sale, or that anyone has acted improperly.

In response to a question, I read from the House hearings information which was not previously divulged to the Senate or to the Senate committee. It was information of which we were not aware. I do not know whether the Senator from Arkansas has studied those hearings, and I doubt that the Senator from Oregon has studied them.

I should like to point out that I think there is a considerable difference between making a contribution to a political campaign and having a person on a payroll month after month. What I seriously question is the policy of giving any bureau of the Government—much less the propaganda bureau—the authority to reach into the editorial rooms of the Nation and select special writers to write special articles, for special fees, paid for by the taxpayers. I believe such a policy should be carefully studied.

I do not know Mr. Daly, of the New York Times. I must assume, and I do assume, that he is a man of the highest integrity. I do not question his motives, or what his opinion about the USIA is.

But I do question the wisdom of a $100 expenditure for an article on Casey Stengel and the New York Yankees. One can get from any small town daily an article about Casey Stengel and the Yankees, without digging down into the taxpayers' pockets and paying for such articles.

I said that I would not pass judgment on the matter. I assured the Senator from Arkansas and the Senator from New Hampshire, when they asked the question, that the Congress should go into it further. That is what should be done. I commend the House hearing to the attention of the Senator from Arkansas and the Senator from Oregon, because it is very interesting to see the regularity with which some of these articles are purchased and the geographical distribution of them.

Mr. FULBRIGHT. I should like to say, in response to what the Senator from Texas said in his last statement, that I agree with him that it is bad public policy. I am not accusing anyone of influencing editorial policy. I said it is bad public policy, and I stand on that statement.

Mr. NEUBERGER. Mr. President, I wish to say, if I can have the floor in my own right——

Mr. FULBRIGHT. I yield the floor.

Mr. CLARK. Mr. President, the Senator from Texas has the floor.

Mr. JOHNSON of Texas. Mr. President, I have the floor. The Senator from Connecticut [Mr. BUSH] had asked me to yield to him, and I shall do so briefly. Then I shall yield the floor.

Mr. CAPEHART. Mr. President, a point of order.

The PRESIDING OFFICER. The Senator will state it.

Mr. CAPEHART. Can a Senator get the floor and then yield the floor to anyone he wishes to, for as long as he wants to?

Mr. JOHNSON of Texas. Mr. President——

Mr. CAPEHART. The Senator——

Mr. JOHNSON of Texas. Mr. President, will the Senator follow the rules? The Senator has been here long enough to know the rules.

Mr. CAPEHART. Mr. President——

Mr. JOHNSON of Texas. Mr. President, may I be recognized? I do not desire to yield to the Senator from Indiana. If he desires to be heard, he can get the floor in his own right. The Senator has undertaken to himself the parliamentary responsibility for this body. The Senator from Texas asked unanimous consent—evidently the Senator from Indiana did not hear it, or recognize it, or was not in the Chamber—that he be permitted to yield to the Senator from Arkansas, without losing the floor. That is the ordinary and customary practice indulged in by Senators—I assume even by the Senator from Indiana.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I do not yield.

Mr. CAPEHART. My point——

Mr. JOHNSON of Texas. Mr. President, I do not want to be shouted down. If the Senator from Indiana does not know the rules, I assume the Chair will enlighten him.

The PRESIDING OFFICER. The Senator from Texas declines to yield.

Mr. JOHNSON of Texas. The Senator from Connecticut asked the Senator from Texas to yield, and reminded him that he had asked unanimous consent that he yield to the Senator from Arkansas without losing the floor. I am not anxious to hold the floor. I desire any Senator who wishes the right to get the floor to have it, but I desire to be courteous to the Senator from Connecticut and yield to him under the same agreement.

Mr. CAPEHART. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator will state it.

Mr. CAPEHART. The point of order is that another Senator can yield only for a question. He cannot yield to another Senator to make a speech.

Mr. BUSH. Mr. President, a point of order.

Mr. CAPEHART. Mr. President——

The PRESIDING OFFICER. The Chair rules that the Senator from Texas was recognized under a unanimous consent to have the right to recognize and yield to other Senators without losing the floor. He first yielded to the Senator from Arkansas with the understanding he would not lose his right to the floor. He has yielded to the Senator from Connecticut.

Mr. JOHNSON of Texas. Mr. President, will the Chair rule on the point of order?

The PRESIDING OFFICER. The point of order of the Senator from Indiana is overruled, and the Chair now recognizes the Senator from Connecticut.

Mr. CAPEHART. Is the Chair stating that a Senator can yield to another Senator other than for asking questions?

The PRESIDING OFFICER. The Senator from Texas, the majority leader, procured unanimous consent for the purpose of yielding to other Senators. That request was granted. The Senator from Texas is now yielding to the Senator from Connecticut.

Mr. CAPEHART. I respectfully say the Senator from Texas did not ask unanimous consent to yield to the Senator from Connecticut.

Mr. BUSH. Mr. President, I respectfully differ with the Senator from Indiana. That was exactly what the Senator from Texas asked—that he might yield to me exactly as he yielded to the Senator from Arkansas. My understanding was there was no objection.

The PRESIDING OFFICER. The statement of the Senator from Connecticut is correct. The Chair now recognizes the Senator from Connecticut, pursuant to the unanimous consent understanding.

Mr. BUSH. I thank the Chair. All I want to do is make a few comments on the report of the conference committee. My views on the bill have not changed. I still feel it is unfortunate that the House made such very deep cuts in connection with the budget request of the administration for the USIA. I think it is further unfortunate that the Senate made further cuts in the appropriation for that Agency. I was glad to see some of the Senate cut restored by the report which the Senator from Texas is making this morning. I assume, of course, the conference report will be adopted, and I earnestly hope that the views which have been stated in favor of these deep cuts—and I am sure they have been stated in good faith in almost every instance—may be sustained by experience. I wish to say I very much doubt they will be sustained by experience, and I am very unhappy at the prospect that the conference report will be agreed to.

I have in my hand a letter which I just received from a gentleman by the name of Herbert Maza, of Bridgeport, Conn. I shall not read the entire letter, but only the first three brief paragraphs of it:

DEAR SENATOR BUSH: I have just finished the New York Times on the cuts in USIA, and as a former employee of that organization I would like to voice some comments which I hope you will find of value.

First of all let me say that I can see USIA without any rosy haze and I have been convinced by criticism within and without the Agency that its administration has been subject to bias and been inefficient at times.

However, I feel that the current budget amputations are like trying to cure a cold in the head by cutting it off. I was able to see the results of the 1953 cuts in Switzerland and as an American citizen and taxpayer I was aghast at the foolishness of it all.

The gentleman who wrote the letter goes on to tell about his experiences and observations in Switzerland when he was there at the summit conference, and later in Scotland. He describes the most unfortunate results of the penny-wise pound-foolish policy with respect to the USIA program in those two countries, of which he speaks from experience at first hand.

Because I believe this letter is so interesting and so enlightening, Mr. President, I ask unanimous consent that it be printed in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BRIDGEPORT, CONN., *May 28, 1957.*

DEAR SENATOR BUSH: I have just finished the New York Times on the cuts in USIA and as a former employee of that organization I would like to voice some comments which I hope you will find of value.

First of all let me say that I can see USIA without any rosy haze and I have been convinced by criticism within and without the agency that its administration has been subject to bias and been inefficient at times.

However, I feel that the current budget amputations are like trying to cure a cold in the head by cutting it off. I was able to see the results of the 1953 cuts in Switzerland and as an American citizen and taxpayer I was aghast at the foolishness of it all.

In Bern the whole bottom floor of the Embassy had been emptied. Finally a Swiss was hired to read press clippings. Howard Garnish in Geneva was trying to keep his hand in, while covering the U. N. Conferences in that city. The library, which had been assembled at great cost and trouble was broken up and taken from open shelves in downtown Bern to be distributed among the Swiss universities to get dusty in the stacks. The lists of prominent and influential Swiss were put aside to gather dust and become worthless.

The experienced Swiss employees were fired, some with chagrin, which did United States relations no good. Many who had built up contacts with the United States through these offices, became quite cynical about the United States need for offices only when it wanted something—and critical of the childish and irresponsible behavior of the United States Congress.

True, we can expect the Swiss to be our friends. But they develop deep reservations that neutralize all the good work done through other channels. There was no one there to explain why we raised our tariffs on Swiss watches and cheese. They pointed bitterly to the balance of trade which was in the favor of the United States. They—especially the unemployed watchmakers—were not surprised at the flush of posters showing an American atomic cloud rising from a skull, which were plastered all over Switzerland by the Communist Party.

The argument could have been made that the Swiss were our friends anyhow, and besides, having hard currency, they had access to American films and magazines. I was able to weigh these factors and I must say that our films, which are made for domestic dramatic sensationalism, and our magazines, which put so much emphasis on material consumption, produce a negative

reaction in all classes. They enjoy them, there is no doubt about that. But their impression of America is that of an impetuous money-grubbing nation and none of our commercial outlets can counteract that.

During the Geneva Conference I could see the Tass newspapermen buying drinks for the Indian correspondents and giving them long political talks. Whereas our people from Life and AP were busy collecting handouts and tracking down stories and didn't waste time with the foreigners. Why should they? They weren't paid to do so and they wouldn't get any extra credits from the boss if they explained our attitudes to a Burmese newspaper correspondent. I felt sorry that my country, supposedly the richest in the world, could not keep up with the others in this political competition. I felt sorry that we had wasted so much money closing down an office so impetuously, only to have to reopen it again 3 years later—at additional expense.

My other experience with USIA was in Scotland. Here I found 1 public-affairs officer with 2 secretaries to take care of about 9 million people. Again, the Scots are our friends and most of them seem to have relatives or close connections in the States. They can read our magazines and understand our movies. But you try explaining the Blackboard Jungle to them. Try to explain a story in a magazine showing food being discarded. Try to erase the stereotype of the rich American—with big hat, eyeglasses, cigar, hand-painted necktie—trying to buy the castle on Princess Street.

It is difficult to understand that this office will now be abolished. My reaction, after 2 years' residence in Scotland, was that it should have had a branch in Glasgow on the Red Clyde (the color is for political reasons in the shipyards) and in Belfast where there was an economic recession. Dr. Selcke, the PAO, was working like the devil. I tried to help him as far as possible. But you cannot know the shame we felt during the Edinburgh festival, at the reception for the members of the Boston Philharmonic Orchestra in the Royal Caledonian Hotel, when a British brigadier general stalked out (the one who organized the Military Tatoos) because when he arrived late the waiter told him there were no drinks left. The allotment for the reception covered enough for 2 or 3 drinks per person and it was unfortunate that they ran out at that time. Any of us would have been glad to pay for his drink out of our own pockets, but it was too late.

I have seen these PAO's caging lecturers, who they could not pay—at the most they could buy them a lunch, most likely out of their own pocket money—and I have felt sorry for them. By and large they are excellent people, well qualified and experienced. I have liked everyone I have met. Their wives have to work like beavers to keep up the rounds which produce so much information and essential contacts—and now all these are to be lost; the United States is to be discredited by this impulsive reaction.

I could never understand how we could keep about 4,000 United States airmen and officers at Prestwick and Kirknewton and only 1 PAO in Edinburgh to counteract the poor impressions created by drunken sergeants and fast-driving lieutenants. A good many of our military men were never designed for peaceful export. They hardly make friends over here and over there they are apt to be sneering and noisy in their shortsighted criticism. It would take the pay of only two majors to double the USIS office and produce a service of considerable value. Yet, somehow that has not been possible. I cannot understand it. I have seen and have measured the effects (in my mind's eye) and the shift would have certainly been worth while.

Naturally, I am not familiar with the overall picture. I have not had the privilege of seeing all United States overseas operations. So at this time I should make a reservation that perhaps overall United States policy requires such drastic action. However, if you would like the impressions of an American who was on the ground in question, all I have said above, and more, stands.

Yours sincerely,

HERBERT MAZA.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to my friend the Senator from Pennsylvania.

Mr. CLARK. Mr. President, I should like to invite the attention of the majority leader to the appropriation for representation allowances, which, as I understand, was originally recommended by the administration at $1.6 million.

Mr. JOHNSON of Texas. $1.2 million.

Mr. CLARK. $1.2 million. It was cut by the House to $600,000. The Senate restored $200,000 of the cut.

I know I speak not only for myself but for the junior Senator from Montana [Mr. MANSFIELD] and perhaps for the majority leader in regretting that cut and expressing the hope that next year we shall be able to correct this situation, which I believe causes a serious curtailment of the effectiveness of the members of our Department of State.

My question of the majority leader is: Does he believe that the House is so adamant that we are not going to be able to do anything to remedy that situation, which I personally believe to be most unfortunate?

Mr. JOHNSON of Texas. I have found our colleagues in the House to be very cooperative and very concerned with the national interest, as they see it. We could not agree on this particular item.

It was the feeling of the Senator from Texas that there should be an increase in the amount appropriated by the House. But, after 5 hours and 15 minutes, he was unable to convince the House conferees of that fact; so we felt, rather than to delay action on the bill, that in this instance we would have to yield.

I may say to my friend that I have great respect for the Members of the other body who sit on the subcommittee. I shall talk to them from time to time and express my viewpoint. I hope that the viewpoint will be given due consideration.

Mr. CLARK. Mr. President, will the Senator yield for one further brief question?

Mr. JOHNSON of Texas. I yield to my friend.

Mr. CLARK. I thank the Senator for his explanation of the matter. A short while ago the distinguished majority leader made reference to the Harvard Glee Club and the amount that was paid to advertise the Harvard Glee Club by somebody from the USIA.

Mr. President, I am keenly aware of the musical attributes and abilities of the citizens of the great State of Texas, and I know they have also made a real contribution to international understanding.

Mr. President, my view is that the Harvard Glee Club needs no advertisement from the USIA or any other group. I should like to place of record the fact that the Harvard Glee Club, in its tours of Europe and other areas of the world, has made as great a cultural contribution to understanding between the peoples of the Free World as any other similarly situated organization.

If the Senator from Connecticut had not unfortunately left the Chamber, I might have made the suggestion that the Harvard Glee Club has made an even greater contribution that the Whiffenpoofs, a group to which the distinguished Senator from Connecticut belongs.

I know the distinguished majority leader intended no affront to the Harvard Glee Club, from the fine institution of which I happen to be a graduate, and that he was just commenting upon the matter when he discussed the writing up of a story on the USIA.

Mr. JOHNSON of Texas. The Senator can go further than assuming it. It is a fact clearly in the RECORD.

In response to an inquiry, the Senator from Texas gave a listing of various articles which had been written by correspondents of various newspapers and other writers on various subjects. He stated, before he made his comment, that he did not pass judgment on the propriety of the articles. He did not question the effectiveness of the program. He did not make any unfair reflection on the Harvard Glee Club, and is certain that it is as good as my colleague from Pennsylvania says it is.

Mr. President, Senators are asking questions as to when it is expected that a vote will be reached. I am unable to tell them. However, in order that all Senators may be on notice, I believe that the Senate should order the yeas and nays on the question of agreeing to the conference report. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. BYRD. Mr. President, I wish to pay tribute to the distinguished majority leader, who was chairman of the subcommittee handling these appropriations, for bringing about a result the like of which I do not recall having seen in all my experience in the Senate. He submitted a conference report which provides lower expenditures than either the House or Senate versions of the bill.

The conference report is $194,000 below the Senate version of the bill. It is $908,500 below the House figure. It is $102,758,509 below the estimates, or about 15 percent.

I commend the Senator from Texas for the capacity and diligence he has shown in presenting the report of the committee, and also in handling the conference report. I have never known a bill to be more fully explained, in an understandable way, than the bill which was handled by the distinguished majority leader.

Mr. JOHNSON of Texas. I thank my friend from Virginia.

Mr. JAVITS. Mr. President, I should like to enter a dissent to the pending conference report.

This being the final legislative action upon the pending measure, I believe that

certain points need to be made with respect to the USIA whether they are effective in terms of this conference report or not. We all understand that the conference report wraps up the appropriations for the State Department as well, and therefore it undoubtedly will be agreed to, because everyone wants the State Department, as well as the other agencies, to be financed.

However, it seems to me that that begs the fundamental question. It is my deep conviction that the USIA is being mutilated, against the best interests of our country. I do not question the motives or the point of view of anyone. I am expressing my own point of view.

I point out, by way of substantiation of the statement which I have made, that when we make a reduction now, we force the Agency to retrench—not to fail to expand, but to retrench—because in order to give the Agency the amount with which it operated last year, we would need to allow it $20 million more than is allowed in the conference report. So if we wished the Agency to operate as it is now operating, it would be necessary to allow it $20 million more. We are reducing the appropriation even further, $10 million in terms of the conference report, below what the House allowed.

The real danger is that, being forced to retrench and dismiss employees, the Agency cannot hire them back overnight. The Agency suffered from that kind of disorganization in 1953, and it will suffer from the same kind of disorganization, in an even more critical period, in 1957 and 1958.

Bearing upon the question of mutilation—and I think that is what is involved—I wish to read to the Senate a very brief statement which was made by Tracy S. Voorhees, a highly respected public servant who served in the previous administration as well as in this administration, and other members of his group which studied USIA a year or so ago. At the request of the previous Director of the Agency, Theodore Streibert, he headed a small committee to study the problem.

This is what they said:

We have noted that Senators who have recently criticized the operation of the program will recognize the importance of the program itself. With this in mind, we stress the fact that we know of no alternative to strengthening the existing organization to the full extent possible.

If, through crippling cuts, the patient effort which has been made over almost 4 years to build this Agency from a very low start to a much more effective—although of course far from perfect—instrument is reversed, we believe that it would be extremely difficult, if not impossible, again soon to rebuild.

It seems to me that the arguments that we hear address themselves to the theory that Congress somehow is engaged in arms's-length trading with the USIA, and is saying that it has not justified its work, that it is not doing a good job, and therefore Congress will not give it more money. However, we are hurting ourselves if we do that, because our job is to see to it that the job is well done. We should at least give USIA what they received last year, and give ourselves or them an opportunity to reorganize their activities.

In an excellent article published in the New York Herald Tribune, entitled "Daily Communique To Tell Cold War's Progress Urged," the distinguished columnist David Lawrence analyzes the subject. David Lawrence, the publisher of U. S. News & World Report, certainly is no radical. In the article, he points out that we are just now giving notice that we are curtailing our information activities in Britain and France. He goes on to point out that those who have argued about our operations there do not realize that there are many newspapers in both countries which do not have money enough with which to pay for their own press services, and they are able to get full statements made by our President and Congressional leaders only through the USIA. Here is what he says:

Meanwhile, the understanding of the American viewpoint by the British and French people is growing. Unfortunately, this is the time selected by some Members of Congress to cut down the services of the United States Information Agency. Over the weekend it was announced from London that the work of the American Agency inside Britain would have to be curtailed for budget reasons. Probably this will happen also with respect to France.

CAN'T AFFORD CABLE TOLLS

Shortsighted Members of Congress have been asking what the need is for information services to those two countries. The answer in part is that most newspapers abroad cannot afford to pay cable tolls on the full texts of America's statements of policy. The United States Information Agency provides these texts free. Also it is important for the United States Information Agency to have representatives on the spot to explain the American viewpoint to editors abroad.

In short, Mr. President, I think this is the worst kind of economy from the standpoint of the interest and national security of the United States. This must be stated.

I hope the President will immediately ask us for supplemental appropriations so this Agency is not dismembered in ways in which it cannot be restored. It must be remembered that it is often not possible to get good people back after they have been sent out into the main stream of commercial activity.

Mr. JAVITS subsequently said. Mr. President, I ask unanimous consent that the memorandum from which I read earlier in the day, in connection with the consideration of the conference report on appropriations for the USIA, be printed in full in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM CONCERNING THE UNITED STATES INFORMATION AGENCY

The undersigned neither hold nor expect in the future to hold any official position with USIA. However, we all have had extensive experience with the United States Information Service. Mr. Dickey was first a consultant and then the Agency's general counsel for upwards of a year in 1953 and 1954. Mr. Thomason has been a consultant for a number of years. He was a member, and Mr. Voorhees was chairman, of a committee which, at the request of the then head of the Information Service, made 4 years ago a study of how it should be organized as a separate agency. The recommendations of this study were adopted.

A year and a half ago, all three of us, at the request of the Director of the Agency (Mr. Streibert), joined in a restudy to determine, after more than 2 years' operation, what organizational and other changes were called for. As a foundation for this, Mr. Dickey spent more than a month full time in interrogation of the key personnel stationed in this country or here on temporary duty during that period. After analysis of this material, and following extensive further studies by Mr. Thomason and Mr. Voorhees, a report and a series of recommendations were made to Mr. Streibert. These recommendations were, we were informed, largely adopted, with successful results. Accordingly, we all have acquired a substantial amount of knowledge concerning the information program, the Agency, and its problems.

Mr. Thomason and Mr. Voorhees also had much information about the weaknesses of the Service when it was a part of State. On account of these, and in an effort to improve the Service, we did all in our power to have it set up as an independent unit. This work was done concurrently with, but of course entirely independently of, the later phase of the year-long study made by the Senate's Hickenlooper committee. That committee, in its report of June 15, 1953, recommended approval of Reorganization Plan No. 8, which separated the Agency—except for the exchange of persons program—from State.

From our collective experience with the Agency as a result of all of the above work, we reached somewhat over a year ago certain conclusions which, we believe, possessed objectivity. Such an objective approach was furthered both because none of us at the time had or ever expected to have any official position, and because our study was made at a period when there was no public controversy whatsoever about the Agency.

As contrasted with the conditions prevailing in the spring of 1953, we found and reported an almost unbelievable improvement. The organization had been tightened up. Morale was high. Able persons had been recruited for key positions. Appointments had obviously been made on merit with little or no regard for political considerations. We found that the staff had uniformly marked enthusiasm for its work, confidence in the importance of the Agency's mission, and pride in participating in it. We repeat that these are not conclusions reached now in the stress of public controversy, but more than a year ago, and which were arrived at with no thought of their being used or needed for the purpose of defense of the Agency or of its budget.

To our mind, one of the salient improvements in the Agency in the last 4 years stems from an organizational setup which is, so far as we know, almost unique in Government agencies with world-wide operations. Under this, the Director and his alter ego, the Deputy Director of the Agency, are represented by four highly mobile Assistant Directors for Latin America, Europe, the Mid-East and Asia, and the Far East, respectively. These men have broad powers, and spend virtually half of their time in the field. They have extensive authority to correct immediately any matters which, during such trips, they find need attention. They find out at first-hand the needs of the Agency's Public Affairs Officers (PAOs) in the respective countries. Their personal reports to the Director in Washington are, therefore, first-hand observations.

As a part of this organizational plan also, the Public Affairs Officer in each country is regarded as the customer, and the function of the media in this country is to supply the services which are required by the field.

This represents a maximum decentralization with a minimum of red tape and Washington organization. Our second study proved that this plan had been very effective.

We should like to stress also that there has apparently been a big stepup in the Russian propaganda program during the last several years, with a corresponding increase in the need for a larger information effort on the part of the United States. The war which we are fighting today is a war of subversion, and we all know the dangers of it. This calls for an even more adequate United States Information Service, and surely makes it imperative that the existing Service should not be weakened at a time of real crisis in the Communist war to subvert the minds of men.

We have noted that Senators who have recently criticized the operation of the program still recognize the importance of the program itself. With this in mind, we stress the fact that we know of no alternative to strengthening the existing organization to the full extent possible. If through crippling cuts, the patient effort which has been made over almost 4 years to build this Agency from a very low start to a much more effective—although of course far from perfect—instrument is reversed, we believe that it would be extremely difficult, if not impossible, again soon to rebuild. The Information Service was under almost continuous criticism for years when it was part of the State Department, and there was great discouragement on the part of its staff and most of those interested in it as the situation stood 4 years ago. With this in mind, another knockdown would be, we believe, disastrous.

We have seen the argument advanced that a $90 million appropriation would be about the average which the Agency has had over several earlier years, and therefore that this should be enough. However, USIA has a much bigger opponent than it had then in the greatly stepped-up Russian propaganda effort. There is also the fact that costs, including mandatory Government salary scales, have gone up so that the same dollars cannot now buy the same end product.

Therefore, we have tried to examine the effect of the proposed cutbacks. The reduction made by the House to $105 million could, we find, be accomplished through omitting certain programs. This, although not desirable, would not be disastrous. But cuts beyond this would mean radical reductions in force. With seniority rights, this in turn means losing able personnel more recently obtained, and expensive and inefficient shifts from country to country of personnel who have seniority rights. The direct impairment in effectiveness and morale from this would be serious enough, but even more critical is the fact that the reintroduction of such uncertainties and lack of stability would make it, we are convinced, almost impossible to recruit the kind of new personnel constantly needed in the future as replacements, or even to keep many of the ablest of the existing staff not affected by the cuts.

In summary, we believe that the issue here is not merely a routine or even a temporary one, but one which seriously affects the security of the United States and its ability to fight the kind of war which the Communists are forcing us to fight every day.

RAYMOND R. DICKEY.
JAMES A. THOMASON.
TRACY S. VOORHEES.

Mr. JOHNSON of Texas. Mr. President, I now yield to the Senator from Indiana.

Mr. CAPEHART. Mr. President, I have always found the majority leader, the Senator from Texas [Mr. JOHNSON], a very hard-working man, and a very hard hitter. I have always enjoyed working with him, because he is a hard hitter. I believe that the RECORD should show that this afternoon he refused to yield to me, although he afterward yielded to some 6 or 7 Senators.

The majority leader is entitled to make a mistake now and then. I know I do, and I know that all of us do. However, I think that the RECORD should show that I do not believe he should have refused to recognize me when I asked him to do so.

I simply rise to say that because I can well understand why the majority leader must control the Senate. Someone must control any organization. I have no objection to that at all. However, I do believe that all of us have a right to speak our minds. I merely wanted the RECORD to show that. I have always found the majority leader to be fair. In this instance he was wrong. Being a human being, he is entitled to be wrong once in a while. I know I am wrong once in a while, too. I assure him that I will cooperate and work with him in every way in the future.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. CAPEHART. I do not have the floor.

Mr. JOHNSON of Texas. I am glad to yield to the Senator from Connecticut.

Mr. BUSH. I am very glad that the Senator from Indiana has raised this point and said what he has said. It is very gracious of him to do it. I should like to make clear, however, for the RECORD, that what the majority leader was doing in yielding to me without losing his right to the floor was exactly what he had done for the Senator from Arkansas. He probably felt that, having done it for another Senator, he should do it for me, because otherwise there might appear the semblance of discrimination.

Mr. CAPEHART. That is what I objected to, that he did not do it for me. I have had my say. I have said that he is entitled to make a mistake once in a while.

Mr. BUSH. I think that the majority leader had a prior understanding with respect to yielding, and that is the only reason he did it. I am very glad to have cleared up that point.

Mr. JOHNSON of Texas. I appreciate the observation of both of my friends. I had an agreement with the Senator from Connecticut that I would yield to him. Then I asked unanimous consent that I might yield to the Senator from Indiana even before the Senator from Indiana could ask me to yield to him. I have just finished yielding to him again. If I have offended him in any way by not yielding to him first or giving him priority, I am sorry, and I extend to him my deep regrets.

Mr. President, I now yield to the Senator from Kentucky. I may say to him that there are some Senators on his side of the aisle, and perhaps on this side of the aisle also, who have a very important engagement around 1 o'clock. I have agreed also to yield to the Senator from Oregon. However, I yield first to the Senator from Kentucky.

Mr. COOPER. I shall conclude my remarks long before 1 o'clock.

At the time the bill was considered by the Senate, I joined several other Senators in the position that the cut recommended for the USIA was too great and that it would interfere seriously with the activities of the USIA. It is very difficult for us to appraise the activities of the USIA, because by its very nature, its results are not concrete. On the other hand, I believe it is possible to look at the various functions of the USIA, determine whether necessary and valuable functions have been restricted or denied by the conference. I know that members of the committee had the opportunity to study the various activities of the USIA, and that it is difficult for those of us who are not on the committee to speak in detail of them when we do not have the information of the committee.

However, I did point out in my speech in the Senate at the time the bill was being considered that it was not difficult for any of us to know that, if the cuts proposed by the committee was maintained, valuable programs of the USIA would be either reduced or eliminated. Among these, the dissemination of straight news through the press services of the USIA will be reduced, in my view.

Second, I believe that the low-cost book program, designed to give some understanding of the institutions, the thought and literature of our country to people around the world, particularly in the newly developed countries of Asia and Africa, and even Latin America, was being restricted or denied.

Third, that the opportunity for the expansion of libraries, which hold great interest in these countries, would be seriously restricted in Asia and Africa.

I have held grave doubt about any activity of the USIA which might be considered propaganda, in the sense of the popular definition of propaganda. But I believe the dissemination of straight news, the provision of libraries, and the provision of the literature of the United States are of greatest value in bringing to other people an understanding of the institutions, and life of the United States.

I noted the distinguished majority leader's statement that it is proposed to institute a study of the operations of the USIA, so that when the question arises next year there will be a clear idea of its functions and its value. I urge the Senator to take into account the fact that programs which deal with the straight news services of our country, which deal with literature, books, and libraries, can be of great value in creating better relationships with other countries, particularly the newly independent countries of the world. In countries which will be governed for years by representatives of the educated classes, we must give them, and particularly their students, access to our thought—for what is known about us as a matter of truth and fact is the best way to help in understanding between countries. The people of other countries are very quick to discern that which is purely propaganda and that which is truth.

I must come back to the position I took when the bill was before the Senate. Whatever were the desires and purposes

of the committee, I believe a great mistake was made when the committee reduced the opportunity of sending to the people of the countries of Asia and Africa the literature of our country, the press services of this country, and the libraries to which their students and those who are hungry for education throng.

Furthermore, I think a great mistake was made in denying the funds which would extend programs to reach into Africa and Asia.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. JOHNSON of Texas. First of all, the Senator is unfamiliar with what the committee did. We did not disallow any request for Africa or Asia. On the contrary, we insisted that the USIA transfer some of its personnel in Western Europe, which at present is more than 3,000, to those areas. We did the same thing last year. We thought they were topheavy with personnel in the European theater. We thought they could very properly and appropriately transfer some of their personnel to new areas. We have suggested that they do so.

I may say, in connection with the Senator's statement, that the administration decreased the appropriation for USIA by $38 million in the first year of the great crusade inaugurated by the Senator's own President and the Senator's own party. In the second year of this administration, USIA received only $79 million. The third year, they got only $87 million. The only time the USIA received more than $90 million since this administration came into office was when the Senator from Texas came upon the floor of the Senate and pleaded with the Senate to give the Agency another trial to pursue the very programs about which the Senator from Kentucky is talking.

If the Senator will go back and read the RECORD of the time the appropriation bill for this Agency was considered last year, he will find many Senators then questioned the wisdom of increasing the amount for this Agency above what it had been for 3 years.

If the party of the Senator from Kentucky could reduce the program by $38 million in 1 year, I see no reason why the committee cannot use the best standards available to it. That is a matter of judgment.

The judgment of the USIA was that it would have liked to have $156 million. But the President reduced that amount by $12 million in his budget. After the Agency representatives testified in the House, the House reduced the amount to $106 million. I will not venture to say what action would have taken place if there had been a yea-and-nay vote on the matter in the House.

The conference report now provides $96 million for this Agency. That is more than it has had for 3 of the past 4 years. It is more than the Agency had in either of the 2 years when the party of the Senator from Kentucky was in control of Congress. It is more than in any year except when the Senator from Texas came before the Senate and asked that the Agency be given another trial. I must say that I am disappointed in the action of the Agency which followed.

The chairman of the House group which must pass on these requests made a statement in 1955. I call it to the attention of Senators.

An article published in the Daily News of October 26, 1955, quotes Chairman ROONEY, commenting after a trip abroad, as saying that:

> The United States Information Agency is "more interested in propagandizing the American public than in combating communism abroad."

The New York Times of of October 26, 1955, stated:

> Representative JOHN J. ROONEY * * * described the United States Information Agency yesterday as "futile." He said it was more interested in propagandizing the American people than in combating communism abroad.

Of all the speeches I have heard defending the USIA, I do not believe there has been one which has been made by a Senator who heard the testimony. I do not believe there is a Senator from either party who sat in the room, or a reporter who covered the hearings, who failed to recognize that the USIA not only had not justified the budget request, but had not justified what it had received for the current year.

I appeal to Senators who take the public position that we are making drastic reductions in the Agency to recognize the fact that we are giving the USIA more than it has had for 3 years out of the past 4.

We have given them more than they received in either of the 2 years when the Senator's party controlled Congress. I heard no speeches from the Senator from Kentucky, who was then a Member of the Senate, denouncing the Appropriations Committee, which was then headed by the Senator from New Hampshire [Mr. BRIDGES], or denouncing, the first year, the late majority leader, Senator Taft, and the next year the present minority leader, the Senator from California [Mr. KNOWLAND].

The appropriation for the USIA was reduced to $79 million before it started to go up again under the Democrats. I do not say that with a great deal of pride, although I did have hope at the time that the Agency would be guided by the direction of Congress.

I say to the Senator from Kentucky that if Mr. Larson and Mr. Washburn will spend a little of their time fighting communism, and not so much of their time fighting the Committees on Appropriations of the respective bodies, I think they will be more successful with the information program.

Mr. COOPER. I am not here as a special pleader for the USIA or for Mr. Larson or Mr. Washburn. I have taken my position because I believe that the action of the committee in restricting particular functions—the ones I have mentioned, which I considered to be straight, clear information and truth—was unwise.

Mr. JOHNSON of Texas. The committee took no such action.

Mr. COOPER. The action of the committee is harmful, not particularly to the USIA, but to the best interests of the United States. In saying that, I make no derogatory judgment of any sort regarding the purposes of the committee. But as one Member of the Senate, I say that action was unwise and could be harmful to the best interests of our country. I base that judgment chiefly on the following broad consideration: In Asia and Africa, whose people have had no association with our country, and who know little about our institutions and policies—even though we sometimes act as if we think they do—if we fail to take advantage of the opportunity to inform them about our policies and our programs and our free institutions, I think we shall be making a great mistake.

Mr. JOHNSON of Texas. Mr. President, we did no such thing.

Mr. COOPER. I realize that the Senator from Texas says the committee did not. However, when we were discussing the matter on passage of the bill I noted that the committee by its action cut off or prevented the extension of activities in Africa.

Mr. JOHNSON of Texas. Not at all; the Senator from Kentucky is completely, 100 percent, in error.

Mr. COOPER. In what respect?

Mr. JOHNSON of Texas. In saying that we have directed the Agency to curtail its activities in Africa or Asia. The Senator from Texas has assured the Senator from Kentucky that we have done no such thing.

Mr. COOPER. But the amounts requested by the USIA would have allowed it to extend its activities to other countries in Africa.

Mr. JOHNSON of Texas. Mr. President, the USIA requested $156 million. If that amount had been granted, I do not know what the USIA would have done with it. But the committee reached the conclusion that the USIA could do an effective job with $96 million; and the Agency is not bound to spend that money in Asia or Africa, but it is not prevented from doing so either. That is a matter entirely within the judgment of the Agency; and the $96 million is more than the Republican Congress allowed the Agency in either year that the Republicans controlled the Congress.

Mr. COOPER. That may be true, but it does not bear upon this issue.

Mr. JOHNSON of Texas. If the President of the United States thought he could get along with $79 million and $84 million and $87 million for this agency for 3 years out of 4—and during those years we had a reasonably effective program—then what better standard can we have by which to judge the future, than to use the experience of the past?

Mr. COOPER. The amount available last year permitted certain activities to be carried on. It is only logical to conclude that if that amount is reduced, that will mean, first, that some of the activities of the agency must be discontinued and, second, that no new activities can be undertaken by it.

Mr. JOHNSON of Texas. That does not follow at all. The agency has

already, as a part of its propaganda on the conference report, served notice that it is releasing 30 employees in London. That does not mean that it cannot hire 10 new ones in Africa. As a matter of fact, the committee hopes that will be done—that the agency will emphasize these new areas, where we believe we need better operations than we have had. The Senator from California very clearly pointed that out in the statement he made the other day. He said that after we have done a reasonably good job in the European theater, we believe we should shift our emphasis to other parts of the world.

The agency already is discharging some of its employees in the European theater. We think it has too many; it has between 3,000 and 4,000 employees. The agency operates approximately 65 libraries in Western Europe. We think the number of those employees should be curtailed and some of them should be transferred, and we think that is what the agency is in the process of doing now.

But not one thing in the conference report or in the bill provides that the Agency cannot increase the number of its employees in Asia and Africa, if it finds that desirable. I am not going to recommend that the Agency increase its employees anywhere, because from all the reports I have received, the Agency has had too many employees in almost every place. But certainly the USIA is not precluded from doing so; and it is very unfair to say that by this appropriation we shall have kept the Agency from employing some additional persons in Africa. Such a statement is unfair, because it is not true.

Mr. COOPER. I do not state that the pending measure will prevent the employment of anyone. I am not interested in that.

Mr. JOHNSON of Texas. Was not that the effect of the statement the Senator from Kentucky made?

Mr. COOPER. I simply question whether this reduction would make it impossible to carry on its necessary program activities—and I named the actvities—and where necessary, extend them in Asia, the Mideast, and Africa.

Mr. JOHNSON of Texas. In my opinion, the answer is "No." This measure would not prohibit the Agency from carrying them on. On the contrary, it would give the Agency ample funds to permit it to do what it wishes to do in the areas the Senator from Kentucky has discussed and in the fields of activity he has discussed.

Mr. HUMPHREY. Mr. President, will the Senator from Texas yield to me?

The PRESIDING OFFICER (Mr. MONRONEY in the chair). Does the Senator from Texas yield to the Senator from Minnesota?

Mr. JOHNSON of Texas. I yield.

Mr. HUMPHREY. I wish to understand, for the RECORD, whether the funds provided will make possible the construction of a suitable transmitter in the Mediterranean and the Mideast area.

Mr. JOHNSON of Texas. They will.

Mr. HUMPHREY. And it will not in any way be limited or curtailed, but is provided for, so it can be undertaken; is that correct?

Mr. JOHNSON of Texas. It is.

Mr. HUMPHREY. Furthermore, as I understand, the conference report does not impose any limitation on the use of funds for library services, visual aids, and mobile library services which are under way in some of the countries; is that true?

Mr. JOHNSON of Texas. In that respect, there is no limitation on the Director. That work can be carried out.

Mr. HUMPHREY. So the committee has not served notice on the Director or the Agency to curtail or eliminate any particular function, in order to meet the budget; and the use of those funds is left up to the responsible administrative officers; is that correct?

Mr. JOHNSON of Texas. I would say that is generally true, the only exception being that $350,000 was earmarked for private radio broadcasting purposes. So it is purely a matter for the judgment of the Director and those with whom he is associated.

Mr. HUMPHREY. I am sure the Senator from Texas knows that I have great concern, as other Senators have, with the effectiveness of the USIA. I should like to have the RECORD show that I think there has been a decided attempt on the part of our representatives in this Agency to do a good job.

I must confess that I was very much concerned about the colloquy this morning in regard to the number of the members of the press hired throughout the United States by the USIA, without saying at the same time that such persons are capable—and they are capable—and honorable—and they are honorable. I have definite feelings about this matter, and I expressed them privately to my friend, the Senator from Oregon [Mr. NEUBERGER].

However, instead of continuing this discussion, let me say that I asked the United States Information Agency for certain information in regard to some of the questions asked in the Senate subcommittee hearings and in the hearings of the full Senate Appropriations Committee, particularly in the case of the employment of persons in the Beirut, Lebanon, printshop, and in the Manila printshop, and also in regard to the activities of the Communists and their propaganda activities, together with other items. I ask unanimous consent to have that analysis of the Communist propaganda activities, an analysis of certain employment figures, and also an analysis of the USIA wireless competition with American commercial services, printed at this point in the RECORD, as a part of my remarks.

There being no objection, the memoranda were ordered to be printed in the RECORD, as follows:

COMMUNIST PROPAGANDA ACTIVITIES 1956—A SUMMARY

Radio (all figures in hours per week):

Russia increased 19 percent in broadcast time, to 2,097 hours per week. (Comparative VOA figure: 1,139 hours.)

Russian output to Near East doubled (from 14 hours to 28½).

Spanish to Latin America, up 50 percent.

Satellite programs to Latin America went from 20 minutes in 1955 to 19½ hours per week in 1956.

Red China began 3½ hours per week (in English) to Egypt and Central Africa.

Comparison bloc output versus Voice of America

[Hours per week]

To	Bloc, 1955	Bloc, 1956	VOA, early 1957
North America	120	242¼	0
Europe	(1)	961	[2] 556½
Near East, south Asia, and Africa	229	241½	192½
Far East	(1)	414	252
Latin America	(1)	72	5¼

[1] Not available.
[2] Voice of America figure includes U. S. S. R. and satellites.

Films:

One hundred and ninety-two feature films produced in 1956, up 30 percent, of which Russia produced 85 and has announced quota for 1957 of 120.

Moscow began producing in June 1956 a monthly newsreel in 30 languages.

In 1956 the bloc produced in all an estimated 500 documentaries and newsreels, a small increase over 1955. Plans for 1956, however, to celebrate 40th anniversary of October revolution, include 500 million rubles (about $125 million at official rate of exchange) allocated for films (primarily documentaries).

Bloc countries captured 13 out of 22 awards in last Venice Film Festival, and 36 out of 179 awards at Edinburgh Film Festival.

Publications:

Soviet Union produced 613 new book titles (100 or more pages) in 27,836,000 copies in free-world languages in 1956.

Breakdown by principal languages:	*Copies*
Arabic (7 titles)	27,250
Urdu (5 titles)	59,500
English (240 titles)	7,743,000
French (118 titles)	2,260,500
German (151 titles)	16,990,100

Soviet 1956 figures for publishing of translations not available, but 1955 total of titles translated into non-Soviet languages was 29.7 higher than in 1954, including increases of 300 percent into Arabic, 150 percent into Urdu, and 82 percent into English.

Wire services:

Communist wire services and news agencies, official appendages of the total propaganda effort, stepped up activities during 1956. New China News Agency opened up in Cairo and expanded in Damascus and Kabul. TASS expanded in New Delhi, Karachi, Bangkok, Djakarta, Beirut, Cairo, Copenhagen, Kabul, Phnom Penh, and Helsinki. TASS in India doubled size of its fortnightly magazine, Soviet Land.

In Beirut alone, the estimated 1956 cost of TASS, VOKS, Cultural Center, and Najah Press (which issues a weekly magazine in Arabic), was $410,000.

Exchange of persons:

Increased 40 percent in 1956, as number of governmental, cultural, and sports delegations traveling to and from the orbit jumped from 1,317 to 1,810. This includes a 100 percent increase in travel to and from Near East, south Asia, and Africa.

International fairs:

Communist country exhibits in international fairs in free world countries:

1954	$10,000,000
1955	38,000,000
1956 (approximately)	100,000,000

Reds participated in 93 international fairs in 1956, a jump of 36 percent over 1955.

ANALYSIS OF SENATE RECORD ON UNITED STATES INFORMATION AGENCY FISCAL YEAR 1958 APPROPRIATION REQUEST

Criticism:

That USIA employed too many people in Ethiopia.

"We found 2 USIA officers and 12 "locals" in Ethiopia, a country of 12 million people, where fewer than 100,000 speak, write, or read English, and where there are only 4 newspapers—2 weeklies and 2 bidailies—and 2 radio stations. The USIA said it had hired an assistant and needed 8 more locals to help propagandize 2 weeklies and 2 bidailies." (P. 6964 of the CONGRESSIONAL RECORD, May 15, 1957.)

Analysis for the record: (See testimony of Huntington Damon, Assistant Director, USIA, pp. 1162–1167).

1. Mr. Damon testified in detail on the activities of the USIA mission in Ethiopia. He pointed out that the mission there not only provides news to 4 newspapers and 2 radio stations in Addis Ababa, but supervise 4,000 volume library in Addis Ababa with an annual attendance of approximately 50,000 and a reading room in another city. It displays exhibits and motion pictures throughout the country of approximately 400,000 square miles. It handles the exchange-of-persons program for Ethiopia, publishes a daily news bulletin, and puts out a monthly pictorial publication about economic developments in Ethiopia. The American officials travel around the country maintaining personal contact with the top provincial officials.

2. In addition to what appears in the RECORD it is worth adding the following:

(a) The mission puts out a small illustrated daily newspaper called the "News Item". This goes to over a thousand Government leaders, schools, and other individuals and institutions throughout Ethiopia.

(b) In the last week of March, 123 motion pictures were loaned out, chiefly to schools, of which the film "Out of Hungary to Freedom" was the most popular. Films have been shown and materials given directly to the Emperor and his cabinet.

(c) In addition to the 4 newspapers mentioned by Senator JOHNSON the mission serves 11 newspapers in Eritrea.

3. It is also worth noting that Ethiopia is a country of almost 400,000 square miles and 20 million people. The total United States aid program for Ethiopia last year was $58 million. The USIA budget was about $110,000 in fiscal year 1957.

Criticism:

That USIA could not show that its programs were effective.

"We tried to find out whether the programs of the USIA were effective. The reply was that this year will offer a glorious opportunity to combat Communist imperialism.

"The committee consists of reasonably patient, reasonably experienced, and reasonably understanding men. But I doubt whether a single member felt that he had been given facts that demonstrated the effectiveness of USIA. If I am wrong, I shall be glad to be corrected." (P. 6964 of the CONGRESSIONAL RECORD, May 15, 1957.)

Analysis of the record:

1. Measuring the effectiveness of the Agency's programs is just about the most difficult job the Agency has. There is no objective way by which to ascertain how much influence Agency activities have had on individual or public opinions. The Agency does take public opinion polls (see p. 816 of the Senate hearings), and it does analyze mail from radio listeners, but it is faced with an inherent difficulty of obtaining objective evidence of subjective attitudes.

2. Nevertheless, the record shows that there were many instances during the Senate hearings where Agency officials tried to analyze the effectiveness of particular programs.

The effectiveness of the low-priced book program was discussed at pp. 497–8 of the Senate hearings. On p. 499 Mr. Larson discussed the effectiveness of motion pictures on visits to United States of heads of other nations such as Sukarno, Nehru, and Ngo Ding Diem. On p. 500 he told of how Nenni, the Italian left-wing Socialist leader, long a follower of Communist party line, first learned about the notorious Krushchev speech attacking Stalin through USIS. The Agency's efforts and their effectiveness in correcting distortions and sensationalism in the European press concerning the Autherine Lucy case was discussed at length and a special memorandum was inserted in the record. (See pp. 806–13 of the Senate hearings.) The effectiveness of the Agency's exhibit on the "open skies" disarmament proposal was set forth at pp. 816–17 of the Senate hearings. The fact that USIS is the second most important source of information about America for West Germans was discussed on p. 819. The effectiveness of the Sukarno film in Indonesia, seen by over 10 million people, was noted at p. 1212 of the Senate hearings.

Criticism:

The USIA wireless file competes with American commercial wire services like the United Press, Associated Press, and the International News Service.

"What was most disappointing was the competition of the Government press service with private industry. We issued warnings, and we admonished. We placed in the law a provision that the Government press service must not compete with existing news agencies.

"What did the Agency do? It added 200 employees, in defiance of the most generous friend the Agency has had." (Page 6964 of the CONGRESSIONAL RECORD, May 15, 1957.)

Analysis of the record:

1. The question of competition between the USIA news file and commercial news services (INS, AP, UP) has been gone into at great length on many occasions. (See p. 513 et seq of Senate hearings.)

(a) The Agency submitted a full written statement on the matter for the record. (See p. 864 of the Senate hearings.)

(b) The commercial news services themselves were asked to comment. Their letters appear in the record (see pp. 1234–1235 of the Senate hearings). Associated Press and International News Service stated clearly that there was no competition. Only the United Press complains about the Agency's news file.

Criticism:

That USIA added 200 employees to its Press Service last year even though it had been criticized for competing with private services.

"They used a large portion of the increased appropriations to add 200 additional people, an increase of 33 percent, to the Press Service that competes with the United Press and others in the foreign field. I consider that not only disappointing, but almost insulting to the Senate.

"What do they propose to do this year? This year they want not 684, not 887, but despite all the storm that is brewing, and with all the clouds that are hanging over them, they have come before the committee to say, 'We are not satisfied with 684 or 877, we want 930 for the Press Service.'" (P. 6969 of the CONGRESSIONAL RECORD, May 15.)

Analysis of the record:

1. The Agency's Press Service is one of the main administrative divisions of the Agency and is in reality a press, publications, and printing service. By far the greatest part of its resources go into supplying pamphlets, periodicals, and other printed materials, plus paper and other printing supplies for the programs of the individual posts. Agency justifications are clear on this point. It is dealt with in testimony beginning at page 1229 and continuing through page 1239.

As indicated in testimony, most of the personnel of the Press Service are actually engaged in the production of publications of various kinds. The largest single group is employed in the two regional printing centers in Beirut, Lebanon, and in Manila, Philippines, which do all the printing and publications work for USIA posts in the Near and Far East.

Others in the Press Service put out pilot pamphlets for adaptation and use by field posts, such as an illustrated pamphlet on the United States "Open Skies" disarmament proposal. Other items produced include cartoon strips, feature articles, and photographs which are used for placement by overseas posts. A major new function is the production of the Russian language magazine, America Illustrated.

Between fiscal year 1956 and 1957 no new employees were added for the purpose of expanding the wireless file, which puts out texts of official speeches and other materials used by posts overseas, and which is the operation occasionally criticized as competing with private news sources.

2. The figures given in the above quoted statement are not accurate. Last year, the Agency requested 840 positions for the Press Service.

Primarily because the publication of America Illustrated [1] was undertaken during fiscal year 1957, the Agency initially increased the number of authorized positions in the Press Service to 877 during the course of the year. However, 42 of these positions were eliminated before they were filled, and the Agency actually added 151 positions to the Press Service, instead of the 200 referred to in the statement. (See p. 845 of Senate hearings.)

Of the 151 increase, approximately 100 were for the regional printing centers in Lebanon and the Philippines. The balance were for America Illustrated (37), for the production of so-called pilot pamphlets, which are prepared centrally and then sent to field posts for local adaptation and printing in numbers required (4), and the balance for several functions, including a central reproduction shop (mimeographing and multilithing) which is operated by the Press Service for the Agency as a whole.

Mr. NEUBERGER. Mr. President, I should like to conclude my part of the discussion regarding the practice of the United States Information Service to employ, from time to time, journalists on the staffs of various United States newspapers, in order to have them write various articles and essays used by the United States Information Agency.

I was pleased to hear the able Senator from Texas announce that he was withholding judgment until a further examination of the matter could be made. I believe that is an advisable policy. In my opinion, the average journalist is honest and ethical, and I do not believe his political views will necessarily be influenced by what he has written for the United States Information Agency.

As I stated previously, undoubtedly some Members of the Senate continue associations with legal firms that enjoy retainers from corporations and other groups which have contacts and problems with the Federal Government. However, I would not like to think that Senators were unduly influenced by that situation.

---

[1] Russian language pictorial for distribution in Soviet Union.

The Senator from Texas said we should note the geographical distribution of the newspapermen employed. I would remind him—and I am sure he would agree with me on this point—that if the United States Information Agency is to present abroad an accurate picture of life and culture in the United States, it is necessary that those who provide that information and material be selected somewhat on a broad geographical basis, so that the entire nation—throughout its length and breath—will, as a result, be portrayed.

In conclusion, I would add this one comment. I believe the tendency of this kind of employment must be analyzed, when we examine it for any possible sinister purposes or any result which would jeopardize a free press in this country. If the men were employed to write political tracts, to write material favorable to the United States Information Agency, to take a side in partisan politics, I think that is one thing, and I certainly disapprove of it. If they were hired merely to portray what life is like in the United States—whether it is about athletics, music, geography, recreation, scenery, or wildlife—I would say that is quite a different thing than employing them to take a side in some partisan political matter, to urge some particular Government appropriation, or to take the side or slant or bias of some particular agency.

Mr. JOHNSON of Texas. The Senator is aware, of course, of the Agency head's reputation in that regard, is he not?

Mr. NEUBERGER. I am perfectly aware that the so-called No. 1 "modern Republican" heads the United States Information Agency. I think the President of the United States made an error in placing at the head of that certain Agency someone who is as partisan and as political a figure as is Mr. Larson.

Mr. JOHNSON of Texas. I am not talking about the President's right to appoint him; I am talking about what he said on political subjects since he has been in the Agency. The Senator from Oregon was talking about persons writing on political matters. I am asking the Senator whether he is aware that Mr. Larson has been expressing his political views since he has been in the Agency.

Mr. NEUBERGER. I am quite familiar with that fact. I am not familiar with the list the Senator from Texas has, because I have not seen it, but it is my hope that these journalists or writers have not been employed to write political tracts or partisan material.

Mr. JOHNSON of Texas. So far as the Senator from Texas is aware, that is not the case, and he made no such statement.

Mr. NEUBERGER. I am pleased to hear that. I know the Senator from Texas will look into the matter judiciously and fairly, because that is the way he searches into everything. I was glad to learn that the Senator from Texas is withholding final judgment in this situation.

Mr. JOHNSON of Texas. Mr. President, in response to the question of the Senator from Minnesota, I stated, so far as I recall, there was a provision in the bill that required the USIA to spend not less than $350,000 for private radio broadcasting purposes in South America. We expect them to expand the coverage in that area.

We provided funds necessary to begin construction of the transmitter in which the Senator from Minnesota was so interested.

The conferees agree in principle with the position taken by the House committee with respect to the level of radio broadcasting activities.

We also felt the Agency could properly use the new medium of television. We hoped it would place maximum reliance on private programs, particularly where television goes behind the Iron Curtain. We doubted the wisdom of its trying to go into the producing business, so as to become a second Hollywood.

We are concerned that the Agency is using more than 40 percent of its money for employees in personal services. We are concerned that the Agency seems to employ more people in Western Europe each year, instead of fewer. Instead of shifting emphasis, the Agency wants to employ more than were employed in the highest year, instead of the average for all the years or the number employed in the lower years.

How far we can go in increasing the appropriation, I do not know; but I hope the Foreign Relations Committee will make a careful study of the work of this entire Agency and will come up with a legislative recommendation for the Congress.

I assure the Senator that no Member of the Congress is more interested in an effective information service, and to make certain that correct information will be disseminated to all corners of the world, and that we will be pictured in the true light. I do not think that is being done at the present time.

Mr. President, if there are no further statements to be made, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. PASTORE in the chair). The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, may we have the yeas and nays?

The PRESIDING OFFICER. The question is on agreeing to the conference report. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. JOHNSON of Texas. I announce that the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Missouri [Mr. HENNINGS], the Senator from South Carolina [Mr. JOHNSTON], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. NEELY], and the Senator from Alabama [Mr. SPARKMAN] are absent on official business.

I also announce that the Senator from New Mexico [Mr. ANDERSON] is absent holding hearings for the Senate Interior Committee.

I further announce that if present and voting, the Senator from New Mexico [Mr. ANDERSON], the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from South Carolina [Mr. JOHNSTON], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from West Virginia [Mr. NEELY], and the Senator from Alabama [Mr. SPARKMAN] would each vote "yea."

Mr. DIRKSEN. I announce that the Senator from Vermont [Mr. AIKEN], and the Senator from New Hampshire [Mr. BRIDGES] are absent on official business.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

The Senator from Kansas [Mr. CARLSON], the Senator from Massachusetts [Mr. SALTONSTALL], and the Senator from Wisconsin [Mr. WILEY] are detained on official business.

If present and voting, the Senator from New Hampshire [Mr. BRIDGES], the Senator from Kansas [Mr. CARLSON], the Senator from Maine [Mr. PAYNE], and the Senator from Massachusetts [Mr. SALTONSTALL] would each vote "yea."

The result was announced—yeas 75, nays 2, as follows:

YEAS—75

So the report was agreed to.

RESIGNATION OF SECRETARY OF THE TREASURY GEORGE M. HUMPHREY

During the consideration of the Conference report on House bill 6871.

Mr. BUSH. Mr. President, I should like to advert to another matter, which I hope may appear in the RECORD not in

sequence here, because it does not relate to the pending business.

I invite the attention of the Senate to a news dispatch which has just been handed me, which says that the Secretary of the Treasury Humphrey resigned today and that President Eisenhower nominated Robert B. Anderson, former Secretary of the Navy, as his successor.

Mr. President, this means the loss of a very great man to the Cabinet of the President of the United States. I have had the very great privilege of the friendship of this man for many years, even before he came to Washington, but my estimate of him has increased enormously since he has been the Secretary of the Treasury. He has been referred to by men in both parties, and by writers who both favor and disapprove of the Eisenhower administration, as the strong man of the Cabinet. Indeed, he has been a very strong man in the Cabinet.

Secretary Humphrey has been an excellent witness before the committees of the Congress of the United States. Whether the Senators agreed with him, or whether the Representatives agreed with him, they have all agreed with each other that he has been honest, forthright, clear, and steadfast in his views, as he has expressed them before the committees of both the House and the Senate. He did much to arrest the inflationary trend which was plaguing this country at the time of the 1952 election. He has stood solidly behind, at most times, the Federal Reserve Board, which, in its objective and independent way, has done a great deal to arrest the inflationary trend in this period. He introduced, and laboriously presented to the Congress, a tax revision bill which was passed in 1954, which resulted in the largest tax reduction ever given to the people of the United States, a tax reduction in one bill of approximately $7.4 billion.

Now he has chosen to retire to private life. Mr. President, I could not fail, because of my great respect for him, and my high appraisal of his value as a servant of the people of the United States during his incumbency in the Cabinet, to express these views this morning.

I notice also that Randolph Burgess, who has been the Under Secretary of the Treasury, will retire. I feel that by his retirement the Government will lose another very valuable public servant. Probably no man could have been better fitted by experience for his work as Under Secretary than was Randolph Burgess. He had spent many years in the Federal Reserve Bank of New York, and later was an officer and director of one of the great banks of the United States, now known as the First National City Bank of New York. I also express my regret that this very estimable gentleman is to give up his position in the Treasury Department.

Finally, Mr. President, on this subject, I may say that I regard with most favorable approval and anticipation the appointment of Robert B. Anderson, formerly of Texas and now of Connecticut, as the new Secretary of the Treasury. If I may have the attention of the majority leader, I should like to say to him that we in Connecticut have welcomed the residence of this great citizen, who left Texas to move east for personal reasons. It is very gratifying to me, as a close neighbor of Robert Anderson in Greenwich, Conn., to realize that he has been selected by the President to become the next Secretary of the Treasury. His distinguished record in Washington during the earlier days of this administration, as Secretary of the Navy and then Deputy Secretary of Defense, speaks for itself. He has earned already the respect and admiration of this community, and, I believe, of the Members of Congress in both parties.

Mr. President, I wish to thank the distinguished majority leader for his courtesy in yielding to me.

Mr. BYRD. Mr. President.

Mr. JOHNSON of Texas. I yield to my friend, the Senator from Virginia.

Mr. BYRD. Mr. President, I very deeply regret the resignation of Secretary of the Treasury, Mr. Humphrey. As a member of the Senate Committee on Finance and as the Chairman, I have been closely associated with Mr. Humphrey for the past 5 years. I regard him as a man of great ability and of superior patriotism. He has rendered outstanding public service and will be sorely missed.

I have known well his successor, the former Deputy Secretary of Defense, Robert Anderson. I regard him as well qualified, and an excellent choice for the position of Secretary of the Treasury.

REQUEST FOR UNANIMOUS CONSENT FOR THE COMMITTEE ON RULES AND ADMINISTRATION TO MEET TODAY DURING THE SESSION OF THE SENATE

Mr. JAVITS. Mr. President, the Committee on Rules and Administration did not furnish its agenda this morning, which included certain amendments to rule XXII of the Senate rules. Therefore, I ask unanimous consent that the committee may meet this afternoon, during the session of the Senate.

Mr. TALMADGE. I object.

The PRESIDING OFFICER. Objection is heard.

PROGRAM TO SAVE NATURAL RESOURCES OF THE KLAMATH INDIAN RESERVATION AND TO DO EQUITY TO INDIANS

Mr. NEUBERGER. Mr. President, as chairman of the Indian Affairs Subcommittee, I am attempting to save the vast natural resources of the Klamath Indian Reservation and, at the same time, to do justice and equity to the Indian families whose welfare is involved.

Toward that end, I have introduced—for my senior colleague [Mr. MORSE] and myself, Senate bill 2047, which sets up an orderly program for husbanding these resources under effective custodianship, and also reimbursing the Indians adequately.

I am happy to report to the Senate that this bill of ours has been endorsed by two prominent newspapers of my State—the Bend Bulletin and the Oregonian, of Portland. Their editorials of May 10 and May 25, 1957, are entitled, respectively, "Klamath Termination Proposal" and "Klamath Program Sound."

Particularly, I wish to call attention to the concluding paragraph in the Oregonian's editorial, which emphasizes that the liquidation bill of 1954 was perhaps unduly hasty and jeopardized the tribal lands and timber of the reservation, as well as imperiling the economy of southeastern Oregon.

I ask unanimous consent that both editorials be printed at this point in the body of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bend (Oreg.) Bulletin of May 20, 1957]

KLAMATH TERMINATION PROPOSAL

Senator RICHARD L. NEUBERGER has come up with the only legislative proposal to see the light of day regarding the final disposal of the lands of the Klamath Indian Reservation.

NEUBERGER'S proposal, announced in Washington, Thursday, provides that the lands of the reservation shall be divided into three classifications. One class is for timber lands, one class is for marsh lands and one class is for farming lands.

Under the NEUBERGER pitch, timber and marsh lands will be bought by the Federal Government. Farming lands will be appraised and sold to the highest bidder.

Timber lands will be turned over to the United States Forest Service for management. Marsh lands will go under the jurisdiction of the Fish and Wildlife Service.

This newspaper has been long worried about the Klamath termination, and what it will do to the timber and the members of the tribe.

NEUBERGER'S proposal is the most sensible to see the light of day. We hope it can be adopted by Congress without the too-long delays which sometimes characterize congressional action.

[From the Portland Oregonian of May 25, 1957]

KLAMATH PROGRAM SOUND

Orderly disposal of tribal forests and lands of the Klamath Indian Reservation to assure protection and perpetuation of all natural resources as well as proper payment of the Indians who choose to sell is the goal of legislation now in Congress. It is essential that Congress complete action on two bills introduced by Senators NEUBERGER and MORSE at this session.

The legislation will put into effect the recommendations of a team of management specialists that surveyed the situation after Congress acted too hastily on the Klamath liquidation bill.

Senate bill 469, adopted in that body this session, will delay liquidation of reservation lands and timber until the end of the second session of the 85th Congress. The House should accept this delay without crippling amendments.

Senate bill 2047, introduced this month, would prevent helter-skelter sale of Indian lands and forests to private buyers with such consequences as these: Destruction of the sustained yield program of logging of Indian timber, which has accounted for 24 percent of the lumber cut in the Klamath Basin; dumping of around 2,700,000,000 of the 3,800,000,000 board feet of tribally owned timber suddenly on the market, with consequent depression of prices and ruinous effects in the industry; loss of 70,000 acres of the finest waterfowl nesting area of this region; and serious depletion of the water

supply on which Klamath Basin agriculture depends.

S. 2047 provides for Federal purchase of the tribal lands and forests and full payment within a year of the 70 percent of the Indians who wish to withdraw from the reservation. It provides further, for:

1. Transfer of timberlands to the national forests within the Department of Agriculture, from which consolidation continued sustained yield cutting would be permitted—this providing an annual harvest of more than 60 million board feet of Ponderosa pine forever.

2. Sale of lands other than timberlands on a competitive bid basis, with priority purchase allowed to members of the Klamath Tribe.

3. Transfer of administration of the 70,000-acre Klamath marsh to the Federal Fish and Wildlife Service for waterfowl sanctuary and nesting purposes. This provision is strongly indorsed by the Oregon Game Commission and wildlife conservation groups.

Those who have studied the Klamath Reservation program impartially seem to be in agreement that the original legislation providing for liquidation of tribal lands and forests in private sales would cause irreparable harm to the Indians, to Oregon's economy, to the long-range timber supply of Klamath Basin mills, to the basin's water supply, and to waterfowl and wildlife. These two new Senate bills should have vigorous support in the State of Oregon.

FOREIGN AIRLINES OPERATING IN UNITED STATES

Mr. MUNDT. Mr. President, I have been disturbed about the tendency and the policy of the State Department of late in granting air rights within the United States to foreign aviation companies. This problem is intensified by virtue of the fact that those foreign air carriers in the main are socialistic enterprises, owned and operated by their respective governments, and subsidized by their governments. Obviously, that kind of an arrangement, when it is brought into competition with private enterprise on this continent, and American-owned and operated airplane companies, creates a situation which is quite serious and formidable.

I suggest that the State Department scrutinize carefully such requests before granting any more of them.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD a short statement I have prepared on this subject.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MUNDT

I have recently seen press reports that negotiations are now in progress between the Governments of the United States and Australia in which Australia is seeking additional air rights from the United States. I hope that the Department of State will not accede to any such request from Australia.

The policy which the Department of State has pursued over the past few years of giving away valuable air rights to foreign countries holds a quick promise of seriously damaging United States' interests. First, there was the agreement with Germany in 1955, which was criticized by the Senate Interstate and Foreign Commerce Committee, and which resulted in the report on international air agreements of that committee. But it was utterly disregarded in the negotiations with the Netherlands in March and April of this year. It was disregarded despite renewed protests of distinguished Members of both the Senate and the House against the action which it was proposed to take.

The Civil Aeronautics Board, an arm of this Congress, charged with the responsibility of insuring the sound development of our United States international air transportation system, likewise opposed the action taken in the agreement with the Netherlands.

Recent press reports indicate that the Department of State is considering, or has even already decided—this time in the case of Belgium—upon a further weakening of our strength in the air.

Australia is our friend. But we should not be required, in the maintenance of our friendship with Australia, or with any other country, to grant air transport rights which are not based upon sound economics and which threaten the ultimate impairment of our own strength. Our easy policy results only in further unwarranted demands by an increasing number of countries. The aggregate impact of a favorable response to these demands will result in our air transport following the decline of our merchant marine.

If the United States continues to give away valuable air rights it will decrease the ability of its own international air transportation system to grow. Aircraft which might have been operated by the United States-flag carriers, and which might have been a part of our military reserve fleet, will instead fly the flags of foreign governments. American labor which might have been trained and employed by United States airlines in the operation and maintenance of these aircraft will find that its services are not needed by the United States. Instead, foreign labor, trained and employed by foreign airlines in distant countries, will replace this need. Our defense will be affected. Additional necessary aircraft and trained personnel will have to be provided in other ways at a cost to the American taxpayer.

I repeat that I hope the Department of State will make no additional route grant to Australia.

PROPOSED EXCHANGE OF AIRPORT TRANSPORT RIGHTS BETWEEN THE UNITED STATES AND AUSTRALIA

Mr. ELLENDER. Mr. President, I understand that consultations are now being held between the United States and Australia concerning the matter of air transport rights. I am informed that Australia is asking to extend its present service from Sydney to San Francisco to go beyond to New York and on to London and around the world.

I hope the Department of State does not follow its past policy of yielding to nearly every demand made by a foreign country for air routes. I believe that the request of Australia should be denied. The present agreement between the United States and Australia already provides a reasonable exchange of economic benefits for the two countries. Any additional grant would seriously disrupt this balance of benefits and give Australia a decided advantage.

While it is not to Australia's discredit, the simple fact of the matter is that Australia has no air transport rights to offer to the United States which could be considered as an equitable exchange for those which would be given to Australia in providing it with an opportunity to operate across the United States and beyond New York in the great transatlantic market.

The United States today has an international air transportation system of which it may well be proud. It meets the commercial needs of our Nation. It serves throughout the world as a symbol of the success of our free enterprise system. The Department of State, however, by its recent actions, is undermining the strength of that system. There must be no further delay in putting an end to the pursuit of this policy.

HOUSING ACT OF 1957

The PRESIDING OFFICER (Mr. PASTORE in the chair). Morning business having been concluded, the Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H. R. 6659) to extend and amend laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the amendments proposed to the committee substitute by the Senator from Oregon [Mr. MORSE] for himself and other Senators, inserting a new section on page 42, after line 9, and to renumber the succeeding sections.

Is there objection to the consideration of the amendments en bloc? The Chair hears none, and it is so ordered.

RADIATION FALLOUT

Mr. MORSE. Mr. President, before I turn to the amendment which is the pending question before the Senate, I wish to make a few insertions in the RECORD, and to make some brief comments on each.

Former President Truman was reported in the press yesterday to have warned the American people not to yield to hysteria or panic with regard to the so-called radiation fallout danger.

Mr. President, I share that advice and I join in it. However, I would also point out that it is of the utmost importance that we find out all the facts about the radiation fallout danger. There certainly exists a body of prima facie evidence which would indicate that the danger is real. On the floor of the Senate today I wish to commend the distinguished Representative from California [Mr. HOLIFIELD] for his great leadership in connection with this subject, as well as to commend all the other members of his subcommittee for the statesmanship they have manifested in regard to this problem. They are, in addition to Mr. HOLIFIELD, Representative PRICE, of Illinois, Representative COLE, of New York, and Representative VAN ZANDT, of Pennsylvania; and our own colleagues, the Senator from Rhode Island [Mr. PASTORE], the Senator from Washington [Mr. JACKSON], the Senator from Ohio [Mr. BRICKER], and the Senator from Iowa [Mr. HICKENLOOPER]. As one Senator, I wish personally to thank them for what I consider to be the outstanding leadership they are giving not

only to Congress, but to the country, in connection with the investigation of the radiation fallout danger.

The hearings which are now being conducted are historic hearings. I am particularly pleased that in the 3-day hearings which have been scheduled the witnesses have been limited to the scientists, as I understand. If we are to avoid panic and hysteria, we must get the scientific facts.

I wish to say to the men of science of America that they have a tremendous responsibility on their shoulders in connection with this great issue. They have the duty, first, to furnish the facts in such scientific terminology as is necessary to make the official scientific record; and then, I plead with them further, to interpret this data in clear language so that the people of the country can understand the facts. The American people are entitled to know what the facts are, so that they can determine the public policy question involved.

It is an important public policy question as to what the course of action of our Government should be in the immediate future in regard to the further testing of nuclear bombs. If I understand correctly, such tests increase the percentage of so-called strontium in the atmosphere, and strontium saturation can reach only a certain percentage point before mankind itself is seriously endangered.

If I correctly understand the facts, it is possible to saturate the atmosphere with radiation fallout to the extent that in our generation if we follow a short-sighted course of action, we will reap its horrendous costs upon society not for our generation alone, but because the fallout could have an effect upon our genes as would produce great harm to the bloodstream in future years of millions and millions of human beings yet unborn.

I therefore wish to express my sincere commendation to the Members of Congress who are conducting this investigation.

I do not know about the mail of other Senators, but I know what is in my mail. I am getting a considerable body of mail each week from concerned people, not only in my State, but throughout the United States, urging me to make the proposal to investigate radiation fallout one of my major interests.

I may be getting so much mail from my own State because during the course of the campaign last fall, I took the position that, on moral grounds, we should seek to lead the world in a cessation of hydrogen bomb testing. I have not changed my opinion. I have in recent days expressed the same point of view elsewhere, and I express it again today on the floor of the Senate. I believe that on this issue we owe a great moral responsibility to the world. We dropped the first nuclear bomb. Having first dropped it, we should also be the first in the cessation of further testing.

So long as there is hope—and I refuse to think that there is no hope—that if we would exercise a great moral leadership at this time in the councils of the world, we would not only receive the cooperation of other nations who share our exceedingly high regard for the rights of man, but also, with their cooperation, we would place any other nation which might insist upon dropping more nuclear bombs in such a position that the moral pressure of the world and public opinion would cause it to change its course of action.

We cannot do that until we first make the pledge. I propose again that we make the pledge, and that we follow up the pledge by urging that the United Nations, as a body, support such a proposal. It should be our prayer and hope that Russia will finally see the wisdom of our position and the position of similarly minded nations, and join with us in an international understanding through the United Nations that no more nuclear bombs shall be tested.

Mr. President, this noon I had lunch with a very dedicated woman, a woman who has worked closely with the United Nations groups in connection with this radiation problem. Her husband is a medical man, and he has demonstrated a great interest in the medical phases of this problem. I refer to Mrs. Colby, of New York. It was an inspiration for me to have lunch with her this noon and to learn from her some points of view in connection with this problem of which I was not aware before I had the lunch. She gave me a copy of a petition on this matter which is being circularized for presentation to the President of the United States. I should like to read the petition into the RECORD, because I think its objective is so sound that this record of it should be made. The petition reads:

PETITION TO THE PRESIDENT

The President of the United States:

We, the undersigned, respectfully request that our Government propose to the Soviet Union and the United Kingdom to take prompt and concurrent action with the United States to postpone further nuclear tests, until an international committee of recognized scientists determines precisely the danger from the radioactive fallout. We recognize that excessive radioactivity creates a hazard for all; but it is in the name of our children especially that we make this request, since they who are innocent stand to suffer more directly and acutely from strontium 90 than do we who are responsible.

Mr. President, I think the procedure proposed in the resolution is one possible approach to this problem. I should certainly desire to encourage any such agreement between Russia, the United Kingdom, and the United States. My preference is that we use the procedures of the United Nations to accomplish the same end; that we try to work for this program through the United Nations; that we try to get all like-minded states within the United Nations to join with us in a resolution calling upon the nations of the world to agree to a halt in the testing of nuclear bombs.

I would place this matter upon what I think are the clear dictates of morality. I made a comment in a speech some time ago that I thought this should be done as an example of the practicing of Christian principles. I received—and I think rightly so—some letters of criticism by persons of other religious faiths, who pointed out to me that, after all, they stood for and were committed and dedicated to the same great principles of morality. So today, on the basis of that very rightful criticism which I received, I urge that we follow this course of action which I am recommending upon the basis of the moral principles common to all religions which recognize that, after all, there is a Divine Being, and that all men who believe in a Divine Being ought to join in following the course of action I suggest in carrying out common moral obligations.

Mr. President, I wish now to advert to another subject.

The PRESIDING OFFICER. The Senator from Oregon has the floor.

ETHICS IN LABOR UNIONS

Mr. MORSE. Mr. President, this morning the distinguished Senator from Illinois [Mr. DOUGLAS] and I took part in a radio program with Mr. Al Hayes, international president of the machinists union. The purpose of the broadcast was to discuss primarily the proposed legislation of which the Senator from Illinois is the author and of which I am privileged, along with other Senators, to be cosponsor, pending before the Senate Committee on Labor and Public Welfare. The measure seeks to deal with the problem of full public disclosure of union funds, including welfare funds.

In the course of our radio discussion this morning, we spoke of many other matters—the whole question of congressional investigations and the question of alleged crookedness, racketeering, communism, and fascism within some segments of the American labor movement.

The Senator from Illinois and I expressed our deep appreciation to Mr. Al Hayes, the international president of the machinists union, for this opportunity to speak over the air. Mr. Hayes is also the chairman of the committee of the combined AFL-CIO which deals with codes of ethical practices. The Senator from Illinois and I called the attention of the American people to the fact that Mr. Hayes has exhibited outstanding and remarkably fine industrial statesmanship as the chairman of the ethical practices committee of the American labor movement. He has demonstrated great courage. But he has done nothing which any of us did not expect him to do. In fact, I may say that I think Al Hayes, as chairman of the ethical practices committee of the AFL-CIO, and George Meany, as president of the combined AFL-CIO, have in recent weeks performed not only a great service to the American labor movement, but they have demonstrated an exceptionally high degree of citizenship and statesmanship. They have demonstrated what many of us who have known them personally knew was true, namely, that they are men of high courage, men of great principle, and men who can be trusted with labor responsibility.

One has only to read the codes of ethical practices which have been prepared by the Hayes committee, which have received the endorsement of the officials of organized labor, to know how right some of us have been when we

have said many times: Gather the facts, and the responsible leaders of the American labor movement can be counted upon to clear house.

But in our broadcast this morning, the Senator from Illinois and I pointed out that Congress has a responsibility, when bad conditions develop in any segment of our society, to make certain that we proceed to protect the public interest in regard to such conditions; and we are pleased to report that Mr. Hayes completely agreed with us. Thus, the Senator from Illinois and I have pointed out that, in our opinion, congressional committees do have the great responsibility of conducting investigations which will disclose the conditions which are being disclosed at present by the McClellan committee and by the Douglas committee in regard to the existence of most undesirable practices in certain segments of the American labor movement.

We pointed out in the broadcast that, first, the subpena power of a congressional committee is a power which a committee of a labor organization does not have; and Mr. Hayes agreed with us. For example, the committee on ethical practices of the AFL–CIO does not have the subpena power to require the production of records, evidence, and testimony, as does a congressional committee.

Second, we pointed out in the broadcast that the authority of a congressional committee to require witnesses to come before the committee and testify under oath is an exceptionally important weapon which needs to be used when one is trying to eliminate from the body politic bad practices which develop against the public interest, whether they be in the field of labor, the field of management, or in any other phase of our society.

Therefore, the Senator from Illinois and the Senator from Oregon took the position that it is important that committees of Congress and committees of labor and management seek to work cooperatively, as they are doing, in an endeavor to bring forth solutions to the problems about which there is so much public concern these days in connection with labor racketeering and other unfortunate labor practices.

We also agreed—and I wish to stress the point again today—that our investigative work as a Congress should be carried on in accordance with well-recognized rules of procedure which would be fair to all concerned.

My position on the matter is well known, and I have stated it so many times for the RECORD that I shall not repeat it in detail now, other than to state that on the radio this morning I said that when allegations of the occurrence of a crime are made, regardless of who is involved—whether it be a union leader, a union member, a banker, a teacher, a farmer, or any other American—then certainly procedural safeguards should attach themselves to any investigation of the alleged offense. These are, first, a bill of particulars given in advance of a hearing; second, the right to be confronted by those who accuse and allege that a crime has been committed; third, the right to cross-examine those who accuse and testify against one; fourth, the right to put on one's case in chief, by way of defense, in an orderly fashion, and with the assistance of counsel; and, fifth, needless to say, the right to cross-examine those who appear in behalf of the defense.

In our symposium, so to speak, this morning, we were in common agreement regarding fair procedures.

Mr. President, I wish to say that, in my judgment, the hand of American labor would not be as strong as it is today, in cleaning its own house, if it had not been receiving the assistance and the cooperation of the McClellan committee and of the Senate Committee on Labor and Public Welfare. The Senate Committee on Labor and Public Welfare has been working, through the Douglas subcommittee, by the use of the subpena power and by the oath requirement, whereby a record has been made and subpenas have been issued in regard to certain very undesirable and antisocial practices which exist in some segments of the American labor movement to the end that labor has been helped in its endeavor to clean house.

However, the difficulty is—and we need to be on guard against it, if we are going to be fair—that when in the case of any group—whether a labor group or any other group—there are disclosures of most undesirable practices on the part of some; it is easy to jump to the conclusion that such undesirable practices characterize the entire group.

So I was very glad that Mr. Hayes, the chairman of the ethical practices committee of the AFL–CIO, took the time during the broadcast this morning to point out that only an exceedingly small percentage of the many thousands of labor officials in the United States are pointed to by any evidence indicating that they are violating the great trust they owe to their rank-and-file members. Mr. Hayes made very clear that, so far as he and the officials of the combined AFL and CIO are concerned, they intend to root out any malpractice, malfeasance, corruption, racketeering, communism, or fascism that they find within the American labor movement; and to that end they have prepared, and have adopted, a group of codes of ethical practices for the American labor movement. I believe these codes are so important that they should be made part of today's RECORD. I hold the first four of them in my hand. In a moment I shall ask unanimous consent to have the others printed in the RECORD.

The first four codes appear in booklet form; and they are as follows: First, the code on local union charters; second, the code on health and welfare funds; third, the code on racketeers, crooks, Communists, and Fascists; and fourth, the code on conflicts of interest.

The titles of the codes speak for themselves; but I believe it is particularly interesting to note, as we study the codes, that the American labor movement itself is insisting—as some of those of us who serve in the Congress have been insisting for some years, and are on public record time and time again in that connection—that democratic processes and the protection of the democratic rights of the individual rank-and-file union member at the local union level must be protected as a partial guaranty, at least, against what are frequently referred to as oligarchical abuses which have developed in some of America's labor unions.

In the discussion this morning, Mr. Hayes pointed out the democratic organization and the democratic control of the machinists union, is rooted in the local union. He pointed out, for example, that his union operates on the basis of the very sound democratic procedure of the referendum. As I said to him this morning, as one who comes from a State which historically is entitled to the reputation of being the leading State of the United States in the development of the initiative and referendum system, whereby the people of the State have the ultimate check upon the political policies of the State, I can well understand how proud he is, as the international president of the machinists, that his union is bottomed upon the democratic guaranty of the referendum procedure. The code that the AFL–CIO have adopted in regard to local union charters will be very reassuring, I believe, to a great many persons who have not taken the time to study all phases of the union problems which confront us. It is reassuring to me to know that now we have the AFL–CIO formally taking the public position, under this particular code, of having greater democratic procedures guaranteed to the local union.

Mr. GOLDWATER. Mr. President, will the Senator from Oregon yield to me?

Mr. MORSE. I shall be glad to yield in a moment.

Before I yield, Mr. President, and before I submit the other codes, I ask unanimous consent to have printed at this point in the RECORD, as a part of my remarks, the first four codes, which already have appeared in pamphlet form. I ask unanimous consent to have printed in the RECORD, along with the codes, the other contents of the pamphlet. It also deals with the AFL–CIO constitution; and I think it should be available to Senators, for quick reference. The pamphlet also contains the resolution on ethical practices, of the AFL–CIO 1955 convention; and in addition the AFL–CIO executive council resolution on procedures in ethical practices cases, which points out the very democratic procedures and fair-trial procedures which are provided when allegations of unethical practices are made. The pamphlet further contains the AFL–CIO executive council statement on the use of the fifth amendment in investigations of racketeering.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the entire pamphlet, including the foreword by George Meany, the president of the combined labor organizations; and I point out that the foreword reads as follows:

FOREWORD

The American Federation of Labor and Congress of Industrial Organizations is committed, by word and deed, to the concept that free, democratic trade unionism must be clean, honest trade unionism.

This handbook contains the sections of the AFL–CIO constitution relating to corrupt or Communist efforts to infiltrate the labor movement; pertinent resolutions and policy statements adopted by the AFL–CIO convention in 1955 and by subsequent meetings of the AFL–CIO executive council; and four codes of ethical practices prepared by the AFL–CIO ethical practices committee and adopted by the executive council.

I commend these documents to union members and officials as guides to help insure the continued healthy development of our American labor movement.

GEORGE MEANY,
President.

FEBRUARY 11, 1957.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

AFL–CIO CODES OF ETHICAL PRACTICES

(Published by American Federation of Labor and Congress of Industrial Organizations, 815 16th Street NW., Washington 6, D. C.; George Meany, president; William F. Schnitzler, secretary-treasurer; publication No. 50, February 1957)

FOREWORD

The American Federation of Labor and Congress of Industrial Organizations is committed, by word and deed, to the concept that free, democratic trade unionism must be clean, honest trade unionism.

This handbook contains the sections of the AFL–CIO constitution relating to corrupt or Communist efforts to infiltrate the labor movement; pertinent resolutions and policy statements adopted by the AFL–CIO convention in 1955 and by subsequent meetings of the AFL–CIO executive council; and four codes of ethical practices prepared by the AFL–CIO ethical practices committee and adopted by the executive council.

I commend these documents to union members and officials as guides to help insure the continued healthy development of our American labor movement.

GEORGE MEANY,
President.

FEBRUARY 11, 1957.

1. AFL–CIO CONSTITUTION ON ETHICAL PRACTICES

Article II, section 10: The objects and principles of this federation are to protect the labor movement from any and all corrupt influences and from the undermining efforts of Communist agencies and all others who are opposed to the basic principles of our democracy and free and democratic unionism.

Article VIII, section 7: It is a basic principle of this federation that it must be and remain free from any and all corrupt influences and from the undermining efforts of Communist, Fascist, or other totalitarian agencies who are opposed to the basic principles of our democracy and of free and democratic trade unionism. The executive council, when requested to do so by the president or by any other member of the executive council, shall have the power to conduct an investigation, directly or through an appropriate standing or special committee appointed by the president, of any situation in which there is reason to believe that any affiliate is dominated, controlled or substantially influenced in the conduct of its affairs by any corrupt influence, or that the policies or activities of any affiliate are consistently directed toward the advocacy, support, advancement or achievement of the program or of the purposes of the Communist Party, any Fascist organization or other totalitarian movement. Upon the completion of such an investigation, including a hearing if requested, the executive council shall have the authority to make recommendations or give directions to the affiliate involved and shall have the further authority, upon a two-thirds vote, to suspend any affiliate found guilty of a violation of this section. Any action of the executive council under this section may be appealed to the convention, provided, however, that such action shall be effective when taken and shall remain in full force and effect pending any appeal.

Article XIII, section 1 (d): The committee on ethical practices shall be vested with the duty and responsibility to assist the executive council in carrying out the constitutional determination of the federation to keep the federation free from any taint of corruption or communism, in accordance with the provisions of this constitution.

2. AFL–CIO RESOLUTION ON ETHICAL PRACTICES

(Adopted by AFL–CIO convention, December 1955)

The democratic institutions of the United States of America were established on the foundation of honesty, integrity, responsibility. The free and democratic labor movement of our country similarly rests upon the foundations of brotherhood, honesty, and integrity.

Any departure from the most exacting ethical principles is harmful not only to the people directly affected but to the whole fabric of our civilization.

The American labor movement has ever been quick in its denunciation of public officials who betray their trust. We have been equally critical of businessmen who have used corrupt methods and bribery to gain their selfish, acquisitive ends. We must be equally quick to recognize and condemn those instances of racketeering, corruption, and disregard for ethical standards when they occur inside our labor movement.

The vast majority of labor union officials accept their responsibility and trust. They endeavor honestly to carry out the democratic will of their members and to discharge the duties of their office. Yet the reputations of the vast majority are imperiled by the dishonest, corrupt, unethical practices of the few who betray their trust and who look upon the trade-union movement not as a brotherhood to serve the general welfare, but as a means to advance their own selfish purposes or to forward the aim of groups or organizations who would destroy our democratic institutions. By the adoption of the constitution of the American Federation of Labor and Congress of Industrial Organizations, the American labor movement has clearly accepted the responsibility for keeping its own house in order and to protect the movement "from any and all corrupt influences and from the undermining efforts of Communist agencies and all others who are opposed to the basic principles of our democracy and free and democratic unionism." Only by their wholehearted dedication to this constitutional objective can labor unions meet their obligations to their memberships. Failure to meet these responsibilities can only result in governmental assumption of what are properly trade-union functions. Reliance on the agencies of government for keeping our movement free from the infiltration of racketeers, crooks, Communists, Fascists, and other enemies of free democratic unionism would constitute a threat to the independence and freedom of the entire movement: Now, therefore, be it

Resolved—

1. The first constitutional convention of the AFL–CIO calls upon all its affiliated national and international unions to take whatever steps are necessary within their own organizations to effect the policies and ethical standards set forth in the constitution of the AFL–CIO. When constitutional amendments or changes in internal administrative procedures are necessary for the affiliated organizations to carry out the responsibilities incumbent upon autonomous organizations, such amendments and changes should be undertaken at the earliest practicable time.

2. This first constitutional convention of the AFL–CIO pledges its full support, good offices, and staff facilities of the AFL–CIO committee on ethical practices to all national and international unions in their efforts to carry out and put into practice the constitutional mandate to keep our organization free from any taint of corruption or communism.

3. RESOLUTION ON PROCEDURES

(Adopted by AFL–CIO executive council, June 1956)

Whereas article II, section 10, and article VIII, section 7, of the AFL–CIO constitution provide that it is a basic principle of this federation that it must be and remain free from any and all corrupt influences; and

Whereas article VIII, section 7, authorizes the executive council, upon the request of the president or any other member of the executive council to conduct an investigation directly or through an appropriate standing committee or special committee appointed by the president, of any situation in which there is reason to believe that any affiliate is dominated, controlled, or substantially influenced in the conduct of its affairs by any corrupt influence * * *"; and

Whereas article XIII, section 1 (d) provides for a committee on ethical practices which shall be vested with the duty and responsibility to assist the executive council in carrying out the above constitutional principles, and such committee has been appointed by the president with the approval of the executive council: Now, therefore, be it

Resolved by the executive council of the American Federation of Labor and Congress of Industrial Organizations:

1. That the committee on ethical practices is vested with the authority of the council to conduct formal investigations, incuding a hearing if requested, on behalf of the council, into any situation in which there is reason to believe an affiliate is dominated, controlled or substantially influenced in the conduct of its affairs by any corrupt influence and in which such formal investigation is requested by the president or any member of the executive council. The committee shall report to the executive council the results of any such investigation with such recommendations to the council as the committee deems appropriate.

2. The committee is authorized, upon its own motion or upon the request of the president, to make such preliminary inquiries as it deems appropriate in order to ascertain whether any situations exist which require formal investigation. The committee will report to the executive council as to any situations in which it believes that formal investigation is required or desirable and shall undertake such formal investigation as provided in paragraph 1 of this resolution.

3. The committee is directed to develop a set of principles and guides for adoption by the AFL–CIO in order to implement the constitutional determination that the AFL–CIO shall be and remain free from all corrupt influences. Upon the development of such recommended guides and principles, they shall be submitted by the committee to the executive council for appropriate action.

4. AFL–CIO STATEMENT REGARDING COOPERATION WITH ALL APPROPRIATE PUBLIC AGENCIES INVESTIGATING RACKETEERING

(Adopted by the AFL–CIO executive council, January 28, 1957)

The American Federation of Labor and Congress of Industrial Organizations is pledged both by its constitution and by fundamental principles of trade union morality to keep the labor movement free from any taint of corruption.

While the AFL–CIO has its own responsibility for keeping its house in order and is

attempting to meet this obligation to the best of its ability, this does not in any sense mean that appropriate agencies of government and the public do not have rights, obligations and responsibilities in eliminating racketeering and corruption from all segments of American life, including the labor movement.

No institution or agency, whether labor or business, public or private, enjoys special immunity from the equal application of the laws, from appropriate investigation by duly constituted legislative committees and from scrutiny of its operations by the members of the press or the general public.

Investigations by fair and objective legislative committees in the field of labor-management relations have been of tremendous help in eliminating abuses in this area.

The investigation conducted by the La-Follette committee exposing as it did, unsavory and illegal practices on the part of important business interests, contributed greatly to the enactment of the Wagner Act and to the elimination of employer practices which prevented union organization and caused strife and violence in labor-management relations. The recent investigation by the Douglas subcommittee of the Senate Labor Committee, exposing as it did, instances of corruption and improper conduct by labor officials and others in the handling of health and welfare funds, has provided for the public and the labor movement invaluable information which has laid the foundation for proposed disclosure legislation in this field, endorsed by the AFL–CIO, and which in addition, has enabled the AFL–CIO and its affiliates to do a better job of keeping their house in order. Both law enforcement agencies, in the interest of enforcing law, and legislative committees in the interest of enacting corrective legislation, by reason of their power and authority to subpoena witnesses and to place them under oath, as well as their superior investigatorial facilities, have means beyond those of the labor movement to expose and bring to light corrupt influences.

It goes almost without saying that law enforcement agencies, legislative committees, and the labor movement itself share the common responsibility of conducting investigations fairly and objectively, without fear or favor and in keeping with due process concepts firmly imbedded in the tradition and Constitution of our great country. It is a firm policy of the AFL–CIO that the highest ethical standards be observed and vigorously followed by all officials of the AFL–CIO and its affiliates in the conduct of their offices, in the handling of trade union and welfare funds, and in the administration of trade union affairs. Trade union and welfare funds are the common property of the members of our unions and must, therefore, be administered as a high and sacred trust for their benefit.

The AFL–CIO is determined that any remaining vestiges of racketeering or corruption in unions shall be completely eradicated. We believe that Congress, in the interest of enacting corrective legislation, if the same be deemed and found necessary, has the right, through proper committees, to investigate corruption wherever it exists, whether in labor, industry or anywhere else.

It is the firm policy of the AFL–CIO to cooperate fully with all proper legislative committees, law enforcement agencies and other public bodies seeking fairly and objectively to keep the labor movement or any other segment of our society free from any and all corrupt influences. This means that all officials of the AFL–CIO and its affiliates should freely and without reservation answer all relevant questions asked by proper law enforcement agencies, legislative committees and other public bodies, seeking fairly and objectively to keep the labor movement free from corruption. We recognize that any person is entitled, in the exercise of his individual conscience, to the protection afforded by the fifth amendment and we reaffirm our conviction that this historical right must not be abridged. It is the policy of the AFL–CIO, however, that if a trade union official decides to invoke the fifth amendment for his personal protection and to avoid scrutiny by proper legislative committees, law enforcement agencies or other public bodies into alleged corruption on his part, he has no right to continue to hold office in his union. Otherwise, it becomes possible for a union official who may be guilty of corruption to create the impression that the trade union movement sanctions the use of the fifth amendment, not as a matter of individual conscience, but as a shield against proper scrutiny into corrupt influences in the labor movement.

5. CODES

Ethical Practices Code I: Local union charters

(Approved by the AFL–CIO Executive Council, August 29, 1956)

The AFL–CIO, as one of its specific objectives, has a constitutional mandate "to protect the labor movement from any and all corrupt influences."

The committee on ethical practices has been vested by the AFL–CIO constitution with the "duty and responsibility" to assist the excutive council in its determination to keep the AFL–CIO "free from any taint or corruption."

As the statement on ethical practices adopted unanimously by our first constitutional convention pointed out, "The vast majority of labor union officials accept their responsibility and trust. * * * Yet the reputations of the vast majority are imperiled by the dishonest, corrupt, unethical practices of the few who betray their trust and who look upon the trade union movement not as a brotherhood to serve the general welfare, but as a means to advance their own selfish purposes."

The statement of our constitutional convention specifically called upon our affiliated national and international unions "to take whatever steps are necessary within their own organizations to effect the policies and ethical standards set forth in the constitution of the AFL–CIO." The same resolution pledged the "full support, good offices and staff facilities" of the ethical practices committee to our affiliated national and international unions in "their efforts to carry out and put into practice the constitutional mandate" to keep our organization free of corruption.

At its June 1956, meeting the executive council directed the committee on ethical practices "to develop a set of principles and guides for adoption by the AFL–CIO in order to implement the constitutional determination that the AFL–CIO shall be and remain free from all corrupt influences" and directed that such recommended guides and principles be submitted to the council.

In accordance with these constitutional responsibilities and mandates, the committee on ethical practices, in the period since its formal creation, undertook an analysis of the issuance of local union charters as it relates to the problem of corruption. The code recommended in this report is the first in a series which the committee plans to develop in accordance with the executive council's direction.

The committee found that in this area, as in the field of union welfare funds, the instances of corruption are relatively rare. The vast majority of local union charters are issued by the affiliated national and international unions of the AFL–CIO for legitimate trade-union purposes and without any taint or possibility of corruption. In a few instances, however, local union charters have fallen in the hands of corrupt individuals who have used these charters for their own illicit purposes instead of legitimate trade union objectives.

The possession of charters covering "paper locals" has enabled such racketeers to victimize individual workers, employers and the general public, while giving a black eye to the labor movement. They have used these charters to enter into conspiracies with corrupt employers to prevent, for a price, the genuine organization of workers into legitimate unions, thus depriving these workers of the benefit of honest collective bargaining agreements. These racketeers also use a charter as a basis to falsely invoke the collective strength of the trade-union movement for their illegitimate ends, thus demeaning the trade union's historic respect for the legitimate picket line, and injuring honest businessmen in the conduct of their affairs. A local union charter, improperly issued, can be used to control a local union unit vote, which negates the legitimate unit vote of bona fide local unions and thus subverts the democratic process within the trade-union movement at various levels. A racketeer treats a charter as a "hunting license" to invade the jurisdictions of other national or international unions, in the interests only of corruption and dishonest gain, and to cloak with a respectable name a whole range of nefarious and corrupt activities.

Such corrupt practices are not widespread. But even the few instances in which local union charters have been corruptly used are too many. The name of the AFL–CIO, and of the national and international unions affiliated with it, must always be a hallmark of ethical trade-union practices.

Scrupulous adherence, the committee believes, to certain traditional practices and principles of the trade-union movement with reference to the issuance of local union charters will serve to prevent and to eliminate the specific evils in this area.

The basic principle with reference to the issuance of a local union charter is that the charter is, in all unions, a solemn instrument establishing a subordinate or affiliated body of the international union, composed of organized workers in a particular subdivision of the union. The committee has made a study of the practices and constitutions of a great number of national and international unions with respect to the issuance of local union charters. In the vast majority of cases, the committee found, there is a constitutional prohibition against the issuance of charters in the absence of application by a minimum number of bona fide employees, eligible for membership in the union, within the jurisdiction covered by the charter.

The specific rules governing the issuance of charters necessarily vary greatly from union to union. And each national and international union, as part of its autonomous right, has complete authority to prescribe the particular procedures governing the issuance of local union charters. But whatever the particular procedures, each autonomous union has the duty to see to it that the purpose of issuing local union charters is to promote the general welfare of workers. The constitution of the AFL–CIO makes it clear that no affiliate has an autonomous right to permit corrupt or unethical practices which endanger the good name of the trade union movement.

The committee believes that implementation and enforcement of the basic principle that local union charters are to be issued only to give recognition to workers joining together in a subordinate or affiliated body of a national or international union, which is in fact expressed in the vast majority of union constitutions, will provide an effective method of preventing the kind of evils described in this statement.

Therefore, the ethical practices committee, under the authority vested in it by the constitution of the AFL–CIO and pursuant to

the mandate of the first constitutional convention of the AFL–CIO, recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions and to prevent any taint or possibility of corruption in the issuance of local union charters:

1. A local union charter, whether issued by the AFL–CIO or by a national or international union affiliated with the AFL–CIO, should be a solemn instrument establishing a subordinate or affiliated body. To assure this, the AFL–CIO and each national and international union, by constitution or administrative regulation, should require, for issuance of a local union charter, application by a group of bona fide employees, eligible for membership in the union, within the jurisdiction covered by the charter.

2. The purpose of issuing such charters should be to promote the general welfare of workers and to give recognition to their joining together in a subordinate or affiliated body.

3. A charter should never be issued to any person or persons who seek to use it as a hunting license for the improper invasion of the jurisdictions of other affiliated unions.

4. A charter should never be issued or permitted to continue in effect for a paper local not existing or functioning as a genuine local union of employees.

5. A charter should never be issued to persons who are known to traffic in local union charters for illicit or improper purposes.

6. The provision of the AFL–CIO constitution prohibiting the AFL–CIO and any affiliated national or international union from recognizing any subordinate organization that has been suspended or expelled by the AFL–CIO or any national or international union plainly includes and prohibits the issuance of a local union charter by the AFL–CIO or any affiliated national or international union to any group of individuals or any individuals suspended or expelled from the AFL–CIO or any affiliated national or international union for corruption or unethical practices.

7. The AFL–CIO and each national and international union shall take prompt action to eliminate any loopholes through which local union charters have been or can be issued or permitted to continue in effect contrary to these policies.

8. The AFL–CIO and each national and international union shall take prompt action to insure the forthwith withdrawal of local union charters which have been issued and are now outstanding in violation of these policies.

Ethical Practices Code II: Health and Welfare Funds

(Approved by the AFL–CIO Executive Council, January 31, 1957)

At its June 1956, meeting the executive council directed the committee on ethical practices "to develop a set of principles and guides for adoption by the AFL–CIO in order to implement the constitutional determination that the AFL–CIO shall be and remain free from all corrupt influences" and directed that such recommended guides and principles be submitted to the council. In accordance with this direction, and its constitutional responsibilities, the committee on ethical practices submitted to the executive council at its August 1956, meeting the first of a proposed series of recommended codes. This code covering the issuance of local union charters was unanimously adopted by the council.

This report, and the recommended code contained in it, is the second in the series which the committee, in accordance with the council's direction, is developing to implement the constitutional mandate that the AFL–CIO shall be and remain free from any and all corrupt influences and the determination of the first constitutional convention of the AFL–CIO that the reputations of the vast majority of labor union officials, who accept their responsibilities and trust, are "imperiled by the dishonest, corrupt, unethical practices of the few who betray their trust and who look upon the trade union movement not as a brotherhood to serve the general welfare, but as a means to advance their own selfish purposes."

Both the American Federation of Labor and the Congress of Industrial Organizations prior to the merger of these two organizations into the AFL–CIO gave thorough consideration to the subject of health and welfare funds. This subject was also considered by and dealt with by the first constitutional convention of the AFL–CIO and a resolution dealing with this subject matter was adopted by that convention.

As stated in the resolution adopted by the first constitutional convention of the AFL–CIO, the task of administering and operating health and welfare programs which have been developed through collective bargaining has placed heavy new responsibilities upon the shoulders of trade union officials. The funds involved are paid for through the labor of the workers covered by the plans. They must be administered, therefore, as a high trust for the benefit only of those workers.

Most trade union officials have been faithful to the high trust which has been imposed upon them because of the development of health and welfare funds. The malfeasances of a few, however, have served to bring into disrepute not only the officials of the particular unions involved, but also the good name of the entire American labor movement. For this reason, it is imperative that the AFL–CIO and each of the national and international unions affiliated with it, rigorously adhere to the highest ethical standards in dealing with the subject of health and welfare funds.

For these reasons, the ethical practices committee, under the authority vested in it by the constitution of the AFL–CIO and pursuant to the mandate of the first constitutional convention of the AFL–CIO, recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions:

1. No union official who already receives full-time pay from his union shall receive fees or salaries of any kind from a fund established for the provision of a health, welfare, or retirement program. Where a salaried union official serves as employee representative or trustee in the administration of such programs, such service should be regarded as one of the functions expected to be performed by him in the normal course of his duties and not as an extra function requiring further compensation from the welfare fund.

2. No union official, employee, or other person acting as agent or representative of a union, who exercises responsibilities or influence in the administration of welfare programs or the placement of insurance contracts, should have any compromising personal ties, direct or indirect, with outside agencies such as insurance carriers, brokers, or consultants doing business with the welfare plan. Such ties cannot be reconciled with duty of a union official to be guided solely by the best interests of the membership in any transactions with such agencies. Any union official found to have such ties to his own personal advantage or to have accepted fees, inducements, benefits, or favors of any kind from any such outside agency, should be removed. This principle, of course, does not prevent the existence of a relationship between a union officer or employee and an outside agency where (a) no substantial personal advantage is derived from the relationship, and (b) the outside agency is one in the management of which the union participates, as a union, for the benefit of its members.

3. Complete records of the financial operations of all welfare funds and programs should be maintained in accordance with the best accounting practice. Each such fund should be audited regularly by internal auditors. In addition, each such fund should be audited at least once each year, and preferably semiannually, by certified public or other independent accountants of unquestioned professional integrity, who should certify that the audits fully and comprehensively show the financial condition of the fund and the results of the operation of the fund.

4. All audit reports should be available to the membership of the union and the affected employees.

5. The trustees or administrators of welfare funds should make a full disclosure and report to the beneficiaries at least once each year. Such report should set forth, in detail, the receipts and expenses of the fund; all salaries and fees paid by the fund, with a statement of the persons to whom paid; the amount paid and the service or purpose for which paid; a breakdown of insurance premium paid, if a commercial insurance carrier is involved, showing, insofar as possible, the premiums paid, dividends, commissions, claims paid, retentions and service charges; a statement of the person to whom any commissions or fees of any kind were paid; a financial statement on the part of the insuring or service agency, if an agency other than a commercial insurance carrier is employed; and a detailed account of the manner in which the reserves held by the fund are invested.

6. Where health and welfare benefits are provided through the use of a commercial insurance carrier, the carrier should be selected through competitive bids solicited from a substantial number of reliable companies, on the basis of the lowest net cost for the given benefits submitted by a responsible carrier, taking into consideration such factors as comparative retention rates, financial responsibility, facilities for and promptness in servicing claims, and the past record of the carrier, including its record in dealing with trade unions representing its employees.

The trustees of the fund should be required to include in reporting to the membership the specific reasons for the selection of the carrier finally chosen. The carrier should be required to warrant that no fee or other remuneration of any kind has been paid directly or indirectly to any representative of the parties in connection with the business of the fund.

7. Where a union or union trustees participate in the administration of the investment of welfare fund reserves, the union or its trustees should make every effort to prohibit the investment of welfare fund reserves in the business of any contributing employer, insurance carrier or agency doing business with the fund, or in any enterprise in which any trustee, officer or employee of the fund has a personal financial interest of such a nature as to be affected by the fund's investment or disinvestment.

(This is not to be construed as preventing investment in an enterprise in which a union official is engaged by virtue of his office, provided (i) no substantial personal advantage is derived from the relationship, and (ii) the concern or enterprise is one in the management of which the union participates for the benefit of its members.)

8. Where any trustee, agent, fiduciary or employee of a health or welfare program is found to have received an unethical payment, the union should insist upon his removal and should take appropriate legal steps against both the party receiving and the party making the payment. Where health and welfare funds are negotiated or administered by local unions or by other organiza-

tions subordinate to or affiliated with a national or international union, provision should be made to give the national or international union the authority to audit such funds and to apply remedies where there is evidence of a violation of ethical standards.

9. Every welfare program should provide redress against the arbitrary or unjust denial of claims so as to afford the individual member prompt and effective relief where his claim for benefits has been improperly rejected. Every program should provide for the keeping of complete records of the claims experience so that a constant check can be maintained on the relationship between claims and premiums and dividends, and on the utilization of the various benefits.

10. The duty of policing and enforcing these standards is shared by every union member, as well as by local, national, and international officials. The best safeguard against abuses lies in the hands of a vigilant, informed, and active membership, jealous of their rights and interests in the operation of health and welfare programs, as well as any other trade union program. As a fundamental part of any approach to the problem of policing health and welfare funds, affiliated unions, through education, publicity, and discussion programs, should seek to develop the widest possible degree of active and informed interest in all phases of these programs on the part of the membership at large. International unions should, wherever possible, have expert advice available for the negotiation, establishment, and administration of health and welfare plans, and should provide training for union representatives in the techniques and standards of proper administration of welfare plans.

11. Where constitutional amendments or changes in internal administrative procedure are necessary to comply with the standards herein set forth, such amendments and changes should be undertaken at the earliest practicable time.

Ethical practices code III: Racketeers, crooks, Communists, and Fascists

(Approved by the AFL–CIO Executive Council, Jan. 31, 1957)

This is the third in a series of recommended codes which the committee on ethical practices has developed in accordance with the direction of the executive council that it should "develop a set of principles and guides for adoption by the AFL–CIO in order to implement the constitutional determination that the AFL–CIO shall be and remain free from all corrupt influences."

Article VIII, section 7, of the constitution of the AFL–CIO establishes that "it is a basic principle of this federation that it must be and remain free from any and all corrupt influences and from the undermining efforts of Communist, Fascist, or other totalitarian agencies who are opposed to the basic principles of our democracy and of free and democratic trade unionism." Under this constitutional provision there is no room within the federation or any of its affiliated unions for any person in a position of leadership or responsibility who is a crook, a racketeer, a Communist, or a Fascist. And it is the obligation of every union affiliated with the AFL–CIO to take appropriate steps to ensure that this principle is complied with.

To be sure, neither the AFL–CIO nor its affiliated unions are law-enforcing agencies. It is not within the purview or authority of a trade union to convict its members of a violation of statutory law. But it is the duty and responsibility of each national and international union affiliated with the federation to see to it that it is free of all corrupt, Communist or Fascist influences. Consequently, a trade union need not wait upon a criminal conviction to bar from office corrupt, Communist or Fascist influences. The responsibility of each union to see to it that it is free of such influences is not a responsibility placed upon our unions by law. It is a responsibility which rests upon our unions by the AFL–CIO constitution and by the moral principles that govern the trade union movement. Eternal vigilance in this area is the price of an honest democratic trade union movement.

It is not possible, nor is it desirable, to set down rigid rules to determine whether a particular individual in a position of responsibility or leadership in the trade union movement is a crook, a racketeer, a Communist, or a Fascist. Obviously, if a person has been convicted of a crime involving moral turpitude offensive to trade union morality, he should be barred from office or responsible position in the labor movement. Obviously also, a person commonly known to be a crook or racketeer, should not enjoy immunity to prey upon the trade union movement because he has somehow managed to escape conviction. In the same manner, the fact that a person has refrained from formally becoming a member of the Communist Party or a Fascist organization should not permit him to hold or retain a position of responsibility or leadership in the trade union movement if, regardless of formal membership, he consistently supports or actively participates in the activities of the Communist Party or any Fascist or totalitarian organization.

In this area, as in all others, determinations must be made as a matter of common sense and with due regard to the rights of the labor unions and the individuals involved.

On the basis of these considerations, the ethical practices committee, under the authority vested in it by the constitution of the AFL–CIO, pursuant to the mandate of the first constitutional convention of the AFL–CIO, recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions:

1. The AFL–CIO and each of its affiliated unions should undertake the obligation, through appropriate constitutional or administrative measures and orderly procedures, to insure that no persons who constitute corrupt influences or practices or who represent or support Communist, Fascist, or totalitarian agencies should hold office of any kind in such trade unions or organizations.

2. No person should hold or retain office or appointed position in the AFL–CIO or any of its affiliated national or international unions or subordinate bodies thereof who has been convicted of any crime involving moral turpitude offensive to trade union morality.

3. No person should hold or retain office or appointed position in the AFL–CIO or any of its affiliated national or international unions or subordinate bodies thereof who is commonly known to be a crook or racketeer preying on the labor movement and its good name for corrupt purposes, whether or not previously convicted for such nefarious activities.

4. No person should hold or retain office or appointed position in the AFL–CIO or any of its affiliated national or international unions or subordinate bodies thereof who is a member, consistent supporter, or who actively participates in the activities of the Communist party or of any fascist or other totalitarian organization which opposes the democratic principles to which our country and the American trade union movement are dedicated.

Ethical practices code IV: Conflicts of Interest

(Approved by the AFL–CIO Executive Council, January 31, 1957)

This is the fourth in a series of recommended codes which the committee on ethical practices has developed in accordance with the direction of the executive council that it should "develop a set of principles and guides for adoption by the AFL–CIO in order to implement the constitutional determination that the AFL–CIO shall be and remain free from all corrupt influences." Prior codes have dealt with the issuance of local union charters; welfare funds; racketeers, crooks, and Communists. The code herein recommended deals with conflicts of interest in the investment and business interests of union officials.

It is too plain for extended discussion that a basic ethical principle in the conduct of trade union affairs is that no responsible trade union official should have a personal financial interest which conflicts with the full performance of his fiduciary duties as a workers' representative.

Obviously an irreconcilable conflict of interest would be present if a trade union official, clothed with responsibility and discretion in conducting the representation of workers, simultaneously maintains a substantial interest in the profits of the employer of the workers whom he is charged with representing. Even though, in a particular instance, there may be no actual malfeasance in the representation of the employees involved, the opportunity for personal gain at the expense of the welfare of the employees whom the union official represents obviously exists.

Such a simple case, however, does not fully present the problems which exist, or may exist, in this area. There may be cases in which the conflict of interests is not so clear, but nevertheless exists. There are, on the other hand, forms of private investment which seem wholly devoid of any possibility of corruption or dereliction in trade union responsibility. It will be the purpose of this report to discuss some of the varying situations which may arise in this area and, on the basis of such discussion, to present a recommended code of minimum standards to which the committee believes all trade union officials should adhere in their investment and business interests.

The problems in this area, of course, could all be eliminated by adoption of the simple principle that no trade union official should, under any circumstances, use his own personal funds or property in any form of business enterprise or investment. But the committee feels that it is both unnecessary and unwise to establish such a rigid standard for trade union officials; union officers and agents should not be prohibited from investing their personal funds in their own way in the American free enterprise system so long as they are scrupulously careful to avoid any actual or potential conflict of interest. The American trade union movement does not accept the principle that either its members or its leaders should own no property. Both union leaders and members have the right to set aside their own personal reserves for themselves and their families, and to invest and use those reserves in legitimate ways.

But the trade union leader does have certain special responsibilities which he must assume and respect because he serves as a leader in the trade union movement. And those responsibilities, the committee believes, necessarily imply certain restraints upon his right to engage in personal investment, even with his own funds and on his own time. In a sense, a trade union official holds a position comparable to that of a public servant. Like a public servant, he has a high fiduciary duty not only to serve the members of his union honestly and faithfully, but also to avoid personal economic interest which may conflict or appear to conflict with the full performance of his responsibility to those whom he serves.

Like public servants, trade union leaders ought to be paid compensation commensurate with their services. But, like public servants, trade union leaders must accept certain limitations upon their private activities which result from the nature of their

services. Indeed, the nature of the trade union movement and the responsibilities which necessarily must be accepted by its leaders, make the strictest standards with respect to any possible conflict of interest properly applicable.

It is plain, as already stated, that a responsible trade union official should not be the owner in whole or in part of a business enterprise with which his union bargains collectively on behalf of its employees. The conflict in such a case is clear.

It is almost equally clear, the committee believes, that a trade union official should not be the owner of a business enterprise which sells to, buys from, or in other ways deals, to any significant degree, with the enterprise with which he conducts collective bargaining. Again, the possibility that the trade union official may be given special favors or contracts by the employer in return for less than discharge of his obligations as a trade union leader, exists.

Somewhat different considerations, however, apply to the ownership, through purchase on the open market or other legitimate means, of publicly traded securities. Employee ownership of stock is certainly a fairly common practice in American life. Often, indeed, there are special stock purchase plans designed to stimulate such employee investments.

On the other hand, ownership, even of publicly traded securities, in sufficient amounts to influence the course of management decision seems to the committee incompatible with the proper representation of the employees by a trade union official.

The committee believes, therefore, that the minimum standards of ethical conduct in this area should not forbid all investment by a trade union official in the corporate securities of companies employing the workers he represents. Such investment by a trade union official, however, should always be subject to the restriction that it is not acquired in an illegitimate or unethical manner, that it is limited to securities which are publicly traded, and that his interest should never be large enough so as to permit him to exercise any individual influence on the course of corporate decision.

There is nothing in the essential ethical principles of the trade union movement which should prevent a trade union official, at any level, from investing personal funds in the publicly traded securities of corporate enterprises unrelated to the industry or area in which the official has a particular trade union responsibility. Such securities offer a wide choice of investment and are, generally speaking, so far removed from individual stockholder control or influence that with the exceptions above noted, there is no reason to bar investment by trade union officials.

The same principles apply with respect to privately owned or closely held businesses which are completely unrelated to the industrial area in which the trade union leader serves.

On the basis of these consideration, the ethical practices committee, under the authority vested in it by the constitution of the AFL–CIO and pursuant to the mandate of the first constitutional convention of the AFL–CIO, recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions:

1. No responsible trade union official should have a personal financial interest which conflicts with the full performance of his fiduciary duties as a workers' representative.

2. No responsible trade union official should own or have a substantial business interest in any business enterprise with which his union bargains collectively, or in any business enterprise which is in competition with any other business enterprise with which his union bargains collectively.

3. No responsible trade union official should own or have a substantial business interest in a business enterprise a substantial part of which consists of buying from, selling to, or otherwise dealing with the business enterprise with which his union bargains collectively.

4. The provisions of paragraphs 2 and 3 above do not apply in the case of an investment in the publicly traded securities of widely held corporations which investment does not constitute a substantial enough holding to affect or influence the course of corporate decision.

5. No responsible trade union official should accept "kickbacks," under-the-table payments, gifts of other than nominal value, or any personal payment of any kind other than regular pay and benefits for work performed as an employee from an employer or business enterprise with which his union bargains collectively.

6. The policies herein set forth apply to: (a) all officers of the AFL–CIO and all officers of national and international unions affiliated with the AFL–CIO, (b) all elected or appointed staff representatives and business agents of such organizations, and (c) all officers of subordinate bodies of such organizations who have any degree of discretion or responsibility in the negotiation of collective bargaining agreements or their administration.

7. The principles herein set forth apply not only where investments are made by union officials, but also where third persons are used as blinds or covers to conceal the financial interests of union officials.

Mr. MORSE. Mr. President, I also ask unanimous consent to have printed in the RECORD three additional codes: The Code of Ethical Practices With Respect to Financial Practices of Unions, the Code of Ethical Practices With Respect to Union Democratic Processes, and the Recommended Code of Minimum Accounting and Financial Controls for Affiliates.

There being no objection, the codes were ordered to be printed in the RECORD, as follows:

CODE OF ETHICAL PRACTICES WITH RESPECT TO FINANCIAL PRACTICES OF UNIONS

This is the fifth in a series of recommended codes which the Committee on Ethical Practices has developed in accordance with the direction of the executive council that it should "develop a set of principles and guides for adoption by the AFL–CIO in order to implement the constitutional determination that the AFL–CIO shall be and remain free from all corrupt influences." On August 29, 1956, the council approved a code dealing with the issuance of local union charters; on January 31, 1957, the executive council approved codes dealing with health and welfare funds; racketeering, crooks, and Communists, and investment and business interests of union officials.

There are principles inherent in the conception of a free, honest, and democratic trade union movement, which, the committee believes, virtually dictate the outlines of any Code of Ethical Practices dealing with union finances. The first of these principles hardly requires statement. It is simply that a labor union is an organization whose primary function is to improve the wages, hours and working conditions of the employees it represents, through the processes of collective bargaining with employers. It is not a business enterprise or an investment company. Unions, of course, must have funds with which to operate and it is clearly desirable that they should maintain reserves to cover contingencies which may arise in the course of the performance of their functions as workers' representatives. But, equally clearly, the accumulation of funds per se is not the objective for which the union exists. A union is not a profit-making institution but a democratic organization with definite social aims and principles. Union funds are held in trust for the benefit of the membership. But a union, unlike a bank, a trustee, or other fiduciaries, is not primarily a manager of funds vested with the duty of enhancing their value and making distributions. Increasing the value of the union's funds should never become an objective of such magnitude that it in any way interferes with or obscures the basic function of the union, which is to devote its resources to representing its members, honestly and faithfully.

A second basic principle which dictates the terms of a code of ethical practices with respect to the handling of union funds is again simple. It is that unions are democratic organizations.

The fact that a union is a democratic organization plainly implies that the members of the union are entitled to assurance that the union's funds, which are their funds, are not dissipated. They are also entitled to be reasonably informed as to how the funds of the organization are being used or invested. Finally, their delegated representatives in the union's governing body and conventions should have the power and responsibility to oversee the expenditure of the union's moneys so that the members can be guaranteed that funds are expended solely for the purposes for which the organization exists.

A final fundamental principle, the committee believes, is involved. That principle is that each national or international union affiliated with the AFL–CIO in the words of the resolution on ethical practices which was unanimously adopted by the founding convention of the AFL–CIO in December 1955, "has clearly accepted the responsibility for keeping its own house in order and to protect the movement 'from any and all corrupt influences and from the undermining efforts of Communist agencies and all others who are opposed to the basic principles of our democracy and free and democratic unionism'."

From these three basic principles, the committee believes that certain conclusions necessarily follow. Since a union holds its funds for the benefit of its membership and to further their interests it should comply with standards generally applicable to fiduciaries or trustees with respect to the manner in which it keeps its records and accounts. Regular audits should be made and there should be appropriate distribution of summaries of such audits so that the membership and the public are adequately apprised of the state of the organization's finances. In this connection, a committee of secretary-treasurers of AFL–CIO affiliates has drawn up a suggested set of minimum accounting and financial controls for affiliates of the AFL–CIO. This set of controls represents, the committee believes, the minimum with which any affiliated organization should comply in order to fulfill the constitutional mandate that the labor movement should be kept free from any taint of corruption. Almost all unions, the committee believes, today comply with the minimum controls set forth in the recommendation of the secretary-treasurers. Many, indeed, have much stricter controls. The minimum controls suggested by the secretary-treasurers, therefore, should not be regarded as an optimum. Unions are to be commended and encouraged to establish and maintain even more stringent accounting and financial controls.

In addition to accounting and financial procedures necessary to conform to the con-

trols applicable generally to well-run business organizations and fiduciaries, the committee believes that certain other rules follow from the basic principles set forth above. Because a union is a union, not a business organization or a trust company, the rules which guide its use and investment of funds are necessarily different. For example, investments by business organizations in other businesses from which they buy or sell so that the investing business may get favored treatment in its sales or purchases may be an acceptable business practice; similar investment by a labor union in business enterprises with which it bargains collectively presents serious problems. Such investment is not good practice for a union.

The fact that the basic objective in the management of trade union funds is not the maximizing of profit, but to further the objectives of the members joining together in a union leads to additional conclusions. A business organization has one function: To make money for its stockholders. A fiduciary's primary obligation is to preserve and, within limits defined only by the necessity for safety, to augment the funds which the trustee is charged with holding for the benefit of the beneficiaries. Since these are not a union's primary functions, a union's investment policy may properly be governed by different considerations. For example, business institutions and corporate trustees might question today the propriety of investing all of their reserves in Government bonds because of their comparatively low yield. Yet, for a trade union, one of whose fundamental objects is "to protect and strengthen our democratic institutions" such an investment policy is to be commended. Similarly, since another object of a trade union is to aid and assist other unions and "to promote the organization of the unorganized into unions of their own choosing" loans and grants for mutual aid and assistance are part of the proud tradition of the labor movement even though foreign to the business community and not justified by any considerations of financial gain or even security.

Similarly, the business community may not regard it to be a bad business practice for a business enterprise to buy or sell from firms in which the officers of the business have a financial interest. Nor may the business community regard it as bad practice for a business organization to lend money, on adequate security, to members of the organization. Because the funds of a labor union are both held in trust for the benefit of its members and to further legitimate trade union purposes, practices which may be acceptable in business organizations, the committee believes, should be limited if not completely eliminated among labor organizations.

All of these considerations lead to this ultimate conclusion. With respect to accounting and financial controls and the expenditure of its funds for proprietary (housekeeping) functions the labor movement, it goes almost without saying, should follow the strictest rules applicable to all well-run institutions. With respect to the policies governing its financial and proprietary decisions, a higher obligation rests upon the trade union movement: to conduct its affairs and to expend and invest its funds, not for profit, but for the benefit of its membership and the great purposes for which they have joined together in the fraternity of the labor movement.

On the basis of these considerations the Committee on Ethical Practices, under the authority vested in it by the constitution of the AFL-CIO and pursuant to the mandate of the First Constitutional Convention of the AFL-CIO and of the executive council, recommends that the executive council of the AFL-CIO adopt the following policies to safeguard the good name of the AFL-CIO and its affiliated unions:

1. The AFL-CIO and all affiliated national and international unions should comply with the minimum accounting and financial controls suggested by the committee of secretary-treasurers and approved by the executive council which is annexed hereto.

2. The AFL-CIO and all affiliated national and international unions should conduct their proprietary functions, including all contracts for purchase or sale or for the rendition of housekeeping services, in accordance with the practices of well-run institutions, including the security of competitive bids for all major contracts.

3. Neither the AFL-CIO nor any national or international union affiliated with the AFL-CIO should permit any of its funds to be loaned, invested, or otherwise dealt with in a manner which inures to the personal profit or advantage of any officer, representative or employee of the union.

4. Neither the AFL-CIO nor any national or international union affiliated with the AFL-CIO should enter into any contracts of purchase or sale or for the rendition of services which will inure to or result in the personal profit or advantage, including gifts of more than nominal value, other than his regular salary or compensation, of any officer, representative or employee of the union.

5. Neither the AFL-CIO nor any national or international union affiliated with the AFL-CIO should invest in or make loans to any business enterprise with which it bargains collectively.

6. The provisions of paragraph 5 shall not be construed as prohibiting investment by unions in the publicly traded securities of widely held corporations which investment does not constitute a substantial enough holding to affect or influence the course of corporate decision; the provisions of paragraphs 3 and 4 shall not be construed as applying to the profit that may result from a proper investment by a union officer, representative or employee. Nor shall such provisions be construed as preventing investment in a business or enterprise in which an official or an affiliate is engaged by virtue of his office, provided (a) no substantial personal advantage is derived from the relationship and (b) the business or enterprise is one in the management of which the affiliate participates for the benefit of its members. The provisions of such paragraphs, however, shall apply wherever third persons are used as blinds or covers to conceal the personal profit or advantage of union officials.

7. Neither the AFL-CIO nor any national or international union affiliated with the AFL-CIO should make personal loans to its officers, representatives, employees, or members, or members of their families, for the purpose of financing the private business or investment of such persons.

8. Each national or international union affiliated with the AFL-CIO should promptly take whatever internal steps are needed to insure that the standards set forth in this code are made applicable to itself and to each of its locals and other subordinate or affiliated bodies. Wherever constitutional amendments or changes in internal administrative procedures are necessary to fully comply with those standards, such amendments and changes should be undertaken by the affiliates at the earliest practicable opportunity.

Code of Ethical Practices With Respect to Union Democratic Processes

This is the sixth in a series of recommended codes developed by the AFL-CIO committee on ethical practices. The prior codes have dealt, primarily, with the questions related to corruption and conflicts of interest. The present code has been developed by the committee pursuant to the mandate contained in article II, sections 10 and 11, of the constitution of the AFL-CIO, which sets forth the basic objectives of the federation to protect the labor movement not only from corrupt influences and Communist agencies but also from "all others who are opposed to the basic principles of our democracy and free and democratic unionism" and to "safeguard the democratic character of the labor movement."

These constitutional provisions of the AFL-CIO give effect to the democratic tradition upon which the entire labor movement is based. Freedom and democracy are the essential attributes of our movement. Labor organizations lacking these attributes, like Hitler's labor front, Franco's syndicates, and Moscow's captive unions, are unions in name only. Authoritarian control, whether from within the labor movement or imposed from without by government, is contrary to the spirit, the tradition and the principles which should always guide and govern our movement.

We are proud of our record. Just as the constitution of the AFL-CIO proclaims its dedication to the concepts of freedom and democracy and contains machinery for their implementation in the federation's operations, so also do the constitutions of its affiliates. Almost without exception, they provide for the basic elements of union democracy: the right of full and equal participation by each member in the affairs and processes of union self-government, in accordance with the principles of representative democracy and the necessity for protecting the rights of individual members.

The record of union democracy, like the record of our Nation's democracy, is not perfect. A few unions do not adequately, in their constitutions, provide for these basic elements of democratic practice. A few unions do not practice or implement the principles set forth in their constitutions. Finally, while the overwhelming majority of American unions both preach and practice the principles of democracy, in all too many instances the membership by apathy and indifference have forfeited their rights of union citizenship. The provisions of the Taft-Hartley Act have substantially frustrated previously successful efforts by unions to insure maximum attendance and participation by the membership in union meetings and affairs. The real corrective in this area is not so much the establishment of new principles as the exercise of rights presently recognized and accorded. Just as eternal vigilance is the price of liberty, so is the constant exercise of the rights of union citizenship the price of union democracy.

It is valuable, nevertheless, to restate the principles which should govern all free and democratic unions and to rededicate the labor movement to the preservation of these principles.

The Committee on Ethical Practices has attempted to formulate in the following code the basic and elementary principles which any affiliated union should achieve if it is to comply with the basic principles and objects of the AFL-CIO constitution. Necessarily, since each union has grown up in its own tradition and with its own background, forms and procedures may differ widely. Unions should be free to determine their own governmental structure and to regulate their own affairs. But, whatever the form, the basic democratic rights set forth in the code should be guaranteed.

1. Each member of a union should have the right to full and free participation in union self-government. This should include the right (a) to vote periodically for his local and national officers, either directly by referendum vote or through delegate bodies, (b) to honest elections, (c) to stand for and to hold office, subject only to fair qualifications uniformly imposed, (d) to voice his views as to the method in which the union's affairs should be conducted.

2. Each member of a union should have the right to fair treatment in the application of union rules and law. The general

principle applicable to union disciplinary procedures is that such procedures should contain all the elements of fair play. No particular formality is required. No lawyers need be used. The essential requirements of due process, however—notice, hearing, and judgment on the basis of the evidence—should be observed. A method of appeal to a higher body should be provided to insure that judgment at the local level is not the result of prejudice or bias.

3. Each member of a union has the responsibility (a) fully to exercise his rights of union citizenship and (b) loyalty to support his union. The right of an individual member to criticize the policies and personalities of his union officers does not include the right to undermine the union as an institution, to advocate dual unionism, to destroy or weaken the union as a collective-bargaining agency, or to carry on slander and libel.

4. To safeguard the rights of the individual members and to safeguard its democratic character, the AFL–CIO and each affiliated national or international union should hold regular conventions at stated intervals, which should be not more than 4 years. The convention should be the supreme governing body of the union.

5. Officers of the AFL–CIO and of each affiliated national or international union should be elected, either by referendum vote or by the vote of delegate bodies. Whichever method is used, election should be free, fair, and honest and adequate internal safeguards should be provided to insure the achievement of that objective.

6. All general conventions of the AFL–CIO and of affiliated national or international unions should be open to the public, except for necessary executive sessions. Convention proceedings or an accurate summary thereof should be published and be available to the membership.

7. The appropriate officials of the union and such bodies which are given authority to govern a union's affairs between conventions should be elected, whether from the membership at large or by appropriate divisions, either by referendum vote or by the vote of delegate bodies. Such bodies shall abide by and enforce the provisions of the union's constitution and carry out the decisions of the convention.

8. Membership meetings of local unions should be held periodically with proper notice of time and place.

9. Elections of local union officers should be democratic, conducted either by referendum or by vote of a delegate body which is itself elected by referendum or at union meetings.

10. The term of office of all union officials should be stated in the organization's constitution or bylaws and should be for a reasonable period, not to exceed 4 years.

11. To insure democratic responsible and honest administration of its locals and other subordinate bodies, the AFL–CIO and affiliated national and international unions should have the power to institute disciplinary and corrective proceedings with respect to local unions and other subordinate bodies, including the power to establish trusteeships where necessary. Such powers should be exercised sparingly and only in accordance with the provisions of the union's constitution, and autonomy should be restored promptly upon correction of the abuses requiring trusteeship.

12. Where constitutional amendments or changes in internal administrative procedures are necessary to comply with the standards herein set forth such amendments and changes should be undertaken at the earliest practicable time.

RECOMMENDED CODE OF MINIMUM ACCOUNTING AND FINANCIAL CONTROLS FOR AFFILIATES

The special committee of the secretary-treasurers' conference of the AFL–CIO, consisting of William Pachler, Utility Workers Union of America; Toney Gallo, United Cement, Lime, and Gypsum Workers International Union; Frank Grasso, United Papermakers and Paperworkers; I. W. Abel, United Steelworkers of America; James B. Carey, Industrial Union Department; James R. Downes, International Association of Bridge and Structural Iron Workers; George E. Fairchild, Building Service Employees International Union; Al Hartnett, International Union of Electrical, Radio, and Machine Workers; Vernon Housewright, Retail Clerks International Association; Joseph D. Keenan, International Brotherhood of Electrical Workers; Lewis McCracken, United Glass and Ceramic Workers of North America; Emil Mazey, United Automobile, Aircraft, and Agricultural Implement Workers of America; John J. Murphy, Bricklayers, Masons, and Plasterers International Union of America; Eric Peterson, International Association of Machinists; and Desmond Walker, United Rubber, Cork, Linoleum, and Plastic Workers of America, herewith submits to the executive council, through the secretary-treasurer of the AFL–CIO, a recommended code of minimum accounting and financial controls for affiliates. This system of principles was prepared in response to the request and under the general supervision of the secretary-treasurer, acting pursuant to a motion passed by the executive council at its March 1957 meeting. It has been unanimously approved by the special committee of the secretary-treasurers' conference, and in addition, has received the endorsement of representatives of nationally known and highly distinguished independent certified public accounting firms.

This statement of principles is proudly presented. It embodies therein standards of accounting and financial responsibility and control that today meet with general approval and general acceptance. It provides a further manifestation of the determination of the AFL–CIO to give substance to its constitutional mandate that this federation must be and remain free from any and all corrupt influences. It will, as intended, augment, fortify, and strengthen the codes of fundamental trade union morality earlier adopted by the executive council to effect adherence to the high ethical standards proclaimed in the constitution of the AFL–CIO.

The code of principles herein recommended represents agreement of many minds on fundamental, minimum standards that should be adopted and put into effect by affiliates and other subordinate bodies in the conduct of their financial affairs and in the preparation and maintenance of appropriate records and reports. It is the result of many meetings and a full exchange and discussion of ideas and concepts, with rich contributions being made not only by secretary-treasurers of international and national affiliates, but by the representatives of the independent certified public accounting firms whose recommendations form the basic structure of the controls herein suggested.

The first meeting was held on April 4, 1957, and it was attended by the secretary-treasurer of the AFL–CIO and members of his staff, by members of the special committee of the secretary-treasurers' conference, and by legal counsel to the federation. At this meeting the motion adopted by the executive council was presented and discussed.

A subcommittee was appointed and commissioned to meet with representatives of six outstanding and eminent certified public accounting firms with the end in view of soliciting and considering their recommendations as to the essentials of an effective, worthwhile and workable standard of accounting and financial controls. The six certified public accounting firms selected were: Main & Co., Price Waterhouse & Co., Thomas W. Havey & Co., Wayne Kendrick & Co., Scovell, Wellington & Co., and Haskin & Sells.

The subcommittee thereafter met on April 18, 1957, and a draft of proposed controls was considered and discussed. During the afternoon of that day the subcommittee met with representatives of the accounting firms mentioned above and considered with them the formulation of a statement of standards dealing with financial and accounting responsibility. At this meeting the subcommittee's draft of proposed controls was reviewed and discussed. Before concluding this meeting, it was agreed that the representatives of the accounting firms would further consider the subcommittee's proposals and at a subsequent date would submit their observations with respect to the same and present their written recommendations with respect to a satisfactory and appropriate code of financial conduct and accounting.

Thereafter and by May 1, 1957, recommendations were received from Price Waterhouse & Co., Thomas W. Havey & Co., Scovell, Wellington & Co., Wayne Kendrick & Co., and Main & Co. A detailed study of these recommendations was made by members of the subcommittee at a meeting held on the morning of May 9, 1957. This study disclosed that four of the firms making recommendations believed that minimum controls should be adopted in any code proposed. The fifth recommended a broad and general statement of principles. This study further disclosed that these four firms recommending minimum controls were in substantial agreement as to the nature and reach of the controls to be adopted. The recommendations for minimum controls met with the general approval of the subcommittee and a proposed code substantially incorporating the recommendations made was prepared and adopted by the subcommittee. That afternoon the proposed code was submitted to the special committee for its study and approval. After a thorough analysis and discussion some minor changes were made in the proposed code and, as so amended, it was unanimously adopted by the special committee with the recommendation that it be finally discussed with and reviewed by the representatives of the public accounting firms collaborating in its preparation.

This was accomplished the following day when the members of the special committee and staff members of the AFL–CIO, including legal counsel, met with the representatives mentioned. Again changes were made and a system of proposed minimum controls, meeting with the unanimous approval of all present, finally emerged. In this process of agreement the representative of one accounting firm who had advocated as a preferable method of approach, a broad and general statement of principles rather than a code of minimum controls, joined with his associates, in affirming that the controls proposed provided a sound, workable, and effective system for ensuring the maintenance of satisfactory standards of financial and accounting responsibility.

This, then, is the genesis of the proposed system of principles now submitted to the executive council. In making this submission the special committee of the secretary-treasurers' conference again calls attention to the fact that the proposed code suggests basic minimum accounting and financial controls. It does not purport to embrace the entire field. Such full embracement is neither necessary nor feasible in setting standards for affiliates of the AFL–CIO to follow. Indeed, some doubt exists as to the actual need for the controls mentioned, for many organizations within the family of the AFL–CIO have, for years, adhered to financial and accounting standards far more exacting and embracive than those here proposed and many more affiliates have established and now maintain standards fully meeting the requirements embodied in the proposal sub-

mitted. The standards established herein are needed only because of and for the benefit of those few affiliates that may still adhere to loose and inadequate controls that can, and on a few occasions have allowed, mismanagement or misuse of union funds. It is because of these few and the harm their deficiencies in financial and accounting controls can bring to the good name of the AFL–CIO and its affiliates that the proposed standards are necessitated.

For those few organizations the standards proposed possess efficacy and are not unduly burdensome. In summary, they provide, among other things, for the establishment and maintenance of detailed and accurate records of accounts consistent with good accounting procedure and furnish adequate safeguards against the improper handling and use of union funds. Basic principles designed to insure the soundness and safety of union investments with due regard for adequate return on funds invested are stated and union investments in a concern or enterprise in which a union officer may have a direct or indirect personal financial interest of a substantial nature are proscribed. Improper payments, such as kickbacks, to union representatives and employees are forbidden. Loans to union officers, representatives, members, and employees are restricted to duly authorized and fully disclosed loans made on a sound investment basis. Provision is made for periodic and detailed financial reports and for internal audits by competent persons in accordance with generally accepted standards of auditing. Annual audits, by certified public accountants, of the accounts of affiliates, except directly affiliated local unions, are to be required by such affiliates and such affiliates are to require that annual audits be made of the accounts of its subordinate bodies by competent persons. Annual audits of directly affiliated local unions are to be made by competent persons designated by the secretary-treasurer of the AFL–CIO. Summaries of all annual audits are to be made available to the membership of the organization involved. Adequate fidelity bond coverage is to be required by each affiliate for all officers, representatives, and employees of that affiliate in positions of trust, including officers and employees of subordinate bodies of such affiliate. Finally, provision is made for the preservation of all financial records for the period of time required by applicable law.

Attention is called to the fact that full compliance with the principles stated in the proposed code may require some affiliates to amend their constitutions and make changes in internal administrative procedures. This possibility is recognized in the proposed code itself and it is the sense of the code that adequate opportunity should be given to affiliates to make such constitutional amendments or changes in internal administrative procedures as are necessary.

The principles stated in the proposed code have been made applicable to all affiliates of the AFL–CIO and their subordinate bodies. This is not intended to mean, however, that the AFL–CIO is to assume the responsibility of supervising their execution. Their execution is the duty and the responsibility of each affiliate. However, the AFL–CIO should expect and should insist upon full observance and compliance by affiliates and their subordinate bodies with the standards of conduct set forth in the proposed code.

With confidence that the proposed code will effectively implement the codes of ethical standards already adopted by the AFL–CIO and will further safeguard and protect the good name and reputation of the federation and its affiliates, the special committee of the secretary-treasurers' conference, in carrying out the assignment entrusted to it by the secretary-treasurer of the AFL–CIO under instruction of the executive council, recommends that the executive council of the AFL–CIO adopt the following recommended Code of Minimum Accounting and Financial Controls for Affiliates:

1. Detailed and accurate records of accounts, in conformity with generally recognized and accepted principles of accounting, should be currently maintained by all affiliates of the AFL–CIO. These records should include, as a minimum need, a cash receipt record, a cash disbursements record, a general ledger, a dues or per capita tax record, an investment record, and a payroll record.

2. All receipts should be duly recorded and currently deposited. No disbursements of any nature should be made from undeposited cash receipts.

3. All expenditures should be approved by proper authority under constitutional provision and be recorded and supported by vouchers, providing an adequate description of the nature and purpose of the expenditure sufficient for a reasonable audit by internal and independent auditors. Disbursements should be made only by check, with the exception of disbursements from petty cash, in which situation, an imprest petty cash fund should be established.

4. Salaries of elected officials should be established only by constitutional provision. Compensation to nonsalaried elected officials, and to other officials, representatives and employees, if not fixed by constitutional provision, should be established and paid in strict conformity with such authority as is provided by the constitution and in accordance with its applicable provisions.

5. Reimbursement of expenses, including per diem expense, should be made only where such expenses have been duly authorized and are supported in a manner that will permit a reasonable audit.

6. Every precaution should be taken to insure the soundness and safety of investments and the investments are made only by persons duly authorized to act for and on behalf of the affiliate. Investments in securities should either be restricted to the type of securities which legally qualify for trust fund investments in the domicile State or a person or persons authorized to invest funds of an affiliate should, in making such investment, be required to exercise the judgment and care under the circumstances then prevailing which men of prudence, discretion and intelligence exercise in the management of their own affairs, not in regard to speculation but in regard to the permanent disposition of their funds, considering probable safety of their capital as well as probable income. No investment should be made by an affiliate in a business or enterprise in which any officer of that affiliate has a direct or indirect personal financial interest of such a nature as to be affected by the affiliate's investment or withdrawal of investment. (This last stated provision is not to be construed as preventing investment in a business or enterprise in which an official of an affiliate is engaged by virtue of his office, provided (a) no substantial personal advantage is derived from the relationship, and (b) the business or enterprise is one in the management of which the affiliate participates for the benefit of its members.) Securities owned by the affiliate should be under dual officer control and held by a bank or a trust company as agent or if that is not feasible, such securities should be placed in a safety deposit vault. All investments and legal title to all assets of an affiliate should be in the name of the affiliate or its duly designated agent or trustee.

7. Periodic, but not less than semiannual, detailed financial reports should be prepared in accordance with generally recognized and accepted standards of financial reporting. These reports should be prepared and submitted by the elected financial officer of the affiliate to the executive body of such affiliate for its study and such action as may be required.

8. A record of each meeting of the executive body of an affiliate should be made and maintained. These records should note all official actions taken by that body, in relation to accounting and financial matters.

9. Adequate fidelity bond coverage should be required by an affiliate for all officers, representatives and employees of that affiliate in positions of trust, including officers and employees of subordinate bodies of such affiliate.

10. Affiliates and their subordinate bodies should be subject to a system of internal audits made by auditors or by other competent persons in accordance with generally accepted standards of auditing so as to maintain current vigilance over all financial transactions.

11. At least annually, an audit of the accounts of each affiliate, except directly affiliated local unions of the AFL–CIO, should be made by independent certified public accountants. A summary of such audit approved by such independent certified public accountants should be made available to the membership of the affiliate and to the public.

Each such affiliate should require, at least annually, that an audit be made of the accounts of its subordinate bodies by competent persons. A summary of such audit approved by such competent persons should be made available to the membership of such subordinate body.

An annual audit of the accounts of directly affiliated local unions should be made by authorized competent representatives of the AFL–CIO designated by the secretary-treasurer of the AFL–CIO. A summary of such audit, approved by such representative, shall be made available to the membership of such directly affiliated local unions.

12. All financial and accounting records of affiliates and their subordinate bodies and all supporting vouchers and documents, or microfilm copies thereof, should be preserved for a period of time not less than that prescribed by applicable statutes of limitations.

13. Neither the AFL–CIO nor any national or international union affiliated with the AFL–CIO should make personal loans to its officers, representatives, employees, or members, or members of their families, for the purpose of financing the private business or investment of such persons.

14. No kickbacks or any other improper payments should be accepted or made, directly or indirectly, by any officer, representative or employee of an affiliate in connection with any financial transaction of such affiliate.

15. Affiliates should take every precaution necessary to insure their full compliance with all properly authorized and applicable requirements of State or Federal law pertaining to financial and accounting matters and to reporting.

16. In order to protect and safeguard the good name and reputation of the AFL–CIO and its affiliates, the financial and accounting controls set forth herein are made applicable to all affiliates of the AFL–CIO and their subordinate bodies and to all their funds of whatever nature.

17. Where constitutional amendments or changes in internal administrative procedure are necessary to a full compliance with the standards set forth herein, such amendments and changes should be undertaken by affiliates at the earliest practicable opportunity.

Mr. MORSE. I now yield to the Senator from Arizona.

Mr. GOLDWATER. I wish to compliment the senior Senator from Oregon for the remarks he has made this afternoon relative to the position taken by labor itself. I would be the first to agree that the great majority of local union leaders, and I think also the great majority of international union leaders,

are honest and sincere men. I am glad the Senator has brought this to the attention of the Senate, because I think there is a tendency on the part of the American people to condemn the whole labor movement, when the whole movement is not subject to such condemnation.

The Senator might be interested in hearing of a study I made about 4 or 4½ years ago into the constitutions of labor unions which were then available in the Department of Labor. I found approximately 85 percent of those which were available provided democratic processes for governing themselves.

I merely desired to call to the Senator's attention the fact that what we are finding today in the labor movement exists because of the inattention of members to democratic processes. That inattention is not confined to the labor movement, but extends also to bar associations, medical associations, and business associations, to which I belong. In fact, it extends to the entire electorate of the United States, when we consider that only 70 percent of the registered voters vote, and that 70 percent represents 54 or 55 percent of citizens who are entitled to vote. We then find the seeds of the same kind of corruption that will occur, not only in the governments represented by the local unions, but in the governments of large cities, of the States, and of the Nation.

We can talk all we care to, we can try to legislate all we desire, but we cannot legislate into the minds of people their responsibilities under the democratic processes.

I have heard the suggestion made that laws should be enacted to make union members attend union meetings, but I think if we can bring the attention of the American people to their responsibility to adhere to democratic processes, whether it be on school boards or in local unions or in local associations, we shall do more good.

Again I thank the Senator for yielding. I merely wanted to make these comments.

Mr. MORSE. The Senator has made an excellent contribution to this discussion.

I agree with the Senator that one of the greatest problems that union officials have, as they will tell us, is that at labor conference after labor conference they get active rank-and-file interest in the local union only when things are going badly. When things are going relatively well, there is a tendency for men and women to stay away from union meetings, and forget that, after all, a labor union involves much more than merely coming to a meeting place for the discussion of wages, hours, and conditions of employment.

The American labor movement, as I see it, should be one of the great schools of citizenship education. It ought to be one of the forums where men and women of common interest meet and make themselves better citizens.

I am delighted, however, with the codes I have thus far put into the record this afternoon, because I think if we get more and more unions to adopt, for instance, the recommendation of the code on local charters, it will greatly strengthen, in the long run, the programs of the local unions themselves.

I think the Senator from Arizona is completely right when he points out that the overwhelming majority of American labor unions, so far as the governing procedures which are set forth in their constitutions and bylaws are concerned, are very democratic. In fact, I remember that back in the thirties some time one of the great labor organizations held its national convention in Portland, Oreg. It was held in one of the large public auditoriums. The public was invited to occupy the gallery, and the delegates were on the floor. I was doing a great deal of labor arbitration work in those days. I urged a good many of my business friends in the Portland area to attend the meetings. Many of them did. I found their comments very interesting, and some of them amusing. First, I found that many of them did not have the slightest idea of the democratic processes involved in conducting an international union convention. They had apparently read so much propaganda material, antilabor in nature, that they apparently thought the president stood up in union meetings and handed down the orders.

At that convention, on several occasions the president was overwhelmingly reversed after a hard fight on recommendations committees had made to the convention. He took a "shellacking," so to speak, and was voted down. That was a great lesson to some of my employer friends who had never seen a labor union actually operate before, so far as a convention was concerned.

Of course, the same procedure is going on night after night, in local union after local union, all over the country. But there is no doubt about the fact that there are some unions which still function on a completely oligarchic basis—a basis of orders from the top down, instead of democracy from the bottom up.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. MORSE. I shall yield in half a minute.

One has only to read the code on local union charters and the codes which Al Hayes has produced, and is urging for the consideration of the American labor movement, to recognize that we have gone a long way in the past 30 years in democratizing the procedures of the American labor movement; and I am for going all the way.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. GOLDWATER. I wish to give impetus to the discussion by remarking that during the course of the hearings which involved locals and one council in Portland, Oreg., we discovered that of a membership of, as I recall, about 4,000 in one group, the average attendance would be less than 50 at the local meetings.

I recall in my home town of Phoenix speaking before a bricklayers' union local. I remarked to the president that there was a rather small crowd present, and that I had thought they would turn out in force to take me apart. There were 35 members there. He said, "Oh, no; this is the largest attendance we have had in months"—35 out of 1,800. I cite that instance to add weight to my argument that how the unions are run is up to the members themselves.

I have a theory which I hardly dare mention on the floor of the Senate, because I know how the Senator from Oregon feels about it, and I am sure we could stay here discussing it until the snow got 10 feet high on Pennsylvania Avenue. I am sincere in stating that I believe that if we removed the provision for compulsory membership from the union movement we would encourage a better attendance at union meetings. If the Senator cares to go into that matter, I know we could spend many hours on it. It is a matter that is a favorite subject of mine. I believe voluntary membership would induce greater interest in unions. We are a free people. We like to do everything voluntarily. When we do it that way, it is more effective.

Mr. MORSE. I respectfully submit to my friend, the Senator from Arizona, that we had better proceed with consideration of the housing bill. Nevertheless, I am glad to have his contribution to my discussion.

Before doing this, however, I wish to say, Mr. President, that I now should like to request permission to have printed in the body of the RECORD immediately following the first four codes I have had printed in the RECORD, in pamphlet form, three additional codes, which I now wish to mention briefly. I ask for permission to have the material I shall now discuss printed in the RECORD immediately following the printing of the first four codes previously authorized to be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE. The fifth code promulgated by the AFL–CIO under the able leadership of Al Hayes is the Code of Ethical Practices With Respect to Financial Practices of Unions. A good many phases of this code are involved in the Douglas bill with regard to legislation dealing with finances of unions.

I quite agree with the Senator from Arizona that the answer to many of these problems is not legislation, but I wish to repeat what I said in Wisconsin some weeks ago, at a labor symposium honoring the professor, Ed Witte, one of the greatest living labor economists, that there are two subjects on which I think Congress should pass legislation before we adjourn this summer. One is the matter of union financing; and the enactment of legislation along the lines of the Douglas bill, which requires full public disclosure of union funds, including welfare funds.

As I said in Wisconsin, I repeat today: Union finances are vested with a public interest. That a union is a private lodge is now a bygone notion. A union today is an institution vested with a public interest, as is a corporation. The unions today have a very close relationship to public welfare in a great many respects. Therefore, I think the Congress has a duty to see to it that there is fair and reasonable legislation on the

books which will protect the public interest, and will protect the rank and file interests of the union members.

I believe this Code of Ethical Practices With Respect to Financial Practices of Unions will be very helpful to the Committee on Labor and Public Welfare in the promulgation of legislation which I hope we will be able to recommend to the Senate and have passed by the Congress before final adjournment.

Not critically, but regretfully, do I say this; I wish Mr. President, that we were getting the same offer of enthusiastic cooperation from some of the great employer organizations, when it comes to the matter of public disclosure concerning the administration of welfare funds, because, as Mr. Hayes pointed out in our broadcast this morning, only a small percentage of the so-called welfare funds are union-administered. Most of them are management-administered. Yet when the suggestion is made that there ought to be the same public disclosure with regard to the financial arrangements, accounting and bookkeeping, respecting funds which come under management control, we are getting a surprisingly large amount of opposition from employer groups and insurance groups. I hope there will be a change. I think there will be. I believe that if our committee performs as it should, it will be able to educate not only the public generally, but the employer and insurance groups, which at the present time seem to be skeptical, to a recognition that it is in their interest that we have the same policy of public disclosure of welfare funds and other financial funds of the employer groups as well as those of the labor groups.

The next code which I obtained permission to have inserted in the RECORD is the Code of Ethical Practices with Respect to Union Democratic Processes. I have already discussed that subject in general, and I shall say no more about it at this time.

Lastly, Mr. President, there is the Recommended Code of Minimum Accounting and Finance Controls for Affiliates, which was adopted by the AFL–CIO May 22, 1957, which is included in the material I have received permission to have printed in the RECORD.

I close this part of my discussion today by again commending the AFL–CIO leadership for its industrial statesmanship, for the clear-headedness with which I think it is meeting the labor crisis that confronts the American labor movement, and for its great courage in demonstrating beyond a question of doubt its determination to clean house, to sweep from labor's house any vestige of racketeering, crookedness, communism, fascism, or reprehensible conduct on the part of any representative of organized labor, including individuals and unions.

THE HOUSING ACT OF 1957

The Senate resumed the consideration of the bill (H. R. 6659) to extend and amend laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes.

Mr. MORSE. Mr. President, I am now ready to turn to my amendment, but I should like very much to have the chairman of the subcommittee present on the floor when I discuss my amendment. I know that he has been engaged in a very important conference. I suspect, however, that he is probably through with the conference. I wonder if I may receive unanimous consent to ask for a quorum call, the request for which I shall be glad to withdraw after a few minutes, so that notice can be given to those who are interested in my amendment that it is about to be taken up.

Mr. President, I request unanimous consent that I may be permitted to suggest the absence of a quorum, in order that I may be recognized after the call of the roll.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

Mr. MORSE. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BIBLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. THURMOND in the chair). Without objection, it is so ordered.

The question is on agreeing to the amendment offered by the Senator from Oregon [Mr. MORSE] for himself and other Senators.

Mr. MORSE. Mr. President, has my amendment been read?

The PRESIDING OFFICER. It has been printed in the RECORD.

Mr. MORSE. It is the amendment which is printed and lies on the desks of Senators. It is identified as amendment "A", the so-called public housing amendment.

I shall discuss my amendment without interruption, in that I shall not yield until I have concluded my remarks on the amendment. Then I shall be glad to have interruptions.

All the amendment would do would be to provide 200,000 units each year for 2 years instead of 35,000 units of public housing provided for in the present law. Construction of the 200,000 units would start in 1958.

I should like to say, by way of background, that the Lehman housing bill of last year, of which I was a cosponsor, namely, Senate bill 3158, called for 200,000 units of public housing annually for 3 years.

The bill reported by the Senate Banking and Currency Committee last year authorized 135,000 units for 4 years, and permitted the President to vary the number of new starts from 50,000 to 200,000, depending upon economic factors each year. The committee report justified that number on the basis of the Housing Act of 1949, which fixed a goal of 810,000 public-housing units to be built, owned, and operated by local public-housing bodies. By 1956, that goal had been only 40 percent achieved, since only 310,500 public-housing units had been placed under contract under the 1949 act.

The committee therefore believed 135,000 a year for 4 years was reasonable. The Senate defeated by a rollcall vote of 41 to 38 the Bricker-Capehart amendment which sought to reduce the number to 35,000 as proposed by the administration. That number is in the present law because it was put in by the House-Senate conference.

In his remarks on May 27, the Senator from Alabama [Mr. SPARKMAN] noted that the additional housing units required each year in order to supply the needs of the American people for comfortable housing is at least 1,500,000. The rule of thumb used to calculate the number of public-housing units, so that low-income groups can be provided for, is 10 percent of the total need. Therefore, 150,000 public-housing units a year would be needed to provide adequate low-income housing. Because the 35,000 units approved last year is so far below that figure, it is entirely reasonable to call for 200,000 units for the next 2 fiscal years, and that is really all our amendment seeks to do.

So much for the background so far as the position of the Senator from Oregon on public housing is concerned. I have been a consistent supporter of it. But there is this additional background to the amendment: In my campaign last year for reelection to the Senate, I was confronted with an exceedingly serious economic slump in my State, particularly in the field of lumber and construction.

Throughout the campaign I deplored the position of the administration in regard to public housing. I deplore its recommendation of only 35,000 public housing units, and I pledged to the people of my State in that campaign time and time again that when the housing bill came before the Senate this year I would offer an amendment—if the committee did not place such a provision in the bill—to provide for at least 200,000 unit of public housing. I stated in many speeches that I thought the figure should be 225,000, in order to catch up with what I considered to be the great lack of progress in this field.

After giving careful consideration to the problem, and after consulting with the Senator from Pennsylvania [Mr. CLARK], who in my opinion is one of the keenest students of the public housing problem, not only in the Senate, but in the entire Nation—and I say this with no overstatement whatever intended, because I believe it to be true—and with the other cosponsors of the bill, I have offered an amendment calling for 200,000 units.

I shall not speak at length, but I wish to buttress my remarks by referring to the hearings, copies of which are on the desks of Senators. I refer to page 98 thereof, and to certain tables to be found on that page.

The first one is entitled "Public Housing Administration: Low-Rent Units Under Management by Public Law as of February 28, 1957." The total is 428,470. That is the total number of low-rent units under management by so-called public law, as of February 28, 1957.

Public Law 171, the Housing Act of 1949, provides for 209,560; initiated, 196,248; reactivated, 13,312.

Under Public Law 412, 117,019.

Under Public Law 671, 48,402.

Under PWA (Public Law 11 and Public Law 67), 21,135.

Under the Lanham Act (War housing converted to low-rent, Public Law 475), 24,845.

Farm labor camps, 7,509.

The next part of the table is exceedingly important. It is headed "Status of Units Under Annual Contributions Contract Initiated Under the Housing Act of 1949, as of February 28, 1957."

These are the cases in which contributions are being made by Government toward rental payments, so to speak. The total in the category "Under Annual Contributions Contract, Not Under Construction," is 92,163; under construction, 11,252; under management, 196,248.

In other words, as I understand, 196,248 represents the number of units in which human beings actually are living. These fellow Americans in the low-income groups are Americans in whose behalf it has been determined to be sound policy for the Government to make a contribution, and give assistance.

The next heading is "Annual Contributions Contracts and Construction Starts Under Housing Act of 1949 Low-Rent Program." Mr. President, I ask, without reading it, that this table be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Annual contributions contracts and construction starts under Housing Act of 1949 low-rent program

Fiscal year	Limitation	Placed under annual contributions contract	Placed under construction
1950	None	14,834	2,774
1951	Presidential limitation to 30,000 construction starts in last half of calendar year, 1950.[1]	130,702	88,359
1952	50,000 construction starts [2]	45,531	52,912
1953	35,000 construction starts [2]	34,245	37,293
1954	No new contracts and 20,000 construction starts	0	18,674
1955 [3]	35,000 annual contributions contracts	30,351	8,723
1956 [4]	45,000 annual contributions contracts	44,422	7,967

[1] 28,656 started July–December 1950.
[2] Limitations were on units initiated after Mar. 1, 1949, units placed under construction include units initiated prior to that date.
[3] Includes 1 month extension by the Congress to July 31, 1955.
[4] Data for 12-month period ending July 31, 1956, to which statutory limitation applied.

Mr. MORSE. Mr. President, the next figures I wish to comment on are headed: "Progress on 70,000 Units Under Housing Act of 1956, August 1, 1956, through March 15, 1957."

Preliminary planning authorized (reserved and funds released), 8,185.

Annual contributions contracts, none.

I stress the significance of the last statement. As Senators will learn from a telegram I shall read into the RECORD in a moment, the fact is that we have not even been going ahead administratively with the authorizations—with the inadequate authorizations, I may say—we made in last year's bill.

The committee's hearing record—and I know of no question of its accuracy—points out that of the 70,000 units on which we could have gone ahead, there was preliminary planning authorized by the housing officials for only 8,185. The annual contributions contracts add up to a goose egg zero.

Mr. President, that concerns me very much, because in my judgment it amounts, in effect, to an administrative emasculation of the objectives of the very inadequate housing program, so far as the public housing features are concerned, which Congress adopted last year.

In the CONGRESSIONAL RECORD for May 28, 1957, at page 7865, in the speech by the Senator from Alabama [Mr. SPARKMAN], the chairman of the subcommittee, there appear some interesting data which he inserted in the RECORD. I refer to the last column of that page, toward the bottom. He said:

The FHA operation has been a profitable one up to the present time. These profits have been enough to pay off initial borrowings from the Treasury and to pay their annual operating expenses and still leave a sizable profit (over $20 million) remaining to be transferred to FHA insurance funds.

This entire operation has not cost the Federal Government any money.

Then the Senator from Alabama went on to discuss the public housing program:

Public housing program

Total of units under management as of Mar. 1, 1957 (all programs)	428,000
Annual contributions paid by Federal Government in 1956	$81,000,000
Annual contribution per unit	$238

I want Senators to keep that figure in mind, because I shall return to it in a moment. The annual contribution per unit of these public housing units has been $238. The Senator from Alabama then gives some additional statistics:

Status of program under Public Law 171—Housing Act of 1949 (as of Mar. 1, 1957)

Total units planned under Public Law 171	810,000
Under management	196,000
Under construction	11,000
Under annual contributions contract, not under construction	92,000
Authorized by Housing Act of 1956	70,000
Total	369,000
Remaining yet to be authorized	441,000

What I wish to focus attention on, Mr. President, in these statistics, and they are living, not dead, statistics—although they refer to a program that is almost dead—is that they provide a plea for Congress to assume what I consider to be a tremendous responsibility.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MORSE. No; I shall not yield at this time. I wish to finish my speech first.

NEED FOR PUBLIC HOUSING CONTINUES

Here we sit in the Senate Chamber in the United States Capitol. I can take Senators 4 or 5 or 6 blocks from here and I can show them living quarters occupied by fellow human beings in the Capital City of the United States in which I would not keep my cattle. I keep my cattle at Poolesville, Maryland, in better quarters than little children are kept in within 4 or 5 or 6 blocks of the dome of the Capitol under which we are now sitting.

That is why this is one Senator who has no intention of being deterred. Here is one Senator who has no intention of relinquishing the struggle for better living conditions for American men and women in low-income groups who cannot pay for decent living quarters. That is why I have said before, and say again today, that in fighting for adequate public housing in the United States, I am fighting to strengthen the front line of defense of American democracy. When I am fighting to strengthen private home ownership and decent living quarters for fellow Americans, I am fighting to strengthen the American way of life. No American, on the basis of economic grounds, can shuffle off his or her social responsibility by saying, "We cannot afford it."

The answer is, we cannot afford not to provide decent housing conditions for American men and women in the low-income brackets.

The cost is $238 per unit. That is what the committee tells us. The taxpayers have been contributing to public housing, for the 196,000 units now occupied by fellow Americans in the low-income group, $238 per unit.

Mr. President, I shall never be silenced in my fight to improve the living conditions of unfortunate fellow Americans as long as such deplorable conditions exist almost within a stone's throw of the Capitol dome. I can take Senators by the hand, if they must be led, 4 or 5 blocks from here and have them see for themselves, because seeing is believing.

When I fight to correct conditions such as that, I am often told I am advocating creeping socialism, or socialism of some kind. What I am advocating is the strengthening and protecting of the private enterprise system of America because woe be unto America if we continue to increase the number of people living in conditions worse than those in which, for example, I would stable my own cattle.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MORSE. No; I will not yield—and I say this, respectfully—until I have finished my speech, because I have had

a little experience with yielding on the floor of the Senate. It somewhat delays me in getting to my final point. When I have completed my speech, I will yield.

I desire to put before the Senate today squarely the social and moral question which is presented by my amendment. There are even those who suggest that if we increase the funds and the amounts for public housing, we will increase the danger of inflation. In my judgment, that is tommyrot, highly fallacious, non sequitur reasoning.

I will tell Senators what will result if we meet the moral obligation which confronts the American people in regard to housing. The result will be that there will be a decrease in the rate of juvenile delinquency. We will save some precious American boys and girls from going wrong. I am not one who thinks it is possible to put a price tag on a single child, because I think each one is priceless.

Here we have the body of information, if we will but read it. Here we have the body of information, if we will but see it. Decent conditions have a direct relationship to the behavior pattern of boys and girls in a community.

PENDING BILL IS TOTALLY INADEQUATE ON PUBLIC HOUSING

I have taken very seriously my work on the Senate Committee on the District of Columbia. I have devoted a great deal of my time seeking to improve the living conditions in the Capital City of the Nation. That is why it hurts to pick up the housing bill on the floor of the Senate, study it, and realize that it is a far retreat from what I thought was for years one of the great objectives of the Democratic Party, the party of the people, the party which sought to promote the welfare of the people of the country, the party of Jefferson, namely, to recognize that, after all, the primary responsibility of our parliamentary form of government is to promote the general welfare of all the people. Are we doing that in this housing bill? I respectfully say to my colleagues in the Senate: We are retreating from that obligation.

Oh, I know the answer, given to me in well-intentioned advice in the cloakroom, in some instances with an arm around my shoulder, goes like this:

"Wayne, old boy, we know you are right about this, but we cannot do it this year. We simply do not have the votes this year. It cannot be done this year. This is the best we can get now, and we have to take what we have."

I do not believe good legislation is passed that way. I believe sometimes it is necessary to lose in order to gain on another day. I happen to believe that sometimes it is necessary to say, "No; we will not compromise the social and moral principles involved in this subject one iota. We are going to insist that either we have a good bill, or we will have no bill at all"; and then let the people be heard from.

But the danger with the kind of approach we are making on the housing bill today is that the news will go out to the country that Congress passed a housing bill. We know that millions of people who think only in terms of titles and labels will not stop to ask the question, What kind of housing bill? What was in it?

Mr. President, if we refuse this kind of compromise, the people will start to ask the question, Why did they refuse?

We will then have the process of public education taking place. It will become known that one of the reasons why we refused was that we did not live up to the principles which I say the party of Jefferson ought to live up to, namely, the responsibility to promote the welfare of the underprivileged. The people would understand.

Mr. President, it is obvious that I feel deeply about public housing. I have made the point. I shall not embellish it. I have made it before. I merely want the RECORD to show that I think the so-called public-housing phases of the bill are so inadequate that the bill itself is made completely inadequate.

I take you, Mr. President, to last year, to a great statement made by the chairman of the subcommittee, the distinguished Senator from Alabama [Mr. SPARKMAN]. His statement appears in the CONGRESSIONAL RECORD of May 24, 1956. He said:

> Mr. President, I wish to speak for 2 or 3 minutes in regard to the particular provision of the bill to which the amendment is directed. I shall not speak at length, because the matter has been before the Senate time after time, and on 4 or 5 different occasions the Senate has confirmed and ratified exactly the position which the Senate committee has reported in the bill. No later than last year did the Senate do that.
>
> With reference to the number of units proposed by the administration, I call attention to the testimony of Mr. Slusser, speaking for the administration, in which it is clearly shown that the number of units asked for by the administration will not even take care of the number of persons who will have to have housing, or who will be moved out of slum areas and areas of urban renewal. He said that in the next 3 years approximately 265,000 families would have to be moved, and half of them would require public housing.

It was only last year, Mr. President—only a few months ago—when these unanswerable facts were given to us. The Senator from Alabama then continued:

> Therefore, the administration program would not take care of any of the needs of the smaller cities and towns throughout the country, but would be restricted completely to urban renewal, and thereby would be of benefit primarily to the big cities, and the big cities only.

Mr. President, as the figures I have already placed in the RECORD show, this administration has administratively failed in connection with even the small number of units which were authorized last year, but the condition this year is worse than that of last year. That being the case, I am at a complete loss to understand why the party of Jefferson is not united on the floor today, fighting to include in the bill a public-housing provision which will meet the needs of the underprivileged of the country, who are living in such deplorable conditions.

I close by reading a telegram I received this morning from Mr. Lee F. Johnson, executive vice president of the National Housing Conference, who, in my opinion, speaks for and represents the point of view of the majority of the people of my State who have expressed themselves on the housing problem. His statement represents the point of view of the lumber industry of my State, so far as the majority of its members are concerned; of the appliance industry; and of the home builders. This is what he said:

> Hon. WAYNE MORSE,
> *United States Senate Office Building,*
> *Washington, D. C.*
>
> Appreciate your steadfastness in refusal to compromise on principle of good housing across the board, including low-rent public housing. We are urging support of your amendment. Urge also every effort be made to have assurances given that housing subcommittee will make inquiry during Congressional recess as to why public housing has been effectively killed administratively and recommend remedies for legislative action next year. Imperative too that public housing provisions of title 4 of committee bill be preserved. The adoption of these provisions are necessary to progress in operation of existing program.
>
> LEE F. JOHNSON,
> *Executive Vice President,*
> *National Housing Conference.*

I wish to make one other point, which I did not develop to the degree I intended. But I shall be brief. I wish to say, regarding the so-called charge that public housing is synonymous with socialism, that we need to remember that the houses are not built by the Federal Government. As we listen to the propagandists who talk about socialism in connection with the public-housing program, one would think the Federal Government had on its payroll carpenters, plasterers, bricklayers, architects, and contractors to construct public-housing units. But what needs to be stressed now is the fact that the houses are built in the local communities by the local contractors, with the use of local labor.

Mr. President, in making this fight, we are making a fight for Government assistance in regard to financing the needed public housing, based upon the recognition of the principle that the Government has the moral and social responsibility of protecting the economic weak in its citizenry from exploitation by the economic strong. That is the philosophy of this program, and I recommend it to the Senate.

Mr. President, I submit my amendment; and I should like to do so on the basis of requesting that the yeas and nays be ordered on the question of agreeing to the amendment. If the number of Members now on the floor is not sufficient for that purpose, then I should like to have the majority leader grant me the courtesy of getting sufficient Members present in order to have my request for the yeas and nays agreed to. I think the majority leader will agree with me that the speech I have just made has been an exceedingly short one for me, on so important a subject. Inasmuch as I have cooperated with him, I now ask him for his cooperation in connection with having the yeas and nays ordered on the question of agreeing to the amendment. I am sure that many Members will be willing to have that order entered, in view of the fact that I have made my speech on the amendment so short.

Therefore, Mr. President, on the question of agreeing to my amendment, I ask that the yeas and nays be ordered.

The PRESIDING OFFICER (Mr. TALMADGE in the chair). Is there a sufficient second?

The yeas and nays were ordered.

Mr. MORSE. Mr. President, I yield the floor.

Mr. CLARK. Mr. President, I shall be brief, also, for I am under no illusions as to what will happen to the amendment. The amendment may not be adopted today, or not even next year; but the 86th and 87th Congresses will reinstate, in my judgment, the public housing program somewhere at the level established under the leadership of three great Senators, back in 1949, in order to ease the suffering of the least privileged among the American people.

Mr. President, the people of the United States have only temporarily lost their conscience; they have only temporarily lost their belief in the principles of the Declaration of Independence and in the principles of the party of Jefferson, Jackson, Franklin D. Roosevelt, and Harry Truman, and also, I may say, in the principles of the party of Lincoln and of Theodore Roosevelt. Therefore, although we may not win the battle today, we shall win it before too long, because the American people will not permit it to be lost.

Mr. President, I desire to commend the distinguished Senator from Oregon for the splendid speech he has just made, and I wish to associate myself with the sentiments he has expressed. I shall endeavor not to repeat anything he said.

First, to my friends across the aisle I should like to read very briefly from testimony which was taken before our committee, when it had under consideration the bill I introduced, which in substance is the same as the amendment offered by the distinguished senior Senator from Oregon. At that time we had before us Commissioner Charles E. Slusser, who is in charge of this program for the Federal Government. I now read from that part of the hearing:

Senator CLARK. Could I now shift to another subject, Mr. Slusser. It is my understanding that under the Taft-Ellender-Wagner Act of 1949—

They were the three distinguished Senators to whom I referred a moment ago—

810,000 units of public housing were authorized to be built over a period of years. Can you tell us how many of those have actually been built?

Mr. SLUSSER. Two hundred and ninety-nine thousand six hundred and sixty-three have been committed for construction.

Senator CLARK. So that there are roughly 510,000 units of that 1949 program still unbuilt.

Mr. SLUSSER. That is correct, yes.

Senator CLARK. Is not the need just as great now as it was in 1949?

Mr. SLUSSER. Yes, there is no question in my mind about that.

Senator CLARK. Then why do you oppose the provision of my bill which would authorize 200,000 units to be built within the next 2 fiscal years?

Mr. SLUSSER. There is not the demand upon the agency. The applications are just not coming in for that amount of housing.

Senator CLARK. But the need is there.

Mr. SLUSSER. There is no question in my mind about the need. Going back to the same reference you made, the Taft survey, that indicated there was some 8 million substandard houses in the United States.

Mr. President, there are at least that many substandard houses in the United States today.

I turn now to the statement made at the committee hearing on behalf of the American Municipal Association, the official agency of the cities of the United States, consisting of representatives of 12,000 urban communities. The statement of that Association to our committee is, in part, as follows:

The 1950 census revealed that there were 10 million substandard nonfarm housing units.

Two million more than Mr. Slusser stated.

I read further from the statement submitted by the American Municipal Association:

President Eisenhower's Advisory Committee on Government Housing Policies and Programs pointed out that local governments with their limited taxing powers are not in a position to provide standard housing for the low- and middle-income groups in our population. Private enterprise has also failed to provide adequate shelter for these income groups. The Housing Act of 1949 authorized a 6-year program that was to provide $10,000 units of public housing and a stepped up program of slum clearance. The American Municipal Association urges Congress to return to the goals of the Housing Act of 1949 and to authorize up to 200,000 public housing units a year, the maximum permitted under the act (1954).

Mr. President, I am not one to complain about the appropriations made by the Congress in support of a host of other activities—in particular, our farm program. Many Pennsylvania farms need help. Even if they did not, I would support appropriations to enable the farm population to have the necessities of life.

But aside from that situation, let me point out that an increasing percentage of the population of the United States is rapidly moving into the cities. Unless the cities are able to take care of them, there soon will be a real threat to the soundness of our democracy in our urban communities. And if democracy in the urban communities goes under, so will democracy throughout the United States.

Mr. President, there is another reason for the amendment proposed by my distinguished colleague, the senior Senator from Oregon. The urban-renewal program, which yesterday the Senate tentatively approved, will require, in the next several years, clearance of thousands of acres of slums; and when that slum clearance has been completed, one unit of public housing will be neded for 1 out of every 2 slum units cleared away. It has been estimated that under the urban-renewal program alone, approximately 200,000 units of slum housing will be disposed of.

Thus, an additional 100,000 public-housing units will be required in the next 2 years. Merely to satisfy the urban-renewal program alone will require an annual rate of public-housing construction greater than is now authorized. This does not take into account the number of slum units which will be removed because of highway construction and other Federal and local construction activities. The normal loss from fire and other natural causes is between 100,000 and 160,000 units a year. A large percentage of these units, of course, are located in slum areas, as any municipal fire chief can attest. A very large percentage of these displaced families will need public housing.

Mr. President, I think the need for the program is established beyond dispute.

My good friend, the Senator from Oregon [Mr. MORSE] made a very convincing argument as to the minimal nature of the cost. Practically speaking, 200,000 units, when occupied, would cost the Federal Government approximately $50 million a year, which is a small cost, in view of the social benefits which will accrue from the housing.

The administration has argued that cities have not requested new public-housing projects at a rate higher than 35,000 a year. But let me quote further from the statement of the American Municipal Association submitted to our committee:

We believe that in part this inactivity is due to the excessive amount of procedural redtape which has surrounded the Public Housing Administration. Another reason is the administration's requirement that a municipality must comply with the workable program regulations as a prerequisite for participation in public housing. This discourages municipalities, particularly the smaller ones, from applying for needed low-rent housing units. In the November 1956 issue of Washington Municipal News figures from Mr. Albert Cole's office are cited which showed that, of the 426 communities that had taken steps indicating an interest in obtaining public-housing units, some 370 had no workable program. About 70 percent of these 370 cities are communities of less than 10,000 population. About 40 percent have a population of less than 2,500.

Presumably this is why the President, in his state of the Union message, requested that Congress remove the workable program as a prerequisite for smaller municipalities to participate in the public-housing program.

Mr. President, I shall not unduly delay the Senate, but I should like to close my remarks by reading again, as I did yesterday, for the benefit of Members on this side of the aisle, from the 1956 Democratic platform:

We pledge our party to immediate revival of the basic housing program enacted by the Democratic Congress in 1949, to expansion of this program as our population and resources grow, and to additional legislation to provide housing for middle-income families and aged persons. * * *

We reaffirm the goal expressed by a Democratic Congress in 1949 that every American family is entitled to a decent home and a suitable living environment. The Republican administration has sabotaged that goal by reducing the public-housing program to a fraction of the Nation's need.

Our friends across the aisle may well be able to prevail today, and perhaps get some votes on this side of the aisle, when the amendment of the Senator from Oregon comes to a vote, and sabotage still further the public-housing program. As a former mayor of one of the largest cities in the United States, I can personally testify, from my own knowl-

edge, that this program is one of the greatest bulwarks against communism—one of the greatest needs for urban democracy—and one of the most badly needed social reforms the Congress of the United States can ever enact.

I pledge my efforts, for the rest of my term in the Senate, to get this body back to the days of Bob Taft, Allen Ellender, and Bob Wagner, and "get this show back on the road."

Mr. HUMPHREY. Mr. President, I wish to join with my colleagues in support of an expanded housing program. The amendment of the Senator from Oregon provides for 200,000 units. That number is not excessive. Whether or not the Senate will approve or adopt it in no way prejudges whether or not it is needed for the American communities.

I was very much interested in the remarks of the Senator from Pennsylvania, the former mayor of Philadelphia, because I know of his great interest in the objectives of and his great work in the conference of mayors, the Municipal Association, and many other municipal bodies that have been so completely dedicated to the well-being and the development, the modern and progessive development, of our urban centers.

The vast majority of our people live in cities. Sometimes we almost forget that fact in the United States Senate, but people do live in cities. Furthermore, cities today are plagued with more problems, through no fault of their own, than is any other man-made institution. They are restricted by State constitutions, by city charters, and by legislative enactments. The officials of cities are limited in their capacity and ability to meet their local problems by laws that are unsympathetic to the needs of metropolitan areas and by legislators and other officials who are unsympathetic to the needs of metropolitan areas.

I come from a State where two of the cities comprise approximately one-third of the total population of the State. I refer to Minneapolis and St. Paul, with their suburban communities. Yet I regret to say that the State of Minnesota has not had legislative redistricting since 1910. That was 47 years ago, and in the meantime the populations of those two cities have grown by almost 700,000—that is, if we include the metropolitan areas and the metropolitan complex.

I believe that we need to expand our concept of what we call a city into metropolitan planning and metropolitan government, but I am not going to indulge today in a dissertation on local government, even though it is an area of interest to me as well as to others.

Getting back to the subject of housing, I ask my colleagues, What are we going to do about the cities that are rotting from within? When I say "rotting," I mean the physical deterioration that comes from slums and broken-down areas. To be sure, we have the urban renewal program, for which $250 million a year is being provided. I am grateful for that. I am pleased that the united mayors of the united cities of this country came to Washington and literally insisted that some of their needs be met by the White House and the Congress. Therefore, an urban renewal program was included, in some degree commensurate with the problems intended to be faced by the particular measure now pending.

But I want the record clear. Two hundred and fifty million dollars a year for urban renewal in the United States will not meet the problem. We are about one-half as generous with all the cities in the United States as we are with South Korea. Do not misunderstand me. I think we need to help South Korea. We are about as generous with all the cities in the United States as we are with Formosa, and there will be fewer anti-American demonstrations in American cities than there were in Formosa. Now, do not misunderstand me. I am in favor of aid to Formosa. Formosa is an important outpost in our perimeter of defense. But merely because I am for aid to Formosa, I am not willing to cut down on aid to the people of the United States who make it possible for aid to be given to Formosa.

I want my colleagues on the other side of the aisle and those who are opposed to the housing program to give me one reason why this proposal should be opposed.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. CLARK. The Senator knows, I suppose, that our friends on the other side of the aisle will say that there are no applications for public-housing units, and that therefore no more are needed. I wonder if the Senator knows who is in charge of the public-housing agency under this administration.

Mr. HUMPHREY. I surely do. I will tell the Senator how he is characterized. He is a former Member of Congress, and his record on housing was certainly not notable for support. It was notorious for nonsupport. I have said that his appointment to be in charge of the housing program was like putting a fox in charge of a chickencoop, and I repeat it. However, no fox has done quite so good a job of getting rid of the chickens as the administration has done in getting rid of the public-housing program.

Mr. CLARK. Mr. President, will the Senator yield further?

Mr. HUMPHREY. I yield.

Mr. CLARK. Does the Senator recall the happy days last fall, when he and I were campaigning on behalf of the Democratic candidates for the Presidency and the Congress, when we had occasion to refer to certain actions of the Eisenhower administration as "repeal by appointment"?

Mr. HUMPHREY. Yes, indeed. That is a subject which is entitled to exhaustive and comprehensive consideration. We shall do that someday. We shall not do it today, I assure the Senator.

Mr. CLARK. I was not going to ask the Senator to exhaust himself at this time.

Mr. HUMPHREY. I am not very exhausted.

Mr. CLARK. I wonder if the Senator agrees that the administration of the HHFA, including the Public Housing Administration, by Mr. Cole, is one of the most striking examples of "repeal by appointment" which can be found in the city of Washington, D. C.

Mr. HUMPHREY. It could be characterized as that, or possibly "demise by frustration"—just giving up, because one cannot get anything done.

In the city from which I come, many applications for housing have been made. We had the Glenwood project. I do not know whether the Glenwood project is on or off. The administration's atttitude is more changeable than a lady's fancy. We cannot find out. All I know is that we have been waiting for years for programs of public housing, which the community recognizes as being necessary.

I regret to say that in many of our great American cities those programs have not been started. Do not tell me that they could not be underway if there were a desire from the top to get them underway. Back in the days of Republican labeled "inefficient government" and back in the days of "New Dealers" we used to get housing programs underway. We accomplished things.

The main trouble with this administration is not just its philosophy, but rather that it is plain inefficient and not businesslike. I do not know how one can say anything more unkind to a Republican than to say that he is plain unbusinesslike, but this administration is just plain unbusinesslike.

Apparently it does not want to put these programs into effect. It likes to legislate these programs and then bury them. It prefers to bring them into life and then deprive them of life; to let them see the light of day, but quickly to hide them in the darkness. I am opposed to that attitude and philosophy.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield to the Senator from Illinois.

Mr. DOUGLAS. The policy of the modern Republicans is the favoring of progressive legislation but then having it administratively strangled. Is that not a policy which gets the publicity, but which permits the murder to be committed in secret?

Mr. HUMPHREY. The Senator's characterization is getting closer all the time to the point we need to develop here.

When the Senator says "modern Republicans," that is as ironical and paradoxical as talking about "new antiques." "There just ain't none."

I do not know why anybody should want to be particularly modern about it. Let us be just what we are; what our political faith leads us to be.

I should like to add another thing about the housing program. The so-called expenditures for public housing are not actually all expenditures. Expenditures for public housing are investments which have the capacity to pay dividends.

The Senator from Pennsylvania [Mr. CLARK] comes from one of the largest cities in the world. He was its mayor, and he had a record second to none for municipal reform and sound fiscal management, as well as for social vision. The Senator from Pennsylvania knows that for every block of tenements a city

has and for every block of slums it has the cost is from 7 to 10 times as much for municipal services as the cost for a block of decent housing.

The most wasteful luxury in America is a slum. The taxpayers are really taken for a ride, for every block of slums. The fire department is constantly called out. The cost for health services, the cost for relief services and services to the indigent, the cost for rehabilitation, the cost for streets, the cost for crime, and the cost for delinquency are almost incalculable.

Who pays these bills? They are paid by the people who believe a lot of the political "malarky" to the effect that a public housing program is expensive, costly, and sort of socialistic.

I should like to say to my good friends in Minnesota, because I have been carrying on this housing fight for years—have been paying and paying and paying to keep the slums.

What can we do about the areas where there are slums? In some areas of every city the slums are no longer fit for human habitation. Every city official, every mayor, and every city council in the United States has had a survey made of the housing needs in the respective communities. There is no secret about this any longer. We have surveyed the American people until they are almost all cross-indexed. We have had them tested and retested, polled and repolled. Now what they want to know is, "What are you going to do about it?"

I have not found that a public housing program is politically unpopular, if someone needs to be reassured on the political popularity. As a matter of fact, one of the first things we show to the visitors who come to this country from other lands—one of the very first sights—is the area in our municipalities where we have cleaned out the slums and rebuilt, through slum clearance and urban redevelopment. That is one of the very first things shown.

The second thing that we show visitors is the TVA. Then we have people, high in political office, who condemn both of these developments as socialistic.

Mr. NEUBERGER and Mr. GORE addressed the Chair.

Mr. HUMPHREY. I yield first to the Senator from Oregon.

Mr. NEUBERGER. I defer to the greater seniority of the Senator from Tennessee.

Mr. HUMPHREY. I yield, then, to the Senator from Tennessee, who is great and has seniority also.

Mr. GORE. I thank the able Senator. I rise in a friendly gesture to suggest to the Senator that in addition to the other adjectives which may be used in the description of the able junior Senator from Minnesota, because he is in favor of this program, he is apt to be called an inflationist, if he is in favor of decent housing, either through an effective home-loan program or through public housing.

Mr. HUMPHREY. I should like to say to my good friend, first of all, I thank him for his expression of solicitude. It is made in a spirit of friendship, that I know.

But I wish to say to my friend, the Senator from Tennessee, I should like to have him know—and I should like to have every other one of my colleagues know—that I have been called many things. If I am going to be called an inflationist that will not bother me one bit, because the one thing this Senator remembers is that the troubles we had in our business and in our family did not come from inflation, they came from deflation. We were deflated completely in 1931, 1932, and 1933. That was what really cleaned us out. If I have a choice between having about a 20-percent deflation or another 5-percent inflation, it will not take me long to make up my mind.

I do not happen to think this proposal is inflationary. What generally happens is that whenever one proposes something in these legislative halls which is good for the people—I mean for the great multitude of the people—somebody comes up with about six reasons of opposition—not sound reasons, but at least six——

Mr. GORE. Excuses.

Mr. HUMPHREY. Yes; weak excuses.

Frequently there is some self-appointed righteous soul who will say it is going to destroy the moral fiber of the people. We have had more moral fiber worries in politics than in any other one area of life. Everyone ought to be concerned about his moral fiber, and I wish to pay great tribute to my minister. He worries about mine. He is doing something about it, I hope, and I am trying to cooperate. But I do not need any admonitions from my colleagues about that.

The next thing which people generally worry about is that it is going to cost too much. That, again, can easily be analyzed. It either costs or it does not.

If one wishes to be the richest man in the cemetery, there is a way to do it. If one wishes to have as an objective in life never spending anything, there is a way to do that. If some of my colleagues are worried about costs, they can save a great deal of money in their own households by not feeding their families. But that is one way to save some money. It involves a great deal of misery, but one can save money. I wish to reassure you, that I do not recommend such a policy.

I am of the opinion that the way to evaluate costs is on the basis of whether one is wasting or investing his money. I submit that every single unit of housing built in America is not a waste, not a cost, but an investment—first, an investment in real property; second, an investment in social values; third, an investment in political stability; and fourth, an investment in family life, the best investment that can be made.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. NEUBERGER. I am extremely pleased that the Senator from Minnesota, in his very able support of our amendment, has just mentioned the great cost of broken homes. Recently I read a statement by Mr. J. Edgar Hoover, of the FBI, to the effect that our crime bill in the United States at present averages approximately $2 billion a year.

A few mornings ago I took breakfast here with a man named Alan T. Belcher, who is a famous retired officer of the Royal Canadian Mounted Police. Recently he was the second ranking officer in that renowned police force. Now he is with the Arctic Institute of North America.

As we know, Canada has a far lower crime rate, and far greater discipline in its society than is the case with us. Commissioner Belcher told me, however, that the Canadians are beginning to have trouble with an accelerated crime rate in some of the cities along the American border, and that the bulk of their difficulties are with what he described as young hoodlums, who come from broken homes or slum areas in some of the largest American metropolitan centers.

I daresay that the entire housing program proposed in the amendment offered by my senior colleague and some of the rest of us would cost far less than our crime bill, in terms of dollars, to say nothing of the agony of death, destruction, property loss, and social miseries which are the result of the crime rate in the United States.

The able Senator from Minnesota mentioned deflation. I should like to add this brief thought: One of the institutions which will be deflated virtually out of existence, unless we have a continuing and revived program of housing construction in the United States, is the great lumber industry, which centers in the Pacific Northwest, in the States of Oregon and Washington, and, in the upper Middle West, in the great State of Minnesota.

All one has to do to see what has happened to the home-building industry—both with respect to private, single-unit dwellings, and with respect to the multiple-unit dwellings provided for in the amendment offered by the senior Senator from Oregon—is to visit, in our State, some of the silent sawmills and deserted logging camps. These indicate that the great lumber industry, which has been so important to our entire economy, has virtually come to a standstill in many areas because of the fact that the necessary new housing for the American people is not being constructed today. That housing is urgently needed.

I thank the Senator from Minnesota for his inimitable way of presenting the issues which some of us, by contrast, can present only in a very mundane fashion.

Mr. HUMPHREY. I thank the Senator from Oregon for his undeserved compliment.

I am always bewildered, particularly in this Chamber, by the argument which is made whenever we have good times, when there is a high rate of employment, a reasonably high economic productivity, and a reasonably high gross national product that if we want to do anything like building schools, hospitals, or homes, we are told that that is inflationary. A chorus of voices is raised, saying, "You cannot do that now. That is inflationary."

Then, when things are rough, when there is a recession, when things are go-

ing down, when times are tough and people are in trouble, the same voices say, "We cannot do it now, because we cannot afford it." When we can afford it they say that it brings about inflation. When we do not have the income with which to do it, the chorus says, "This is not the right time." I ask, What is the right time?

Modern Republicans are supposed to be different from other Republicans. The late Senator Robert Taft was a Republican, period. He stood here like a pillar of strength, year in and year out, to take on any Democrats or any Republicans who wished to enter the fight.

One thing about the late Senator Taft was that he was a realist. One can argue a political philosophy. One can maintain his point of view. When the late Senator Robert Taft was in the Senate in 1949, our cities were 8 years younger than they are now. Our cities were under no such strain as that under which they now operate.

When the late Senator Taft visited the cities and saw the need he said we needed 135,000 housing units every year for 6 years, or a total of 810,000 units.

Then came the crusade. Then came "modern Republicanism," and "liberal Republicans." We obtained an authorization for 35,000 units for 1 year.

By roadblocks, by administrative quicksand, and by shimsham, what do we find happened, under even that limited authorization? We found that as of May 1957, only 1,610 low-rent public housing units had been approved for loan and annual contribution contract by the HHFA administrator. Even Rip Van Winkle could have done a better job than that. That many units could be authorized by accident, without design.

I expect someone to tell me that somehow or other the slums have vanished. Are there some kind of "housing hormones" which make homes become newer and younger, without anyone doing anything but looking at them? It must be so.

The old units which the late Senator Taft saw in 1949 are still there, but somehow or other something is supposed to have happened to them. It depends upon the way we look at them. If one puts on the Eisenhower-GOP modern glasses, those houses look younger and more beautiful, particularly if GOP propaganda tell us so. But in truth, they are still the same problems. They are still old houses. They still need modern facilities. They are still broken down. They are the centers and the sources of social infection, disease, crime, delinquency, and hopelessness. This Congress ought to do something about the problem.

Mr. DOUGLAS and Mr. CAPEHART addressed the chair.

The PRESIDING OFFICER. Does the Senator from Minnesota yield; and, if so, to whom?

Mr. HUMPHREY. I yield first to the Senator from Illinois, and then I shall be glad to yield to the Senator from Indiana.

Mr. DOUGLAS. Mr. President, does the Senator from Minnesota remember one of Grimm's fairy tales, about the king who supposedly had a beautiful new suit woven for him of the finest silk, but which, in reality, was entirely a figment of the imagination? The king would ride forth, and everyone would bow and admire his suit. However, in reality, he was merely a male Godiva.

Mr. HUMPHREY. It is a charming little fairy tale.

Mr. DOUGLAS. Finally a little child said, "The king has nothing on."

Is that not true of the Eisenhower housing program?

Mr. HUMPHREY. Exactly.

Mr. DOUGLAS. It has been touted as a marvelous suit of clothes for the American people; but when the Senator pierces through to the facts, it becomes apparent that the administration has authorized only a thousand units, when, under the 1949 act, we were supposed to build 135,000 units a year. Is it not true that the king has no clothes on?

Mr. HUMPHREY. The Senator from Illinois could not be more correct; nor could he be more pertinent in his analogy.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. HUMPHREY. The only thing I wish to say is that I think possibly the king had had a bath. In this instance, I am not so sure that the scene is quite so tidy.

Mr. DOUGLAS. Now, I urge the Senator to be careful.

Mr. HUMPHREY. I am.

Mr. DOUGLAS. I urge him to be careful or he will bring down upon his head an attack from the other side that he is libeling the President of the United States. I urge him to be careful.

Mr. HUMPHREY. I say to my good friend from Illinois that I was careful beyond even the point of prudent judgment. I am so careful that I want it to be crystal clear that I am not even thinking of the White House. I am speaking of a house in slum area in any typical American city. With those definitions perfectly clear, I wish to yield now to my good friend from Indiana.

Mr. CAPEHART. Mr. President, I should like to ask the Senator a serious question.

Mr. HUMPHREY. Yes; please do.

Mr. CAPEHART. I should like to ask the Senator who is the Speaker of the House of Representatives?

Mr. HUMPHREY. The gentleman who is the Speaker of the House of Representatives is known to the Senator from Indiana, as he is known to the Senator from Minnesota. He is a very illustrous Democrat, a great citizen, a renowned public servant, one of the finest of all men, Speaker SAM RAYBURN.

Mr. CAPEHART. Who controls the House of Representatives? Is it the Republicans or the Democrats?

Mr. HUMPHREY. I may say to my good friend from Indiana that if he wants a lesson in politics, I can help him. I did not want to return so soon to my teaching associations. Of course that could happen in politics at any time. I was hoping, though, that I would get a chance to serve out my present term at least.

The Senator from Indiana asks me who controls the House of Representatives. I do not lay claim to any knowledge about the other body. However, I have heard that on occasions that a majority of the Senator's friends join up with a minority of Senators on this side of the aisle, and, by some strange set of circumstances, a coalition is formed, particularly in opposition to some of the more humane, social issues. I am happy the Senator has asked the question, because if it is a deep, dark secret, then it is time that the Senator be informed. It was commonly called—before these modern days—a Republican-Dixiecrat coalition. We have changed, and we now say it is the Old Guard Republicans and some of the Democrats that have guilt by association.

Mr. CAPEHART. Does the Senator not know that the House of Representatives for as many years as I can remember—and I include the present year when the bill now before the Senate is pending—have refused to vote any better housing? That has happened in a Democratic-controlled House.

Mr. HUMPHREY. I say to my good friend that we are not here managing the affairs of the House of Representatives. I appreciate the solicitude and interest of the Senator from Indiana in the House of Representatives. But I remind him that we are not running the House of Representatives. We are running the affairs of this Chamber. What we had better do is quit talking about our friends across the other side of the Capitol.

Mr. CAPEHART. Mr. President, will the Senator yield further?

Mr. HUMPHREY. Not for the moment. I wish to pay tribute, first, to the Members of the House of Representatives. They are running the House, and they are doing it as they see fit. We do not have to vote in the House. They are not even asking us to come to visit in that Chamber. They are not soliciting our advice.

I will tell the Senator what they will do. They will sit down in conference with Senators and they will confer and they will negotiate. If the Senator from Indiana will be helpful, we can get a couple of hundred thousand public housing units included in the bill, and we can then go over to the House and sit down in conference with them, and we will be able to negotiate. With the Senator from Indiana a member of the committee on conference, with a man of his ability as a horse trader second to none, one who is truly a great horse trader, and, may I say, he is one of the greatest traders of all time—I am confident that we will come back with not less than 195,000 public housing units.

I assure the Senator from Indiana that our job is to manage the affairs of the Senate, not of the House. I have great faith in the Senator's ability.

Mr. CAPEHART. Who controls the United States Senate?

Mr. HUMPHREY. There has been on occasion some doubt about that, but to be sure the Democrats have a majority. If the Senator from Indiana will give us a little help we will have enough votes so that we will be able to amend and improve the housing bill. The Senator

is persuasive. I have great respect for his qualities and his abilities. I am trying not to have an argument with him. I am pleading with him to join in the good fight for a public housing program.

Mr. CAPEHART. The point I was trying to make is that the Senator has been condemning the Republicans and blaming the Republicans for lack of a housing program——

Mr. HUMPHREY. Oh, no; I was praising them.

Mr. CAPEHART. When all the time the Democratic Party controls the Senate, and the Democrats have the chairmanships of the various committees, and have controlled Congress during the past 25 years except for the 80th Congress, because in 1953 and 1954——

Mr. HUMPHREY. The 83d Congress, I believe it was.

Mr. CAPEHART. No. In 1953 and 1954 we did not have control. We had the able senior Senator from Oregon at that time on this side of the aisle, and he was kind of surrounded.

Mr. HUMPHREY. I may say to the Senator that if he had the able Senator from Oregon on his side, he could be five more Senators short on his side of the aisle and still have control, because this man is legion.

Mr. CAPEHART. The Senator from Oregon was in a sort of frustrated state at that time.

Mr. HUMPHREY. I can understand why he would be in the Republican ranks. See how contented he looks now. Notice his happy countenance today.

Mr. CAPEHART. He did not know whether he was a Republican or a Democrat.

Mr. HUMPHREY. He made up his mind. Look how happy he is.

Mr. CAPEHART. He was going through a change, I will say. He was not much good to us.

Mr. HUMPHREY. The Senator's party was responsible for that. The Senator's party asked for a change. In 1952 the Senator's party said, "It is time for a change." The Senator from Oregon said, "I agree." He came over to the Democratic side, and I want to thank him personally for doing so.

Mr. CAPEHART. The Senator has been speaking about the housing situation in the United States, and he has drawn a very sad picture of juvenile delinquency and its terrible, bad effect. Yet the Senator's party has been in control of the Government for almost 25 years. If the situation is as bad as he says, I suggest that he go home and take a good look at himself in the mirror.

Mr. HUMPHREY. I am sure there are many more enjoyable pursuits than looking at myself in the mirror. Life is short enough without going through that ordeal.

What I would like to do is debate with the Senator from Indiana, because he is such a pleasant gentleman and such a distinguished gentleman. When the Democrats were in control we passed a housing bill, and we did it over the anguished cries of pain by the Republicans. They were then being dragged into the 20th century, and they were not liking it. However, Franklin D. Roosevelt, with the great help of Senator Wagner, of New York, was able to get housing legislation passed by Congress. We got under way. It was not as much as some of us would have liked to have at the time. However, the most important thing in life is to be born. The party of the Senator from Indiana was not for being born, so far as the housing program was concerned.

Then we came to 1949. I remind my good friend from Indiana that there was then in the White House a gentleman by the name of Harry S. Truman, the man from Independence, Mo. There were men on the floor of the Senate at that time, like the leader, Senator Scott Lucas, and the Senator from Louisiana [Mr. ELLENDER], and the Republican who was true to the honor and fame of his party, and who was the leader of the Republican Party, Senator Taft, Mr. Republican.

Mr. Republican was not only true to his party, but he was true to himself. He went up and down the length and breadth of the land and he saw suffering and slums and pitiful conditions in some of our major metropolitan areas, with their tenements. What did he do? He cast aside dogma and doctrine. He even turned his back upon previous positions he had held. He joined with other Senators in this body, not to sit by and defend the status quo, but he joined the issue. That great leader, Senator Taft, and the Senator from Louisiana [Mr. ELLENDER] joined with the leadership in the Senate and passed a housing bill which provided 135,000 units a year for 6 years, or a total of 810,000 units for 6 years. That was in 1949. I repeat: That was before the Republicans became modern. That was before the crusade.

When did we start to get into trouble with the housing program and the slum clearance program? We started to get into trouble with the housing program when Congress was under the influence of an election in 1952–53, which brought in Republican leadership, and has continued that leadership in the White House and in the executive branch of the Government.

I am not saying that our President does not seek to do good things for the people. I simply say that the President, in submitting his budget message concerning the public housing program, has missed the mark by at least 100,000 units. Thirty-five thousand units of public housing? Let us not try to fool one another. What are 35,000 housing units in a Nation having a population of 160 million? Many Senators can go into their own cities and find a great need for that many. I shall not name the States, but any Senator can go into the major metropolitan cities and see whether or not there is a need for slum clearance; whether or not there is a need for low-rent public housing.

Someone might say that we do not need public housing; that what we ought to have is private housing. Let me make my position clear. I am 100 percent for private housing, if we can get it. I am an advocate of private housing for families who can afford to pay for it. But I am also for the development of low-cost homes, because homes are the best investment the Government of the United States can insure.

I cannot understand, for the life of me, why Congress drags its feet—even puts them in cement—whenever we come to talk about education, housing, or health. What is wrong with those subjects? They are good, normal subjects. Scripture is filled with references to them.

I am not an expert on that subject, but I can say that unless the opposition to this program can prove that the communities of America can be rid of their slums with a different kind of program, then it is necessary to accept the alternative which has been used. Let them go to New York City and see what has been done with the limited funds which were available. The Senator from Pennsylvania [Mr. CLARK] knows what was done in his own city of Philadelphia. I know what has been done in a limited way in my city of Minneapolis. Minneapolis is not an old city; we do not have many blocks of what would be called slums. But we do have some, and we are not proud of them. I do not think we perform a service by trying to push these matters under the rug.

I will join with the Senator from Oregon in saying that it is a national disgrace to have blocks of slums within a short distance of the Nation's Capitol building. If the few Senators in the Chamber will put on their bifocals, they can go outside and look at slums within 4, 5, or 6 blocks of the Capitol building. Those slums are costly to the police department, the fire department, and the relief department; their cost in misery, unhappiness, broken homes, delinquency, crime, and disease, is incalculable.

I do not say the housing program will cure those conditions, but I say it will help to do so. It is like the story of Tina and Ole. Ole had 17 cups of coffee. Tina asked, "Doesn't that much coffee keep you up all night?" Ole said, "No; but it sure helps to."

I do not say the housing program will reform society, but it certainly will help. It will offer a better environment in which the reform can take place. It will offer a better environment in which better families can live and be happy. It is a shame that in this country some children do not have yards in which to play and homes which are decent in which to live.

America is the richest country on the face of the earth. Furthermore, I charge that this program will not cost anything if we really figure it out. What it will cost is the immediate investment in brick, mortar, and the appliances which go into a home. This program will be liquidated ultimately by the payments of rent and the savings which will come to the local governments in local services.

In my city of Minneapolis—and I speak with some knowledge of the matter—we found that when we began a housing program in an area, the business community around that housing project improved its own economics, and that business was better and profits were available. Businessmen who had not been taxpayers before, because they had little or no set income, became taxpayers.

What is more, when a family goes into a housing project, there is an incentive for community participation and for community stature. There is new dignity and new self-respect. There is a sense of being a part of the social fabric of the community.

I am one United States Senator who is willing to say now and again that he wants to join with others in making the housing program a living testimonial to the late Robert Taft. I call upon my Republican friends to join with me in making it a living testimonial to him to the extent of at least 135,000 units. Or will they turn their backs upon their philosopher? Will they turn their backs upon their late, lamented leader? I say that instead of building a tower with bells to his memory, let us build throughout America housing units and call them "Taft units," in memory of one who had the courage to set aside dogma and doctrine, yes, medieval economics, and to come forward with the philosophy of the 20th century and to face realities.

I say to my Republican friends, "If you really want to be modern Republicans, then open the windows, lift up the blinds, turn on the lights, and look out upon your home cities—not simply where you and I live, because we are privileged to live in better areas." I am very grateful to the people of my State.

I submit we would do well to walk in the shadows of the tenements and the slums of the cities and see what goes on there. Then we might well ask ourselves if that is what we mean by America, and ask ourselves whether or not we are willing to stand stunned, stultified, and unwilling to do anything to meet this social need.

I ask my colleagues of the opposition to demonstrate on the floor that this program is costly. That is the first point, because they have raised the dollar sign. I will argue the economics of this matter, and will win. There is no doubt about it; I will argue it and win.

I will ask them if they can justify slum conditions in the richest Nation of the world, in the richest period of our history. We cannot have it both ways. We cannot say this country has achieved the greatest prosperity the world has ever known, and then say we cannot afford to rid our communities of a few blocks of slums.

I am prepared today to argue the case that slums and broken down housing constitute the most costly and extravagant waste and luxury of modern society, at least in terms of urban physical plant.

I have able experts in the Senator from Pennsylvania [Mr. CLARK], the Senator from Illinois [Mr. DOUGLAS], the Senator from Oregon [Mr. MORSE], the Senator from Colorado [Mr. CARROLL]—men who have lived in cities, men who have studied social problems, and who know what the answers are.

Mr. President, I am about to yield the floor; but before I do so, I ask unanimous consent to have printed in the RECORD a number of telegrams which I have received from contractors and builders, all good citizens of the State of Minnesota. I shall not read them. These contractors and citizens, all taxpayers, support housing programs, support lower down payments, support lower interest. Many of them supported the amendment I offered yesterday to stop the nefarious practice of discounting.

They are good citizens, and because they understand the importance of the construction industry, as well as the social values of good housing, they join with me, as do others, in the effort to make certain that at long last we shall get on with the business of letting the sunlight banish the darkness of the slums of American cities.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

MINNEAPOLIS, MINN., *May 22, 1957.*
Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D. C.:

We very sincerely urge your utmost consideration and deliberation on the matter concerning the reductions in the required FHA downpayments. We urge you to support this necessary action if the building industry is to continue to thrive at all.

Respectfully,
ERNEST R. SPETZ,
Past President, Minneapolis Association of Plumbing Contractors.

ST. PAUL, MINN., *May 22, 1957.*
Senator HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

Urge you to support reduction in FHA downpayments. This is necessary for high volume of moderate and lower-priced housing. Don't cut President's budget if cutting will weaken Nation's defenses.

MICHAEL KASSAN.

MINNEAPOLIS, MINN., *May 23, 1957.*
Senator HUBERT HUMPHREY,
United States Senate Office Building,
Washington, D. C.:

I urge you to support the bill reducing FHA downpayment which is vitally important to the continued welfare of the building industry.

JOEL OSTERHUS,
Builder.

MINNEAPOLIS, MINN., *May 23, 1957.*
Senator HUBERT HUMPHREY,
United States Senate Office Building,
Washington, D. C.:

We urge you to back legislation to permit easier downpayment on FHA housing. This is a desperate need.

Ej and Alma Eliason, Leo Lund, Paul McNeillis, Lorraine and Arlo Eliason, Catharine and Harold Brokke, Kenneth Swanson, Warren Kempfert, Everett Jones, Henry Cotten, Howard and Harriet Schulz, Halvor and Helen Strand.

MINNEAPOLIS, MINN., *May 21, 1957.*
Senator HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

To make possible adequate housing for middle and lower income groups and for the economic welfare of the millions employed in home building and in industries which provide the hundreds of items necessary to furnish a completed home, we urgently recommend your support of a reduction in FHA downpayments and substantial increase in the borrowing authority of FNMA.

HART ANDERSON,
Page & Hill Homes, Inc.,
Shakopee, Minn.

ST. PAUL, MINN., *May 22, 1957.*
Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D. C.:

Today we have been informed that the Senate committee has rejected any reduction in FHA downpayments after previously approving them.

I know that you are aware of the situation that has existed during the past 6 months regarding VA financing and the discount required by the builder or seller to place such mortgages.

We, as builders, cannot sell to GI's and show the kind of profit necessary to stay in business.

We anticipated an FHA program that would take the place of the VA program so that we could establish a firm selling program for this building season. We are well into the building season and apparently still a long way away from a sound, workable FHA program.

We wish to urge your support of a liberalized FHA program that can be put into effect immediately and help the building industry through this year, and also provide new adequate housing for the qualified buyers who are not in a financial position to put a large amount of cash downpayment into a new home.

GENE NEITGE CONSTRUCTION CO., INC.

ST. PAUL, MINN., *May 21, 1957.*
Hon. HUBERT H. HUMPHREY,
United States Senate Office Building,
Washington, D. C.:

Have been advised that the Senate committee rejected any reduction in FHA downpayments and substantially cut a proposed increase in the borrowing authority of FNMA for funds to purchase mortgages. Urgently ask you to support the lowered FHA downpayments and the increase asked for FNMA. If you do not take this action we are asking for, you will be directly responsible for creating a depression that will curl your hair. In the event that you are on our side, please show this wire to those Senators that are not.

HARRY J. GROSSMAN,
D. & G. Realty and Construction Co.

MINNEAPOLIS, MINN., *May 21, 1957.*
Hon. HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

Feel you should have our opinion that reduced downpayment requirements by FHA is vital to welfare to home-building industry and other segments of national economy tied to it. Urgently request you support amendment to Senate bill to this end.

KILGORE LUMBER CO.
HOPKINS, MINN.

ST. PAUL, MINN., *May 21, 1957.*
Hon. HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

Have previously drawn your attention to drastic situation that prevails in home-building industry due to tight money. The GI program is dead. Urge you have Senate pass Representative EDMONDSON'S FHA bill just passed by House. Greatly disturbed over action of Senate banking committee regarding tight money.

RATFIELD COBBE, INC.
NEW BRIGHTON, MINN.

DULUTH, MINN., *May 23, 1957.*
Hon. HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

We urge you support reduction of FHA downpayments. Meeting of association last night voted 100 percent in favor. Please inform us of stand you take.

KENNETH NORDIN,
President, Duluth Home Builders Association.

MINNEAPOLIS, MINN., *May 23, 1957.*
Hon. HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

Strongly recommend reductions in present FHA downpayment and substantial increase in funds available to FNMA for financing in secondary mortgage market to make possible adequate housing for middle- and lower-income groups.

W. C. PEDERSEN,
The Ruberoid Co.

MINNEAPOLIS, MINN., *May 21, 1957.*
Hon. HUBERT H. HUMPHREY,
Senate Building,
Washington, D. C.

I urge you to support a reduction in the required FHA downpayments.

EARL BARTHOLOME,
Minneapolis Home Builders Association Member.

Mr. HUMPHREY. Mr. President, I also ask unanimous consent to have printed in the RECORD a telegram I have received from the mayor of the largest city of my State, a city of approximately 535,000 people, the city of Minneapolis. He is the Honorable Eric G. Hoyer, and he supports the stand I have taken on housing. I also ask unanimous consent to have my reply to his telegram printed at this point in the RECORD.

There being no objection, the telegram and letter were ordered to be printed in the RECORD, as follows:

MINNEAPOLIS, MINN., *May 27, 1957.*
Senator HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

I strongly urge passage of H. R. 6659, as approved by Senate Banking and Currency Committee. Provides increased renewal aid from two-thirds to three-fourths of net project cost. Would appreciate everything you could do to insure passage of this legislation.

ERIC G. HOYER,
Mayor of Minneapolis.

MAY 28, 1957.
The Honorable ERIC G. HOYER,
Mayor of Minneapolis,
Minneapolis, Minn.

DEAR ERIC: Many thanks for your wire urging passage of H. R. 6659. While there may be some changes in this legislation on the Senate floor, I am hopeful that the increased renewal aid feature will remain in the bill and be reported favorably from the House-Senate conference.

You can depend upon me to do everything I can to see to it that this provision is retained.

Best wishes.

Sincerely yours,

HUBERT H. HUMPHREY.

Mr. HUMPHREY. Mr. President, when my colleagues speak of downpayments on housing, I want them to remember that all housing in the United States is not alike. In my part of America, the temperature in the wintertime reaches 35 degrees below zero. In Minnesota, the people need housing which is somewhat more expensive in construction than the type of construction needed in other parts of the country. Therefore, I was pleased by the action of the Senate on yesterday in voting to lower the downpayment on FHA housing, because if the downpayment on only $10,000 houses is lowered, that will not be of any great help to the people in the part of the country in which I live inasmuch as it is not possible to live comfortably in Minnesota in a house costing $10,000. In Minnesota, the minimum price of a home is at least $14,000, due to the need for insulation and to the depth of the frostline. In other words, in the northern part of the United States the construction problems are unique.

I hope the Senate will listen today to the pleas of all those of us who are not arguing for anything particularly new. In fact, we are simply asking that in respect to this program, the Senate catch up with the program of the past. We ask the Senate only to catch up with the 1949 program.

Mr. President, imagine what would happen if a Member of the Senate asked that today our Military Establishment proceed on the basis of its 1949 program, or that today our educational program proceed on the basis of its 1949 program. A Senator who made such a request would be laughed out of the Chamber.

Yet today we are asking for a chance to return to the standards which Congress previously established, the program for which many of the present Members of the Senate voted, and for which other Members of the Senate, who were not then Members, cheered because they desired to vote for it.

Mr. CARROLL. Mr. President, will the Senator from Minnesota yield to me?

Mr. HUMPHREY. I yield.

Mr. CARROLL. I desire to commend the distinguished Senator from Minnesota [Mr. HUMPHREY] for his very stimulating speech.

I should like to say that in the 5 months during which I have served in this body, it seems to me that yesterday and today are the first times the Senate has come to grips with some of the issues which confront the people of the United States.

All of us know that religious and spiritual leaders of this country are warning the Nation about the growth of materialism in the United States. The Senator from Minnesota has placed his finger on a serious problem. Today, the dollar sign is the symbol of progress, whereas the general welfare used to be the great symbol. It ought again to be the symbol which moves us forward.

Yesterday the distinguished Senator from Tennessee [Mr. GORE], made an excellent argument in an attempt to have the Senate vote to provide control of discounting in the housing construction program; there were other excellent speeches on the subject of lowering downpayments on FHA insured houses. Each of those speeches was designed to persuade the Senate to vote to strengthen and protect the family life of America. That is the democratic tradition—not to serve alone the corporate life of America, but to help build the family life of America. That is what all Democrats stand for—regardless of whether the word is spelled with a capital "D" or a small "d".

I may say to the Senator from Oregon [Mr. MORSE], after listening to his inspirational remarks, it is true, as regards his comments about public housing being tagged as socialistic, that before there can be, for example, a public housing program in Colorado, enabling legislation must be enacted by the Colorado Legislature. The people of Colorado are not socialistic for such an enabling act has been approved. Before there can be a public housing program in Denver, such a program must be initiated by the Denver City Council.

Since the Korean war and the election of 1952, the growth of materialism and the failure to move forward in the interest of the general welfare have seemed to me to have permeated the entire political structure of this country. But in the last 2 days at least, the Senate has made progress in the field of housing, including the field of public housing; and I hope the Senate will move ahead also in the field of foreign aid, and particularly in the case of the program of technical and economic assistance—a program which was a Democratic program. No Member of the Senate who sincerely believes in those programs will wish to have the funds cut drastically. We believed in the foreign assistance programs in 1948 and 1949 when I was a Member of the other body. If at that time we believed in promoting the welfare of humanity throughout the world, and if by the same token we still believe in taking care of humanity throughout the world we must also at this time take care of the needs of our own American people in our own backyard.

As was said yesterday by the Senator from Minnesota, we should ourselves ask whether everything at home is all right. In the last 10 months the cost of living has been steadily increasing. I have served on the committee investigating the gas and oil price increases, and I know what those recent increases have done to the Nation's economy. We know what the profits in the oil industry are, and we know what the profits of the steel companies are. On yesterday, the Senator from Minnesota discussed the profits of some of the major, giant corporations of the Nation. These are the companies who fix the prices; and as they engage in their so-called selective price fixing, they are also drawing upward the prices of other commodities, creating growing economic pressure on our constituents at home. The proposal before us today in the matter of public housing calls for only an additional 200,000 units a year.

I served in the other body with the Housing and Home Finance Administrator, Mr. Cole. All we need to do is examine his record there in terms of the general welfare. I do not speak disparagingly of him in any personal sense; but I say that an examination of his voting record in connection with housing will in itself show that he had one of the blackest records in the Congress on the issue of the general welfare of the American people. Under those circumstances, when such a gentleman is put in charge of a great social program it is no wonder it has bogged down.

We are confronted now in the present law with a 35,000-unit public housing program, which is not adequate to present day needs.

I say to my distinguished colleagues, that I believe this housing program debate can serve as a springboard, to stimulate the thinking of some of the Members on this side of the aisle and also

the thinking of some of the Members on the other side of the aisle. If we are able to stimulate thinking on both sides of the aisle, perhaps we shall be able to move forward once again with a legislative program which will have a beneficial effect upon the general welfare of the American people.

In the course of our forward progress we shall be able to take care of the budget problem. This country has enormous revenue resources, and I say it will be possible to reduce the budget by thriftily utilizing these resources while at the same time eliminating excessive spending and waste.

Here is a sound, sensible housing program which we have had under consideration for the last 2 days; and I commend the distinguished Senator from Minnesota [Mr. HUMPHREY] the distinguished Senator from Tennessee [Mr. GORE], the distinguished Senator from Oregon [Mr. MORSE], and the distinguished Senator from Pennsylvania [Mr. CLARK]. This program may be the very one that is needed in order to get the Senate finally moving in the proper direction.

Mr. MORSE. Mr. President, will the Senator from Minnesota yield to me?

Mr. HUMPHREY. I shall be happy to yield in a moment.

Mr. President, earlier in the debate a comment was made regarding the attitude of the Democrats in connection with the housing issue. I asked one of the staff members to look up the vote last year on the public-housing question.

In order that the record may be complete, I shall quote from the CONGRESSIONAL RECORD, volume 102, part 7, page 8909. At that time the question was on including in the public-housing program 135,000 units for 4 years. On that question, the vote was 41 to 38. As Senators will recall, the committee had included in its recommendations an item for 135,000 units.

The Senator from Ohio [Mr. BRICKER] was the one, I believe, who moved that the provision for that amount of housing be stricken from the committee's bill. When that motion was put to a vote, there were 38 yeas—38 votes in favor of eliminating that housing provision—and 41 nays.

Of the 38 yeas—that is, the 38 votes in opposition to public housing—7 were Democrats and 31 were Republicans. In other words, the ratio of Republicans to Democrats was 4½ to 1. Of the 41 nays—and that is the pro-public-housing vote—there were 35 Democrats and 6 Republicans—almost 6 to 1.

I have never claimed that either political party was monolithic. There are monolithic parties in totalitarian countries. Our party members have independence of judgment. We do not have unanimity. We respect differences of opinion, and try to find as many areas of agreement as we can. Each political party is somewhat of a coalition, by nature of the great expanse of our country, and differences in stages of development. Some sections of the country are newer than others, more industrial, or more agricultural.

The most recent record shows that, on the issue of providing 135,000 units, a year ago almost to the week, on May 24, 1956—and today, I believe, is May 29—the vote was 41 for 135,000 units, of which 35 were Democrats and 6 were Republicans, and the vote was 38 against public housing, of which 31 were Republicans and 7 were Democrats.

Mr. President, those are statistics. I do not believe in repeating the names of Senators, because a vote is a vote, and it is in the RECORD.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. HUMPHREY. I am happy to yield to this friend of public housing.

Mr. JAVITS. I should like to call the Senator's attention to what I consider a fundamental point of American life in the Senate and in the House, where I had the privilege of serving; namely, that whatever the Senator has said about the figures demonstrates one other point, that without the 6 Republican votes, there would not have been the 41 votes for public housing.

I should like to call further attention to the fact that when the Housing Act of 1949 was passed, I had the privilege of being its informal manager in the House on the Republican side. It took some 23 Republican votes to pass it at all. I can assure the Senator that if those votes had not been available, the bill never would have passed.

If I may finish my thought, because I am not making a barren political statement, since that would be valueless, I think the most significant point is that those who are deeply devoted to this subject, those who are deeply devoted to civil rights, those who are deeply devoted to immigration legislation, in all their partisan zeal—which I admire, and which is the stuff of life in our country, and it is fine—must be very careful not to isolate and make impossible the necessary support without which the issue itself will go down the drain. I think that must always be borne in mind, and I hope my colleagues will keep it in mind.

Mr. HUMPHREY. The junior Senator from Minnesota is grateful to many Republicans, because he could not be elected in his State without Republican votes. I like Republicans. They are great Americans.

With all due respect, I say to my friend, the six votes to which he refers were important. They were the difference between success and failure. However, I point out that without the 35 Democratic votes, the 6 Republican votes would have been insignificant.

There is plenty of room in the gardens of achievement and success. They are not crowded, and I welcome the Senator from New York. I know of his fine work in the House. We are personal friends, and I hold him in the highest esteem.

I paid tribute to the late and beloved Senator from Ohio. I remember many fine deeds the Senator did, and I said so when he was alive, not after he had left us. He was a realist, and he was a vigorous partisan when he needed to be. But when he saw something needed to be done, he moved in to get it done.

Now, I should like to ask this question: Is there a Senator who can honestly say today that conditions in American cities relating to slums and breakdowns in tenements and other physical plants are any better than they were in 1949? Have they improved in any way? Can any Senator really say that we ought to have less today than we had 8 years ago? That is what the issue is, and that is all it is.

I know the Senator from New York comes from a State with great liberal traditions. He comes from a State where he himself has a fine liberal record. The Senator knows that 1,610 housing units authorized and contracted for in 1 year, under the title of the public housing program, is not a housing program; it is a farce; and I will tell Senators one of the reasons why.

I have been in this fight up to my neck, trying to help my own city officials. They have spent hundreds of hours and dollars going to Chicago, going to Washington, going back to Chicago, going back to Washington, going back to Chicago, and back to Washington, and back home. All they got was a smile. They never were able to get the papers signed. They never were able to get the projects approved. It is interesting to note how difficult it now is to get projects approved, when they used to be approved much more easily.

I agree with the Senator that people can be driven away by partisan zeal. I have seen it done many times. I think that is an admonition for both sides of the aisle, and an admonition for the White House, on Pennsylvania Avenue, all the way to the end of the line, because there can be a very great deal of partisan zeal.

What we want is not partisan credit. I think it would be wonderful if those on this side of the aisle would withdraw the amendment and get the Republicans to offer it. I would say it ought not to have cosponsors, if it could be adopted. I say about housing, or civil rights, there is no honor in having contributed to the defeat of proposed legislation, or inaction, or lack of success. There is plenty of room on the victory bandwagon. All I want is achievement.

Mr. JAVITS. I thank the Senator.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. MORSE. I wish to take half a minute to say that I have heard the Senator from Minnesota make many great speeches, but, in my opinion, I have listened today to one of his greatest. The inspiration I have received from the Senator from Minnesota today has only increased my determination to continue to fight with him shoulder to shoulder for the success of the movement on which we have joined forces today.

I wish to say a word to the Senator from Pennsylvania [Mr. CLARK] and the Senator from Colorado [Mr. CARROLL]. I hardly think they fully appreciate the thrill it has given many of us in the Senate to have them join us and express the social consciousness, the liberal philosophy, and the dedication to the interests of the welfare of the American people which they have expressed not only here today in the two beautiful speeches they have made, but which they have demonstrated by action before they came

to the Senate and since they have been in the Senate.

To my friend, the Senator from New York [Mr. JAVITS], I wish to say I completely agree with the observation he made. I do not know of any Member of the Senate who is in a better position to say what I have said, because I think I have demonstrated a nonpartisanship which I doubt is equaled by any other Senator, for I am not concerned about partisanship. I am concerned about causes. I am concerned about great legislative objectives. I am concerned that as we sit here in the Senate we always should rise above partisanship and serve what we consider to be great principles in the interest of social justice.

I want the Senator to know that, so far as I am concerned, I expect to be standing shoulder to shoulder with him on many great causes in the interest of the welfare of the people. The welcome sign is always out, on a nonpartisan basis, to join in the kind of cause we are joining in here today.

I wish to say I would be less than human if I did not appreciate very much the wonderful support we have received by way of the magnificent statements by Senators who have been spoken, backed up, as we have been several times this afternoon, by our two great colleagues, one from the State of Tennessee [Mr. GORE] and one from the State of Illinois [Mr. DOUGLAS], who always seem to be ready to give us the assistance we need.

Of course, one of the great warriors of the group is the Senator from Montana [Mr. MURRAY], sitting here and taking it all in, waiting for the rollcall. We always know where he will be when the roll is called.

Mr. HUMPHREY. May I add, on the people's side.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. HUMPHREY. Indeed I will yield to the Senator from New York.

Mr. JAVITS. I wish to say that I appreciate the very fine things that have been said. I notice that in this body, if the Senator from Minnesota will permit me, our Members are more truly polite to each other. Even if they differ very sharply they show a personal affection which is most gratifying.

I feel that the Senator from Minnesota is an outstanding public servant, working with fervor and sincerity for the causes in which he deeply believes. People are always grateful for that kind of service.

I hope very much that in these most cordial exchanges between men who have known each other a long time and seen each other through many battles, the main point will not be missed. We really must draw a lesson from a very pertinent case like housing from which a lesson can be drawn—that as we serve the people, we can serve them best if we stop just this side of losing by our excess of partisan zeal that indispensable support which is indispensable in terms of great issues which we are so proud to back.

That goes for both sides of the aisle.

As a new Member of the Senate, I shall take away a new and deeper imprint of what I consider to be this truth from this debate. I hope my colleagues will do the same thing.

CRITICISM OF SENATOR HUMPHREY IN CONNECTION WITH CORN PROGRAM

Mr. HUMPHREY. I wish to thank the Senator from New York, because his last comment reminded me that I had a mission to perform here, which I hope I shall not forget, on an entirely different topic, because I have tried to give it some support.

I shall digress for a moment, if my colleagues will forgive me.

Mr. President, the point was made a moment ago that we should always stop short of the point of partisanship where we lose support, and which is even more important, the point where we lose the respect of our colleagues.

Mr. President, the current issue of the Republican National Committee's propaganda publication, Straight From the Shoulder, sees fit to attack me in an article—an article very complimentary—entitled "Irked Farmers Hold Hubert's Bag of Wind."

GOP FARM POLITICS

There is no question that farmers of America have been left holding the bag, Mr. President, but it was handed to them by Secretary Benson and the Republican administration, not HUBERT HUMPHREY.

However, I suppose in view of strange current trends in the Republican Party it should not be surprising that a Democrat bold enough to come out in support of the President's foreign aid program should be the subject of attack by the GOP high command. It is a rather confusing situation these days as to which party is really the party of opposition.

Apparently, while I was busy overseas defending the President's policies and trying to find a way for our Secretary of Agriculture to make some constructive use of our farm abundance, the Republican propaganda writers were assigned the task of trying to throw the responsibility on me for failure of the Congress to enact any corn legislation this year.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. DOUGLAS. Is it not true that, in his conversations with Prime Minister Nasser, the Senator from Minnesota continuously emphasized that the President, in his judgment, was a man of peace, and that in the Eisenhower doctrine he was seeking simply the good of the people of the Middle East, Arabs and Jews alike?

Mr. HUMPHREY. The Senator is absolutely correct. I am happy to have done so.

Mr. DOUGLAS. As a repayment for this, the Republican Party has launched this personal attack upon the Senator from Minnesota.

Mr. HUMPHREY. Yes. It is a sort of repayment with dividends. I am not particularly disturbed.

In the course of that attempt, they make some confessions. When the corn referendum was offered growers last year, Secretary Benson insisted he was staying neutral and leaving the choice up to producers. Some of us charged that the administration was pushing for one side of the issue before farmers, but Secretary Benson firmly denied it. Now comes the Republican National Committee, in its attack on me, to protest against what it describes as my influence in defeating "an administration-sponsored corn program" submitted to the producers in the referendum.

However, my colleagues will note that the Secretary said he was neutral, he did not choose up sides one way or the other.

By the way, the Under Secretary testified in committee that they really did not support this referendum, even when it was voted on in the Senate. The Republican propagandists now say that it is an administration-sponsored program. I appreciate this belated confession. I always felt that that was the fact.

I appreciate the influence which they apparently give me credit for having over the growers of corn in the United States. However, they are stretching the truth a bit recklessly when they say that I publicly promised corngrowers an increased acreage allotment and higher price supports if they would vote against the administration-sponsored plan to give the Secretary full discretion for lowering price supports still further.

What I did promise—and the record is available for anyone interested in the truth—was to make every effort in this Congress to obtain a better program if growers showed by their votes that they were not satisfied with either of the alternatives on the ballot.

Regardless of the outcome, no one can fairly say that HUBERT HUMPHREY did not make every effort to obtain a better program this year.

I am sure, most objective observers will agree that my efforts and the efforts of others, all of us working together, might have succeeded if Secretary Benson had not pulled the rug out from under us by withholding his support for an expanded corn allotment when it came to a showdown vote—after all kinds of earlier indications that he was for the very provisions of the bill we brought to the floor.

It was a bipartisan bill.

However, it does none of us any good to beat a dead horse. It is not putting any more money in the farmers' pockets. The Republican National Committee would be more helpful if it would set its sights ahead—and tell us what the GOP intends to do toward bailing us out of this farm mess, now that Benson publicly admits his program is a failure. At least I am trying to do something constructive toward using our abundance, instead of complaining about it.

As for the GOP and Secretary Benson, I should like to let a fine Minnesota newspaper from the heart of one of our great farming areas speak for me in an editorial entitled "The Box Score on Benson."

I ask unanimous consent to have printed in the body of the RECORD at this point an editorial from the May 21 issue of the Park Region Echo at Alexandria, Minn., written by John C. Obert, city editor.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Alexandria (Minn.) Park Region Echo of May 21, 1957]

THE BOX SCORE ON BENSON

For all his gallant front, for all his pious utterances, for all his control programs, his fight against price supports and his farm export subsidies—Ezra Taft Benson is hanging on the ropes and about to go down for the count.

All of which makes the Minnesota Young Republicans' recent reendorsement of his agricultural program the more ironic. Mr. Benson can, as he did just last week again, say the crisis is past and farmers are on their way to getting their "fair share of the national income," but his words now have a hollow ring. It would be interesting to see a tabulation of just how many times the Secretary has made just such a statement in the 5 years he has commanded the Department of Agriculture.

Ironic, too, is the fact that it is his very own Department's official statistics which make a mockery of his predictions and promises.

Mr. Benson said, as recently as April 2, for instance, that realized net farm income in 1956 was 4 percent above 1955. Yet the Department of Agriculture reports that net farm income after inventory adjustments in 1956 was down $100 million from 1955's figures. Net farm income has dropped steadily from $15.1 billion in 1952 to $11.6 billion in 1956.

Earlier this year the Secretary announced that "agricultural abundance has held down prices paid by consumers for food and fiber." True, food prices were 2 percent lower in 1956 than they were in 1952, but there is a disparity here that Mr. Benson overlooked. While agricultural abundance may have resulted in this modest lowering of prices to consumers, something was happening to the farmers who were producing so abundantly. Their income dropped 17 percent over the same period.

The Secretary also claimed, last month, that there is every indication that we have passed the peak of the storage problem and that the Commodity Credit Corporation investments in price supports are declining. Then he added, "We are cutting down our acquisition of wheat, corn, and cotton by means of the soil bank. We are moving toward a better balance of supply and demand."

Yet the Department of Agriculture reports: Commodity Credit Corporation losses during the 20-year period from 1933 to 1953 were $1.1 billion as compared with losses of $2.9 billion in the 4 years between July 1, 1953, and January 31, 1957; that the total CCC inventory held on January 31, 1953, was $1.09 billion while the total inventory held on February 28, 1957, was $5.7 billion; that there is three times as much corn on hand today as when the present Secretary of Agriculture assumed office—266,711,000 bushels on hand in January, 1953, 967,122,000 bushels on hand in February of 1957; and that there were 127,779,000 bushels of wheat on hand in January 1953, compared with 789,918,000 bushels on hand in February 1957.

When Benson took on the job of Secretary in 1953, the Government had $2,912,000,000 invested in farm surpluses. Now it has $8,300,000,000 invested in surpluses.

Moreover, and again real irony, the much-ballyhooed soil bank program is fizzling like many another punctured platitude. Half the farmers reject the plan and the others, by virtue of increased use of fertilizers, grow more than ever on less acreage. And why not? The Secretary cuts the corn acreage allotment from 43.3 million acres in 1956 to 37.3 million acres this year and simultaneously drops the support price from $1.50 a bushel to $1.36. Is it any wonder, then, that most farmer in the Corn Belt plan to plant without restriction?

Furthermore, if current reports are reliable, many of the farmers who are abiding by soil bank restrictions for one crop are planting more acres with other crops. The result? The actual cut in plantings will be about half what it was supposed to be under soil bank land idling pledges. And who can blame the farmers? Five years of golden euphemisms seasoned with sanctimonious preachings are getting a little hard to digest—particularly when prosperity, that much-promised commodity, keeps ducking around the corner ahead of them.

What's the answer? How can the farm problem be solved? We doubt that there is any one solution. It seems apparent by this time that no one-shot panacea will ever work. There are many farm problems in many farm areas, and we suspect that the only workable plan will have to be one which is administered on a regional basis to take into account differences in crops, operations, and problems. The Midwest grain farmer, for instance, may desire 90 to 100 percent price supports, but the New England poultry farmer may well be opposed to such a program.

One thing seems certain. This knotty, and in many areas painful, farm problem will not be solved by the sort of political oratory we have been subjected to in the past 5 years. Neither pious Republican platitudes about thrift, independence, and efficiency, nor Democratic spouting about a return to high rigid price supports, period, will bring the farmer prosperity and do away with the bogy of surplus at the same time. Some bold, new, and dynamic thinking must be turned to the crisis in agriculture now and not in some halcyon day when there are no more elections to be won.

A final thought. It seems only wise at this particular moment to let Ezra Taft Benson return to his sugar beets. There was a time when this writer looked upon the Secretary of Agriculture as a misguided man, but one of courage and integrity. Somewhat regretfully we write now that the courage we admired was apparently bullheaded obstinacy and the integrity? Well, even Mr. Benson's integrity had clay feet at election time. The truth of the matter is that the farmers want a Secretary of Agriculture upon whom they can look with confidence and to whom they can look for understanding. Mr. Benson provides neither. His greatest weakness is his demonstrated inability to understand the function of his job, for the Department he heads was instituted many years ago to help farmers. It is unfortunate but true that the farmers who need Government help the most are the farmers who get the least help from Ezra Taft Benson and his administration.

Mr. CAPEHART. Mr. President, the Senator in charge of the bill, the chairman of the Subcommittee on Housing of the Banking and Currency Committee [Mr. SPARKMAN] was obliged to leave the Chamber, and he asked me to speak for a few minutes.

Now that the smoke has cleared away, I think a record should be made as to what the pending bill would do.

The bill provides more than $500 million for slum clearance, which we commonly refer to as urban renewal. The present law, under which we are operating at the moment, contains a provision for 70,000 public housing units, so I should say that the bill we are considering at the moment provides $700 million or $800 million for public housing and slum clearance, or urban renewal.

I also feel compelled to say, in behalf of myself, as the ranking minority member of the Senate Committee on Banking and Currency, on behalf of the able chairman of the committee [Mr. FULBRIGHT] and on behalf of the able chairman of the Subcommittee on Housing [Mr. SPARKMAN] that we know the problem involved with the House of Representatives with respect to public housing.

Notwithstanding what may have been said here during the past 3 or 4 hours, the question of being for or against slum clearance and public housing is purely a matter of degree.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CAPEHART. Please allow me to finish my statement.

Mr. CLARK. I should like to ask the Senator a question.

Mr. CAPEHART. I wish to complete my statement first.

The question of one's attitude upon the subject of public housing, slum clearance, or urban renewal, is purely a matter of degree. I know of no one who is opposed to it. As has been brought out, the late Republican Senator Taft was one of the original authors of slum clearance and public housing legislation. It is a matter of degree. That was true over the years when the late beloved and able Senator from South Carolina, Senator MAYBANK, was chairman of the Senate Committee on Banking and Currency.

However, we always had the same fight with the House of Representatives. Generally speaking, the House of Representatives was against public housing. Senators will remember that last year the Senate adopted an amendment, by a vote of 41 to 38, providing for 135,000 units of public housing. We took that amendment to conference. It will be remembered that the conference required 2 months, and we finally settled the question within 24 or 48 hours of the time of final adjournment. The House conferees simply would not give in. The conferees sat for 2 months.

There are thousands of public housing units authorized at the moment which have not been built. I shall not argue the question as to whether someone has been slow in building them under the law, or whether those in charge have done the best they could.

I do know that under the law enacted by Congress we must obtain support and help from the local communities. Many of them, of course, have made no application for help. Others have made application, but, as Senators know, the enactment of legislation is ordinarily a slow process.

So when someone says that Republicans are against slum clearance and public housing, or Democrats are against it, the statement is not true. The facts will not substantiate it. The only difference is a matter of degree, as to how fast we can go, or how fast we should go.

As I have said, the history of the situation has been that the House of Representatives has wanted to do nothing. The Senate has been much more liberal.

In the pending bill, for a 2-year slum-clearance program, there is provision for $250 million a year of direct grants, or a total of $500 million. It was originally reported from the committee on the basis

of 4 years, but yesterday the Senate reduced the period to 2 years.

No purpose would be served by adopting the pending amendment. I should not try to speak for the House, and I shall not speak for the House, except from a historical standpoint. I have been a member of the Senate Committee on Banking and Currency for 13 years. We shall not get any public housing other than what is provided for under existing law. I do not know that we would be able to build any more public housing in the next year, even if more units were authorized. I doubt very much that we would. However, let me ask, how far we can go when the public is demanding economy, when Senators and Members of the House on both sides of the aisle are literally overwhelming the President of the United States and his administration with cries to reduce expenditures? Everyone is asking that the budget be reduced and that taxes be reduced. Yet, the amendment offered by the Senator from Oregon would cost possibly a billion dollars. I say that, although I do not have the exact figures, and I know different estimates have been made as to its cost.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CAPEHART. I will yield in a moment. I do not know what the figure is, whether it is two billion or one million or five hundred million dollars.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CAPEHART. I will yield in a moment. The point is, if we are to be economy-minded how can we authorize the expenditure of huge sums of money? Approximately between 50,000 and 70,000 public-housing units are now authorized by existing law, and the money has been appropriated. Those units have not yet been built.

We ought to be fair in this discussion. We ought not to accuse one side or the other side of being against public housing, because that is not true. The difference is a matter of degree. We have shown in the Senate—both Democrats and Republicans—that we are in favor of public housing and in favor of slum clearance. The President of the United States and Mr. Cole, the Administrator, were the first to initiate it, and they constituted a group to study the problem of slum clearance. That group made a report. I was the Chairman of the Committee on Banking and Currency in 1953 and 1954, when Congress passed the most liberal housing bill that had ever been passed up to that time and no one can successfully contradict that statement.

We wrote into that act section 221, which is commonly referred to now as the slum-clearance section. For the first time Congress passed an act which made it possible to clear slums. Some may argue, possibly rightfully so, that we did not at that time, and have not since then, appropriated enough money.

However, I ask Senators, in all fairness, whether they do not hear the cry of the people throughout the United States to curtail expenses, to reduce the budget, to balance the budget, and to reduce taxes. How are we going to do all of those things? How are we going to reduce the budget on the one hand, and increase it on the other?

So I ask, how can the President of the United States win? He gets cussed and discussed today for not making some expenditure; then tomorrow by the same group he will be discussed and cussed because of the big budget and because he does not reduce expenses and because he does not reduce taxes.

How can he win? How can anyone in a like situation win? I would say, honestly, if other Senators had been through the fight I have faced for the past 13 years, they would realize that we have made a great deal of progress in the housing field, and that we are making a fairly good record. We are not doing nearly as good a job of slum clearance as I would like to see done under section 221. However, the Senate is only one branch of the legislature. I have been dealing with the other branch of the legislature. I appreciate their position. I am not criticizing them. I am merely trying to be realistic.

The Senate should reject the amendment offered by the able Senator from Oregon purely as a matter of practicability, if for no other reason. If we add the amendment to the bill, those of us who will be in conference with the House, will find that we will be in conference for weeks, unless history proves to be different from what it has been all along.

It will be remembered that last year, I believe it was, the House conferees took such an amendment back to the House for a vote at least once, and perhaps twice, and the House voted it down.

I wish to pay my compliments to the able Senator from Pennsylvania [Mr. CLARK], who is a member of our committee. He has a great zeal for slum clearance and for public housing. He was mayor of Philadelphia, and I can well understand his zeal. As I visit various cities of the United States, it breaks my heart to see the conditions under which some people are living. However, we are doing as much as possible under existing conditions, and, as time goes on, we will make greater progress.

In this bill, as Senators know, we guarantee FHA home mortgages, so that people will be able to own homes. We have reduced the down payment, by an amendment offered by the able Senator from Alabama [Mr. SPARKMAN], the minority leader, and myself. The down payment in the bill is, I believe, $100 on an $8,000 house. It is not so liberal, I will say frankly, as I would like it to be. I would like to see some more money made available by the bill, if the Government had it to dispense. But I cannot vote today for the appropriation of more money and at the same time vote to cut the budget, to cut expenditures, and to reduce taxes.

I am not unmindful of the needs of the people. I simply cannot see how we can meet them all. Even if we provided for 500,000 units, instead of 200,000 units, there would still be a great many people who would not be able to find housing.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CAPEHART. There are many cities which do not need the assistance, or at least say they do not need it.

I now yield to the Senator from Pennsylvania.

Mr. CLARK. I thank the Senator for his kind words. I assure him that I am indeed in favor of slum clearance. I wonder whether the Senator is not laboring under a misapprehension as to the amendment offered by the Senator from Oregon and myself. I thought I heard the Senator from Indiana say at one point that the amendment offered by the Senator from Oregon would cost between seven hundred and eight hundred million dollars.

Mr. CAPEHART. I have seen different estimate of the cost of the amendment. As I understand, it would authorize the building of an additional 400,000 units.

Mr. CLARK. No; an additional 200,000 units.

Mr. CAPEHART. It reinstates provision of the old law.

Mr. CLARK. No; I think it is important that our colleague should understand what we are talking about.

Mr. CAPEHART. Let us talk about 200,000 units. My best judgment is that the amendment would reinstate the old law. However, let us talk about 200,000 units.

Mr. CLARK. It would authorize 200,000 more. I am sure the Senator from Indiana does not want to leave the impression with the Senate that the cost of those units would be paid by taxpayer dollars.

Mr. CAPEHART. No.

Mr. CLARK. Because, as the Senator from Indiana knows perfectly well, the cost would be paid by bonds floated by the public-housing authorities.

Mr. CAPEHART. Guaranteed by the FHA.

Mr. CLARK. Yes. We might argue as to whether such a move would be inflationary. The fact is that the only cost to the taxpayers as a result of the adoption of the amendment pending before the Senate would be for a subsidy to make up the difference——

Mr. CAPEHART. About $250 a unit.

Mr. CLARK. For 200,000 units it would be in the neighborhood of $50 million a year.

Mr. CAPEHART. It is at the rate of $250 a unit.

Mr. CLARK. The only other point I should like to make is that I understood the Senator to say that there are thousands and thousands of units of public housing authorized which have not been constructed. I am sure the Senator will agree with me that there are less than 35,000 units authorized for the present fiscal year, and an additional 35,000 units for the coming year.

Mr. CAPEHART. That is correct.

Mr. CLARK. Our complaint has been that the mayors of the cities of the United States—and I speak with some personal experience in that field—consider that such an authorization is not adequate; it should be a great deal more. The only question in connection with voting on this amendment is whether the Senator from Indiana and his colleagues are right, or whether the mayors of the

cities and those of us who support the amendment are right, as to whether we can afford to provide for these additional units without unduly taxing the economy of the country.

Mr. CAPEHART. I said it was a matter of degree. I think it is unfair to accuse one party or group of being opposed to public housing. No one is opposed to it except as to the degree. The argument and the point I am making is that there are in the neighborhood of 60,000 units to be built under the existing law, which are as many as will be build during the next year.

The House, of course, would not accept this amendment; at least, it has not done so in the past.

Then, too, there is the cost connected with it, because the FHA guarantees the bonds.

Mr. CLARK. I think the colloquy has very well stated the issues which have arisen in connection with the amendment. I thank the Senator from Indiana.

Mr. CAPEHART. My best judgment, trying to be practical and realistic, is that the Senate ought to reject the amendment, because otherwise the whole bill will be tied up, as it was tied up last year in conference for a couple of months.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. BUSH. I have in other years voted for an authorization for public housing above the levels which the House of Representatives has been willing to support.

I am informed that at present there is a backlog of authorizations for public housing which apparently is in excess of the actual demands from the municipalities.

I ask the Senator from Indiana if it is not true that responsible officials of the Public Housing Administration have assured the committee that the existing backlog is more than adequate to meet the demand which will arise before Congress will reconvene in January.

Mr. CAPEHART. I think that is true. There, again, arises the question of degree. How many units should be built? How many can be built? How many would we be justified in building under the existing conditions of the budget, the expenditures, and the demand for a reduction?

This housing bill alone, including the amount which it has been increased by amendments, has possibly increased the budget more than the House and Senate combined have been able to reduce it so far.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. CLARK. The distinguished Senator from Connecticut was, unhappily, not in the Chamber when the Senator from Minnesota [Mr. HUMPHREY], the Senator from Colorado [Mr. CARROLL], and the Senator from Oregon [Mr. MORSE], made what to me were persuasive arguments in support of the amendment.

I may say to the Senator from Connecticut that it is true that Mr. Albert M. Cole and his colleagues say that the demand for public housing will not measure up to the presently authorized units, but we who are supporting the amendment have taken the position—although the Senator from Connecticut, I am certain, will not agree with it, but he ought to know it—that the reason is that the Public Housing Administration, under the leadership of Mr. Cole, is dragging its feet on the program and is doing its very best to make certain that the requests for public housing, some of them from my own Commonwealth of Pennsylvania—and I have literature here to prove it—shall not be honored, so that the actual units will not be built.

There is already in the bill a provision respecting the public housing sections of the law which will sufficiently liberalize the present requirements to get the houses built; and I hope the provision will be kept in the bill; I suppose there will be a vote on it a little later.

So, in my judgment, if the pending amendment shall be adopted, there will be a great flood of applications from public housing officials in every city in the country who have testified before our committee that there is a present need for 200,000 units.

I am certain I do not have to remind the Senator from Connecticut that it has been testified that one of the places where such units are most urgently needed is the city of New Haven, in his State of Connecticut.

Mr. BUSH. Mr. President, I would not want my failure to comment to be interpreted as an indication of approval by me of the remarks which the Senator from Pennsylvania has made about Commissioner Cole. I do not hold the opinion which the Senator has just uttered that Mr. Cole is dragging his feet on the program. I believe he has been a conscientious administrator of the law which was given him by Congress to administer. I cannot accept the interpretation of the Senator from Pennsylvania that Mr. Cole has attempted to drag his feet in the matter of public housing.

I have before me a statement on the subject of public housing which was prepared by the Public Housing Authority. I shall read a part of it which is apropos of the situation we were discussing.

As of July 1, 1954, there were in effect annual contributions contracts between the Federal Government and local communities covering over 37,300 low-rent public housing units on which construction had not yet started. During the fiscal year which began on that date, the local communities placed under construction only 8,497 units. As of July 1, 1955, the backlog of low-rent public housing units under Federal annual contributions contract but not yet placed under construction amounted to over 57,000 units. Only 6,762 units were placed under construction by the local communities during fiscal year 1956. We entered the present fiscal year with a backlog of about 54,400 public housing units under annual contributions contract. On April 1, 1957, with 9 months of the fiscal year having passed, only 3,155 units had been started. Thus, in each of three successive fiscal years, sizable backlogs of units under Federal aid contract have resulted in very few construction starts by our local communities.

I offer that statement in support of the position I have taken in the matter.

Mr. SPARKMAN. Mr. President, I wish to speak for a few minutes with reference to the amendment. First, I have always voted for public housing. I do not think there has ever been a vote in the Senate involving the question of public housing since I entered this body in 1947 when I did not support the program.

I regret that my good friend, the distinguished and able Senator from Oregon [Mr. MORSE] has insisted upon offering this amendment at this time; although I will say, in all fairness, that he gave us pretty good notice, on the very first day of the debate, to the effect that he did not feel the bill was sufficiently complete, and that we ought to be here fighting for the program.

I have been doing a good bit of thinking about the public housing program. While it is true I did not like the 2-year program which was put into effect last year, which provided for approximately 85,000 units, as I recall, for the two years. I felt the number was entirely too small, and I even quoted from the figures of the opposition to demonstrate that it was not sufficient, but that was the action taken by Congress last year on a 2-year program basis.

I have felt that we ought to continue with that program, marshal our facts and figures next year when the time arrives for normal extension of the act, and try to provide a realistic program, one which will take care not only of all those who have been displaced by reason of governmental action—and the present program is not sufficient to do that—but also to enable those cities and towns, particularly the smaller cities and towns, which are not able to get into the first phase of the program, to have the benefit of it. I have felt that we could marshal the facts and information next year to get and to support a real program.

I believe in being realistic in seeking to have legislation passed. I know what was said by the distinguished Senator from Minnesota [Mr. HUMPHREY] with reference to the other House; but I recall that last year the housing bill was holed up in the House Committee on Rules for weeks and weeks. It appeared for some time that no housing legislation whatsoever would be enacted last year. That was because the Senate had written into the bill a provision for 135,000 units a year, which I think is a fair amount to be programed each year. That was at a time when we had to do something about public housing or else let it drop. In other words, the program was running out.

So I simply think about what the House Committee on Rules would do this year, when there is no requirement to act upon a public-housing program.

I regret exceedingly to be compelled to vote against the amendment, which under normal conditions I think would be a good amendment, one which I should be glad to support.

Mr. LAUSCHE. Mr. President, will the Senator from Alabama yield to me?

The PRESIDING OFFICER (Mr. BIBLE in the chair). Does the Senator

from Alabama yield to the Senator from Ohio?

Mr. SPARKMAN. I yield.

Mr. LAUSCHE. I should like to have the Senator from Alabama state his views regarding the backlog of available units which have been certified, but not put under construction, by local agencies; and those which have not been certified, but are still available.

Mr. SPARKMAN. I believe the Senator from Connecticut referred to that matter a few minutes ago, in connection with the letter he had.

Mr. LAUSCHE. Do those figures rather accurately state the situation?

Mr. SPARKMAN. I believe the figures accurately state the situation.

Mr. CAPEHART. Mr. President, if the Senator from Alabama will yield to me, let me say that approximately 60,000 units are yet to be built; they are in various stages of processing.

Mr. LAUSCHE. I should like to ask a further question of the Senator from Alabama: It is charged that this backlog is the result of an unwillingness on the part of the administrator properly to process and service the requests of the local agencies. What is the understanding of the Senator from Alabama in regard to that matter?

Mr. SPARKMAN. I wish to draw a distinction between the two men who are connected with the Housing Administration. There has been considerable comment about Mr. Cole. Mr. Cole is the head of the over-all agency, the Housing and Home Finance Agency. The one who is the head of public housing is Mr. Slusser, who I believe formerly was the Mayor of Akron, Ohio.

Mr. LAUSCHE. That is correct.

Mr. SPARKMAN. I wish to say that Mr. Slusser has shown a very friendly attitude toward the public-housing program. I cannot say what has been the cause of the slowness with which these units have been put into the mill this year. I know there are problems in connection with the program. I know what the problem was at one time; and apparently the administration thought that was the problem this year. It was the requirement that every town have a workable program.

The President, in his message—I believe it was in his annual message to the Congress—recommended that the requirement of a workable program be done away with. However, when the representative of the Agency testified this year before our committee, they had reversed the administration's previous position; and at that time they said it was not necessary to eliminate that requirement.

Now we have included in the bill a provision to repeal the workable-program requirement. No one would object to a workable-program requirement if it were administered in a practical way. The trouble is that in the case of the average small city, and certainly in the case of the towns, and I suppose also in the case of some of the larger cities, it is difficult to find and employ experts who are qualified to develop a workable program.

So far as I know, that was the difficulty. Whether it has been cleared up, I do not know.

Mr. LAUSCHE. Let me say that I know Mayor Slusser.

Mr. SPARKMAN. Yes; he is from the Senator's home State.

Mr. LAUSCHE. I should like to say to the Senator from Pennsylvania that I am certain that Mayor Slusser is sympathetic to the development of a public-housing program.

I should like to ask a further question of the Senator from Alabama.

Mr. SPARKMAN. I yield.

Mr. LAUSCHE. If there is a backlog, produced by an unwillingness to process, how will the authorization of an additional number of units solve that problem?

Mr. SPARKMAN. I did not say there was an unwillingness to process. I said the processing may have been cluttered up by the provision requiring a workable program. However, I do not know that that is the cause.

On the other hand, I know the program has been dragging badly. If the trouble is not the workable-program requirement, then, even if we remove that requirement it will not do any good to include in the bill a provision for the extra units, except perhaps it would prod the Agency somewhat.

I believe it is untimely to offer this proposal at the present time. First of all, I feel certain that we shall not be able to have the provision enacted into law. I do not believe that the House of Representatives will vote for it. As a matter of fact, I feel certain that the Senate will not vote for it at this time. So I think the provision is untimely, because I believe that the Senate has never voted unfavorably on public housing. That is quite a record; I know I am correct in stating that the Senate has never voted against the principle of public housing. If there is to be an adverse vote this afternoon, I want the record to show very clearly that it was not because of opposition to the merits of a good, sound public-housing program, well administered, but that it was due to the fact that this is not the proper time to try to add to the public-housing program. Next year will be the proper time. If the committee next year does not recommend a program which at least will carry out what Bob Taft estimated as being the minimum—a program at least as good as the 1949 program—then I shall be greatly disappointed.

Mr. CLARK. Mr. President, will the Senator from Alabama yield to me?

Mr. SPARKMAN. I yield.

Mr. CLARK. I wish to say that I agree with the Senator about ex-Mayor Slusser, whom I know personally, and who I believe is sympathetic with the program.

The difficulty is that Mr. Slusser works under, and subject to Mr. Cole; and with deep regret I cannot say Mr. Cole is a friend of the program. So long as he served in the House of Representatives, he was a bitter enemy of the program; and I think he has continued to be a bitter enemy of it since he has been in the Agency. Of course, that is a matter of opinion.

I understood the Senator from Alabama to say that he would favor a searching inquiry, between now and the next session of Congress, by the Housing Subcommittee of the Senate Banking and Currency Committee, into the present status of public housing, including a visit by members of the subcommittee to various cities where public housing is bogged down and where it has been built too slowly.

If the Senator from Alabama has that in mind, I should like to commend him for it, and to suggest that that is the best way I know to answer some of the doubts of our friends who are opposed to the amendment today, and I believe it is the best way to persuade them to vote for it next year.

Mr. LAUSCHE. Mr. President, I should like to know the estimated cost of the 200,000 units, if they were built in the time contemplated. I am not referring to what would be the cost of subsidizing the loss; but I wish to know what would be the actual cost of the buildings and how the money would be obtained by the local agencies.

Mr. SPARKMAN. A local housing authority which is building houses, sells bonds on the open market.

Mr. LAUSCHE. They would have to sell bonds which would produce sufficient money to enable 200,000 units to be built; is that correct?

Mr. SPARKMAN. That is correct.

Mr. LAUSCHE. Would it be fair to say that those units would cost $10,000 apiece? Does the Senator have an estimate on that? Is that figure correct?

Mr. SPARKMAN. Yes, I would say the average cost would be around that.

Mr. LAUSCHE. The local housing authority would have to go into the bond market and sell enough bonds to build 200,000 units, costing $10,000 each. Is that correct?

Mr. SPARKMAN. If 200,000 units were built, yes.

Mr. LAUSCHE. Last week the Federal Government had to pay 3⅝ percent on short-term bonds. I know, when I was Governor of the State of Ohio, the State had to pay 2¾ percent on full faith and credit bonds.

What is the prospect of a local housing authority selling bonds that will provide money to build 200,000 units? What is the prospect of selling them, and at what rate of interest?

Mr. SPARKMAN. The Senator from Ohio said a while ago that the program was dragging. As a matter of fact, I think he has just mentioned one of the factors that has caused the program to drag. The towns and cities have been unable to sell their bonds at a rate of interest that they were willing to pay. I think that is true.

Now, I should like to answer the question of the Senator from Pennsylvania. I did not say exactly what he understood me to say. I did say by the time the program comes around for our consideration next spring, we can marshal facts and figures to find out just what the situation is. As a matter of fact, I would be very glad to do what the Senator has suggested. In fact, I feel—and I want to say this regardless of the fact that an amendment is now pending—we ought to make a careful study of the public housing program, regarding many phases of it. After all, it has now been

underway for a good many years, and perhaps we ourselves could profit somewhat by studying it.

With reference to the subcommittee's making a study, there are some very practical difficulties involved. The Senator will remember that at the beginning of this year the small amount of money which we requested was not granted.

The amount granted was below the amount requested. Thus, we have budgeted our accounts just about as far as we can. We do not operate merely as a committee to make special studies, but we carry the legislative load for the regular committee. The result is that we are budgeted just about up to the last dollar, and we could not possibly undertake such a study without asking the Senate for additional funds. I do not like to contemplate what I would hear around the Senate if we asked for the amount of money which would be necessary to make that kind of study. I believe, however, we can bring together many facts and figures.

By the way, the Senator may recall that when the housing authorities were before us this spring, they told us they were going to check into a good many different phases and features of this program and be able to present them to us next spring.

Mr. CLARK. I am sure a study made by the present housing agency would not be satisfactory.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. LAUSCHE. If I am correct in my calculation, 200,000 units at $10,000 would amount to a total of $2 billion. That means that $2 billion worth of additional bonds would be thrown into the market for sale. I shudder to think what an impact that would have on interest rates generally. I subscribe to the views of the Senator from Alabama, with the sympathetic attitude that he has toward this program, that the proposal of the Senator from Pennsylvania, while it may be sound, is not timely.

Mr. SPARKMAN. Let me say, in connection with the statement of the Senator from Ohio, that, of course, I recognize the force of the argument he makes, but I do not want to let the record stand silent in this respect. If public housing is needed—I am not talking for the record now, but maybe a year from now—and we need that many units in order to carry out the program Congress has decreed to be a good program, I do not see why we should let the fear of the effect of issuing $2 billion worth of bonds stand in the way and then blandly enter into a tremendous public highway program and issue five times that many bonds.

I wonder whether the Senator will comment on that aspect.

Mr. LAUSCHE. I have no hesitation in saying that, in my opinion, next to the threat of international communism, the gravest threat confronting this country is inflation, and I think there ought to be a dampening of the program of highway construction for the time being.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield to the Senator from Pennsylvania.

Mr. CLARK. I should like briefly to comment to the Senator from Ohio that I fail to shudder, as he does, at the prospect of what would happen if $2 billion worth of bonds were put on the market, over a gradual period of 2 years, by cities in 48 States, or in perhaps 35 States, and the effect it would have on inflation, particularly when we recall that the total value of bonds amounts to about one-half of 1 percent of the total national product of America.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oregon [Mr. MORSE].

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment offered by the Senator from Oregon [Mr. MORSE]. The yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. JOHNSON of Texas. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. NEELY], and the Senator from North Carolina [Mr. SCOTT] are absent on official business.

On this vote, the Senator from Virginia [Mr. BYRD] is paired with the Senator from Missouri [Mr. HENNINGS]. If present and voting, the Senator from Virginia would vote "nay," and the Senator from Missouri would vote "yea."

I further announce that if present and voting, the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Michigan [Mr. MCNAMARA], and the Senator from West Virginia [Mr. NEELY] would each vote "yea."

Mr. DIRKSEN. I announce that the Senator from Vermont [Mr. AIKEN], the Senators from New Hampshire [Mr. BRIDGES and Mr. COTTON], the Senator from Nebraska [Mr. HRUSKA], the Senator from South Dakota [Mr. MUNDT], and the Senator from Massachusetts [Mr. SALTONSTALL] are absent on official business.

The Senator from Connecticut [Mr. PURTELL] and the Senator from North Dakota [Mr. YOUNG] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

If present and voting, the Senators from New Hampshire [Mr. BRIDGES and Mr. COTTON], the Senator from Nebraska [Mr. HRUSKA], the Senator from South Dakota [Mr. MUNDT], the Senator from Connecticut [Mr. PURTELL], the Senator from Maine [Mr. PAYNE], and the Senator from Massachusetts [Mr. SALTONSTALL] would each vote "nay."

The result was announced—yeas 20, nays 54, as follows:

YEAS—20

Carroll	Humphrey	Murray
Case, N. J.	Ives	Neuberger
Chavez	Jackson	O'Mahoney
Church	Javits	Pastore
Clark	Kefauver	Symington
Douglas	Kennedy	Yarborough
Gore	Morse	

NAYS—54

Allott	Frear	Monroney
Anderson	Fulbright	Morton
Barrett	Goldwater	Potter
Beall	Hayden	Revercomb
Bennett	Hickenlooper	Robertson
Bible	Hill	Russell
Bricker	Holland	Schoeppel
Bush	Johnson, Tex.	Smathers
Butler	Johnston, S. C.	Smith, Maine
Capehart	Kerr	Smith, N. J.
Carlson	Knowland	Sparkman
Case, S. Dak.	Kuchel	Stennis
Cooper	Lausche	Talmadge
Curtis	Long	Thurmond
Dirksen	Malone	Thye
Dworshak	Martin, Iowa	Watkins
Ellender	Martin, Pa.	Wiley
Flanders	McClellan	Williams

NOT VOTING—21

Aiken	Hennings	Mundt
Bridges	Hruska	Neely
Byrd	Jenner	Payne
Cotton	Langer	Purtell
Eastland	Magnuson	Saltonstall
Ervin	Mansfield	Scott
Green	McNamara	Young

So Mr. MORSE's amendment was rejected.

Mr. CAPEHART. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. KNOWLAND. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from California to lay on the table the motion of the Senator from Indiana to reconsider.

The motion to lay on the table was agreed to.

ORDER FOR ADJOURNMENT TO FRIDAY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that at the conclusion of its business today, the Senate adjourn until Friday, May 31, 1957, at noon; that on the said day only requests for the insertions of matters in the RECORD shall be in order under a 3-minute limitation of debate; and that at the conclusion of its business on said day the Senate shall adjourn until 12 o'clock noon on Monday, June 3, 1957.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE HOUSING ACT OF 1957

The Senate resumed the consideration of the bill (H. R. 6659) to extend and amend laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. KUCHEL. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from California will be stated.

The LEGISLATIVE CLERK. At the end of the bill it is proposed to insert a new section, as follows:

URBAN PLANNING GRANTS

SEC. 605. The second sentence of section 701 of the Housing Act of 1954 is amended by striking out "and" immediately preceding clause (3); and by inserting before the period at the end thereof a semicolon and the following: "and (4) to official planning agencies for areas threatened with rapid urbanization as a result of the establishment or rapid and substantial expansion of a Federal installation."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from California [Mr. KUCHEL].

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. KUCHEL. I am glad to yield to the Senator from Alabama.

Mr. SPARKMAN. The Senator from California has discussed this amendment with me and with the senior Senator from Indiana [Mr. CAPEHART]. It is really a curative amendment. As I understand, it is agreed to even by Members of the House of Representatives, and I am perfectly willing to take it to conference.

Mr. KUCHEL. I appreciate the Senator's statement. Merely for the edification of my brethren in the Senate, let me say, that the Administrator is now authorized to facilitate urban planning in small communities. The intention of the Congress, in adopting the present law, was to authorize assistance to local area agencies, becoming urban in nature, by reason of any impending influx of people. Thus proper planning by such areas could be undertaken for their future. The clarifying amendment which I offer merely indicates that public agencies, or official planning agencies in the language in which the amendment describes them, are eligible for planning assistance by the Administrator if the areas they represent are threatened with rapid urbanization as a result of the establishment or rapid and substantial expansion of a Federal installation. For example the establishment or great enlargement of a Federal defense installation could bring on the problems of rapid urbanization suddenly, and present the multiplicity of problems which some of us believe Congress had in mind helping to solve when section 701 was passed.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from California [Mr. KUCHEL].

The amendment was agreed to.

Mr. BUSH. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Connecticut will be stated.

The LEGISLATIVE CLERK. On page 52, after line 21, it is proposed to add the following two subsections at the end of section 601 of the bill:

(c) Section 401 (c) of the Housing Act of 1950 is amended to read as follows:

"(c) A loan to an educational institution may be in an amount not exceeding the total development cost of the facility, as determined by the Administrator, and shall be secured in such manner and repaid within such period, not exceeding 50 years, as may be determined by him; and with respect to applications filed after May 10, 1957, the loans entered into during any calendar quarter shall bear interest at a rate equal to the total of one-fourth of 1 percent per annum plus the rate chargeable by the Secretary of the Treasury (with respect to notes and obligations issued during such quarter) under the second sentence of subsection (e) of this section."

(d) The second sentence of section 401 (e) of such act is amended to read as follows: "Such notes or other obligations issued during any calendar quarter to obtain funds in excess of the aggregate amount required with respect to applications filed on or before May 10, 1957, shall bear interest at a rate determined by the Secretary of the Treasury, which shall be not more than the average yield to maturity, as estimated by the Secretary of the Treasury on the basis of daily closing market bid quotations or prices during the second month preceding such quarter, on all outstanding marketable obligations of the United States having a maturity date of 15 or more years from the first day of such second month, adjusted to the nearest one-eighth of 1 percent.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Connecticut.

Mr. BUSH. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. BUSH. Mr. President, I shall try to make my explanation as brief as possible. I wish to make a very brief statement, and then I shall be prepared to vote.

Subparagraph (c) which would be added to section 601 of the bill would require the Housing Administrator, in making college housing loans, to charge a rate equal to that payable by him to the Treasury plus one-fourth of 1 percent. The present law provides for a similar spread, except that if the resulting rate is less than 2¾ percent the higher rate must be charged. However, because of the different base to which the one-fourth-percent differential would be applied under the provisions of the next subsection—which changes the formula fixing the interest rate paid by the Administrator on funds borrowed from the Treasury for college housing loans—as compared with the present law, the net result under present market conditions, would be to change the college housing loan interest rate from 2⅞ percent to 3½ percent.

Subparagraph (d) which would be added to section 601 of the bill would provide that college housing funds borrowed by the Administrator from the Secretary of the Treasury shall bear interest at a rate, calculated each calendar quarter, based on the current average market yield on all outstanding marketable obligations of the United States having a remaining maturity of 15 or more years. This formula would be in place of the formula now in the law which bases the interest rate on the average rate borne by all interest-bearing obligations of the United States, irrespective of maturity, as computed at the end of the proceding fiscal year, or 2½ percent, whichever is higher. The rate proposed would currently result in the Administrator paying 3¼ percent on funds borrowed from the Treasury. Under the present law, the rate for fiscal year 1957 is 2⅝ percent.

The enactment of the interest rate formula proposed, which would raise the interest rate on college housing loans on the basis of present market conditions from 2⅞ percent to 3½ percent, would eliminate the subsidy inherent in the existing interest rate formula by permitting the Administrator to borrow college housing loan funds from the Secretary of the Treasury at a rate of interest equal to that which the Treasury itself would have to pay if it went into the market to borrow the funds for a comparable length of time. In that way the colleges receive the full benefit of the use of the Treasury's credit on Federal Government borrowings for college housing loan funds.

As the formula is based on current market yield, it reflects the interest rate the Treasury would have to pay in the current market for borrowings of maturities comparable to that of college housing loans. It is unrealistic to assume that when the Treasury lends money to an agency it somehow can dip into a fund which represents the composite of all of its past borrowings still outstanding. Therefore, the proposed interest-rate formula does not reflect the interest cost relating to old borrowings, such as those financing World War II.

The point has been made that the Federal budget is now in balance, with income sufficient to cover current expenditures. Therefore, it is argued that Government borrowing is necessary for the purpose of refinancing old obligations, and that college housing loan funds are really being derived from tax revenues and not from borrowing. The argument then concludes that there should be no necessary connection between the college housing interest rate and the current cost of long-term Government borrowing.

This entire chain of reasoning is based on a false assumption. It assumes that the Government should finance new programs, such as the college housing loan program, out of current revenue, while using new borrowings to refinance old debt. This would give the college housing program a prior claim on current tax receipts than would be given to the repayment of old debt. There is no reason why the college housing loan program should have first claim on current tax revenues while the repayment of old debt receives a second claim.

The old debt is a result of a war which had to be fought, and the old debt must now be repaid. Since it must be repaid, the undertaking of later programs, such as the college housing program, makes necessary new borrowings. Since these new borrowings require the payment of a rate of interest on current market conditions, it is clear that a subsidy will be given to the colleges if loans to them are

made at a rate which is insufficient to cover the cost to the Federal Government of borrowing in today's market, plus administrative expenses, plus a reserve for losses.

The Federal Government should, if its finances are to be managed prudently, give a first claim on current tax revenues to current operating expenses, such as defense expenditures. It should give a second priority to meeting the maturing debt. Finally, it should give a third priority to capital projects and long-term investments such as college housing loans. These are in effect financed by new borrowing when current income is insufficient.

Under the present law, college housing loans are geared to the interest rate being paid on all outstanding debt, including moneys borrowed during World War II at only 2½ percent interest. The college housing loan interest rate should be geared to the current cost of long-term borrowings.

In brief, it cannot be denied that the need for Federal long-term borrowing, now or in the near future, would be lessened were it not for the college housing program and similar current loan programs. It is folly for the Federal Government to continue indefinitely to compute the cost of such borrowing on the basis of interest rates which were set during the 1940's and earlier for moneys borrowed to cover the cost of the war and of prior emergencies.

Mr. President, there are only a few more remarks I wish to make in connection with this amendment. The question before the Senate is whether we shall continue the hidden subsidy to the college loan program. The funds of the taxpayers are limited. If we are to give subsidies to education, we must make sure that we support activities which are most in need of aid.

I do not suggest, for instance, that the college housing program is not in need of aid. However, I submit that we have before Congress other measures which surely are of great importance. I consider the classroom construction bill as being one of those. We have appropriations facing us for training physicists and other scientists. Those bills are certainly important.

I believe that the hidden subsidy is wrong in principle, and that all subsidies should be out in the open where they can be seen.

I may say that the House of Representatives, in its bill, adopted the principle which I advocate. If we adopt my amendment it will make the bill conform in that respect to the bill passed by the House of Representatives.

I may say for the information of the Senate that I am advised that the average maturity of the present outstanding marketable debt of the United States, including all Federal Reserve obligations, is 3 years and 9 months. At least that is what it was at the end of 1956. If we exclude the obligations of the Federal Reserve, the average is 4 years and 3 months.

Therefore we are merely asking colleges to pay a long-term interest rate for a long-term borrowing.

Mr. President, that is my position. I now yield first to the Senator from Tennessee, for a question.

Mr. GORE. If the Senator is successful in obtaining the adoption of his amendment to raise the interest rate on loans to colleges, will he next propose an amendment to raise the interest rates on the Rural Electrification Administration?

Mr. BUSH. I would not propose it in connection with the pending bill, but I think it ought to be done. I think it is just as much an indirect subsidy as the one I have been discussing.

Mr. GORE. Will the Senator yield further?

Mr. BUSH. I yield for a question.

Mr. GORE. Is this to be the first step to put into effect the announcement made at the White House yesterday?

Mr. BUSH. So far as I am concerned, that is not the case. I had the amendment in mind and had prepared it long before I heard of that announcement. I am not sure what that announcement was. I have a general idea that the White House will send to Congress suggested legislation which would do away with the hidden subsidy in interest rates on other programs. However, if this is the first step in that direction, it is not so deliberately. It is brought before the Senate as a pertinent amendment to the pending bill.

Mr. GORE. Is the Senator in sympathy with the general idea of the announcement of yesterday, as he understands it?

Mr. BUSH. I am a little hesitant to comment on it, because I have not seen the announcement. If it is what I think it is, I am in sympathy with it.

Mr. HUMPHREY and Mr. WILLIAMS addressed the Chair.

Mr. BUSH. I yield first to the Senator from Minnesota.

Mr. HUMPHREY. I should like to ask the Senator why the date of May 10, 1957, was used? What is the magical quality of that date? What schools have applied prior to that date which would be made eligible for the lower interest rate treatment, and what schools would be left over, which would be the victims of the higher interest rate treatment? That date is very interesting to me. It sticks out in the amendment. I wonder why the date of enactment was not used.

Mr. BUSH. I am sorry; I cannot answer that question. Possibly one of the other Senators who is a member of the committee can answer it. There had to be a cutoff date. But the Senator asked me why May 10 was selected.

Mr. HUMPHREY. Is not this the Senator's amendment?

Mr. BUSH. Yes, it is my amendment.

Mr. HUMPHREY. Why did the Senator place that date in the amendment?

Mr. BUSH. This is an amendment which I asked to have prepared to deal with the interest question. I cannot tell the Senator specifically why the date of May 10 was selected.

Mr. HUMPHREY. The amendment was prepared on May 27. I simply wondered what happened on May 10 or prior to May 10 which caused the date of May 10 to be placed in the amendment. What schools would be eligible for the more generous democratic treatment prior to May 10, and what ones would be eligible for the higher priced treatment after May 10?

Mr. BUSH. I think the reason why this date is in the amendment is that it is the date on which the bill was adopted by the committee. But I do not think there is any magic in it.

Mr. HUMPHREY. Would the Senator mind having the date changed to the date of the enactment?

Mr. BUSH. I would have no objection, if the Senator wants to change it.

Mr. HUMPHREY. I only want to vote against the whole amendment.

Mr. BUSH. If the amendment can be made more palatable to the Senator by changing the date to June 1, that would be agreeable to me.

Mr. HUMPHREY. The Senator will make it palatable if he will strike out everything after line 3 on page 1.

Mr. BUSH. I do not think we want to go that far.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. BUSH. I yield.

Mr. WILLIAMS. The question was asked whether this was the first step under the President's recommendations of yesterday. I approve of the President's recommendation but about a year and a half ago Congress, without any objection, adopted the same principle in connection with the finances of the Commodity Credit Corporation, when we said that that Corporation should pay to the Government the average prevailing interest rate.

In like manner, Congress adopted a similar amendment to the Civil Service Retirement Act and the Social Security Act, requiring the United States Treasury to pay to those funds, if the Treasury borrowed money from that fund, the prevailing rate for the same type of loan.

Congress adopted a similar amendment to the Railroad Retirement Fund Act, and has applied it to many other agencies.

This is only a continuation of a practice which was adopted several years ago, whereby each agency would pay its own carrying charge. It is a sound accounting principle and the amendment should be adopted.

Mr. BUSH. I thank the Senator. I observe that the House of Representatives has this amendment in its bill, so I think it can be said positively that should be evidence, at least to our friends on the other side of the aisle, that we are not in league with any general program of this nature; neither had I heard of one even being contemplated, until yesterday, I believe it was.

Mr. MARTIN of Pennsylvania. Mr. President, will the Senator yield?

Mr. BUSH. I yield.

Mr. MARTIN of Pennsylvania. The Senator probably made this plain in his statement, but will the amendment include loans which have already been made but are not yet due?

Mr. BUSH. I do not think the interest rate could be changed on existing contracts; and this amendment does not contemplate doing so.

Mr. MARTIN of Pennsylvania. I thank the Senator.

Mr. BUSH. Mr. President, that concludes my statement on the amendment. I simply express the earnest hope that the Senate will adopt it.

Mr. FULBRIGHT. Mr. President, I have prepared a short statement on this amendment, because this is not the first time this subject has been before the Senate. I believe this is the third year in which we have struggled with the same question. It is one in the consideration of which men may honestly differ as to the significance of the formula of arriving at the rate of interest on college housing loans.

Before I read my statement, to which I hope my colleagues will listen, because it was prepared very carefully by myself and the staff of the Committee on Banking and Currency, there are 1 or 2 preliminary observations I wish to make.

One significant fact, for example, regarding the purity of the present policy of interest rates, is that the Federal Government now borrows from the old-age and survivors insurance fund at an interest rate of 2½ percent, which is less than the colleges will pay to the Federal Government under the formula in existing law. The Federal Government is getting money from that particular fund in an amount of almost $19 billion. I do not know of any particular reason why the Federal Government itself should benefit in this respect. But there are many different situations existing with regard to the interest rates at present.

There is no absolute way of arriving at the correct method of charging interest. One way is that which is advocated by the Senator from Connecticut.

Mr. BUSH. Mr. President, will the Senator yield for a question?

Mr. FULBRIGHT. I yield for a question.

Mr. BUSH. My question is whether the borrowings which the Federal Government is making are short-term or long-term borrowings from the fund in question.

Mr. FULBRIGHT. For all practical purposes, they are forever, so long as there is a government. The Government keeps using the funds all the time. I see no prospect of the practice being changed in the immediate future. I do not think there is anything wrong with it, but it is inconsistent with the argument made by some Senators.

Colleges and universities now pay a rate of 2⅞ percent. I do not believe there has ever been a default on loans of this character.

I do not think the Senator from Connecticut wishes to leave the impression that there is any risk involved which would call for any increased interest rate for this particular type of loan.

The Senator said there was a hidden subsidy. I do not think it is a subsidy at all; but whatever it is, it is not hidden.

The method of arriving at the interest rates, which I will proceed to describe, is perfectly open and above-board. There is nothing secret. It has been adopted 2 or 3 times on the floor and in the committee. We are not trying to put anything over on anybody. The committee has heard testimony from some of the leading representatives of some of the finest institutions in the country. There is nothing hidden about the interest rate formula.

Let us assume there is a subsidy although I say there is not a subsidy; I say that under this program the Federal Government is reimbursed for the real cost plus one-quarter of one percent.

But suppose there were a subsidy; it would be a very small one. What is wrong with that, when we consider all the subsidies granted by the Government. The most recent one perhaps, is subsidy to the Idaho Power Co. There are subsidies paid to the airline companies and subsidies paid to the railroads. Throughout history there have been special subsidies of which the Senator from Connecticut, I suppose, approves. I say this is not a subsidy. But if it were a subsidy, there would be no particular harm in it, nor would it be anything new. So I think that disposes of that argument.

The real point is very simple: The amendment of the Senator from Connecticut would change the existing formula for computing the interest rate on college-housing loans.

On yesterday the Senate agreed to decrease the amount available for college-housing loans. By means of the sort of overall compromise which was reached, the Senate voted to decrease the amount, although the Senate was very reluctant to do so. Of course, I assumed that the action in decreasing the amount by $25 million would have had some effect upon the desire of my friend, the Senator from Connecticut, to submit this amendment. But apparently that was not the case. The bill now provides for this particular purpose $175 million, including $25 million for nurses' homes.

Mr. BUSH. Mr. President, I trust that the Senator from Arkansas is not inferring that I was a party to any such agreement as that.

Mr. FULBRIGHT. No; I am not, although other Senators on the other side of the aisle were. I made that clear on yesterday; the Senator from Connecticut had no part in it at all.

The immediate effect of the amendment would be to increase the interest rate by five-eighths percent—from 2⅞ percent to 3½ percent. I believe that change would kill this necessary program. In 1954, the 83d Congress raised the interest rate, and the volume of loans dropped drastically. In the following year the 84th Congress adopted the present formula, over the administration's opposition; and this is the third successive year in which the Senate has been asked to approve a higher interest rate.

Only two arguments are made in support of the amendment. First, it is argued that the 2⅞ percent interest presently charged the colleges for these loans is too low, and does not equal the price which the Federal Government must pay for long-term money. It is said that these college-housing loans run for 40 years, and that they should bear the same interest as long-term Government bonds. This statement is not true. As a matter of fact, the college-housing loans are repaid gradually over a period of 40 years. If the outstanding principal is averaged, for comparison with Government bonds, the term is about the same as 23-year bonds. If the interest rate is determined as proposed in the administration's amendment, the Government would make an unwarranted profit out of our distressed colleges and universities.

It is immaterial to argue that one Federal dollar costs more than another. All Federal dollars are alike. The true measure of the cost of Federal money is the average cost of the Federal debt.

This is the very heart of the difference. If this average goes up, then the charge to colleges will go up, under the present formula. A new average will be computed in June and the charge to colleges is expected to rise to about three percent, under the existing formula.

There will always be short-term Federal borrowings and long-term Federal borrowings. The college-housing loans have no significant effect on the amount of either kind of borrowing. In fact, if the Federal Government continues to meet its expenses from current income, then the only Federal borrowing required is to refinance outstanding obligations as they come due. If colleges pay the average Federal rate, plus one-fourth of 1 percent, the program is entirely self-supporting, and costs the taxpayers nothing.

The second argument made is that the present interest rate has stopped all private loans for college housing, and that the only way to stimulate private loans in this field is to raise the interest rate. This argument cannot be supported. The Housing and Home Finance Agency estimated that $4 billion in college-housing construction would be required in the period from 1956 to 1965. The total remaining Federal fund for college housing is only $92 million. If the bill in its present form is passed, it would be $267 million. Obviously, private capital must supply the great bulk of funds required.

It is not necessary to raise interest rates to all colleges merely to force some colleges out of the Federal program. If the proposed higher interest rate is merely a rationing device to screen out the large publicly supported institutions, they can be screened out without raising the interest rate for all the colleges. It will not help any college, to raise the interest rate, solely to make certain colleges with better credit standing borrow their funds elsewhere at higher rates.

The American Council on Education sponsored a comprehensive study of the financing of college housing at 733 institutions—public and private, large and small. This study showed that during the 3 years 1953, 1954, and 1955, the Federal loans to the colleges and universities surveyed totaled only $60,195,000, while in the same period the total of non-Federal financing of college housing was $100,462,000. And in 1955, the last year for which figures were obtained, Government loans for college dormitories increased over those of the preceding year from $13,803,000 to $19,138,000, or 21 percent, while private loans increased from $30,740,000 to $38,181,000, or slightly more than 24 percent. This record clearly shows that the Federal

program has not eliminated the private investor from this field.

The unsupported suggestion that a 3½-percent Federal interest rate would make more private funds available is likewise made completely unrealistic by the American Council's report.

The research group, in July and August 1956, asked 71 municipal bond dealers to specify the rate at which they might purchase or bid on specific maturities of "best grade" college housing bonds. Their replies showed that for tax-exempt bonds of State-supported institutions, the median bid would be 4 percent; and that for the non-tax-exempt bonds of private institutions, the median bid would be 5 percent. There is no reason to suppose that raising the interest rate on Federal loans to 3½ percent would result in any increase in funds from private investors.

Advocates of this amendment try to excuse themselves on grounds that the higher interest rate would have very little effect upon room rent to students. A judgment on this subject is a very relative matter, because $10 means as much to some students as $100 means to others. A cost of $25 more rent per year can be a very significant factor in the educational budget for the parents of many college students. But I believe that is not the most important aspect of this matter. That is not a true measure of the effect of a higher interest rate. From the standpoint of the college administrator, this $25 must be multiplied by the number of students to be so affected; and the aggregate increase in interest charges becomes a very important consideration for those who must decide whether to go ahead with a new dormitory or whether to abandon it. Large numbers of students obtain dormitory rooms at prices below the economic rent, and the deficit is made up from other funds available to the institution. This is a very common situation at many of our colleges. Every dollar added to a student's housing cost is a dollar taken away from some other educational endeavor. Increased interest rates mean an increased drain on scholarship funds and on funds which might othrewise be allocated for teachers' salaries and educational buildings.

The suggestion of the Senator from Connecticut that his amendment should be adopted because it would then put education on a basis of equality with everything else, and that one of the reasons for favoring the adoption of the amendment is that there will be a classroom construction bill, is certainly a remote reason for adopting the amendment, because no one knows that there will be such a classroom construction bill. So I think that is a wholly irrelevant reason for favoring the amendment.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Arkansas yield to me?

The PRESIDING OFFICER (Mr. FREAR in the chair). Does the Senator from Arkansas yield to the Senator from Texas?

Mr. FULBRIGHT. I yield.

Mr. JOHNSON of Texas. Mr. President, I appreciate very much the remarks of the distinguished Senator from Arkansas. I have listened with attention to all he has said about the amendment.

I believe the amendment relates to an area in which the Federal Government should be deeply concerned regarding the problems facing the colleges and universities of the Nation.

This program is a very small one, but I believe it is a very essential one.

I hope every Member of the Senate will realize the full implications of this amendment, and what would happen if it were adopted by the Senate, as a result of the yea-and-nay vote, and finally were enacted into law. If the Congress begins to raise the interest rates applying to college students, by means of an amendment offered on the floor today, we shall hear about it in the years to come. It will apply not only to the institutions of higher learning and not only to all the youngsters who must live in the dormitories which will be built by means of the use of this money, but it will extend to every other lending activity of the Federal Government. I think that education deserves our support, particularly higher education. I hope the amendment will not be adopted, and I hope the conference committee will not set off a raise in interest rates that will spread throughout the Government.

Mr. FULBRIGHT. I thank the Senator from Texas. He reminds me of another aspect of this matter. There have been a great many reports made recently about education in Russia, and the tremendous effort being made by Russia to increase the number of trained engineers and scientists. We have been reminded by some of our leading citizens that the United States has got to do something along that line. We know, for reasons which some of us believe to be irrelevant, that the United States Government has not been able to take appropriate action. While I do not like to be a defeatist, I know that chances are very remote that there will be any Federal aid to education.

Mr. JOHNSON of Texas. But we have a chance to do something for education here today, when we vote on the amendment. We can keep the interest rates where they are.

Mr. FULBRIGHT. That is all I am asking. If Senators will examine the formula in the existing legislation, as it has been in effect now for 2 or 3 years, I think they will agree it is not an outrageous formula at all. I think it is quite fair to say it costs nothing, but that it gives to colleges the advantage of the mass purchasing power of credit of the Federal Government. It gives colleges that advantage. I am not saying it is not an advantage. It is an advantage, but it is at no cost to the taxpayer. We are merely allowing the colleges to use the enormous prestige of the Federal Government.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield to the Senator from Ohio.

Mr. LAUSCHE. Will the Senator from Arkansas, by illustration, demonstrate to me what the difference is between the results of the existing law and what is proposed by the Senator from Connecticut?

Mr. FULBRIGHT. The first and simplest difference is that if one follows the Senator from Connecticut, the proposal will have the effect of raising the interest colleges have to pay from 2⅞ to 3½ as of now. There are two different formulas. That is the real difference. The present formula simply provides for taking the average cost of all of the Government debt, short-term and long-term, and averaging it out, and adding one quarter of 1 percent for administrative expenses. That formula now happens to work out to be 2⅞ percent. Included in the average cost is some short-term money, and there is some long-term money. Because of the current tendency to increase the cost of short-term money, that gap is narrowing. What advantage there is in the formula in the existing law is being lessened. We have seen one example of that, where the effort to refinance three and three-eighths bonds by three and five-eighths bonds was only one-eighth successful. The cost of short-term loans is going up, and, correspondingly the cost of this particular housing program will go up. It is not an absolutely stable rate. It may go up, and get closer and closer to the long-term rate, and we shall have to go along with it.

Mr. LAUSCHE. Does the present law provide a specific date on which a recalculation shall be made?

Mr. FULBRIGHT. Once a year on the 1st of July the rate is recalculated. It is estimated by experts that the existing rate will be increased to the neighborhood of 3 percent.

Mr. LAUSCHE. Am I correct in my understanding, then, that the rate of interest is predicated upon an average of all the interest paid by the Federal Government on long- and short-term obligations?

Mr. FULBRIGHT. That is correct.

Mr. LAUSCHE. And on July 1 an average is taken. Is that correct?

Mr. FULBRIGHT. That is correct.

Mr. LAUSCHE. Then, for the ensuing year, the borrower pays the average interest. Is that correct?

Mr. FULBRIGHT. The Senator from Ohio has stated it correctly.

The difference between the present formula and the proposal of the Senator from Connecticut is that the Senator from Connecticut wants us to take only the long-term rate, and fix the rate in accordance with the long-term rate, excluding from consideration all the short-term rates. His proposal would average only the long-term rates. That is really the only difference.

Mr. LAUSCHE. How does the Senator from Arkansas answer the argument of the Senator from Connecticut with respect to the allegation that logic requires that the rate of interest on long-term obligations be applied to colleges because they also have long-term obligations?

Mr. FULBRIGHT. My answer is that, insofar as that is an argument to support the idea that this is a subsidy and is taking something out of the taxpayers' pocket, the proper way to consider the cost to the Federal Government is to

take the average rate. In the first place, it is a small amount. I have given the figures as to how small it is. I do not think it affects the cost to the Federal Government.

Mr. O'MAHONEY. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield to the Senator from Wyoming.

Mr. O'MAHONEY. I ask the Senator if it is not a fact, as reported by Allen Dulles, brother of the Secretary of State, who is the head of the Central Intelligence Agency, that Soviet Russian schools will graduate 1,200,000 scientists by 1960, and that the graduates in the United States will number only 900,000 during the same time.

Mr. FULBRIGHT. The Senator is quite correct.

Mr. O'MAHONEY. Is that not an unanswerable argument in favor of the position of the committee against the amendment offered by the Senator from Connecticut?

Mr. FULBRIGHT. The Senator is absolutely correct, although I am ashamed of how little we are doing to overcome that situation. I would not want to leave the impression that this bill makes any real contribution to that end, because the amount is so small.

Mr. O'MAHONEY. But to adopt the amendment which has been offered would merely provide an obstacle in the effort to overcome this great deficiency, would it not?

Mr. FULBRIGHT. It would, indeed. Properly considered, the cost does not come out of charges to individual students. The real cost for housing is the overall cost. These loans should be regarded as being assistance to colleges as such, and not as assistance to individual students. Most of the college housing cost comes from the college institutions themselves. There is a certain amount of deficit involved in running a dormitory. It is made up from appropriations from States in the case of State institutions, and partly from tuition charges.

In the broad outlook, this is a small thing, indeed. I cannot understand why such a to-do is made of it. Even granting the argument of the Senator from Connecticut, suppose the aid were considered a subsidy. It certainly would be "small potatoes" in these days of Federal expenditures, in the scale they are made.

I should like to call to the attention of the Senator from Ohio, because he is interested in the question, the fact that the Federal Government uses for its general purposes the old-age and survivors' insurance funds, which are paid into the Treasury for a specific purpose. Only 2½ percent is paid for the use of that money, which is less than what the colleges are paying.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. Yes.

Mr. LAUSCHE. What about the trustees of the fund who are lending money at 2½ percent when they could get 4 percent?

Mr. FULBRIGHT. That is a good question, but I think one could ask, "What about it?" I am only stating the facts now.

Mr. LAUSCHE. Who is in charge of the fund?

Mr. FULBRIGHT. The Secretary of the Treasury, I think; or his nominee.

Mr. LAUSCHE. To me it looks like a hodgepodge.

Mr. FULBRIGHT. The truth of the matter is that our Government is so big and has so many different programs that we do not get any high degree of consistency.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield to the Senator from Oregon.

Mr. MORSE. Will the Senator permit me to read two short paragraphs from a letter which the junior Senator from Oregon [Mr. NEUBERGER] and I have received from a college president, which supports the Senator's position?

Mr. FULBRIGHT. Certainly.

Mr. MORSE. The letter reads:

DEAR SENATOR: I understand that the college housing loan matter will be before the Senate very shortly. I hope you hold to the committee's report; namely, retaining the present interest rate of 2⅞ percent.

Recently, through a circular of the American Council on Education, I learned of what the United States Chamber of Commerce is doing, not only to raise the interest rate, but, if possible, scuttle the whole college housing loan item in the budget. As is not unusual with the chamber, it is spreading some false information. The circular states that the need for college housing loans has declined because college enrollments are leveling off. Nothing could be farther from the truth.

I wish to say that I do not know any college president who does not share the point of view that from the standpoint of need for educational facilities in the field of higher education we should keep the interest rate at 2⅞ percent as the Senator has so eloquently argued this afternoon.

Mr. SPARKMAN. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield to the Senator from Alabama.

Mr. SPARKMAN. I should like to commend the distinguished Senator from Arkansas, the chairman of the Committee on Banking and Currency for the very fine and clear manner in which he has presented this argument today. It seems to me there is certainly no validity to the argument that the interest rate holds a concealed subsidy, since it represents a quarter of a percent over and above what the Government has to pay for the general run of money. It seems to me that is a technical point, really straining the point, when one ties it to a particular class of borrowing. As I understand, that is what the formula does; it ties the rate to the overall cost of money to the Government.

Mr. FULBRIGHT. The average rate on all money borrowed, adding one quarter of 1 percent.

Mr. SPARKMAN. Is it not true, without enumerating the programs, that there are several programs for which even a lower rate of interest is charged?

Mr. FULBRIGHT. The Senator is correct. There is a variation in the rates which has grown out of past history. This is much like the fact that there is a different tax rate for people to pay. One kind of company pays one tax rate, and another company pays another tax rate. They have historical bases. No one contends that everybody ought to pay exactly the same. Some may say it, but they do not get any results.

There are many differences. The narrow question here is whether or not the particular program proposed is justified by its purpose. Are we interested, or not, in helping our colleges in some slight degree?

Mr. SPARKMAN. Will the Senator yield for one more brief question?

Mr. FULBRIGHT. I yield.

Mr. SPARKMAN. Is it not true that the great field of real need in this matter is with the smaller schools throughout the country, rather than the large schools, which have their longtime endowments? Is it not true, now that we have added this new feature, that it will be the smaller hospital training schools which will be in need of help, rather than the large schools?

Mr. FULBRIGHT. The Senator is absolutely correct.

Mr. SPARKMAN. Is it not true that if the rate of interest is changed, it will apply not only to the loans to colleges, but also to the loans to the nursing schools, for which there is such a tremendous need?

Mr. FULBRIGHT. I may say to the Senator that I have no doubt the great institution of Yale, at New Haven, Conn., has no need for this program.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. FULBRIGHT. It has an endowment of $3 million or $4 million. That is a very great institution, of which I am proud to be an honorary alumnus. I am sure it does not need the program.

I am thinking of the small colleges all over the country, which have no great endowments. As a matter of fact, it happens, to be personal about it, that Arkansas has a very small number of applicants, but there is a small Negro college, Philander Smith, in Little Rock. It has meager resources. It has no endowment at all, so far as I know. It passes the hat every year. But it has an application for a small loan.

We can supply to Senators all the figures. There is nothing sectional about this matter.

The Senator from Alabama is quite right in stating that the small colleges, and not the great endowed institutions on the eastern seaboard, are the ones which will benefit.

Mr. HOLLAND and Mr. BUSH addressed the Chair.

Mr. FULBRIGHT. I shall yield to the Senator from Connecticut in a moment. I yield first to the Senator from Florida.

Mr. HOLLAND. Mr. President, first I wish to commend warmly the Senator from Arkansas. I should like to say that I have had some doubts about this program, myself, but those doubts have been resolved completely.

There is one important thing that has resulted. I had a letter from the chairman of the board of trustees of a very fine but small and not wealthy school in South Carolina. I am sorry the distinguished senior Senator from South Carolina [Mr. JOHNSTON] is not present in

the Chamber, because I have had occasion to discuss the matter with him.

In the letter it was pointed out that a difficulty had arisen. The chairman said, "We have made our budget and had our achitectural plans drawn up, relying upon the provision of the present law and upon the existence of a fixed rate for at least a year, during which we can make our plans come to perfection." Now he says, "If this new law becomes effective, and the suggested change is made, our plans will be entirely upset. Our plans for retirement and the handling of obligations will have to be entirely computed again."

I wish to invite the attention of the distinguished Senators to the fact that not only would such a condition arise in the first instance, but under the amendment of the distinguished Senator from Connecticut [Mr. BUSH], whose conservatism I generally admire greatly, we would find that situation existing every quarter. At least, there would be a danger of it every quarter under the proposal. Is that not correct?

Mr. FULBRIGHT. Every quarter, as I understand the amendment.

Mr. HOLLAND. As I understand the amendment, in each quarter there would be a new computation, which means that it would be physically impossible for any program to be carefully worked out and concluded within a period in which there would be an assurance that a fixed-interest rate, determinable before the application was filed, when the plan was being worked up, would apply. The fixed-interest rate would not be assured.

Mr. President, it seems to me that, if such a system confronted the heads of and the planners for these small institutions, an almost impossible situation would result.

I ask if the distinguished Senator from Arkansas does not agree with that statement.

Mr. FULBRIGHT. I do agree. I appreciate the contribution of the Senator from Florida. I should have called attention to that defect in the proposal. I overlooked mentioning it, and I appreciate very much the fairness of the Senator from Florida. He always goes into these bills to the very last provision, and usually comes up with a very significant contribution.

Mr. HOLLAND. Mr. President, I appreciate the very kind remarks of the distinguished Senator from Arkansas, who is an honorary alumnus of Yale, and for whom all of us have great fondness, as we also have for Yale.

Mr. FULBRIGHT. I have very great fondness and respect for Yale. I hope the bill will help Yale, but I imagine Yale is not crying for it like many other colleges.

Mr. HOLLAND. Mr. President, the second point which disturbed me, and frankly disturbed the gentleman who wrote to me, is that he did not want any situation to arise under which it appeared that private or religious colleges would be beneficiaries of or recipients of gratuities from the Federal Government in such a way that conceivably they might come within the scope of a recent opinion of the Supreme Court affecting a college in Philadelphia, and other similar opinions.

It seems to me the distinguished Senator has completely met that point, when he has brought to our attention the fact that the Federal Government continues to be the borrower of funds from the OASI pool in an amount, I believe he stated, of $19 billion or more, at an interest rate of 2½ percent.

Certainly the Congress, as one of the agencies having to do with both the spending and investment of public funds, can take notice of the fact that that particular fund can be used for this particular purpose, and that there can be no question of this program being a subsidy from the standpoint suggested.

I want it to be very clearly shown in the RECORD that the Senator from Florida regards the situation as now having been established conclusively by the Senator from Arkansas, that there is no subsidy in this proposition, which would involve the rather difficult point I have just mentioned, and which was mentioned, I believe, in a colloquy with the distinguished Senator from Alabama the other day.

I think the Senator has made such a clear case that I should desist. I thank him for having allowed me this privilege.

Mr. FULBRIGHT. I appreciate what the Senator from Florida has said. He has been so clear that I think I had better desist and rest the case.

Before doing so, I yield to the distinguished Senator from Connecticut.

Mr. BUSH. Mr. President, I hesitate to intrude myself on this mutual admiration society——

Mr. FULBRIGHT. We welcome the Senator's contribution.

Mr. BUSH. I should like to make one or two comments, inasmuch as the chairman of the committee has raised a question about my alma mater, of which he has confessed he is an honorary graduate. We are very proud of that fact.

Mr. HOLLAND. All of us pay tribute to that great school.

Mr. BUSH. I had the honor to vote for the Senator's degree. I am glad I did. I wish we could see him more often in Connecticut.

Mr. President, the problems regarding college housing are not strange to Yale or to Connecticut. At our university, of which I am still a trustee, we have a very difficult housing program. I can best illustrate it to the Senator, who knows my 18-year-old son, who next year will become a sophomore, by saying that he and five others are going to live in a small suite of three rooms, designed for three students in the days before the so-called college housing shortage. That disturbs me very much, inasmuch as my son is 6 feet 4½ inches tall and weighs about 235 pounds. So I have some personal knowledge of what the difficulties are.

Incidentally, also, Yale is an applicant for college housing funds, so I am not speaking in a vacuum about this situation. I believe I speak for probably a large majority of the graduates of our institution, including those who hold distinguished honorary degrees, when I say we do not believe that this program should be subsidized by means of a special low interest rate. I cannot accept the statement of my distinguish friend from Alabama, that the Government pays the average rate. What we pay is what we pay today when we borrow for the Government; and if we have to borrow long-term money today, we must pay the long-term interest rates.

So if we lend long-term money to the colleges—and I am in favor of this college program, and have voted for it, and hope to see it continued, because it is very much needed—I believe that the colleges are well able to pay the interest charges. I think the hearings will support the argument that it is not necessary to pick out this particular situation and subsidize it with an artificially low interest rate, putting the Government in the position of having to borrow long-term money and lend it at a short-term rate to the colleges.

That is the whole point. I thank the Senator very much.

Mr. FULBRIGHT. I thank the Senator from Connecticut.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Connecticut [Mr. BUSH].

Mr. BIBLE. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment of the Senator from Connecticut [Mr. BUSH]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. JOHNSON of Texas. I announce that the Senator from Virginia [Mr. BYRD], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. NEELY], and the Senator from North Carolina [Mr. SCOTT] are absent on official business.

I further announce, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. NEELY], and the Senator from North Carolina [Mr. SCOTT] would each vote "nay."

Mr. DIRKSEN. I announce that the Senator from Vermont [Mr. AIKEN], the Senators from New Hampshire [Mr. BRIDGES and Mr. COTTON], the Senator

from Nebraska [Mr. HRUSKA], the Senator from South Dakota [Mr. MUNDT], and the Senator from Massachusetts [Mr. SALTONSTALL] are absent on official business.

The Senator from Vermont [Mr. FLANDERS], the Senator from Connecticut [Mr. PURTELL], the Senator from New Jersey [Mr. SMITH], and the Senator from North Dakota [Mr. YOUNG] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

The Senator from Kansas [Mr. SCHOEPPEL] is detained on official business.

If present and voting, the Senator from Vermont [Mr. FLANDERS] would vote "yea."

On this vote, the Senator from New Hampshire [Mr. BRIDGES] is paired with the Senator from Vermont [Mr. AIKEN]. If present and voting, the Senator from New Hampshire would vote "yea," and the Senator from Vermont would vote "nay."

On this vote the Senator from South Dakota [Mr. MUNDT] is paired with the Senator from New Jersey [Mr. SMITH]. If present and voting, the Senator from South Dakota would vote "yea," and the Senator from New Jersey would vote "nay."

The result was announced—yeas 16, nays 54, as follows:

YEAS—16

Barrett	Case, S. Dak.	Malone
Bennett	Dirksen	Martin, Pa.
Bricker	Dworshak	Morton
Bush	Goldwater	Williams
Butler	Hickenlooper	
Capehart	Knowland	

NAYS—54

Allott	Holland	Neuberger
Anderson	Humphrey	O'Mahoney
Beall	Ives	Pastore
Bible	Jackson	Potter
Carlson	Javits	Revercomb
Carroll	Johnson, Tex.	Robertson
Case, N. J.	Johnston, S. C.	Russell
Church	Kefauver	Smathers
Clark	Kennedy	Smith, Maine
Cooper	Kerr	Sparkman
Curtis	Kuchel	Stennis
Douglas	Lausche	Symington
Ellender	Long	Talmadge
Frear	Martin, Iowa	Thurmond
Fulbright	McClellan	Thye
Gore	Monroney	Watkins
Hayden	Morse	Wiley
Hill	Murray	Yarborough

NOT VOTING—25

Aiken	Hennings	Payne
Bridges	Hruska	Purtell
Byrd	Jenner	Saltonstall
Chavez	Langer	Schoeppel
Cotton	Magnuson	Scott
Eastland	Mansfield	Smith, N. J.
Ervin	McNamara	Young
Flanders	Mundt	
Green	Neely	

So Mr. BUSH's amendment was rejected.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the amendment was rejected.

Mr. FULBRIGHT. Mr. President, I move that the motion of the Senator from Texas be laid on the table.

The PRESIDING OFFICER (Mr. FREAR in the chair). The question is on agreeing to the motion of the Senator from Arkansas.

The motion to lay on the table was agreed to.

MESSAGE FROM THE HOUSE—ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (H. R. 6871) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes, and it was signed by the Vice President.

HOUSING ACT OF 1957

The Senate resumed the consideration of the bill (H. R. 6659) to extend and amend laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes.

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on the final passage of the bill.

The yeas and nays were ordered.

Mr. BENNETT. Mr. President, I call up my amendment designated "5-27-57-N."

In accordance with the rules of the Senate, which permit me to modify my own amendment, I strike out the first five lines of the amendment, because the subject covered by that material was covered also by the Bricker amendment last night.

The PRESIDING OFFICER. Does the Senator from Utah ask unanimous consent to have the amendment printed, or does he desire to have it read?

Mr. BENNETT. I ask unanimous consent that the amendment, as modified, may be printed, and that it may be identified by the clerk only by number.

The PRESIDING OFFICER. Without objection, the amendment, as modified will be printed; and the clerk will identify the amendment by number.

The LEGISLATIVE CLERK. Amendment designated "5-27-57-N."

Mr. BENNETT's amendment is as follows:

Amend section 302 of the bill (page 35, line 1, through page 38, line 10) to read as follows:

"SEC. 302. The Housing Act of 1949 is further amended by—

"(a) striking out the second sentence of section 103 (a) and inserting in lieu thereof the following: 'The aggregate of such capital grants with respect to all the projects of a local public agency on which contracts for capital grants have been made under this title, exclusive of projects referred to in the proviso hereto, shall not exceed two-thirds of the aggregate of the net project costs of such nonexcluded projects: *Provided*, That the aggregate of such capital grants may exceed two-thirds but not three-fourths of the aggregate net project costs of those projects which the Administrator, at the request of a local public agency, may approve on such a three-fourths capital grant basis. A capital grant with respect to any individual project shall not exceed the difference between the net project cost and the local grants-in-aid actually made with respect to the project';

"(b) inserting before the period at the end of section 104 a comma and the following: 'and, with respect to projects referred to in the proviso in the second sentence of section 103 (a), local grants-in-aid shall not be required in excess of one-fourth of the aggregate net project costs of all projects of the local public agency on which contracts for capital grants have been made on the three-fourths basis';

"(c) inserting before the first semicolon in section 110 (d) the words 'to defray expenditures within the purview of section 110 (e) (1) hereof';

"(d) inserting before the period at the end of the first sentence of section 110 (e) a colon and the following: '*Provided*, That with respect to a project for which a contract for capital grant has been executed on a three-fourths basis pursuant to the proviso in the second sentence of section 103 (a), that part of gross project cost under clause (1) of this subsection shall, in lieu thereof, comprise the amount of the expenditures by the local public agency with respect to the following undertakings and activities necessary to carry out such a project:

"'(i) acquisition of land (but only to the extent of the consideration paid to the owner and not title, appraisal, negotiating, legal or any other expenditures of the local public agency incidental to acquiring land), disposition of land, demolition and removal of buildings and improvements, and site preparation and improvements, all as provided in paragraphs (1), (2), (3), (4), and (6) of section 110 (c); and

"'(ii) the payment of carrying charges related to the undertakings in clause (i), exclusive of taxes and payments in lieu of taxes, but not beyond the point where such a project is completed; but shall not comprise the cost of any other undertakings and activities with respect to such a project including, but without being limited to, the cost of surveys and plans, legal services of any kind, and all administrative and overhead expenses of the local public agency'; and

"(e) inserting within the parenthesis in the second sentence of said subsection 110 (e) after the words 'or is hereafter executed' the following: ', other than a project on which a contract for capital grant is made on a three-fourths basis pursuant to the proviso in the second sentence of section 103 (a)'."

Mr. BENNETT. If the Senate will bear with me for a few minutes, I will make a very brief statement of the purpose of the amendment. I have prepared a statement which I shall be glad to offer for the RECORD at the conclusion of my brief summary.

The amendment relates to the urban-renewal program. Since the beginning of the program, the cost of the project has been shared two-thirds by the Federal Government and one-third by local governments. Under this formula, more than 400 urban-renewal projects have been started and are now being planned or carried out.

The urban-renewal program is continuing to grow, and I am certain there has not been any diminution of the program because of the inability of local governments to carry as much as one-third of the cost.

Section 302 of the bill would change the Federal share from two-thirds to three-fourths, with a corresponding reduction of the local share from one-third to one-fourth. Thus, one of the most generous of the Federal matching programs would be made more generous.

It may well be that the present programs, planned or started, will actually exhaust the money available; and if the Federal Government's share is raised, it

may have the effect of reducing the number of programs which may qualify.

In the light of these considerations, and realizing that this is a time when the Federal Government should practice economy, I strongly urge that section 302 be amended so that the present two-thirds-one-third formula can remain unchanged.

If we decrease the local contribution from one-third to one-fourth, we will be approaching the stage where local communities will contribute comparatively little toward the solution of their own problems of slums and blight. There may well be a temptation on the part of some communities, considering their limited funds, to rush into ill-considered and unprepared programs. The net result might be that the Federal Government would have to tighten up on its specifications and increase the amount of Federal control which would be involved.

Section 302 of the bill also would make available to localities an alternative grant formula under which, in return for the assumption by the locality itself of various planning, administrative, and overhead expenses, the Government would pay a higher percentage of the reduced project cost which would result.

Under the formula in the bill, in the alternative program, the Federal Government would pay 85 percent of the reduced cost, which would be approximately, so far as I can determine the equivalent of the 75 percent which the bill would call for under the present formula.

I have been advised that if this percentage under the alternative formula were reduced from 85 percent to 75 percent, then the 2 formulas would be approximately in balance at a figure representing about two-thirds of the cost of the formula which would ultimately be assumed by the Federal Government.

Mr. President, I ask unanimous consent that the complete statement which I have prepared may be printed at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BENNETT

Section 302 of the bill would make a very important change in the matching formula under which the Federal Government and the local communities share in the cost of urban renewal. Since the beginning of the program of Federal financial assistance for local slum clearance and urban renewal projects, the cost of the projects has been shared by the Federal Government and local governments on a two-thirds-one-third basis. The one-third of net cost borne by the local communities is payable either in cash or through the contribution of land or public facilities and improvements necessary to the redevelopment or rehabilitation of the urban renewal area. Under this formula, well over 400 urban renewal projects have been started and are now being planned or carried out. The urban renewal program is continuing to grow, and I understand that the number of projects being proposed has not decreased as it would if there were any incapacity on the part of local government to bear its one-third share of the cost.

Section 302 of this bill would change the Federal share of net cost of urban renewal projects from two-thirds to three-fourths, with a corresponding reduction of the local share from one-third to one-fourth. Thus, one of the most generous of the Federal-local matching programs would be made yet more generous. I am at a loss to discover a justification for this proposal. The urban renewal program is not lagging. I understand that the rate of applications for the planning of new projects has not slackened. I have heard of no instance in which a city or other unit of local government has abandoned its urban renewal program because of any ability to bear its one-third share of project costs. Thus there is no real evidence that the present formula for the sharing of urban renewal costs is inadequate. There is no evidence of a need for the Federal Government to contribute more than two-thirds of these costs.

On the other hand, there is every indication that the program is flourishing and that the demands upon the Federal Government under the present aid formula, involving a local one-third share of costs, may even threaten to exceed the amount of grant money which the Government can make available for the program in the light of other demands upon the Treasury. We have to bear in mind that Federal funds are not unlimited. If we properly limit the funds which are made available for urban renewal in the light of other demands upon the Federal Treasury, it inevitably follows that an increase in the share of the cost borne by the Federal Government will merely result in applying the same number of Federal dollars to a reduced total urban renewal program. In other words, if we recognize that Federal funds are limited, we will recognize that section 302 amounts to a proposal to give greater grants to those cities which are now participating in the program, with respect to present projects and projects now contemplated, while eventually leaving less funds available for future projects in these and other cities. Of course, we can increase the share of the costs borne by the Federal Government without reducing the total size of the program. In that event, since Federal funds are not unlimited, some other worthy Federal program will eventually have to be cut.

In the light of these considerations, and bearing in mind that we are now in a period during which it is especially desirable for the Federal Government to practice economy, I strongly urge that section 302 be amended so that the present two-thirds—one-third formula for sharing the cost of urban renewal will remain unchanged.

There are other reasons which prompt me to advocate that the present two-thirds Federal contribution not be increased. As I stated before, the local one-third contribution is payable either in cash or through the contribution of land, or public facilities and improvements necessary to the redevelopment or rehabilitation of the urban renewal area. For example, the cost to the local community of street improvements, waterlines, sewer lines, and neighborhood parks may be counted in calculating the local one-third contribution. It is true that such costs may be counted only if the improvements are necessary to the redevelopment or rehabilitation of the urban renewal area. It is also true, however, that these improvements directly benefit the locality; are of a type which have traditionally been paid for entirely out of local funds; and at least in some instances would have been provided even if an urban renewal project had not been undertaken.

If we decrease the local contribution from one-third of the project cost to one-fourth of the project cost, we will be approaching a stage where local communities will be contributing very little additional toward the solution of their own local problems of slums and blight. When we reach such a stage, there will be two side effects which should give the friends of the program great concern. When it will be possible for our local communities to participate in this program, which is designed for their own benefit, at little or no sacrifice to themselves, there will inevitably be a temptation on the part of some communities to enter the program on the basis of insufficient study and consideration. Ill-conceived projects are more likely to be presented to the Federal Government when local officials feel that the additional costs to the locality are negligible. Under these circumstances, both the Federal funds and the local funds which are contributed to the program will purchase far lesser benefits than would otherwise be the case.

The second side effect which will come about from substantially reducing the local contribution is increased Federal control. When the local community is required to contribute only one-fourth of the project cost, and when that contribution may be almost entirely satisfied by such local public facilities as streets, and neighborhood parks, and sewer and water lines, the program will appear to be primarily a Federal program and, just as surely as night follows day, Federal controls will, rightly or wrongly, be tightened. Furthermore, there may even be justification for tightening Federal controls. Where the local communities are required to make very little sacrifice and where, as a result, a few communities yield to the temptation of submitting ill-conceived requests for Federal aid, it may actually become appropriate for Federal officials to scrutinize local applications more closely and to prescribe additional restrictions and limitations.

In concluding this line of thought, I admonish the well-meaning friends of the urban renewal program who are sponsoring the substantial increase in the Federal contribution by reminding them of the storied unfortunate who killed the goose that laid the golden eggs.

Section 302 of the bill would also make available to localities proposing to carry out urban renewal projects an alternative grant formula under which, in return for the assumption by the locality itself of various planning, administrative, and overhead expenses, the Government would pay a higher percentage of the reduced project cost which would result. This proposal represents a praiseworthy effort to reduce red tape resulting from Federal financing and review of local administrative operations. Because of the removal of planning and administrative expenses from the federally assisted project, ultimate cost both to the Federal Government and to the locality would be about the same, even under a higher percentage Federal grant, as those which now result from the application of the regular two-thirds-one-third cost sharing formula. In other words, the Federal contribution of a higher percentage of project costs would be balanced by a reduction in the number of items includible in project costs.

This alternative formula would not be forced upon any locality. Since use of the alternative formula would require local cash for the planning and administrative expenses, which some communities might be unable to provide when needed, each community could choose which formula it wished to follow.

As a result of the proposal in section 302 of the bill that the present basic Federal contribution to two-thirds of net project costs be increased to three-fourths, the Federal contribution under the alternative cost sharing formula is set forth in section 302 as 85 percent of net project costs. Correspondingly, if the Congress rejects the proposed increase in the Federal contribution under the basic formula, it should also fix the proposed Federal contribution under the alternative formula at 75 percent, and not 85 percent. The Housing Administrator has

stated that a three-fourths grant, where the locality has assumed all the planning and administrative costs, would be the equivalent of a two-thirds grant where the locality has not assumed all these costs. Accordingly, my amendment to section 302 of the bill would provide for three-quarters-one-quarter cost sharing formula under the proposed alternative grant formula instead of the 85 percent-15 percent formula now proposed by section 302.

My amendment to section 302 makes absolutely no change in that section except changes necessary to eliminate the proposed increase in the Federal Government's share of the costs of urban renewal. I am convinced that such an increase is not necessary in order to enable any of our communities to participate in the urban renewal program. I am also convinced that such an increase is most untimely when we are attempting to reduce Federal expenditures, and that it would not increase the total extent of the urban renewal program, but would merely encourage a greater number of local projects which will not be as well-conceived as they would have been had the local investment been more substantial.

Mr. BENNETT. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. BENNETT. I yield.

Mr. WILLIAMS. If the amendment should be rejected, would it not be true that then, under the bill, $108 million of the money would be used to made retroactive payments for projects which have already been approved and started.

Mr. BENNETT. I am not informed about that particular subject. If the Senator from Delaware has that information, I am certain it would be important to place it in the RECORD.

Mr. WILLIAMS. I have a letter from the Budget Bureau dated yesterday in which this fact is confirmed. Also testimony before the committee by representatives of the Housing Agency was to the same effect. Both agencies testified that the bill as written would result in retroactive payments on those projects which have previously been approved, in the amount of $108 million. This would not provide any new housing. It would merely represent a bonus. I support the amendment of the Senator from Utah.

Mr. LAUSCHE. Does the amendment of the Senator from Utah contemplate keeping in force the present provisions concerning the participation of the Federal and local governments?

Mr. BENNETT. It would keep in force the present provisions, but it would also continue the present alternative provision to change the rates, so that under the alternative provision in the present law they would be approximately balanced.

Mr. CLARK. Mr. President, the purpose of the provision now in the bill is to enable the urban renewal program to go forward, so that slums can be cleared and blight eliminated. The reason for the change in the formula is, frankly, that the cities are broke.

The American Municipal Association and the United States Conference of Mayors represented by seven of the outstanding mayors of the country, came before our committee and testified unanimously that they had exhausted their local resources, and that in order to have the blight removal program go forward there would have to be an increase in the Federal contribution.

Let me make this point very clear: The American Municipal Association does not represent only the large cities of the country; it represents the smaller cities, as well. It has 12,000 members.

In my own Commonwealth of Pennsylvania there are 50 members of the Pennsylvania League of Cities. Every one of them has need for urban renewal and slum clearance. Most of them have been unable to get their programs under way because their small local resources have not been sufficient, and their ability to raise their taxes, in view of the fact that the Federal Government has usurped most of the tax resources, has been so meager that they have not been able to contribute adequately to the slum clearance program.

Indeed, I would hazard an educated guess that the change in the present formula would hurt the large cities and help the small cities, because many of the small cities which have not been able to qualify under the present formula would be able to qualify under the new one.

I shall read very briefly from testimony given before our committee by my distinguished successor as the Mayor of Philadelphia, Richardson Dilworth, representing the American Municipal Association.

> Another factor which operates as a drag on the attempt to really crack down on blight is the current ratio for matching funds. The limited nature of local resources is well known. So long as localities are required to put up one-third of the cost of each project, operations will be held down to the pace which these limited local resources make possible, rather than going forward at the pace needed to eliminate the problem quickly. The State of Pennsylvania has provided $5 million to help Pennsylvania communities with this work, of which Philadelphia is receiving $1.5 million. We are urging an additional appropriation at the present legislative session. But the resources of the State, too, are limited.

Mr. President, every mayor who testified before our committee concerning this situation said the cities could not expect additional aid from the State governments, because the States, too, were broke.

I point out to my distinguished colleagues that during the years since World War II, State and local indebtedness has trebled, while the Federal debt has actually declined. In the case of my own city of Philadelphia, I know that during the last 6 years, in order to get some kind of modernization program under way, it has been necessary to raise taxes twice, so that today taxes are 33⅓ percent higher than they were at the end of World War II. But, Mr. President, today we are very nearly at the end of our rope.

I read further from the statement by Mayor Dilworth:

> Federal and local officials have reached the stage where all agree that this work will have to be done eventually. Why not speed it up in all possible ways? Establishment of a ratio of four Federal dollars for each local dollar would have this effect.

Indeed, Mr. President, all this work will have to be done if our urban democracy is to survive.

The mayors were unanimous in asking the committee to change the formula from 2 to 1 to 4 to 1. That was the recommendation of the American Municipal Association, adopted at its 1956 convention. The mayors pointed out the definite needs of the cities of the Nation. Those with smaller needs also have smaller resources, whereas those with greater resources have very massive problems.

However, the committee was unable to agree to raise the Federal share to 4 to 1, but agreed to recommend a change from 2 to 1 to 3 to 1.

In conclusion, let me say to my good friends on the other side of the aisle who are so obsessed with the dollar sign—and I agree with them that we have to watch expenditures very carefully; it is only because of the great necessity for this program that I urge my colleagues to reject the amendment—that the bill as reported by the committee, and as presently before us, will not increase the authorization for expenditure by as much as 1 cent. By means of the amicable agreement reached yesterday, the Senate has decided to fix the urban renewal payments at $250 million for each of the next 2 years; and that is where the amount will remain.

If the amendment submitted by my friend, the Senator from Utah, is adopted, it will mean that certain projects which otherwise would have been started, will not be started; and it will mean that certain cities which otherwise would have participated, will not be able to participate.

Mr. President, I hope very much that the amendment will be rejected.

Mr. GOLDWATER. Mr. President, will the Senator from Pennsylvania yield to me?

Mr. CLARK. I am glad to yield to the Senator from Arizona.

Mr. GOLDWATER. I am somewhat disturbed to hear the Senator from Pennsylvania say that America's cities are "broke," and that the States of the Union are in such bad financial condition.

I am happy to have an opportunity to ask the distinguished former mayor of Philadelphia a question, since I myself once was in city government.

During the tenure of the Senator from Pennsylvania as mayor of Philadelphia, was the system of the valuation of property changed?

Mr. CLARK. Yes.

Mr. GOLDWATER. Was the valuation raised?

Mr. CLARK. Yes; and we also raised our real-estate tax substantially last fall.

Mr. GOLDWATER. Have the American cities which are members of the association generally changed their system of valuation during the past 10 years?

Mr. CLARK. I cannot answer that question specifically; but I know that all over the country, in counties as well as in cities, a revaluation of property is in process.

Furthermore, I know that in area after area and block after block in small

cities, as well as in large ones, blight conditions make it quite impossible to have any increase in assessments; and slum clearance is vitally necessary in order to restore those areas to a condition in which they will be able to bear their fair share of the tax load.

Furthermore, in my city of Philadelphia and in other Pennsylvania cities, the cities are tapping not only the property tax, but they also have a flat wage tax, from which Philadelphia last year raised $50 million.

Mr. GOLDWATER. Mr. President, will the Senator from Pennsylvania yield further to me?

Mr. CLARK. I am glad to yield.

Mr. GOLDWATER. Will the Senator from Pennsylvania state the per capita debt in the State of Pennsylvania?

Mr. CLARK. I regret that I am unable to state that figure.

Mr. GOLDWATER. Mr. President, I seriously doubt that the cities of the Nation or the States of the Nation are broke or are in serious financial condition. If they are, it is because of the abnormally high taxes which have been imposed upon the American citizens by the Congress during the past 25 years. So I do not think it is incumbent upon us to vote to increase the taxes, when we hear from the distinguished former mayor of one of the largest cities in the country that his city is broke.

However, instead of lowering taxes, the Congress tends to move in the direction of raising taxes and in the direction of saying, "If the cities of America are not going to take care of this matter themselves"——

Mr. CLARK. Mr. President, I was under the impression that I yielded to the Senator from Arizona for a question. If, instead, he wishes to make a speech, I wish he would make it when he has the floor in his own right.

Mr. GOLDWATER. I was asking a question, but the Senator from Pennsylvania interrupted me.

Mr. CLARK. Will the Senator from Arizona repeat the question?

Mr. GOLDWATER. I was getting to it. [Laughter.]

Mr. CLARK. I am sure the Senator from Arizona has heard about Robin Hood's barn.

Mr. GOLDWATER. Does the Senator from Pennsylvania believe that the cities and the States have substantially exhausted their funds?

Mr. CLARK. I am able to state that that is the case; and if the Senator from Arizona will travel with me to various places in the State of Pennsylvania, including the cities of Wilkes-Barre, Scranton, Hazelton, Pottsville, Pittsburgh, and other areas, he will be able to see with his own eyes the drastic need for improvements which the local tax base will not permit.

Mr. GOLDWATER. Mr. President, I do not doubt at all that the State of Pennsylvania is in need of some assistance.

Let me ask whether the Senator from Pennsylvania sees any relationship between Federal deficits, large Federal budgets, and the dilemma in which the cities of Pennsylvania find themselves today?

Mr. CLARK. I see this relationship: When, in 1913, the Federal Government imposed the graduated income tax, and thereafter proceeded to raise it from time to time—until it reached its all-time high shortly after the end of World War II, and now the Republican administration has reduced it to some extent, particularly in the higher brackets—that tax sucked away from the cities and States of the Nation their principal source of revenue. As a result, although a generation ago the Federal Government was raising only 25 cents of every tax dollar, today it is raising 75 cents of every tax dollar, and the States are raising 13 cents, and the cities are raising 12 cents. The State and local debt has tripled in the past 10 years; and as the Kestnbaum report pointed out—I refer to the report of the distinguished committee of Members of Congress and citizens, appointed by President Eisenhower—it is too late to reverse the trend. Almost with unanimity, the committee recommended against turning back tax resources to the State and local governments; and, therefore, it is necessary for the cities to ask for this additional Federal grant.

Mr. GOLDWATER. Mr. President, will the Senator from Pennsylvania yield for a further question?

Mr. CLARK. I am happy to yield.

Mr. GOLDWATER. In view of the remarks made by the Senator from Pennsylvania, would he join in an effort to limit income taxes?

Mr. CLARK. I certainly would not.

Mr. GOLDWATER. That is what I expected.

Mr. JAVITS. Mr. President, will the Senator from Pennsylvania yield to me?

Mr. CLARK. I am happy to yield to the Senator from New York.

Mr. JAVITS. I think one thing needs to be pointed out, in the case of the big cities. In my State of New York is located, of course, the greatest of all American cities. I have lived in the city of New York all my life, and I know something about its municipal problems. The fact is that the city is passing through a very trying transitional period. The metropolitan area of New York contains approximately 12 million people; and if the outlying sections are included, the total area includes approximately 14 million people. Many thousands of middle-income families, good taxpayers, have moved out of New York City into the suburbs; and the wage earners of those families come to New York City only to work.

We shall have to solve those problems in some way, by means of some other types of taxation, and perhaps some other types of governmental organization. But in the meantime the cities are deteriorating terribly, and that development involves a great loss in economic terms to the country.

This provision is included in the bill in an attempt to see them through this very, very difficult period.

I am very glad my colleague, the Senator from Pennsylvania, saw fit to yield, because I think it is essential that we understand clearly why a majestic city like New York finds itself in very great difficulty.

Some of us think we can do much better in respect to the husbandry and economy under which our cities are organized; but essentially the difficulty has developed because the cities are in a period of transition, and the backbone families of the cities have to a very substantial degree moved into the suburbs, where the city taxes cannot reach them.

Mr. CLARK. Mr. President, I thank the Senator from New York for his helpful remarks; and I call the attention of my colleagues to what I suppose they already know, namely, that the junior Senator from New York [Mr. JAVITS] has had about as much intimate experience with the problems of the cities as has any other Member of this body, and he knows intimately the problems which beset the city of New York.

Mr. President, I yield the floor.

Mr. WILLIAMS. Mr. President, earlier in a colloquy with the Senator from Utah [Mr. BENNETT], reference was made to retroactive payments as being provided for under the bill, unless the amendment is adopted. I should like to read a paragraph from a letter signed by the Deputy Director of the Bureau of the Budget, dated yesterday, concerning this subject:

> Section 302 would increase the basic formula for Federal capital-grant contributions for urban-renewal projects from two-thirds to three-fourths of the net project cost. This change would, in effect, be made retroactive, with the result that $100 million in capital grants would be required for projects on which reservations have already been made on the present formula. It would also establish a higher base for future projects. Such as an increase in the already substantial Federal participation would appear inconsistent with the predominantly local advantages derived from the urban-renewal program.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS. I shall yield in a moment. As the Senator from Utah pointed out before, it does not affect the dollar figure, which provides $250 million each for 2 years; but, if we do not adopt the amendment, $108 million of the $500 million would be used to make retroactive payments for presently authorized projects. This would be a retroactive bonus to existing projects and would not achieve any additional housing. These contracts have already been signed, based on the old formula. Why refund another $108 million?

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS. I yield.

Mr. CLARK. I should like to point out that what the Senator from Delaware has said is perhaps only partially true. There is already available, authorized by prior Congresses and subject to release by the President of the United States, $100 million which can be used for slum clearance and urban redevelopment. When the Subcommittee on Housing and the full Committee on Banking and Currency had the change under consideration, it was our thought the retroactive feature of the bill to which the Senator refers would be used by the President to release the $100 million which was authorized by the 84th Congress. Therefore, to that extent, and to that extent only, the Senator from

Delaware is incorrect. This retroactive feature would not affect 1 cent of the $500 million. I might correct that statement. It might affect $8 million——

Mr. WILLIAMS. Is that not Government money? It would affect it, because, after all, the money is coming out of the Federal Treasury. There are going to be retroactive payments. If the amendment is adopted, the amount will still be $500 million.

Mr. CLARK. The Senator from Delaware has been so concerned about the Federal budget that I merely wanted to explain to him that this change will not have any effect whatsoever on the budget authorization this year, because prior authorizations are involved.

Mr. WILLIAMS. I made the statement earlier that the amendment of the Senator from Utah did not deal with a dollar figure. The amendment does stop the retroactive payment of $108 million previously authorized funds or funds authorized under the bill.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. WILLIAMS. I yield.

Mr. SPARKMAN. Let me say that when the subcommittee voted in favor of this proposal, the question came up as to what date it should become effective. We took the matter up with the housing agency. This arrangement was worked out in accordance with their recommendation.

Mr. WILLIAMS. I do not question that.

Mr. SPARKMAN. I thought the Senator would be interested in knowing that.

Mr. WILLIAMS. The formula in the bill allows $108 million to be made as retroactive payments for projects which have been approved and agreed upon between the Government and cities, and projects which are going on even without the passage of the bill.

Mr. President, I ask unanimous consent to have incorporated in the RECORD at this point the letter signed by the Deputy Director of the Housing and Home Finance Agency, Mr. Walker Mason, addressed to the chairman of the subcommittee, the Senator from Alabama [Mr. SPARKMAN], under date of May 1, 1957. This letter appears on pages 18 and 19 of the report on the bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOUSING AND HOME FINANCE AGENCY,
Washington, D. C., May 1, 1957.

Hon. JOHN SPARKMAN,
Chairman, Subcommittee on Housing, Banking and Currency Committee, United States Senate, Washington, D. C.

DEAR MR. CHAIRMAN: We understand that your subcommittee has decided to recommend that the two-thirds Federal grant formula now in the law for urban-renewal projects be changed to a three-fourths Federal-grant formula. Your staff has advised that the subcommittee would like to have the views of this Agency as to the extent to which this change if enacted, should apply to projects now underway.

Of course you recognize that this Agency does not favor placing the Federal grants on a three-fourths basis except as provided in section 302 of S. 1609 relating to an alternative capital-grant formula. However, if the increase to be recommended by your committee is authorized by the Congress, I believe it should be made applicable to all projects now being undertaken under title I of the Housing Act of 1949, as amended, as well as to urban-renewal projects to be undertaken hereafter. The contract provisions with respect to Federal grants for an urban-renewal project are not executed until the completion of the planning stage of the project. Until that time the local public agency would be in a position to apply for the Federal grants under the new three-fourths formula, unless expressly prevented by the terms of the new authority. The majority of the projects for which reservations have been made are in this planning stage, and I believe there is no reason to prevent these projects from receiving grants on the same increased basis made available to others.

Similarly, I believe it would be inequitable to exclude from the benefit of these increased grants those projects which have been put under loan and grant contracts. To do so would be to penalize those local public agencies and cities which have been sufficiently diligent and rapid in their urban-renewal work to have advanced their projects to the loan and grant stage. Also, if there projects are not included within the new authority to be recommended by your subcommittee, there will be an incentive to delay such projects about to enter the loan and grant stage so they can obtain the increased benefits after the enactment of such new authority.

The uniform application of the proposed three-fourths Federal-grant formula to all projects would undoubtedly result in less administrative difficulty than an application to a special category of projects, particularly if the category required selection and administrative decisions. The latter would tend to promote controversy and charges of discrimination.

Your staff also asked for general information on the cost of the change to be recommended by your subcommittee. An increase in the Federal capital grant from two-thirds to three-fourths of net project costs for all projects underway would result in a general increase of one-eighth in the Federal contribution and a decrease of one-eighth in the local contribution. Thus, the $867.3 million of outstanding reservations and contracts would be increased by about $108 million, inasmuch as only one project with a capital grant of $261,555 is formally completed. Correspondingly, a three-fourths capital grant formula would mean either that future authorizations would support only about seven-eighths as much local urban-renewal effort, or that future authorizations would have to be increased by one-eighth to support as much local urban-renewal effort as would be feasible under the two-thirds formula. The foregoing figures necessarily assume that existing contracts and reservations would remain unchanged, subject, of course, to the general increase necessary over a three-fourths formula.

Sincerely yours.

WALKER MASON,
Deputy Administrator.

Mr. CLARK. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS. I yield.

Mr. CLARK. I should like to point out to Members of the Senate that such is the slowness in these urban redevelopment projects——

Mr. WILLIAMS. Is the Senator asking me a question——

Mr. CLARK. May I complete my question?

Mr. WILLIAMS. Certainly.

Mr. CLARK. That of the more than $900 million which was voted for this program many years ago, only $89 million has already been spent. So that the fears of the Senator from Delaware, to the extent that they are justified, concern the future and not the immediate present.

Mr. BENNETT. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS. I yield to the Senator from Utah.

Mr. BENNETT. Is it not true that under the formula in the existing law, which appropriates $500 million, if that $500 million represents two-thirds of the total potential urban renewal cost, under the formula in the existing law approximately $750 million can be devoted to urban renewal; but under the new formula, which would reduce the $500 million to three-quarters of the total, the net effect would be to reduce the urban renewal program from $750 million to $625 million?

Mr. WILLIAMS. That is true. In addition, it would take $108 million out of the funds and use them for retroactive payments, further reducing the possibility of building this type of construction.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS. I yield the floor.

Mr. CLARK. I honestly think the Senator from Utah is confused. The change in the formula would not increase the authorization from $500 million to $700 million. It would merely be spent more quickly. The Senate and the House of Representatives can have control over that matter. If they do not like the way it is going, they do not have to authorize it.

Mr. BENNETT. If the Federal Government puts up $500 million on the basis that it must be matched by $250 million from the local communities, that produces a total potential of $750 million.

Mr. CLARK. Yes.

Mr. BENNETT. But if the Federal Government puts up $500 million on the basis of that being three-quarters of the total potential, that produces only $625 million.

Mr. CLARK. That is true, and the people who want to spend the mony want it that way.

Several Senators addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield, and if so, to whom?

Mr. CLARK. I yield first to the Senator from Illinois.

Mr. DOUGLAS. I have made a hasty mathematical computation. If $500 million is 75 percent, 100 percent would be $666,666,666.67, and not $625 million.

Mr. BENNETT. I acknowledge the correction of the Senator from Illinois, but it does not change my basic contention that it reduces the amount.

Mr. CLARK. Nor does it change the fact that those who want to spend the money can spend it this way and want to spend it this way.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. CLARK. I yield.

Mr. LAUSCHE. Am I to understand from the statement that has been made

that the resources of the State of Pennsylvania have been exhausted?

Mr. CLARK. Let me put it this way; I would say the capacity of the tax-levying bodies at both the local and State levels in Pennsylvania has been exhausted for the time being.

Mr. LAUSCHE. Can I correctly interpret that to mean that both the State of Pennsylvania and the city of Philadelphia are broke?

Mr. CLARK. I think both the city of Philadelphia and the Commonwealth of Pennsylvania have reached, for the time being, the ceiling of the amount which they can raise—that is, their tax-levying sources.

Mr. LAUSCHE. May I ask this question: Is the Senator from Pennsylvania of the belief that the fiscal situation of the United States Government is such that it has a reserve under which expenditures can be expanded?

Mr. CLARK. It is my judgment that it has an enormous untapped reserve. It is for that reason I have said consistently, in view of our great national needs, that President Eisenhower's budget perhaps is not large enough.

SEVERAL SENATORS. Vote! Vote! Vote!

Mr. LAUSCHE. Mr. President, I ask for the floor.

The PRESIDING OFFICER. The Senator from Ohio is recognized.

Mr. LAUSCHE. I have been listening to the arguments here all day long. With respect to every subject the argument has been made, very appealingly and sympathetically, that the resources back home are gone, the colleges cannot finance the program, the citizens cannot rent or buy homes, the local governments are broke. Then the further argument is made that when it comes to the State governments, the State governments have exhausted their resources, so therefore resort must be had to the Federal Government.

We have done a reasonably good job with this housing bill, but it still portrays the proposition that we all believe the resources of the Federal Government are unlimited.

I wish to invite the attention of the Senate to the fact that when townships, counties, cities, villages, and States say, "We have no more resources left and the United States Government must take care of us," we are in a pretty precarious position.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. WILLIAMS. I congratulate the Senator from Ohio on his timely remarks. On the principle that the United States Government can take care of everybody I ask, Where is the United States Government going to get the money?

Is it not true that we are going to get the money from the same taxpayers and same communities which say they do not have it? In other words, if the United States Government appropriates $500 million, and if the people of the State of Pennsylvania pay about 10 percent of all the revenues which come to the Government, what is the situation? Fifty million dollars would be coming from the same citizens who say they are broke. Can they not tax themselves to some extent and pay their own expenses?

Mr. LAUSCHE. I am delighted the Senator from Delaware asked that question. I have no hesitation in answering that the Central Government in Washington is making representations that "We will give you money back home and no one will have to pay taxes."

Mr. CLARK. Mr. President, will the Senator yield?

Mr. LAUSCHE. That is exactly what it means.

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Pennsylvania?

Mr. LAUSCHE. Not now. I will yield in a moment.

I think we might as well recognize the fact that we should not boast about the saving of $40 million or $50 million allocated to one department, and then proceed to spend a billion dollars. I think we should also recognize the fact that through our conduct in Washington we have misled the people into believing that when Washington gives the money no one has to pay the taxes. That is the argument which has been advanced here all day long. Everybody is broke but Washington. I ask Senators. When will Washington be broke?

Today I heard from a distinguished newspaperman, who said that he would wager with me today that the value of the American dollar 10 years from now will be only 15 cents. I think that is something we ought to begin pondering about.

Mr. CLARK. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Pennsylvania?

Mr. LAUSCHE. I yield to the Senator from Pennsylvania.

Mr. CLARK. Very briefly, I do not desire to have the Senate vote on this question without having an answer made to the, to my mind, extraordinary statement made by my good friend, the Senator from Delaware, a minute ago, when he said that the same people in Pennsylvania and Philadelphia—and particularly Philadelphia—who are paying these taxes, are involved. I should like to point out to my friend, the Senator from Delaware, that the city of Philadelphia has no corporation tax it can levy, no graduated income tax it can levy, and it cannot collect customs receipts and cannot collect excise taxes. The city of Philadelphia is certainly not tapping the same tax sources as the Federal Government, because the Federal Government gets money from the graduated income tax, from the corporate taxes, from excise taxes, and customs receipts.

With all due deference to my very good friend, the Senator from Delaware, what the Senator is suggesting is that the burden shall be lifted from those who can afford to carry it and put on the backs of those who cannot.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. WILLIAMS. It is a statistical fact that 10 percent of all the revenue of the United States Government comes from the taxpayers of the State of Pennsylvania. Whether the Senator from Pennsylvania likes that or not, 10 percent of all he votes for in any appropriations comes from the State of Pennsylvania.

For instance had the amendment offered by the Senator from Tennessee last night passed—and I believe you supported it—it would have added an extra $2 billion of the cost of the bill. This would have cost your State of Pennsylvania $200 million out of the $2 billion.

Let us get this straight. The same people are paying the taxes, whether they pay them in Philadelphia, Pittsburgh, Wilmington, or whether they pay for the projects through the Federal Government. The United States Government has access to no mysterious source of income. All the money we can spend comes directly or indirectly from the taxpayers of the various States, whether it is from the Senator's State or my State.

I agree fully with the Senator from Ohio that we are giving the people nothing; we are only giving back to them some of the same money we are taking out of their tax pockets, and giving it back to them minus the political brokerage or the cost of the bureaucracy in Washington.

Mr. LAUSCHE. I thank the Senator from Delaware.

May I say, while we are doing that, we are impairing our ability to cope with the international and defense problems.

SEVERAL SENATORS. Vote! Vote! Vote!

Mr. LAUSCHE. I think we have a sufficient problem in trying to stay militarily strong.

I should like to say one more word. I think I can speak on this subject, since I was mayor of a city. We have been good to the municipalities in this housing bill. The mayors, of course, want the State governments and the Federal Government to help share their burden. We should do it to a reasonable degree, but we come to a breaking point.

In my judgment we will have efficiency and economy if we require them to pay 33 percent. If we reduce it to 25 percent this year, next year we will reduce it to 12 percent and the following year to nothing.

SEVERAL SENATORS. Vote! Vote! Vote!

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah [Mr. BENNETT] as modified. On this question the yeas and nays have been ordered.

Mr. BENNETT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BENNETT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment offered by the Senator from Utah, as modified. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. JOHNSON of Texas. I announce that the Senator from Virginia [Mr. BYRD], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Washington [Mr. MAGNUSON], the Senators from Montana [Mr. MANSFIELD and Mr. MURRAY], the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. NEELY], and the Senator from North Carolina [Mr. SCOTT] are absent on official business.

On this vote the Senator from Virginia [Mr. BYRD] is paired with the Senator from New Mexico [Mr. CHAVEZ]. If present and voting, the Senator from Virginia would vote "yea," and the Senator from New Mexico would vote "nay."

I further announce, if present and voting, the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Michigan [Mr. MCNAMARA], the Senator from Montana, [Mr. MURRAY], the Senator from West Virginia [Mr. NEELY], and the Senator from North Carolina [Mr. SCOTT] would each vote "nay."

Mr. DIRKSEN. I announce that the Senator from Vermont [Mr. AIKEN], the Senators from New Hampshire [Mr. BRIDGES and Mr. COTTON], the Senator from Nebraska [Mr. HRUSKA], the Senator from South Dakota [Mr. MUNDT], and the Senator from Massachusetts [Mr. SALTONSTALL] are absent on official business.

The Senator from Vermont [Mr. FLANDERS], the Senator from Connecticut [Mr. PURTELL], the Senator from New Jersey [Mr. SMITH], and the Senator from North Dakota [Mr. YOUNG] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

If present and voting, the Senators from New Hampshire [Mr. BRIDGES and Mr. COTTON], the Senator from Vermont [Mr. FLANDERS], the Senator from Nebraska [Mr. HRUSKA], the Senator from South Dakota [Mr. MUNDT], the Senator from Maine [Mr. PAYNE], the Senator from Massachusetts [Mr. SALTONSTALL], and the Senator from New Jersey [Mr. SMITH] would each vote "yea."

The result was announced—yeas 38, nays 32, as follows:

YEAS—38

Allott	Dworshak	Potter
Anderson	Frear	Revercomb
Barrett	Goldwater	Robertson
Bennett	Hickenlooper	Russell
Bricker	Holland	Schoeppel
Bush	Kerr	Stennis
Butler	Knowland	Talmadge
Capehart	Kuchel	Thurmond
Carlson	Lausche	Thye
Case, S. Dak.	Malone	Watkins
Cooper	Martin, Iowa	Wiley
Curtis	Martin, Pa.	Williams
Dirksen	Morton	

NAYS—32

Beall	Case, N. J.	Douglas
Bible	Church	Ellender
Carroll	Clark	Fulbright
Gore	Johnston, S. C.	O'Mahoney
Hayden	Kefauver	Pastore
Hill	Kennedy	Smathers
Humphrey	Long	Smith, Maine
Ives	McClellan	Sparkman
Jackson	Monroney	Symington
Javits	Morse	Yarborough
Johnson, Tex.	Neuberger	

NOT VOTING—25

Aiken	Hennings	Neely
Bridges	Hruska	Payne
Byrd	Jenner	Purtell
Chavez	Langer	Saltonstall
Cotton	Magnuson	Scott
Eastland	Mansfield	Smith, N. J.
Ervin	McNamara	Young
Flanders	Mundt	
Green	Murray	

So Mr. BENNETT's amendment, as modified, was agreed to.

Mr. CAPEHART. Mr. President, I move that the vote by which the amendment was agreed to be reconsidered.

Mr. KNOWLAND. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER (Mr. FREAR in the chair). The question is on agreeing to the motion of the Senator from California.

The motion to lay on the table was agreed to.

Mr. HUMPHREY. Mr. President, I send an amendment to the desk and ask for its present consideration.

The PRESIDING OFFICER. The clerk will state the amendment.

The LEGISLATIVE CLERK. On page 19, between lines 16 and 17, it is proposed to insert the following:

SEC. 104. Section 203 of the National Housing Act is further amended by adding at the end thereof the following new subsection:

"(j) The Commissioner, in order to avoid abuses in connection with the insurance of mortgages under subsection (b) of this section, may in his discretion (1) establish a maximum sales price for any property covered by such a mortgage, (2) issue a certificate setting forth the price so established for such property, and (3) require as a condition of eligibility for insurance that the price for which such property is being sold shall be not in excess of the price so established."

The PRESIDING OFFICER. The Senator from Minnesota.

Mr. SPARKMAN. Mr. President, will the Senator from Minnesota yield?

Mr. HUMPHREY. I am very glad to yield.

Mr. SPARKMAN. Mr. President, with respect to this amendment I have consulted with the ranking minority member of the Committee on Banking and Currency, the Senator from Indiana [Mr. CAPEHART], who is temporarily absent from the Chamber. Both of us have agreed that, so far as we are concerned, we are willing to take the amendment to conference. A similar amendment is not included in the House bill, and this is clearly discretionary, as I understand.

Mr. HUMPHREY. The Senator is correct.

Mr. SPARKMAN. We are willing to take it to conference.

Mr. HUMPHREY. It permits the Commissioner to have the authority, if he needs it.

I ask unanimous consent to have printed in the RECORD at this point an explanatory statement of the amendment.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

This amendment would authorize the FHA Commissioner, in his discretion, to establish the maximum sales price for an FHA-insured loan if he finds such action necessary to prevent price gouging. I believe that this authority is essential. Under present law, the only limitation is upon the maximum mortgage which FHA will insure, and there is no control on the sales price which the builder or seller may charge. Your committee recognizes that a provision of law requires that the buyer be furnished with a copy of the FHA valuation of the property and that this procedure introduces some measure of restraint upon the builder's pricing policy.

The Senate has already amended the bill to substantially lower the downpayment requirements. We should also be concerned over the possible consequences which might arise unless the FHA Commissioner is given authority to exercise restraint on sales prices. Where the downpayment required of a home buyer is very small in relation to the total sales price, there may be an understandable temptation in some cases for the builder or seller to raise the price above FHA's valuation. Such an increased price would increase the downpayment correspondingly, and I am fearful that there might be a temptation to vary the price depending upon the seller's estimate as to the downpayment which a particular buyer could muster.

I want to emphasize that the reasonable value control, now mandatory under the GI-loan program, has been signally successful in protecting veterans from paying an unfair price, and I believe that similar authority should be carried over into the FHA program, now that we have reduced downpawments to such an extent. The authority of the FHA Commissioner is discretionary, and the FHA Commissioner would not have to exercise his authority unless actual operation under the program clearly indicated the need of such action to protect home buyers.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Minnesota [Mr. HUMPHREY].

The amendment was agreed to.

The PRESIDING OFFICER. The committee amendment is open to further amendment. If there be no further amendment to be proposed, the question is on agreeing to the committee amendment, as amended.

The committee amendment, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time.

Mr. JOHNSTON of South Carolina. Mr. President, I should like to ask three questions of the Senator from Alabama. Will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. JOHNSTON of South Carolina. What provision is contained in the bill to insure that moneys voted to the Federal National Mortgage Association will go to new houses, rather than to buy up old mortgages from lending institutions?

Mr. SPARKMAN. There is a policy in the Federal National Mortgage Associa-

tion today—and I know of no desire or intent to change it—under which mortgages more than 4 months old are not purchasable.

Mr. JOHNSTON of South Carolina. Is it not true that in the past the Federal National Mortgage Association has taken new money authority given it and used the money to buy up old mortgages held by lending institutions, and thereby deprived the housing industry of the new money?

Mr. SPARKMAN. That may have been true some time back, but it has not been true in recent years. I do not know just how long the present policy has been in effect, but it has been for some time.

Mr. JOHNSTON of South Carolina. In a sense, is this not a roundabout way of freeing more money for lending institutions to put into high interest rate investments, while the housing industry is deprived of money?

Mr. SPARKMAN. We decided that the procedure which is being followed at the present time is the proper procedure. We have had the officials of the Federal National Mortgage Association before our committee. The arrangement to which I referred a moment ago was worked out, more or less, between our committee and the Federal National Mortgage Association, because we felt the greatest amount of good would be accomplished in that way.

Mr. JOHNSTON of South Carolina. Does this bill contain a guarantee against the purchase of mortgage inventories?

Mr. SPARKMAN. There is nothing in the bill to that effect. However, we have, as the Senator knows, a standing subcommittee which stays in touch with the housing situation at all times. Should the Federal National Mortgage Association change the present procedure, the Senator may be assured that we would have them before us for a reckoning.

Mr. JOHNSTON of South Carolina. Therefore, it is the intention of the chairman, as I understand, in urging the passage of the bill, to protect the people and give them a right to construct new buildings?

Mr. SPARKMAN. The Senator is correct.

The PRESIDING OFFICER. The bill having been read the third time, the question is on its passage. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. JOHNSON of Texas. I announce that the Senator from Virginia [Mr. BYRD], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Washington [Mr. MAGNUSON], the Senators from Montana [Mr. MANSFIELD and Mr. MURRAY], the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. NEELY], and the Senator from North Carolina [Mr. SCOTT] are absent on official business.

I further announce, on this vote the Senator from Virginia [Mr. BYRD] is paired with the Senator from New Mexico [Mr. CHAVEZ]. If present and voting, the Senator from Virginia would vote "nay," and the Senator from New Mexico would vote "yea."

I also announce, if present and voting, the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Washington [Mr. MAGNUSON], the Senators from Montana [Mr. MANSFIELD and Mr. MURRAY], the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. NEELY], and the Senator from North Carolina [Mr. SCOTT], would each vote "yea."

Mr. DIRKSEN. I announce that the Senator from Vermont [Mr. AIKEN], the Senators from New Hampshire [Mr. BRIDGES and Mr. COTTON], the Senator from Nebraska [Mr. HRUSKA], the Senator from South Dakota [Mr. MUNDT], and the Senator from Massachusetts [Mr. SALTONSTALL] are absent on official business.

The Senator from Vermont [Mr. FLANDERS], the Senator from Connecticut [Mr. PURTELL], the Senator from New Jersey [Mr. SMITH], and the Senator from North Dakota [Mr. YOUNG] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

If present and voting, the Senator from Vermont [Mr. AIKEN], the Senator from New Hampshire [Mr. BRIDGES], the Senator from Vermont [Mr. FLANDERS], the Senator from Nebraska [Mr. HRUSKA], the Senator from Maine [Mr. PAYNE], the Senator from Connecticut [Mr. PURTELL], and the Senator from Massachusetts [Mr. SALTONSTALL] would each vote "yea."

On this vote the Senator from New Jersey [Mr. SMITH] is paired with the Senator from South Dakota [Mr. MUNDT]. If present and voting, the Senator from New Jersey would vote "yea," and the Senator from South Dakota would vote "nay."

The result was announced—yeas 69, nays 1, as follows:

YEAS—69

Allott	Goldwater	Monroney
Anderson	Gore	Morse
Barrett	Hayden	Morton
Beall	Hickenlooper	Neuberger

Mundt	Saltonstall	

So the bill (H. R. 6659) was passed.

Mr. SPARKMAN. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized and directed to make all necessary clerical and technical changes, including changes in section numbers and cross references, in the engrossed amendment to the bill (H. R. 6659) to amend the National Housing Act, as amended, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPARKMAN. Mr. President, I ask unanimous consent that the bill be printed as a separate bill and that the amendments be numbered.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPARKMAN. Mr. President, I move that the Senate insist on its amendment, request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the presiding officer (Mr. FREAR in the chair) appointed Mr. FULBRIGHT, Mr. SPARKMAN, Mr. DOUGLAS, Mr. MONRONEY, Mr. CLARK, Mr. CAPEHART, Mr. BRICKER, Mr. BENNETT, and Mr. BUSH conferees on the part of the Senate.

Mr. JOHNSON of Texas. Mr. President, I express my deep gratitude to and my great admiration for the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Alabama [Mr. SPARKMAN], the Senator from Indiana [Mr. CAPEHART], and the Senator from Ohio [Mr. BRICKER] for the very excellent work they have done on the bill. While we have had differences of opinion, I think the overwhelming vote by which the housing bill passed is evidence that men of different views can resolve their conflicts in this Chamber.

I deeply appreciate the time which those Senators and the other members of the Committee on Banking and Currency have spent on this far-reaching piece of proposed legislation. I think the bill is very necessary. I think excellent work has been done. I predict that the committee of conference will be able to resolve the differences between the two bodies; and I hope that at an early date we will have on the way to the White House a housing bill of which all of us can be proud.

I am especially grateful to the Chairman of the Committee on Banking and Currency, the Senator from Arkansas [Mr. FULBRIGHT], and to the chairman of the subcommittee, the Senator from Alabama [Mr. SPARKMAN], for their cooperation with the leadership at all times.

I include in my expression of gratitude the minority members of the committee, the Senator from Indiana [Mr. CAPEHART] and the Senator from Ohio [Mr. BRICKER], and the other Senators with whom I had to deal yesterday and today.

The PRESIDING OFFICER (Mr. FREAR in the chair). The occupant of the chair would like to call the attention

of the Senator from Texas the fact that he is a member of the committee.

Mr. JOHNSON of Texas. The occupant of the chair has been very helpful to the Senator from Texas on many occasions, but on none more so than during the past two evenings.

Mr. FULBRIGHT. Mr. President, I call attention to the fact that in working out the compromise with the Senator from Indiana and the Senator from Ohio, the distinguished majority leader, of course, took the lead, as he usually does, in bringing us together, and was able to provide the solvent which resolved most of the differences.

Certainly if anyone deserves credit for the bill, it is the majority leader and, I may say, the chairman of the subcommittee. The chairman of the full committee deserves a very small part of the credit.

Mr. SPARKMAN. Mr. President, I first wish to express a word of appreciation for what has been said; but I think it might be appropriate at this time, because undoubtedly there will be inquiries relating to veterans' housing, to point out that the bill which has just been passed contains no provision for veterans' housing.

Our committee intends to begin work immediately on proposed veterans' housing legislation. A bill which has already passed the House is now before our committee. It is our purpose to begin work on it in the very near future.

Mr. JOHNSON of Texas. The Senator from Alabama knows of my very deep interest in the bill which has already been introduced, and he may be assured of my very complete cooperation.

ANNOUNCEMENT OF PUBLIC HEARING ON OIL INVESTIGATION REPORT

Mr. O'MAHONEY. Mr. President, I desire to announce that at 10 o'clock in the morning on June 7, 1957, the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary will hear a report of the staff members who served in conducting the oil investigation. This will be a new procedure, because it will afford to the public an opportunity of observing the presentation by expert members of the staff of the analysis of the testimony which was given publicly and received as a result of subpenas issued by the committee.

This will be an important hearing. After the presentation of the summary of the facts by the members of the staff, the committee will then draw its own conclusions and will make its own recommendations and report. I may say that the Subcommittee on Public Lands of the Committee on Interior and Insular Affairs will participate in the hearing.

At this session, there will be revealed to the public the manner in which the Committee on the Judiciary, ordinarily in executive sessions, receives the reports of its expert staff members after their study of the bills to be considered by the committee.

The analysis of the testimony presented at the hearings will be presented by the staff members, headed by Donald P. McHugh. Besides Mr. McHugh, the staff members who will testify at the open hearing on June 7 are Gareth M. Neville and Louis Rosenman, legal consultants, and Paul H. Banner, economist.

AUTHORIZATION FOR COMMITTEE TO FILE REPORT

On motion of Mr. JOHNSON of Texas, and by unanimaus consent, it was

Ordered, That the Senator from Arkansas [Mr. MCCLELLAN] be authorized to submit on Friday next a report of the Special Committee To Investigate Political Activities, Lobbying, and Campaign Contributions, as required by Senate Resolution 219, 84th Congress, as amended.

HELLS CANYON DAM

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement I have prepared bringing up to date certain pertinent and important aspects of the Hells Canyon controversy. The facts underlying the statement tend to support many of the contentions emphasized in my special separate report submitted with the Hells Canyon bill from the Committee on Interior and Insular Affairs.

I also ask unanimous consent that some timely newspaper articles written by A. Robert Smith be printed along with my statement, together with correspondence between the White House and the seven Democratic Members of the Senate from the Pacific Northwest.

There being no objection, the statement, newspaper articles, and correspondence were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR NEUBERGER

In a letter from the White House, dated May 25, the fact again has been exposed that the administration is still playing a fast and loose shell game with the water resources of the Columbia River Basin.

The incredible confusion of administration policy for Columbia Basin power and flood-control development was laid bare in a letter sent to me in answer to a request by the seven Pacific Northwest Democratic Senators for a personal interview with President Eisenhower on the Hells Canyon issue. On May 8, we addressed a letter to the President asking for a conference because of our belief that action of administration agencies indicated chaotic conflict over a program for use of Columbia Basin resources. We sought the meeting as a last desperate plea to the President of our country to help us save the finest remaining waterpower site in North America.

We asked for a personal interview; instead we have received a reply from one of the President's aids telling us that such a meeting would be premature. I was amazed to learn from an assistant of the President that it was premature for the President to discuss Hells Canyon Dam with seven Democratic Senators in May of 1957. I say this, Mr. President, because I am sure my colleagues will recall that it was not premature for the White House to call any wavering Republican Senators on the telephone when the Hells Canyon bill was up for a vote in July of 1956.

Rather than indicating that our meeting would be premature, the content of the letter from the White House graphically illustrates the immediate need for such a session so that the President can be set straight on what is being done to the water resources of the second largest river system in the Nation. The letter made it obvious that the President should be alerted forthwith as to how present policies threaten our Nation's greatest reservoir of waterpower, how agencies under his jurisdiction are laying a blueprint for systematic destruction of major outdoor recreational assets of the Pacific Northwest.

The reasons advanced by this White House aid as grounds for rejecting the conference simmer down to the essential fact that the White House advocates certain dams as alternatives to Hells Canyon Dam. But these are phantom alternatives—dams which cannot be built at present because of international conflicts with Canada, dams which would blockade our region's greatest runs of migratory fish, dams which would intrude artificial reservoirs into wilderness sanctuaries which have thus far been protected from commercial despoiliation. The letter is nothing more than the old shell game carried on by this administration since 1953 in an effort to cover up a betrayal of the public interest in relinquishment of the Hells Canyon site to the Idaho Power Co.

So that the Senate may know of the exchange of correspondence between the Democratic Senators from the Pacific Northwest and the White House, I ask unanimous consent to include in the RECORD at this point the letter sent to the President on May 8, an acknowledgement from the White House on May 10, and the letter from the President's Administrative Assistant, dated May 25. The letters follow:

UNITED STATES SENATE,
COMMITTEE ON INTERIOR
AND INSULAR AFFAIRS,
May 8, 1957.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Resumption of the Federal program for development of Columbia River water resources is of paramount concern to the people of the States which we represent. Need for greater Federal participation in providing flood control, navigation, irrigation, and hydroelectric power facilities has been reflected in the mandate from the electorate of Pacific Northwest States.

Recent action of administrative agencies concerned with water-resource policy indicates widespread confusion as to objectives and means of implementing a full and comprehensive program for use of Columbia Basin resources. This administrative breakdown is especially evident in connection with the Hells Canyon reach of the Snake River. Although the Federal Power Commission has licensed a private company to build 3 dams in Hells Canyon, the Department of the Interior has proposed a high storage dam which would flood out 1 and possibly 2 of these units. The staff of the Federal Power Commission has recommended construction of another project which would be impossible to construct if the Interior Department proposal were approved. A third agency, the Corps of Engineers, has disclosed plans for a complete restudy of the Middle Snake River, including the Hells Canyon section. The inconsistency and irreconcilability of these conflicting proposals is evident.

Because of this chaotic situation and because of the basic conservation principles involved in proper use of the Hells Canyon area, we urgently request a conference with you at the earliest convenient date so that we may present to you the views of our constituents prior to the time that further congressional action is taken on a bill to authorize a high Federal dam at Hells Canyon. We believe that such a meeting would have beneficial results in restoring the hopes of the people of the Pacific Northwest that

their precious water resources will not continue to be needlessly and recklessly wasted.

Respectfully,

JAMES E. MURRAY,
WARREN G. MAGNUSON,
MIKE MANSFIELD,
RICHARD L. NEUBERGER,
WAYNE L. MORSE,
HENRY M. JACKSON,
FRANK CHURCH,
United States Senators.

THE WHITE HOUSE,
Washington, May 10, 1957.

The Honorable RICHARD L. NEUBERGER,
United States Senate,
Washington, D. C.

DEAR SENATOR NEUBERGER: For the President, this will acknowledge your May 8 letter, cosigned by several of your colleagues, requesting a conference with the President on our water-resource policy. I can assure you that a further reply will be forthcoming at an early date.

Kind regards.

Sincerely yours,

JACK Z. ANDERSON,
Administrative Assistant to the President.

THE WHITE HOUSE,
Washington, May 25, 1957.

The Honorable RICHARD L. NEUBERGER,
United States Senate,
Washington, D. C.

DEAR SENATOR NEUBERGER: The President has asked me to send you this further reply to your May 8 letter, cosigned by six of your western colleagues. After careful consideration of your request for a conference on water-resources development in the Columbia Basin the President asked me to say that he believes such a meeting would be premature at this time.

The policy of this administration regarding Federal construction of Hells Canyon Dam was set forth clearly on February 4, 1955, when the President informed five of the Northwest Senators that: "I do not believe the administration should determine the issue in advance of the decision of the Federal Power Commission."

Congress empowered the FPC, as an independent and bipartisan administrative agency, to determine what "will be best adapted to a comprehensive plan" for the development of our navigable rivers. The FPC unanimously decided that the project proposed by the Idaho Power Co. was "best adapted to a comprehensive plan for improving or developing a waterway for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes."

Now that the opinion of the Commission in the Hells Canyon matter has been sustained by the courts, we hope that the Congress and all agencies of the executive branch will join together to seek solutions which confront the Columbia River Basin as a whole.

With respect to your comments concerning the "objectives and means of implementing a full and comprehensive program for use of Columbia Basin resources," the Corps of Engineers is reviewing its original "308" report on the Columbia Basin. The proposed project for Glacier View has, apparently, been rejected. The Corps now plans, I am informed, to consider recommending construction of a project with 5,010,000 acre-feet of storage at the Libby Dam site, instead of 4,250,000 as originally proposed. In addition, the Bruces Eddy and Penny Cliffs projects on the Clearwater are now under consideration by the Corps of Engineers. These projects would add 3,700,000 acre-feet for flood-control purposes. The Department of the Interior is cooperating with the Corps of Engineers in the latter's general restudy of this basin.

Furthermore, the Department of the Interior is making a detailed study preparatory to a final feasibility report on the Pleasant Valley project. The detailed analysis of this project is complementary to the study being made by the Corps. Interior's role involves the complete evaluation of all facets of the proposed projects, including the effect upon the fisheries resources of the Columbia in the event the Nez Perce Dam were to be constructed.

In this connection, I understand that an FPC staff study indicates the desirability of construction of a dam at the Nez Perce site because the Salmon River, which the FPC found in the Idaho Power Co. opinion to be one of the "two principal flood producing streams in the Snake River Basin," is presently unregulated.

You may be sure that this administration has been and will be insistent that all development of our water resources shall conform to the principle of the comprehensive development for the best and wisest use of river basin resources. It was for this reason that the Secretary of the Interior proceeded expeditiously to secure a detailed feasibility study of the proposed Pleasant Valley Dam site so as to to determine the advisability of the construction of a multipurpose (flood control, navigation, and power) project in lieu of that proposed in the license application pending before the FPC for development of the Pleasant Valley site.

Sincerely yours,

JACK Z. ANDERSON,
Administrative Asistant to the President.

The White House letter quotes a February 4, 1955, statement of the President that "I do not believe the administration should determine the (Hells Canyon) issue in advance of the decision of the Federal Power Commission." But the letter fails to mention that the administration had already shaped the outcome of that decision by appointment of a majority of members to the Federal Power Commission, a commission headed by a former aid of the Governor of the State of Washington, who was an outspoken supporter of the Idaho Power Co. dams.

Then, the White House letter mentions that the "opinion of the Commission in the Hells Canyon matter has been sustained by the courts." But the White House makes no mention of the fact that it was the President's Attorney General—not the Idaho Power Co. but Mr. Herbert Brownell—who went before the Supreme Court of the United States to insist that the action of the Federal Power Commission in the Hells Canyon case was not of sufficient importance to warrant consideration of the Nation's highest tribunal.

These attempts to obscure the role of the White House in jettisoning of the Hells Canyon project would be less open to criticism if it were not for the fact that the White House letter dangled a proposed Pleasant Valley study on the Pleasant Valley project as an alternative for Hells Canyon Dam. I was shocked by the assertion that "The Department of the Interior is making a detailed study preparatory to a final feasibility report on the Pleasant Valley project," because the course of events indicates the lack of substance in this proposal. It is another phantom alternative to Hells Canyon.

The White House must be aware that a combination of four Pacific Northwest power companies seek licenses to build dams in the Pleasant Valley area. They must also be aware of the fact that the Secretary of the Interior had an opportunity to oppose the issuance of licenses for those dams which would be mutually inconsistent and in conflict with the purposes of a Federal dam at Pleasant Valley. But, in a letter to the Federal Power Commission regarding the license applications of the companies, the Secretary of Interior made no objection to licensing of the dams which would make the proposed Federal project at Pleasant Valley impossible. The true meaning of the Secretary's letter was exposed in an article in the Denver Post of February 15, 1957, which said:

"Both Kuykendall and Seaton's top aids concede that his letter carried no legal weight. It is not in the record, upon which the FPC will base its Pleasant Valley decision, because the record closed 2 months earlier.

"Nor does Seaton's letter withdraw the Aandahl letter, which is in the record saying the Interior Department has no objection to the Pacific Northwest Power Co. license. Finally, Seaton's letter did not ask the FPC to delay its decision, expected sometime this summer, while Interior completes its high Pleasant Valley Dam studies, expected no earlier than November or December."

The failure of the Secretary to protect his proposed project attracted the attention of another newspaperman, Mr. A. Robert Smith, the Washington correspondent of the Oregonian, in Portland, Oreg. In a series of articles, Mr. Smith told how FPC Chairman Kuykendall, alarmed that Secretary Seaton's Federal Pleasant Valley proposal would adversely affect the licensing of Idaho Power's Hells Canyon dams and Pacific Northwest Power Co.'s licenses for dams further downstream, "took his protest straight to Sherman Adams, President Eisenhower's chief of staff." A few days later, the Secretary's letter to the FPC was made public. It was, as The Oregonian articles related, completely meaningless.

Mr. Smith wrote: "To avoid any public reversal of a Cabinet member, he (Secretary Seaton) was permitted to send a letter which could easily be ignored."

In another article, Mr. Smith wrote that "The White House has quietly turned thumbs down on the proposal for building a high dam at Pleasant Valley site on the Snake River, according to well-informed sources."

Yet, the White House now represents to Members of the Senate that a study is now going on in good faith for a Federal dam at Pleasant Valley site. All of the evidence points to the fact that this is another phase of the old shell game, dangling of a phantom alternative for Hells Canyon which has no hope of becoming a reality.

I ask consent to include at this point in my remarks the articles from the Oregonian, detailing how the Chairman of the Federal Power Commisison maneuvered through the White House to protect the licenses of the Idaho Power Co. at Hells Canyon by short-circuiting Secretary Seaton's proposal for a high dam at Pleasant Valley. Mr. Seaton's proposed high Pleasant Valley Dam would flood out one or more of the licensed Idaho Power Co.'s projects, and would conflict with the licenses of the four Northwest companies seeking to take over another section of the Snake River for inadequate development.

"HOW KUYKENDALL OUTMANEUVERED SEATON

"(By A. Robert Smith)

"WASHINGTON.—A relatively unknown Olympia attorney 4 years ago, James K. Kuykendall has now emerged as a formidable figure in the Eisenhower administration as chairman of the Federal Power Commission. He has demonstrated his political muscle by successfully mousetrapping a member of the President's cabinet on what was probably the most significant decision for the Pacific Northwest since the administration backed away from a high Hells Canyon dam.

"In a test of strength with Secretary of Interior Fred A. Seaton over a proposal for a high Pleasant Valley dam, Kuykendall has won hands down by getting the White House to take his side. There will be no high Pleasant Valley dam, it now appears certain.

"When Seaton shot off a strong letter to Kuykendall many weeks ago asking for a delay in FPC action on the application of Pacific Northwest Power Co., Kuykendall took his protest straight to Sherman Adams, President Eisenhower's chief of staff.

"This was more than an academic matter of whose will would prevail; Kuykendall was probably laying his political life on the line. His term expires June 30, and his chances for reappointment to a new 5-year term would not have been enhanced by picking a fight that he could not win.

"In crossing swords with Seaton, Kuykendall was engaging an old pro of the political fights that are settled on the White House grounds, for Seaton was promoted into the Cabinet from the position of deputy assistant to the President, one notch below Sherm Adams.

"But the usually mild mannered, pleasant Washington State lawyer had the better of it psychologically when he precipitated the crisis. Seaton had made the mistake—probably a calculated risk on his part—of publicly announcing his proposal for a high dam without getting advance approval from the President or Adams. Seaton's probable calculation was that if he took this formally to the Cabinet, thereby giving it the prestige of a major policy decision, he might get turned down before his idea was off the ground. At an earlier postelection Cabinet meeting reportedly the President had declared there would be no power policy changes.

"On a nationally televised Sunday interview program on inauguration eve, Seaton floated his proposal publicly for the first time. While editorial writers in the Pacific Northwest were greeting the news with acclaim, the White House greeted it by calling Seaton on the carpet.

"So when Kuykendall showed up with Seaton's strong letter in behalf of the high dam, the White House heavily blue penciled it, deleting the heart of his proposal. To avoid any public reversal of a Cabinet member, he was permitted to send a letter which could easily be ignored.

"And that is just what Kuykendall, with the full support of the Commission and the White House, has now done with the meaningless Seaton letter. As the quiet spoken Dutchman from Olympia tells the visitor, the Commission doesn't like Cabinet members butting into what the FPC regards as its own affair.

"It's a rare day in the Washington power struggle that the head of what is supposedly an independent Commission takes on a high member of the President's official family. It's rarer when he wins so significantly.

"The clash, of course, was basically over the controversial 'partnership' power policy which Kuykendall could contend would be violated by Seaton's proposal, especially since a high dam would flood out the Hells Canyon site already licensed by the FPC to a private utility. The consequential fact is that in siding with Kuykendall, the White House wanted no part of a modification of the power policy."

"WHITE HOUSE OPPOSED TO HIGH DAM ON SNAKE

"(By A. Robert Smith)

"WASHINGTON.—The White House has quietly turned thumbs down on the proposal for building a high dam at Pleasant Valley site on the Snake River, according to well-informed sources.

"This top level decision, taken weeks ago but never publicly announced, carries multiple significance:

"1. It quashes the effort of Secretary of the Interior Fred A. Seaton to have a high Pleasant Valley project built where a combine of 4 northwest private power companies hopes to build a lower dam.

"2. It conforms generally with the administration policy set 4 years ago of nonsupport for a High Hells Canyon Dam in that stretch of the Snake River where Idaho Power Company wanted to build smaller projects, and is now building the first of these.

"3. It demonstrates that the Eisenhower administration is sticking rigidly to the controversial "partnership" power policy by which local utilities are encouraged to build dams at sites once earmarked for Federal development.

"Serious consideration of a high Pleasant Valley Dam began among top officials at the Interior Department in November when the Bureau of Reclamation completed a preliminary survey ordered by Seaton last fall. On January 20 Seaton publicly announced in favor of the high dam, saying he would ask the Federal Power Commission to delay any decision in the pending Pleasant Valley-Mountain Sheep case until Interior engineers could compile complete geological data on the feasibility of the project. He estimated it might take another year to do this.

"SEATON CHANGES COURSE

"But since then, Seaton has never carried out this intention in the forthright manner in which he said he would inject the high-dam proposal into the FPC proceedings. He did write a letter, but it made no request and it has been virtually ignored by the FPC.

"The reason for Seaton's failure to carry through with his plan, informed sources report, is that after his announcement of January 20, made on a network television program and amplified later to this reporter, the following sequence of events took place within the administration:

"Seaton drafted a letter to the FPC Chairman, Jerome K. Kuykendall, to carry out his expressed intention to act in behalf of a high dam. Kuykendall was apprised of the contents of Seaton's letter and went to the White House to protest this action by the Interior Secretary.

"SECRETARY LET DOWN

"Kuykendall's action precipitated what theretofore had not been made—an administration policy decision respecting Seaton's Pleasant Valley idea. Seaton, in a word, had not cleared his January 20 announcement with the White House. He had not taken up the question in the Cabinet.

"The consequence was that the White House turned thumbs down on Seaton's idea, and the Secretary had to tear up the letter he had wanted to send Kuykendall. But having publicly announced he was going to do something, Seaton was permitted to send to the FPC a letter so worded that it could be variously interpreted and perhaps save Seaton the public embarrassment of being reversed openly by the White House on an important policy matter.

"The letter sent to Kuykendall was released February 15 when Seaton was en route to Hawaii. Aids said it could be interpreted to mean the Secretary was asking for a delay, although no such request was made. When it was received, Kuykendall said he found in it no request for a delay. This week he amplified this in an interview, saying 'the Commission does not consider that the letter from the Secretary of the Interior has any legal effect, substantially or procedurally.' He added: 'The Commission does not intend to alter in any way its normal course of procedure in handling the Mountain Sheep-Pleasant Valley application of the Pacific Northwest Power Co.'

"FPC DECISION NEAR

"Kuykendall said an estimate that a decision in the company's case will be ready by late summer was not unreasonable. (Final briefs are now being awaited by the examiner who presided over the hearings which ended in December.) The Interior Department estimates it won't have its data compiled on a high dam until next January 1, months after the FPC decision is expected to be rendered."

I do not know why the White House letter has sought to misrepresent what is being done in regard to plans for Columbia Basin development. There is nothing to substantiate the claim of the White House that the Secretary of the Interior proceeded expeditiously to secure a detailed feasibility study of the proposed Pleasant Valley dam site so as to determine the advisability of the construction of a multipurpose project in lieu of that proposed in the license application pending before the FPC for development of the Pleasant Valley site. Congress has the right to expect an adequate explanation of the difference between what is being done by agencies of the executive department in regard to Snake River water resources, and the facade which is being given to these adverse actions by White House pronouncements. I hope that the President will reconsider our request for an immediate conference on this vital issue.

COLUMBIA BASIN DEVELOPMENT

Mr. MORSE. Mr. President, my colleague earlier today discussed a joint letter which a number of Democratic Senators from the Columbia Basin States have received from the administration. Supplementing what my colleague said, I wish to make these brief remarks.

On May 8, the 7 Democratic Senators from the Columbia Basin States wrote to the President requesting a joint conference to discuss the utter confusion within the administration on Columbia Basin resource development.

Yesterday each Senator received a reply from a Presidential assistant saying, among other things, "the President asked me to say that he believes such a meeting would be premature at this time."

This is an amazing comment. The various executive agencies and the FPC are hopelessly at odds about power, flood control, navigation, and irrigation development. The voters of the area made very clear their dissatisfaction with the administration's policies, but the President believes a meeting on the subject would be premature.

Yet only a few lines later the White House letter expresses the hope that the Congress and all agencies of the executive branch will join together to seek solutions which confront the Columbia River Basin as a whole. How are Congress and the executive to join together if the representatives of the region are told that a Presidential conference with them would be premature?

As the letter we sent points out, the various executive agencies and the Federal Power Commission are going off in all directions. It is quite clear that the confusion stems directly from the administration's scuttling of high Hells Canyon Dam because the loss of its 4 million acre-feet of water storage for power and flood control would disrupt all basin planning to date.

As in 1954, the administration holds out hope of vast new storage at Libby Dam. Yet Libby Dam, a highly desirable project, is not an alternative to Hells Canyon Dam. Furthermore, it is snarled in disagreement with Canada on the sharing of benefits, due in large measure to administration bungling.

For example, in 1953 this administration broke off negotiations with Canada on the subject, and the Republican chairman of the Senate Public Works Committee introduced a bill to rescind the authorization of the Libby Dam. Since 1953, negotiations have been complicatd by strange and legalistic arguments put forward by the United States representative, Len Jordan, former Republican Governor of Idaho, and an outspoken foe of Federal development.

As I have predicted for years, loss of the Hells Canyon Dam would mean administration attempts to substitute undesirable projects elsewhere. Already the Senate has passed a limited authorization for Bruces Eddy Dam. Now the White House letter puts forward a revival of plans for Penny Cliffs Dam, which has an even greater adverse effect upon fish and conservation.

Furthermore, the White House acts as if the Interior Department's studies of Pleasant Valley Dam and the Federal Power Commission staff recommendations for Nez Perce Dam are consistent. They are not. Indeed, Secretary Seaton, according to press reports not denied, has been put under wraps in respect to a higher Pleasant Valley Dam, and the Federal Power Commission is sailing along as if Seaton never informed it of his study.

If anything is premature in this situation, it is Nez Perce Dam. Fish studies are fine, but it is fantastic to hold out Nez Perce Dam as a reasonable expectation for the future.

At every turn the administration is scuttling full, comprehensive river development. Why, for example, is there no mention in the White House letter of development of the magnificent Paradise Dam site? It is because a private utility combine has marked it for really insignficant development.

Why is no mention made of administration failure to request funds for the great John Day Dam—the only major multipurpose dam ready for construction? It is because the administration has not given up its delaying tactics in the hope of fostering its private utility partnership scheme.

The White House reply will be read with disappointment and chagrin in the Pacific Northwest. Furthermore, Mr. President, it is my prediction that it will teach the conservation groups the importance of their proceeding without any delay whatsoever in making clear to the administration that they intend to do everything they can to stop the anticonservation program which has come to characterize the natural-resources program of this administration.

Mr. President, I turn now to another subject.

The PRESIDING OFFICER (Mr. FREAR in the chair). The Senator from Oregon has the floor.

THE TIME WHEN ACCELERATED AMORTIZATION CERTIFICATES BECOME USEFUL

Mr. MORSE. Mr. President, in the Kefauver subcommittee on Monday, and on the floor of the Senate last evening, question arose as to when an accelerated amortization certificate becomes useful.

Interestingly enough, the Director and General Counsel of the Office of Defense Mobilization were not sure of the answer during the Monday hearing. They believed that the certificates go into effect for amortization purposes when a facility becomes productive. After that hearing, I was advised, through an assistant, by experts in the field that the ODM officials were wrong. However, the experts were wrong; they were basing their opinions on the fact that deductions for taxes were taken in 1951 on certificates issued under the law passed in 1950. They were unaware that there was a limited retroactive feature in the law.

In reliance on this mistaken information, I stated on the floor of the Senate, last night, that the certificates are of immediate tax use. However, I promised the Senate that I would look into the matter immediately, and would find out whether my understanding was correct. I have found that it was incorrect. However, this is not to say that these tax certificates are of no immediate use.

For example, as reported in today's issue of the Washington Post, it was developed in yesterday's hearings before the Joint Committee on Defense Production that quick tax writeoff certificates aid companies in obtaining bank loans.

In the Idaho Power Co. case, on April 24—a week after the company's tax certificates were signed—the Federal Power Commission granted the company permission to issue $40 million of unsecured notes for a bank loan, which presumably was consummated.

If the company received no more than the loan on the strength of the generosity of the Office of Defense Mobilization, the company received a great benefit. However, Mr. President, there is another benefit, namely, the effect of the granting of the certificates on the stock market value of the stock of the company. It is interesting to note that following the granting of the certificates to the Idaho Power Co., the value of the company's stock on the stock market immediately rose. Why not? After all, that amounted to a handout and a gift by this administration, to the Idaho Power Co., of a great many millions of dollars of increased wealth for the company.

Mr. President, I turn now to another subject.

The PRESIDING OFFICER. The Senator from Oregon has the floor.

THE POSITION TAKEN IN RECENT YEARS BY SENATOR MORSE IN REGARD TO TAX WRITEOFFS

Mr. MORSE. Mr. President, in recent days, questions have been asked from the floor of the Senate about the position taken by me in recent years in regard to tax writeoffs. At this time I wish to read into the RECORD a statement I made on July 11, 1953—rather early in the life of this administration. I read from volume 99, part 6, page 8549 of the CONGRESSIONAL RECORD of the year referred to:

Mr. MORSE. What needs to be pointed out is that the segment of our population that should be protected, from the standpoint of human values, does not have a well-financed lobby. There is no oil lobby protecting them; there is no private utility lobby protecting them. Does the Senator from New Mexico think it is only a matter of chance that the private utilities of the United States, for example, have obtained thus far, in round numbers, $3 billion in a tax-amortization plan? The average citizen does not stop to realize what a tax-amortization plan really means.

What a tax-amortization plan, to the tune of more than $3 billion, means to the private utilities of the United States is that the little people of America are handing to them on a silver platter, as a gift, private utility plants to the value of $3 billion. It is nice if one can get away with it. It is good if one can have an administration that will let him get away with it. But the representative of the Independent Party intends to fight it so long as he stays in the United States Senate.

It is a grand political steal. It is grand larceny against the American people. That is language the people ought to be able to understand. I cannot be any more plain or blunt than that. I say today to the American people that I think a $3 billion gift to the private utilities of the United States, in the form of a tax-amortization plan, cannot be justified. The American people should be going ahead with the building of such great multipurpose dams as Hells Canyon, for example. They should not be amortizing the tax structure of private monopolies which are not private enterprises at all. Yet the Eisenhower administration talks about private enterprise in the form of private utilities. There is not a private utility in the United States that is a private enterprise. It is a monopoly. As a matter of Government policy, it has been necessary for decades to regulate private utilities because, if they were not regulated, they would exploit the consumers. That is the record of private utilities.

If I should seem to be a little emphatic, it is only because the time has come during the present administration when some one should dare to stand on the floor of the Senate and tell the little people of America, "You are being taken for an economic ride; but, so far as you little people are concerned, it is not in a Cadillac."

That was the position I took on the tax amortization issue on July 11, 1953.

On July 29, 1954, I was interviewed on a radio broadcast which was taped in Washington, and was sent to a number of radio stations in Oregon—some 30, I believe. It is a policy of mine to make a radio broadcast into my State once each week. I make the tape here in Washington, D. C.—a practice which is followed by many Senators. The tape is sent to my State, for use at a regular broadcast time which is scheduled on each station, each week; and my report to the people of Oregon is made in that form.

On July 29, 1954, Mr. President, I discussed the matter of rapid tax amortization. Mr. Berg, my administrative assistant, asked the questions on this broadcast. I now read the transcription of the broadcast:

Senator MORSE. This is your Senator, WAYNE MORSE, reporting to you on issues before the Senate.

Today I have with me my administrative assistant, William Berg, Jr. Bill is one of my former law students who for some years practiced law in Portland.

Bill, I understand you have a number of questions.

BILL BERG. Senator, several days ago you discussed on the floor of the Senate some of the hidden subsidies to big business that are found in the administration's atomic-energy bill. At the same time, you made an analysis of another hidden subsidy for big business known as "accelerated tax amortization." I think the people of Oregon would be interested in hearing your comments on this subject.

Senator MORSE. After studying the operation of the accelerated tax amortization program, I am of the opinion that we could properly describe it as the new look in free enterprise, enterprise for free.

It is a plan that was developed in time of war emergency to induce the investment of private capital in factories, defense plants, and equipment essential for national defense.

In general, the accelerated tax amortization plan permits a company to take larger depreciation deductions for Federal income-tax purposes over a shorter than normal period of time. In other words, it allows the company to amortize or fully depreciate its investment in these emergency facilities over a 5-year period instead of the normal period, which can vary from 10 up to about 50 years.

Of course, the more depreciation a company can take for tax purposes the more money it will have left after paying taxes.

When a company is given the benefit of accelerated tax amortization or rapid tax writeoff, as it is sometimes called, it gets from the Government a certificate of necessity, which it uses at taxpaying time to prove to the tax collector that it is entitled to take these larger depreciation deductions.

BILL BERG. Senator, would you give a practical example of how this rapid tax writeoff plan actually works?

Senator MORSE. Let's take the case of a company that pays $10,000 for a new machine that has a useful life of 20 years. Let's also assume that this company is a real moneymaker—that it is way up in the 52 percent Federal corporate tax bracket. Of course, I'll admit this last assumption is not very realistic over a 20-year period because, as I point out later, corporate tax rates tend to drop after an emergency period.

Under normal depreciation our company can deduct each year, for Federal tax purposes, 5 percent of the cost of the new machine or $500. It can do this for 20 years. At the 52 percent Federal corporate tax rate the deductions represent savings of 52 percent of $500 or $260 each year for 20 years.

On the other hand, if the company has a certificate of necessity from the Federal Government stating that it is entitled to the benefit of a rapid tax writeoff on this machine the depreciation period will be reduced from 20 years to 5 years and the company will be allowed to deduct for Federal tax purposes depreciation amounting to 20 percent of $10,000 each year for 5 years. This amounts to $2,000 instead of $500 a year for the 5-year period. At the 52 percent corporate tax rate, the deduction will represent a savings of 52 percent of $2,000 or $1,040 a year for 5 years.

BILL BERG. Senator, I have computed the total tax deductions for the normal 20-year period and for the 5-year accelerated period you just mentioned. In each case the total tax deductions are exactly the same. Also, the total tax savings are identical in each instance—$5,200.

In the long run, doesn't it work out that there really aren't any overall benefits to the company that decides to get a rapid amortization certificate of necessity from the Federal Government?

Senator MORSE. I'm glad you brought that up because those who like to have this hidden subsidy remain hidden from the public use that very argument. But they're wrong—dead wrong—and unfortunately, at least one big business propaganda mouthpiece in Oregon has been circulating such misinformation.

Such propagandists fail to tell the American people these facts:

First, rapid tax amortization makes possible enormous benefits by way of interest savings on taxes that certificate holders don't have to pay to the Federal Government during the 5-year rapid depreciation period. The company that enjoys these large depreciation writeoffs can put the money to work for its own advantage. That's why this rapid writeoff has been compared to an interest-free loan. You can imagine the nature of this benefit to a large corporation such as a steel mill or a private electric utility when it has been certified for $10 million or $15 million in rapid depreciation. That certificate gives it quite a sum of depreciation withholdings to put to work.

In the meantime, the Federal Government is deprived of its use of millions of dollars in tax income during the 5-year period. It has to borrow to make up the difference and the interest it pays on its borrowings helps to increase the already stupendous national debt.

BILL BERG. Aren't rapid amortization tax certificates also sought by big business because they cut down tax liability in periods of high taxes?

Senator MORSE. That is the second point I want to mention on this subject. The rapid amortization plan gives certificate holders the opportunity to take sizable depreciation writeoffs during emergency periods when Federal taxes usually are high. For example, they had the advantage of big tax deductions when the excess profits tax was on the statute books. Now that the excess profits tax is gone, the corporations have the benefit of lower Federal tax liability during the period in which they no longer can take depreciation deductions on amortized facilities. That translates into hundreds of millions of dollars by way of tax savings for corporations over the years.

BILL BERG. Senator, has the accelerated tax amortization program been handled on a hard-to-get basis by Government agencies?

Senator MORSE. No. It is unfortunate that the whole program has been handled rather loosely without the detailed investigations that are so essential to full protection of the public interest. A couple of years ago, the Senate Small Business Committee issued a report criticizing the way the program has been handled. The report pointed out that tax amortization certificates were issued by Government agencies covering plants and equipment that would have high peace-time value long after the 5-year period. The Small Business Committee stated that certificates of necessity in many cases covered new plants when idle plants were available for the same use. Above all, small-business men who usually don't have enough office people who are experts at filling out complicated Government application blanks found that they were often squeezed out when they applied for rapid amortization certificates. Big business was able to put its experts—including its Washington representatives—to work immediately and thus it got in on the rapid tax amortization program much earlier than most small-business men. Too often, the latter found themselves excluded by the closing of the amortization program so far as their types of business activity were concerned.

BILL BERG. Is it true that the private electric utilities have applied for rapid-tax-amortization certificates in great quantities?

Senator MORSE. Yes. The Office of Defense Mobilization—the Government agency that handles this program—supplied me with the statistics and they are amazing. Since the outbreak of the Korean war these utilities have received rapid-writeoff certificates of necessity totaling $2.2 billion—not millions, mind you, but billions. The electric utilities seem to think that the rapid-tax-amortization program is pretty good.

BILL BERG. Have any private electric utilities in Oregon sought these certificates of necessity?

Senator MORSE. Yes. The Portland General Electric Co. has received at least three certificates of necessity for rapid tax deductions totaling $18,635,000. That's a lot of money. Portland General Electric must like the program.

The California Oregon Power Co. has received a certificate of necessity allowing a $19,524,000 rapid tax writeoff. Copco also finds the program to its liking.

I hasten to add, of course, that I do not oppose the accelerated-tax-amortization program as such. I think we must reconcile ourselves to the fact that it is a necessary inducement to get the construction of urgently needed defense facilities. Apparently we have to have this type of program where the plants or equipment involved would be costly to convert to peacetime uses or would have little value after the emergency is over. However, that is not true of private electric-utility plants. Most of them, because of changes in economic conditions, will be worth more money as our economy expands. Years after they are built they are likely to be worth more than when they were first built. In the case of the electric utilities we are not dealing with something that is going to be of little value after there has been a period of use. The plain fact is that these utilities want certificates of necessity for the tremendous financial advantages that I have discussed previously. I doubt seriously that there are many cases in which they can really justify getting these certificates.

BILL BERG. I understand that for the time being the Government has closed its expansion goals on electric power. In other words, it is not granting certificates of necessity to the private electric utilities at this time.

Do you believe these utilities have given up the idea of getting further tax-amortization certificates?

Senator MORSE. Oh, no. They are still clamoring for rapid writeoffs. Several days ago, I received from the Office of Defense Mobilization a list of about 25 pending cases in which electric utilities are asking for rapid amortization certificates of necessity totaling many millions of dollars.

BILL BERG. Do some of these pending cases involve private electric utilities in the Pacific Northwest?

Senator MORSE. Yes, indeed. There are two very interesting applications for certificates now on file with the Office of Defense Mobilization. The applications were made by the Idaho Power Co. and they cover low-head dams at the Oxbow and Brownlee sites on the Snake River. These applications indicate that the outlays will be $35,944,000 and $67,138,000, respectively.

The pending Idaho Power applications are significant when we recall that the company is in a last ditch battle with those who are trying to bring about full development of the people's interest in the great natural resource assets of the Snake River. The irony of the situation is this:

The Idaho Power Co. wants to deprive the American people of the benefit of the high Hells Canyon Dam by building three puny dams. But, at the same time, the company wants the American taxpayers to pick up rapid amortization tabs on two of the proposed low dams to assist in its fight against the public interest. The Idaho Power Co. shouts, "creeping socialism," when the Federal Government assists in the development of great multipurpose dams but apparently it believes that it is respectable "creeping socialism" for the Government to assist the Idaho Power Co. by way of amortization

certificates of necessity when it wants to build its own low-head, high-cost dams.

BILL BERG. Senator, at the rate the tax amortization program is going, it seems to me there is great danger that the situation will get out of hand and that the Treasury will lose billions of dollars unless remedial action is taken.

Senator MORSE. That's right. Not only do we have this emergency rapid depreciation program in our Federal statutes, but the new revenue revision bill which is being reported out of the Senate-House conference committee in final form contains a provision for "double-rate declining-balance" depreciation which is not limited to emergency defense facilities. It will apply to equipment used generally in peacetime business and production. These two programs promise to cost the Federal Treasury billions of dollars by way of lost revenue. They promise huge financial benefits for big business. I think we can understand why one Congressional committee described this program as the "biggest bonanza that ever came down the Government pike." Congress has investigated the subject of rapid depreciation in the past, but it must be vigilant and continue such investigations because I strongly suspect that these programs may be operating at a price that is much higher than the American public can afford.

This is WAYNE MORSE, reporting from Washington. Goodby until next week—same time—same station.

I read this broadcast, Mr. President, because attempts have been made by some of my Republican colleagues to leave the false impression in the RECORD that the Senator from Oregon was silent when tax amortization certificates were granted in the State of Oregon to some Oregon electric companies.

Mr. President, I have checked very carefully the files in my office, and I make this report to the Senate: When the Office of Defense Mobilization granted these fast tax writeoff certificates to these Oregon utilities I was not informed about it. I did not become aware of it until it was an accomplished fact. But when I discovered it, as this broadcast shows, I protested it. Not only that, but there was much correspondence in my files to show that I expressed strong opposition to it.

I am about to come to the CONGRESSIONAL RECORD, in a moment, but first let me make a statement about what happened when I found that the Office of Defense Mobilization in 1953 was misusing the law Congress had enacted, by granting these certificates to companies for the construction of plants which were not in fact defense plants. They were not plants which would be lacking in great civilian production value after the emergency was over. They were private utility plants, electric powerplants which, as I said in my broadcast, would be of greater value some years after they were constructed, for the simple reason that there would be greater need for the power and there would be an increase in the population in the area, so that demand for more power would ensue, which would of course make the plants, thereby, much more valuable.

I make this statement tonight, Mr. President, because it is so easy for colleagues to make the kind of false assumption that was made in the criticism of me last Wednesday by some of my colleagues, when they sought to leave the impression in the CONGRESSIONAL RECORD that when certain utilities in the State of Oregon received tax amortization certificates the Senator from Oregon was silent. I was not silent, Mr. President, as soon as I found out about it.

Of course, Mr. President, I am not privy to the inner, secret councils of the executive branch of this administration. I do not know, for example, what happened behind the closed doors in the Eisenhower administration when Mr. Seaton's letter recommending against the fast tax writeoff for the Idaho Power Co. became known to the administration leaders.

"EXECUTIVE PRIVILEGE"

Dr. Gray, the Chairman of the Office of Defense Mobilization, would not testify before the Kefauver committee as to what took place. He hid behind executive privilege. He had the right to plead executive privilege, if he wanted to, as anyone has the right to plead the fifth amendment, but he must expect, when he pleads executive privilege, that his plea will be subject to public comment.

I wish to repeat tonight what I said in a radio broadcast to my State today; namely, that it is my suspicion that Dr. Gray does not dare to disclose to the American people what took place behind the closed doors of this administration in regard to the reaction to the Seaton letter. I am satisfied in my own mind that it was a very disturbing thing, because the Seaton letter set forth, of course, the position that some of us have been taking for years in the Senate, in opposition to fast tax write-offs to companies which are using the fast tax write-offs not to build defense plants but to build civilian production plants, examples of which are the electric power dam and generating plants.

What is happening, Mr. President, with respect to this fast tax write-off schedule, is that the American people are now becoming aware of the giveaway that is involved in it.

Senators ought to see my mail. One would think, Mr. President, in view of all of the abuse and castigation I have been receiving, that I would be hearing only from critics. It is true that I am getting some mail that ought to come in asbestos envelopes.

MAIL SHOWS BACKING

But I am proud to report to the Senate that the overwhelming majority of my mail strongly supports my position and urges me to fight on against this kind of political theft by the present administration from the taxpayers of the country. I am urged to continue to lay down the bill of particulars, in instance after instance, of the shocking political immorality of the Eisenhower administration; and I intend to do so.

In fact, from now until adjournment I intend to take some time each week to present a further bill of particulars of the political immorality of the Eisenhower administration. From this desk tonight I now invite the American public to be of all possible assistance to me in this endeavor. I say to the American public that from now until this Congress adjourns sine die, at least once each week I shall present the latest information I have been able to gather regarding new examples, or new facets of old examples, of the political immorality of the Eisenhower administration. I am sure that each week I shall not be able to cover all the examples I will receive, because, as I have said before, this administration is honeycombed with political immorality and political corruption. I repeat that the situation I am describing is an example of it, and the American people do not like it.

I have been greatly encouraged, and I have had my determination to continue this fight greatly strengthened, by the number of Republicans from whom I have been hearing—Republicans not only in my own State, but outside my State, who think the time has come to call a halt to the imposition of hardships upon the little people of America, hardships that are a result of the policies of favoritism by this administration to the big fellows of America.

The people agree with me that it is a pretty shocking thing that the taxpayers should be asked to pay a part of the cost of constructing the facility of any private utility in or out of Oregon, in or out of Idaho, in or out of Washington, in or out of any other State in the Union. The private utilities should be required to pay their own way.

ADVERTISING PROPAGANDA

I have said for some time on the floor of the Senate, in years gone by, that a part of the inexcusable and costly advertising propaganda program of the private utilities, and the service agency known as Ebasco, which is seeking to poison the thinking of the American people by making them believe that a multiple-purpose dam is some kind of socialism, is a cost which should not be collected from the rate payer. It is a cost which should not be allowed to be charged to advertising. It is a cost which should not be collected in part from the taxpayers of the country by having it included in deductible items. It is a cost which ought to be paid by the stockholders.

It is becoming a little hot for the administration in this connection. Many people in the country are asking why something is not being done about the situation. I have not had time to get the official papers yet. I have only the press releases thus far to rely upon. However, the press releases in the past couple of days are to the effect that the Federal Power Commission is at least beginning to concern itself about some of the advertising practices of certain private utilities in some nearby States, and has raised a very serious question as to whether or not certain costs are legitimate advertising costs.

I welcome such an investigation. I hope it is not merely a flash in the pan. I hope it is not merely a temporary conversion. I hope the administration is really getting some political religion, and is about to reform its ways and go down the sawdust trail, so to speak, and put its political professions of reform into practice.

There is so much that it can do to keep itself busy in trying to correct its political sins since the inauguration day of 1953. It can completely change if it really has received political religion at

last, and if it now wants to support good, clean government. There is much it can do to reverse its policy in the field of natural resources.

TAX AMORTIZATION FOR DEFENSE

I have spoken many times in the Senate on the question of tax amortization. For example, as appears in the CONGRESSIONAL RECORD, volume 100, part 9, page 11828, I said:

Mr. President, let me make one point very clear. I have no quarrel with a law which makes available to private capital an inducement by way of rapid depreciation on the construction of emergency facilities used in the preparation of materials for defense or for the prosecution of any war into which we may be forced. Apparently it is asking too much to suggest that big business risk capital for these purposes. I do not ask it.

I digress from the quotation long enough to refresh the memory of Senators as to what the situation was at the outbreak of World War II, and also at the outbreak of the Korean war, when there was a repetition of the situation. We were drafting boys to be sent to their death in a great patriotic cause. There was not very much drafting going on at the civilian front of our economy.

The undeniable fact is that strong protests were received from industry in connection with the so-called crash programs, the emergency programs for the building of war plants. The cry went up that the producers should not be asked to pay for the entire cost of such plants, because many of such plants, like ammunition plants and certain types of steel production plants, would be of very little value after the war was over.

They were right about that, although somehow the situation created a rather sickening feeling in the pit of my stomach, when the very survival of our country was involved, to think that there should be any dragging of corporate feet to interfere with the most rapid progress of a crash program to build the required facilities as quickly as possible. I felt that companies should have been willing to place their faith in the Government to see that equity and justice was done to them.

I was in the midst of some of that activity, because in those dark days I was serving on the War Labor Board. I must confess that I was rather disappointed that there was any delay at all. I said then, and I say now, that the companies should be given assurance that the Government would pay the full cost, so that they would be held without loss, for those plants which would be of no value for civilian purposes when the war was over, but which were needed for war production purposes. When I say the Government should pay the full cost, I am taking into account, of course, some formula or equitable arrangement whereby the profits which were made as a result of war production would be used to pay for at least a fair share of the cost of the plants.

I cite it, Mr. President, because no one can deny the fact that one of the reasons this fast tax writeoff program had to be enacted in the first place was that there was, in a sense, a sitdown strike going on on the part of a certain segment of American big business. Strong representations were made in Washington that this type of subsidy was necessary—that is what it amounted to, a subsidy—in order to get on with the work of fighting the war. That was the theory and the basis for the law in the first place.

As I said so many times, it has been perverted into something entirely different from its original purposes in many instances.

I return to the quotation from my speech of July 24, 1954. I said:

Apparently it is asking too much to suggest that big business risk capital for these purposes. I do not ask it. Therefore, if we justify emergency rapid amortization deductions, we must do so upon the theory that they supply the necessary inducement for the construction of facilities essential to national defense, but which would be of little value to the owners after termination of the emergency or convertible to peacetime uses only at prohibitive cost.

FALLACIOUS ADMINISTRATIVE REASONING

Mr. President, I digress from the quotation for a moment to say that the Seaton letter of March 11 makes perfectly clear that in the opinion of the Secretary of the Interior the fast tax writeoff to the Idaho Power Co. cannot be justified on the basis of a defense purpose, any more than the certificates to any of the Oregon companies in 1953 could be justified on the basis of a defense purpose. My view then, as it is now, is that it was just as wrong to grant those certificates to the Oregon companies as it is to grant the certificates to the Idaho Power Co.

Yet Dr. Gray, for example, in his testimony before the Kefauver committee, on the day before yesterday, took the position that one of the reasons he went along with this was that it had been in accordance with the past administrative practice. Apparently he based his testimony on the fallacious reasoning that a series of wrongs makes a right. Having discovered this wrong in the past, I say his position ought to have been a declination to pursue it further. He should have said, "I am going to end it."

I do not know how we are ever going to clean up anything in Government, if a Government official takes the position that, because an administrative procedure has permitted dirty business to go on, he will not discriminate against the next fellow who wants to take advantage of the taxpayers, too. Of course, I cannot understand a chairman of the Office of Defense Mobilization who would take such a position—of course, I cannot understand why Dr. Gray did.

I said the other day, and I repeat now, that he ought to be removed from office immediately. He has been highly derelict in the performance of his duty. I think he owed it to every American taxpayer to have drawn the issue. In fact, he ought to have asked to appear before the Byrd committee, rather than be requested to appear before it. The moment he assumed office as the head of the Office of Defense Mobilization, and saw this program in effect, he ought to have brought it to the attention of the Congress. Some of the rationalizers of this administration, in and out of Congress, are trying to say that Congress should have done something about it. Mr. President, Congress would not need to do anything about it if we had good administrators in the Government, if the law was being administered in the light of its purpose. I want to say, however, that now, in view of the scandalous situation that has come to light, Congress had better do something about it.

I am not going to say on the floor of the Senate tonight what I am going to support in detail. However, I shall be very much surprised if I do not support the Byrd bill when it comes from his committee, or a similar bill, such as the one that will probably come from the Kefauver committee. I am not ready to say even tonight that fast tax writeoffs should not be made available in specific cases. I have in mind a particular plant vital to the defense of the country—perhaps some atomic-energy plant might qualify—which would have practically no value after the emergency is over, such as, for example, a special type of plant that might be necessary for the manufacture of nuclear warheads. I do not know what the cost of conversion would be, but I believe it could be imagined that such a plant might be needed in the defense program for the manufacture of nuclear warheads. Such a plant would have little more than scrap value, if mankind should ever come to its senses and outlaw nuclear weapons, or agree upon a disarmament program in conformity with our professings about moral principles.

It may be that we ought to wipe the law off the books entirely, and make clear that in wiping it off the books, if, as, and when an agency of the Government wishes to come before Congress with a request for a special bill for the benefit of a particular plant, by means of a rapid tax-write-off provision, we in the Congress will consider the cases individually. Perhaps that might be the best way to do it.

I have been thinking about the problem along that line. I said to my administrative assistant today, "I am inclined to think that what we ought to do is support a complete repeal of the law and an abolition of the tax writeoff practice; take its administration entirely away from the Office of Defense Mobilization, and say to them, 'Come up to us in specific cases; prove your case in a specific case, and then we will write an individual grant for each case.'"

I have a few more quotations to read from my speech of July 24, 1954. It is very obvious that my Republican critics of last Wednesday, who, by reference and innuendo, sought to leave the impression that apparently I had been silent in the past, were not familiar with the facts. I was a little surprised that I should have been silent on any controversial issue. There have not been many controversial issues concerning which I have been silent in the 13 years I have been in the Senate. I should think that they would have had a better hunch than that. I should think that their hunch would have told them, "I bet that fellow talked on that question at some time or other in the past. I bet he opposed it at some time or other."

However, they were a little agitated and a little cross with me, and could not

resist the temptation, apparently, to leave this incorrect impression in the RECORD.

Therefore, for their edification, I shall continue to read from my speech of July 24, 1954, in which I said:

A law enacted for a very worthwhile purpose can produce unfortunate results if it is administered by Government agencies without careful recognition of the basic objectives of the law.

Unfortunately this observation applies to the rapid amortization plan under section 124 of the Internal Revenue Code. As we shall see later, it has been administered so as to permit certification of facilities that bear little relation to defense. Certifications often have been unduly high. Certificates have been issued despite the fact that idle plant facilities were available to produce the needed items. These and similar administrative shortcomings have cost the taxpayers huge sums of money and have produced windfalls that were never contemplated by the Congress.

There are some folks, though, who solemnly assert that there are really no substantial benefits to certificate holders under accelerated amortization.

Mr. President, how many times have we heard that said in recent days on the floor of the Senate? I think it has been rather amusing the extent to which some of my colleagues have swallowed the private utility propaganda line that, after all, sooner or later, the utilities have to go ahead and pay taxes after the depreciation has run out.

THREE-BILLION-DOLLAR SUBSIDY

Of course, as I have said so many times, they do not tell the American people the great interest savings which the utilities make on the money they otherwise would have had to spend for taxes during the period they were getting the interest-free loans and were getting, also, the great reduction in taxes for the 5-year period. That is why I have pointed out in the debate several times in recent days that even the Secretary of the Treasury, now the ex-Secretary of the Treasury, pointed out to the Byrd committee that the rapid tax amortization program had cost the American taxpayers in the neighborhood of a little more than $3 billion in interest. Remember what he said: $3 billion in interest—money out of the taxpayers' pockets. That is taxpayers' money. Who got it? A private monopoly got it. What was it used for? In the case of the private utilities, it was used to build dams that belong to the stockholders of the private utilities, not to the taxpayers of the United States.

Yet the United States Chamber of Commerce and the National Association of Manufacturers, and other reactionary business organizations, have the gall, the brass, and the indecency to talk about a subsidy to the American farmers. Under the Eisenhower administration, American big business has been the recipient of billions of dollars of subsidies. They hide it in this way. But the American people are catching up with them. The responsibility for it rests on the President of the United States, and no one else.

Mr. President, increasing millions are discovering that the idol has clay feet.

I have had a rather interesting time in the past few days. It is necessary to have a sense of humor about it, and to have an understanding of the psychology of human emotional reactions. But nothing has happened that I did not expect to happen. I expected to be loved and hated by many persons who reacted to my pointing a finger which has needed to be pointed for a long time at the White House. Of course, I have been doing it for a long time, but this recent activity links it with something specific that the taxpayers can understand.

Living costs are going up. The taxpayers are simply in no mood to have the administration give away millions of their dollars to big-business monopoly. Therefore, a good many of my Republican friends are concerned about what I have disclosed; they are concerned about the fact that the American people are concerned about it, too.

ADMINISTRATION SCANDALS

I said last night, good naturedly, that one Republican from my State had called me. Now the mail is coming in. At first, word came by telephone. Now I am beginning to get letters from my Republican friends—and I have many of them. If I did not, I would not be in the Senate of the United States—at least, I would not be in the Senate by the majority which sent me here, because I had to receive many thousands of Republican votes last November 6 in order to come back to this desk, and I received them.

Many of those persons are now writing to me, expressing their appreciation, as many of them put it, for my helping them to clean up their own party—because that is going to be one of the results of this action. We are going to find Republicans across the country who will make it very clear to the President and the White House that the time for sanctimonious, pontifical professings about political morality have come to an end. They want some action now. They want to see the proof. They want to see the President clean house. They want to see an end of such examples of betrayal of public trust as the vast writeoff scandal. They want no more Dixon-Yates contracts. They want no more Al Sarenas. They want no more appointments of persons having conflicts of interests. They want no more giveaways of the heritage of the American people in their own natural resources. They want the administration to keep faith with its professings about a political crusade. The American people do not want a program whereby selfish big-business interests take from the economy of the country for their own selfish gain at the cost of the exploitation of the American people as a whole.

I intend to fight on in this matter. You will find me, Mr. President, coming to the floor of the Senate supporting and praising this administration for every act that it commits in support of good, clean government. You will find me, in the days ahead, supporting the President in respect to a good many phases of foreign aid, as I have done ever since I have been in the Senate—conscious, of course, that there are some improvements which can be made in foreign aid.

Oh, I hope the time will never come when I can have great disagreements with this administration and this President and then not support them when I think they are right on some issue.

But I repeat tonight that I am convinced that the advisers of the President are keeping the facts from him, although, as I said earlier in my speech, I am disappointed that the President permitted an adviser, for example, to send to the Democratic Senators of the Pacific Northwest an answer to a letter which asked for a conference about our natural resource problems there, an answer in which the administration said, in effect, that such a conference would be premature.

REAPPRAISAL AND REEVALUATION OF NATURAL RESOURCES PROGRAM

I invite the President to go to the Pacific Northwest and tell that to the people of that area. They are very much concerned about it. They think there ought to be a reappraisal and a reevaluation of the natural resources program, and they elected representatives to present their point of view. I think the President ought to demonstrate a greater faith in the democratic process than is indicated by his letter. I think the President ought to recognize that when seven Senators elected by the people of the Pacific Northwest say to him in a very courteous and respectful letter, "Mr. President, we think the problems in the field of natural resources in our section of the country are so serious that we ought to sit down and see if we cannot, at least, narrow the areas of disagreement which have developed between our section of the country and the policies of this administration," they should not get a brushoff by way of an answer by having an underling assistant at the White House advising them that the President wants them to know that he thinks such a conference would be premature. He is the loser, Mr. President, in that kind of an approach, because the President of the United States is walking out on the democratic processes.

If he thinks for a moment he is going to cram and ram down the throats of the people of the Pacific Northwest his partnership program at, for example, Cougar or John Day or Green Peter or Trinity or any of the other projects in that section of the country, he is sadly mistaken, because the people will stop him; and, as the representatives of the people, we will do the best we can to help them stop him. We are not going to permit that kind of exploitation of our natural resources by this administration or any other. We are going to fight this administration or any other that seeks to foist upon us a program of underdevelopment of the river basins, not only in our section of the country, but anywhere else in the United States, for the reason that full development is essential to the welfare, not only of our generation, but of the American people for all time to come.

Mr. President, I was going to read further excerpts from my speech of July 24, 1954, but I believe I have made my point. Therefore, in order that it

can be a part of the RECORD of this discussion, and can be offered as the proof in answer to the false impressions which some of my Republican colleagues left in the RECORD the other day, when they raised the question as to whether I had opposed this program back in 1953 and 1954, I ask unanimous consent that my entire speech of July 24, 1954, which was printed in the CONGRESSIONAL RECORD, volume 100, part 9, beginning on page 11828 and running through page 11839, be printed at this point in the RECORD, as a part of my remarks.

The PRESIDING OFFICER (Mr. YARBOROUGH in the chair). The Chair wishes to inquire of the Senator from Oregon whether the speech referred to was printed in the CONGRESSIONAL RECORD during a previous year?

Mr. MORSE. That is correct.

The PRESIDING OFFICER. Does the Senator from Oregon request unanimous consent that the speech be printed now in the CONGRESSIONAL RECORD, or does he request that it be incorporated by reference to a previous issue of the CONGRESSIONAL RECORD?

Mr. MORSE. Mr. President, I ask unanimous consent that my speech be reprinted at this point, as proof of the fact that I discussed this problem on July 24, 1954.

Let me say to the Presiding Officer that of course I can, if necessary, take the time now to read the speech into the RECORD.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Oregon? Without objection, it is so ordered. [Laughter.]

The speech referred to is as follows:

[From the CONGRESSIONAL RECORD of July 24, 1954]

The giveaway to which I now refer takes the form of accelerated tax-amortization certificates of necessity. Big business in the United States has been feasting on these at the expense of the rest of the taxpaying public. The accelerated tax-amortization program has become a legalized raid on the Federal Treasury. It has been characterized by one committee of Congress as "the biggest bonanza that ever came down the Government pike"—House Report No. 504, 82d Congress, 1st session, page 1.

The accelerated tax-amortization certificate-of-necessity plan is now found in the Internal Revenue Code, section 124A. Under its World War II predecessor, section 124 of the Revenue Act of 1940, there were issued certificates of necessity totaling about $7.3 billion, of which about $5.7 billion was authorized for rapid depreciation. Section 124A is very attractive to industry. As of June 28, 1954, there have been granted certificates totaling $29,346,861,000, of which 60 percent, or $17,619,629,000, is eligible for rapid amortization.

Those are the official reports of the Office of Defense Mobilization, released June 28, 1954.

WHY IS IT RAPID AMORTIZATION IS SO POPULAR WITH BIG BUSINESS?

What is it about this program that is so alluring to big business?

Mr. President, the answer is quite apparent upon careful analysis: Rapid amortization offers opportunities, first, for enormous interests savings on deferred taxes; and second, minimizing tax liability in periods of high tax rates. Also as the rapid amortization program is administered by Government agencies it provides lush benefits for big business.

Mr. President, let me make one point very clear. I have no quarrel with a law which makes available to private capital an inducement by way of rapid depreciation on the construction of emergency facilities used in the preparation of materials for defense or for the prosecution of any war into which we may be forced. Apparently, it is asking too much to suggest that big business risk capital for these purposes. I do not ask it. Therefore, if we justify emergency rapid amortization deductions, we must do so upon the theory that they supply the necessary inducement for the construction of facilities essential to national defense, but which would be of little value to the owners after termination of the emergency or convertible to peacetime uses only at prohibitive costs.

A law enacted for a very worthwhile purpose can produce unfortunate results if it is administered by Government agencies without careful recognition of the basic objectives of the law.

Unfortunately this observation applies to the rapid amortization plan under section 124 of the Internal Revenue Code. As we shall see later, it has been administered so as to permit certification of facilities that bear little relation to defense. Certifications often have been unduly high. Certificates have been issued despite the fact that idle plant facilities were available to produce the needed items. These and similar administrative shortcomings have cost the taxpayers huge sums of money and have produced windfalls that were never contemplated by the Congress.

There are some folks, though, who solemnly assert that there are really no substantial benefits to certificate holders under accelerated amortization.

PROPAGANDISTS SPREAD FALSEHOODS

Unfortunately there exists in my own State of Oregon one such propaganda mouthpiece which has spread a great deal of misinformation on accelerated amortization. These deceptions had their origin in a little magazine known as the Oregon Voter, a self-appointed oracle on the elective franchise. In its issue of November 21, 1953, it published a diatribe entitled "Untruths Nailed," which dealt with the subject of accelerated tax amortization, particularly in the private electric-utility field. The Voter expressed a desire to impart the truth on this topic and modestly reassured us with a self-serving declaration of its own strict truthfulness. It partially fulfilled its objective. It gave its readers a liberal dose of half-truths.

The Voter criticized the speaker for comments which he made on the floor of the Senate in April 1952 with respect to the enormous benefits the steel industry has enjoyed at the expense of American taxpayers through the rapid tax amortization program. It charged that statements made by the speaker and others regarding so-called benefits of accelerated amortization of costs of new plants are wholly untrue. It cheerfully assured its readers, "The United States Government gets its tax dollars in full," and added that the Federal Government "actually does not lose or donate a dollar of tax" in these amortization cases. This cleverly worded language falls far short of presenting the whole story concerning rapid tax amortization.

The Voter labored arduously to create the impression that any attack on the tax amortization program is pure demagogery. However, the tongue-in-cheek nature of the article was made apparent in statements that might be missed upon a casual reading. For example, there was tucked away in the text of the November 21 article the following little concession:

"If you must figure that the noncollection of interest on that part of the income tax which is deferred to later years is a donation, then you are privileged so to term it."

The readers of that article certainly deserved more information about the interest charge. What they were handed was a fragmentary picture, and a very blurred one at that.

I want to repeat that little escape mechanism the Oregon Voter really sort of hid within the forest of verbiage found in the article: "If you must figure that the noncollection of interest on that part of the income tax which is deferred to later years is a donation, then you are privileged so to term it."

Wait until you see what that little donation amounts to, and then you will see what I mean by hidden subsidy. Then you will see what I mean by the hidden subsidies in this bill. Here is an example of one of them. Of one thing you can be sure, and that is if you vote this bonanza to the private utilities as contained in this bill, they will follow the private utility pattern of recent years, seeking tax amortization benefits. It amounts to a pretty penny, a pretty penny taken right out of the pockets of the people of the United States in the sense that the money is really taken out of the Treasury of the United States because it does not get there in the first place due to this giveaway feature of tax amortization.

At the Labor Temple in Portland, Oreg., on November 23, I had something to say about this interesting problem as follows:

"As part of the propaganda fight waged by the private electric utility monopoly, there has been circulated throughout the State a very clever and misleading article on the subject of tax amortization certificates of necessity. "One sweeping generalization of the utility propaganda article demonstrates that its arguments bear little relation to reality. In bold type it reports that the Federal Government does not lose or donate a tax dollar in these tax amortization cases. Does the author of that suggestion believe his readers are that naive? If the private utility makes no tax savings by the amortization device, why are amortization certificates so eagerly sought?"

This must have hit a tender spot because the December 12 issue of the Voter produced two more articles on tax amortization. In these the Voter yelped like a hound dog, but it never did get a good bite at the truth.

In one of these December 12 pieces entitled "Phony Figures," the Voter did a bit of backtracking. In words that must have been uttered reluctantly, it said:

"Lest there be misaprehension, the Voter does not disclaim that a certificated company derives some nominal benefits from accelerated amortization. But we believe these benefits are smaller and more temporary than the managements usually assume."

Then followed a rambling discussion of compound interest which took the reader over a circuitous route to a conclusion boldly labeled, "Gains All Canceled." With amazing brashness the magazine called the Voter, using a chart that told only part of the story, attempted to demonstrate that interest benefits of accelerated tax amortization, as listed in its chart, cancel out. One insult to the readers' intelligence lay in the fact that the chart concentrated on a 45-year period and avoided full disclosure of the interest savings of the 5-year rapid writeoff period.

I welcome the majority leader. I have a very good report for him. He was ably relieved by a series of very competent colleagues, whose presence I immensely enjoyed. I am delighted to welcome the Senator back to the majority leader's chair. He is refreshed. He is obviously in better spirits than when he left last night. I would not be surprised that we may be able to do some business today, leading to an early recess. I

do not know. We had a little discussion about that a few hours ago, and the Senator from Minnesota agreed with me almost entirely, except when we got to the point where he suggested his offering a unanimous-consent agreement. I told him I was just a private in the rear ranks, carrying out my military orders in this parliamentary battle. I explained to him how mistaken the majority leader was in paying me the great compliment last night of being the leader of the liberal wing of the Democratic Party. I told the Senator from Minnesota that I should like to offer clear proof of how mistaken the majority leader was; because if that were true, if I were anything but a buck private in the rear ranks, I would not be holding the graveyard shift, night after night, on guard duty. That is clear evidence that I can offer that I am far removed from any leadership of the liberal wing of the Democratic Party.

Nevertheless, such kind thoughts make an individual feel good, even though he knows he does not deserve them.

All facetiousness aside, I am very happy to have the majority leader back with me.

Later in this discussion I will have more to say concerning the Voter's phony chart on interest.

Normally, materials on serious subjects appearing in a pulpwood publication are understood to be shallow, slanted, and inadequate. Thus, readers are on guard and not usually grossly misled. However, the propaganda put out in the Voter's articles on tax amortization is so misleading in its cleverly worded half-truths that it cannot be ignored.

WHAT IS MEANT BY ACCELERATED AMORTIZATION

The word "amortization" as used in this discussion has reference to the businessman's practice of gradually writing off—"amortizing"—his investment in capital assets, such as factory buildings and machinery. Obviously, the term has a close relationship to the more commonly understood business concept of depreciation.

Businessmen are well aware of the physical fact of depreciation; they know that their capital investments decline in value through wear and tear, obsolescence, and other causes. They take this into consideration in determining the cost of producing the articles they manufacture. Instead of charging the total cost of a new factory building against current income, the businessman, under recognized accounting practice, "spreads out" the cost over a period of many years. He will charge to each year's cost of production an amount equivalent to a fraction of the total cost of his new factory building, and he will do this for the period of years deemed equivalent to the estimated useful life of the building.

For example, where there is attributed to a new factory building a useful life of 33 years, the businessman depreciates that capital asset 3 percent annually for 33 years. This 3 percent will constitute one of many elements of the year's production costs. In other words, he "amortizes" his factory building—figuratively repays himself its cost—over a 33-year period. In the case just mentioned, the Bureau of Internal Revenue will allow him to deduct from the gross income of his business for 33 years an annual amount equal to 3 percent of the cost of his factory building. Our hypothetical case illustrates the well-known "straight-line" method of depreciation, under which the cost of the facility is written off evenly for a number of years.

When we depart from the physical facts of depreciation and make amortization of the capital investment more rapid by compressing it into a less-than-normal span of its useful life, we say that amortization is accelerated. Thus, section 124A of the Internal Revenue Code allows accelerated—60-month—amortization deductions on emergency facilities that are certified as necessary in the interest of national defense. This is in lieu of, not in addition to, the normal depreciation deductions permitted by the Internal Revenue Code—section 23 (e). Normal deductions are based on the expected life of the facility and, of course, vary depending upon the type of capital asset involved.

ACCELERATED TAX AMORTIZATION—WORLD WAR I

Accelerated tax amortization is a by-product of war. Shortly after the end of hostilities in World War I, the revenue acts of 1918 and 1921 included provisions for the amortization of war facilities (February 24, 1919, ch. 18, sec. 234 (a) (8), 340 Stat. 1078; November 23, 1921, ch. 136, sec. 214 (a) (9), 342 Stat. 240).

In general, the World War I law permitted the taxpayer to request the Commissioner of Internal Revenue for a reexamination of his income tax rates for the years 1918 through 1921 to determine whether additional deductions should be permitted by way of tax amortization. It applied to facilities constructed on or after April 6, 1917, for the production of articles contributing to the prosecution of the war, or vessels engaged in transportation for war purposes. It provided for a reasonable deduction for the amortization "of such part of the cost of facilities or vessels as has been borne by the taxpayer." The World War I plan was supposed to reflect properly the taxpayers' losses in value of facilities or vessels due to the termination of the war.

One would assume that this tax review, dealing with past events, would operate very successfully. It did not. It was unsatisfactory because of difficulties in determining values and ascertain whether facilities or vessels actually "contributed to the prosecution of the war." Also, a backlog of claims resulted in administrative delays.

Critical reports of this World War I program were issued by Senate committees in 1926 and 1935 (S. Rept. 27, 69th Cong., 1st sess., pp. 168–170; S. Rept. 944, pt. 2, 74th Cong., 1st sess., pp. 32–34). The 1935 report recommended against amortization allowances and suggested Government loans in their place.

THE WORLD WAR II TAX AMORTIZATION PROGRAM

Hitler's depredations and the consequent need of becoming militarily strong in a minimum period of time confronted us with a defense problem of huge proportions. Emergency facilities had to be built in record time and the Government, following American tradition, wanted these facilities built with private capital wherever possible. As early as 1939 or 1940, it became apparent that big business was doing a great deal of heel dragging in constructing defense facilities.

Illustrative of the situation prevailing prior to the enactment of the tax amortization certificate of necessity provision of the Internal Revenue Act of 1940 is this observation of the Advisory Committee to the Council of National Defense:

"Substantial amounts of private capital will not be invested in the construction of such facilities unless corporations are assured, in view of the fact that such facilities will be of use chiefly only during the period of national emergency, that they will be permitted to amortize the cost thereof over a shorter period than would be permitted under the depreciation provisions of the Internal Revenue Code." (H. Rept. No. 2894, 76th Cong., 3d sess., p. 16 (1940).)

The impetus to production came by way of an allowance for rapid amortization. In contrast with the World War I procedure whereby refunds were allowed after termination of the war, deductions were to be permitted on a current basis. The extent of the deductions was indicated in each case in what was called a certificate of necessity issued by a Government certifying agency. The Treasury Department accepted such a certificate as authorizing the additional deductions for income-tax purposes.

The World War II rapid amortization plan was enacted in 1940 (Oct. 8, 1940, ch. 757, sec. 302, 54 Stat. 999). This enactment added a new section—124—to the Internal Revenue Code. Briefly, section 124 authorized a 60-month tax amortization—rapid depreciation in lieu of normal depreciation—of the facility in the interest of national defense. The taxpayer was given the privilege of compressing the amortization period into less than 60 months if the period of emergency should end before 5 years. This plan stood in clear contrast with the World War I tax amortization program in that it eliminated an element of uncertainty. The taxpayer was assured in advance that he would get a specific tax writeoff. Also, defense agencies rather than the Treasury made amortization rulings. At first, the Army, and Navy, and later, the War Production Board administered the program.

Railroads, iron and steel, coal, petroleum, aircraft, chemicals, nonferrous metals, machinery, and electrical equipment industries were the chief recipients of these rapid amortization certificates. It has been estimated that rapid tax amortization produced a $3.2 billion reduction in corporate taxes between 1940 and 1945—hearings, Certificates of Necessity and Defense Loans, Subcommittee on Expenditures in Executive Departments, United States House of Representatives, 82d Congress, April 23, 1951, page 335.

These enormous benefits were available until the program was terminated by a Presidential proclamation on September 29, 1945—Proclamation 2669, 59 Statutes 886.

In 1948 the Brewster committee had this to say about the tax-amortization program of World War II:

"Legal profiteering resulted from certificates of necessity. Many companies came out of the war with new, valuable, fully amortized facilities which they could either use or, as some have done, sell. In this way a facility actually paid for out of a contractor's war taxes was additional war profit to him to the extent of its postwar value." (S. Rept. 440, 80th Cong., 2d sess., pt. 2, p. 233.)

RAPID TAX AMORTIZATION TODAY—RESPECTABLE "CREEPING SOCIALISM"

Within a few months after the outbreak of the Korean war, Congress again followed the theory of granting accelerated amortization inducements to encourage the expansion of defense facilities with the use of private rather than public funds.

Section 124A of the Internal Revenue Code, the present law, was enacted on September 23, 1950. The adoption of this action once again demonstrated that Congress wanted to provide a cushion for industry in an emergency period in all cases wherein privately constructed defense facilities might possibly become obsolete or useless by reason of the cessation of hostilities. Section 124A reflects the view that the risk of loss of capital investment in defense facilities should be spread throughout our entire society.

Let me make it very clear, Mr. President, that I do not quarrel with that. I do not think there was anything wrong in theory or principle or policy with the rapid amortization of a true defense plant, namely, a defense plant that we needed in order to protect the security of this country, as part of the war cost. I quite agree with the principle that it ought to be spread throughout all society. I am fully aware of the fact that when we criticize, as I do, the danger of the hidden subsidy in the atomic energy bill with respect to tax amortization certificates, that

was bound to follow, because that is the private utility pattern. I shall present evidence showing how many of these certificates are now outstanding and how many are being sought by private utilities. I think it follows, therefore, that we can expect the same kind of hidden subsidy to flow from this bill. I am saying that these private utility plants are not defense plants. I do not think we can justify the subsidy which these private utilities will receive on any ground except that they constitute a handout. I think we have got to stop this kind of a handout. I think there should be some gage in the bill that will stop it. I am not so sure it should not be done by general legislation and not as a part of this bill. I am inclined to think that what we should do is to pass some general legislation reviewing the whole matter of tax amortization and to provide for it on an emergency basis where the facts justify the privilege. It will be recalled that when the tax bill was before the Senate a little while ago, I offered an amendment dealing with the tax amortization problem in connection with that bill, but it was rejected. But we can come back to it. I am one who is never discouraged by defeat. I think it takes a lot of defeat sometimes before a point prevails.

Here, again, as the Senate and the country come to understand this problem, we are going to get some legislation which will correct some abuses which I think are developing in the field of tax amortization. But I think it is very apropos that in discussing the hidden subsidies in this bill, as I have been doing, previously to this point of tax amortization, the tax-amortization problem be incorporated in the discussion, because it is my fear and my expectation that if this bill passes, here is one of the handouts that the private utility monopoly, which is going to be the chief beneficiary from this bill, will reap at the expense of the taxpayers as a whole.

A comparable type of subsidy insuring private individuals against the risk of loss, such as the farm price support programs, has been called an example of "creeping socialism." The expansion of agricultural production is clearly recognized by everyone as having been stimulated by World War II requirements and justified by the continuation of emergency conditions. Now the farmer, instead of being given tax benefits similar to those of section 124A, is being told that he can expect cuts in price supports.

The accelerated amortization program is not a direct cash grant. It is not a direct Government subsidy or loan. However, to the extent that it brings about reductions in Federal income taxes during the 5-year acceleration period, it makes more cash available to the taxpayer, helps finance the cost of new facilities, and partakes of the nature of an interest-free loan of funds that would otherwise be available for use by the Government.

I seem to have great difficulty in getting some palatable food this morning. I have just been brought a bowl of soup which contains so much pepper that it is hot enough to kill a horse.

Mr. KNOWLAND. Mr. President, will the Senator from Oregon yield for a question?

Mr. MORSE. I yield for a question.

Mr. KNOWLAND. The Senator has just mentioned that the food with which he has been furnished was hot enough to kill a horse. That brings up the subject of horses. I wonder if the Senator would not desire to go for a horseback ride this afternoon and would be willing to agree to a unanimous-consent request this morning.

Mr. MORSE. Before the Senator arrived from his obviously very restful sleep, his predecessor in the majority leader's chair asked me what I would like to do today and I told him that I would like to break a colt. I have a fine roadster out at a friend's farm at Poolesville, Md., which I am in the process of training and breaking to get it ready for the Oregon State Fair. I cannot do that in one weekend. It takes time and patience. The acting majority leader asked me what I would like to do today and I told him that was what I would like to do. I said I thought it would be a fine thing if the majority leader would recess the Senate and carry out the suggestion on which I spent a couple of hours, of arranging for a conference with the President to discuss the areas of disagreement in this bill, to make certain that the President fully understands the different points of view with reference to the bill, and find out, for example, what the Federal Power Commission has said about the lack of legal standards in the bill with respect to the matter of price. Although I made the proposal, I want it clearly understood that I am not suggesting that I be in the delegation to go to the White House. I am perfectly willing to leave my point of view to the Senator from Tennessee [Mr. GORE], and I would go on out and break my colt.

I think the acting majority leader was very fine about it. He agreed with me that that would be a good idea. He had one suggestion to make, and that was that I agree to a unanimous-consent request to limit debate. I told him I would yield long enough, with the understanding that I not lose my rights to the floor, for him to offer the request. I said, "I am not going to take any advantage of you, but I must assure you that I shall have to object."

That is when we had the very interesting discussion about my functions as a private in this army. I certainly could not agree to such a request without full consultation with the generals, in fact, with the chiefs of staff. I wanted to be sure that I was following the parliamentary instructions exactly. I think I indicated very clearly that I would like to be heard within the counsels, presenting one man's opinion. Then after there was full discussion, a final conclusion could be reached one way or another. That ended the conversation.

Now I yield to the Senator from California for a question.

Mr. KNOWLAND. Does the Senator not realize that the colloquy had earlier is not too encouraging to the majority leader, relating to the fact that the distinguished Senator from Oregon may get out and break that colt? May I inquire what is the date of the Oregon fair?

Mr. MORSE. In the latter part of September. I may not get there at all. That would be a great disappointment to me. But if not getting there is the price I have to pay to contribute to saving the American people the great losses they would suffer if the bill passes, I would forego that great pleasure. But something tells me we shall get out of here before then. Time will tell.

With regard to those matters, I always follow what I have found to be a very encouraging principle of philosophy on the part of my wife. When things are pretty discouraging and the going is rather tough, and one wonders if there is not going to be, figuratively, some sunshine sometime about something, she gives me great encouragement by saying, "Don't forget, this too will pass." When one gets meditating, it is a lot of satisfaction to reflect on the idea that this, too, will pass.

I may say to the majority leader that earlier today I was talking about this matter of relaxation and what happens physiologically after there has been sustained tension. Inevitably relaxation sets in, because there must be a physical law that the human body can remain tense just so long. If the body is kept tense beyond a certain point, it breaks. The interesting thing is that people do not get to the breaking point if they relax. I think there has been a lot of tension in the Senate the last few days. I think that is one of the reasons we have not made progress in composing our differences. I was hoping there would be a longer weekend for relaxation than the majority leader promised when he suggested he was going to keep us until midnight tonight.

I am sure the majority leader knows I would not want to say anything out of his presence that I would not be willing to say in his presence. I said that if he felt that way about it, we ought to start acting like men instead of mice, and move to recess or adjourn, and then have a vote on it. We should not let the majority leader dictate to us as to when we should adjourn or recess. I am a realist about even that. I do not anticipate that such a motion would pass, but it ought to, if my good friend from California does not see fit to give us more time. The whole Senate needs it. I think the poor staff needs it more than we do. More time is needed for the relaxation to which the Senator has referred.

But, again going back to my wife's suggestion, I shall take a great deal of comfort in knowing that this too will pass; but I am going to do the best I can to see the bill does not pass. That I do not want to see, because, with respect to that, I think we ought to stop it if we can. I am not a betting man, but I would be willing to wager an exchange of cups of coffee that if the problem could be presented to the President, and if points of view could be expressed to him, he would follow the pattern which Woodrow Wilson followed in 1913 on the Federal Reserve Banking Act that I discussed a couple of hours earlier today. Discussions went on for weeks, with give-and-take conferences with the White House. They finally worked out a bill, when it looked as if no bill would ever possibly be worked out, and it pleased a very large majority of the Senate. I am just willing to wage an exchange of cups of coffee on the proposition that if the President was given a chance to get his hand into this problem, and an opportunity to modify some of his views after he has received full information on the differences, some of us would be surprised how quickly it might come to pass that the controversy in the Senate would end. But, be that as it may, I wish to return now to a discussion of what I think is one of the hidden subsidies in the bill by way of the probability that the provisions will lead to a great deal of accelerated tax amortization.

The accelerated amortization program is not a direct cash grant. It is not a direct Government subsidy or loan. However, to the extent that it brings about reductions in Federal income taxes during the 5-year acceleration period, it makes more cash available to the taxpayer, helps finance the cost of new facilities, and partakes of the nature of an interest-free loan of funds that would otherwise be available for use by the Government.

Section 124A was first administered under regulations issued by the National Securities Resources Board. The certifying function was later transferred to the Defense Production Administration and is now under the Office of Defense Mobilization.

Again, as in World War II, a certificate of necessity, when granted, authorizes the taxpayer to compute his Federal tax deductions on certified facilities upon the rapid, instead of the normal, basis of depreciation.

One has only to read the applicable regulations to become aware of the fact that the administration of the accelerated-amortization law carries us into the realm of conjecture concerning the basis for permitting rapid amortization. It is not at all surprising, therefore, to read the comments of Mr. Vance Kirby, at one time Tax Legislative

Counsel of the Treasury Department, who had something to say about the guesswork in these cases. His comments were made during the course of a House subcommittee hearing on April 23, 1951. In a colloquy with Congressman PORTER HARDY, Jr., and Mr. Ralph Casey, counsel of the House Government Operations Subcommittee, the remarks were as follows:

"Mr. CASEY. Could you explain the statement you made that the Treasury Department does not have the authority without the assistance of section 124A to allow increased amortization of a facility?

"Mr. KIRBY. Well, the Internal Revenue Code permits a reasonable allowance for depreciation. In the case of defense facilities, the question is whether this facility is going to be useful after a certain period, the duration of which no one knows. Within the meaning of the depreciation provision, it would not be reasonable but just guesswork to allow a deduction for the loss of the useful value of such a facility by reason of the termination of that period.

"Mr. HARDY. Is not that the way the depreciation is determined now?

"Mr. KIRBY. Yes.

* * * * *

"Mr. KIRBY. It is a serious question; however, in three emergency periods a special provision has been thought necessary. I think that we have to have some definition relating to defense facilities and granting the allowance by reason of a 'guess' as to a facility's usefulness for defense only.

"Mr. HARDY. You know that is what is being done under the specific authority today; this pricing is largely a guess?

"Mr. KIRBY. Yes. (Citing authorities and sources.)"

That is an interesting series of comments by two experts in this tax field; pointing out, after all, this process is pretty much a process of guesswork.

Thus far we have explored something of the legislative history and the rationale behind the idea of rapid amortization under the Internal Revenue Code. We know that the plan has many elements of guesswork. We are now ready to inquire into some of the real gains enjoyed by those segments of our business community—primarily big business—that are so fortunate as to hold certificates of rapid amortization.

THE VOTER DUCKS THE ISSUE

The pulpwood publication—the Oregon Voter—would have us believe that tax amortization certificates are really of little value to their holders. The Voter attempted to gloss over the enormous benefits of rapid writeoffs by the use of glib expressions designed to distract us from the true facts. Thus, it referred to them as "temporary concessions." Again, it characterized them by expressions such as "deferral—no handout," "nominal benefit," "minor benefit," "gains all canceled."

Instead of meeting the issue squarely, the Voter resorted to statements of the arithmetically obvious in order to create the impression that it had covered the whole field of inquiry. For example, it said: "The Government gets its tax dollars in full. It actually does not lose or donate a dollar of tax in these amortization cases." This represents the time-worn tactic of building a strawman and emphatically knocking it down.

In an effort to create the illusion that it had uncovered remarkable facts which would silence those who dispute its conclusions, the Voter supplied charts showing that over a 50-year period, assuming a constant tax rate, depreciation deductions for tax purposes are the same under accelerated amortization as they are under normal depreciation; that the total tax offsets and total tax payments are identical under each plan. I know of no one who disputes these elementary facts.

When the Voter finally made what must have been the painful concession that a "certificated company derives some nominal benefits from accelerated amortization," it made one of the primary understatements of the year 1953. It failed to go on with the next chapter in this fascinating story. It failed to explore the substantial interest savings accruing to certificate holders by way of deferred tax funds. It did not point out that these retained sums are available for other business uses without resorting to the money market for assistance. It overlooked the correlative fact that the Government, in the absence of the rapid writeoff program, would have had the use of tax money thus deferred by the issuance of necessity certificates. It omitted a discussion of the fact that 5-year rapid writeoffs of capital assets are of special value in emergency periods of high taxes, with the likelihood that the taxpayer will have the benefit of lower tax rates in the future when his depreciation deductions are reduced or eliminated.

In the following paragraphs I shall discuss some of the very substantial benefits of accelerated amortization accruing to taxpaying companies, particularly to the Voter's very good friends, the private electric utilities. These benefits are enjoyed at the expense of the rest of us—the taxpayers of the United States.

BENEFITS ENJOYED BY HOLDERS OF TAX-AMORTIZATION CERTIFICATES

At the outset, let there be no misunderstanding on one point. If we assume a uniform Federal corporate tax rate over the estimated life of a capital asset, the aggregate total taxes paid on the facility will be the same, with or without the benefit of accelerated tax amortization, provided the corporate income remains high enough every year to make the maximum rate applicable. On the other hand, if tax rates and interest rates change favorably for the business, then substantial benefits will be realized.

Any discussion of the effect of rapid depreciation involves matters of a technical nature that can be analyzed adequately only by the use of actual dollar computations.

For that reason I shall use the Voter's hypothetical case of a taxpayer company's $2 million investment in new facilities, a million dollars of which is certified for 5-year rapid amortization and the balance being subject to normal depreciation at the rate of 2 percent a year. Also, a uniform corporate tax rate of 52 percent is assumed. I ask unanimous consent to insert in the RECORD at this point in my remarks a chart designated as schedule 1, entitled "Effect of 5-Year Amortization Compared With Depreciation—Deductions for Tax Purposes and Tax Savings Thereon."

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

SCHEDULE 1.—*Effect of 5-year amortization compared with depreciation—Deductions for tax purposes and tax savings thereon*

Assumptions: Investment, $2,000,000. Total period of amortization and depreciation, 50 years. Amount subject to 5-year amortization (50 percent), $1,000,000

	With amortization	Without amortization	With amortization savings (+) loss (−)
(A) Deductions for tax purposes:			
Each year for the first 5 years:			
Amortization (20 percent of $1,000,000)	$200,000		
Depreciation (2 percent per annum)	20,000	$40,000	
Total	220,000	40,000	+$180,000
Each year, 6th to 50th (all depreciation)	20,000	40,000	−20,000
Total deductions:			
1st 5 years:			
Amortization	1,000,000	0	
Depreciation	100,000	200,000	
Total	1,100,000	200,000	+900,000
6th to 50th year (45-year period)	900,000	1,800,000	−900,000
Total	2,000,000	2,000,000	0
(B) Tax saving by reason of deductions for depreciation and amortization (at uniform rate of 52 percent):			
Each year for the first 5 years	114,400	20,800	+93,600
Total, 1st 5 years	572,000	104,000	+468,000
Each year, 6th to 50th	10,400	20,800	−10,400
Total, 6th to 50th year	468,000	936,000	−468,000
Total tax saving, 50 years	1,040,000	1,040,000	0

Mr. MORSE. Part (A) of the foregoing schedule shows that for each year of the first 5 years the company would be able to deduct $180,000 more per year using rapid amortization than it would if it used normal depreciation. The total increase in deductions for 5 years amounts to $900,000. For the 6th year and each year thereafter up to and including the 50th year, the deductions under the rapid amortization election would be $20,000 per year less than normal depreciation, or a diminished total of $900,000 for the 45-year period against $1,800,000 for the 45-year period under normal depreciation. The total deduction over the 50-year period is, of course, identical in both cases—$2 million.

Again referring to schedule 1, we see in part (B) thereof that the tax saving during the first 5 years is $93,600 per year greater by reason of the increased deductions permitted under rapid amortization. In the 6th year and each year thereafter to the 50th year, the amortization method results in additional tax liability of $10,400 per year. Inasmuch as we assume a uniform tax rate, there would be no net tax saving for the 50-year period as a whole by reason of the rapid amortization election.

THE INTEREST WINDFALL

Mr. President, we now come to an issue of utmost significance in the rapid amortization tax cases. It involves the item of interest saved by reason of the tax benefits

enjoyed by the company under the rapid amortization plan. I ask unanimous consent to insert at this point in my remarks a chart designated as Schedule 2, entitled "Effect of 5-Year Amortization Compared With Depreciation-Interest on Tax Savings at 4 Percent Per Annum."

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

SCHEDULE 2.—*Effect of 5-year amortization compared with depreciation*

Interest on tax savings at 4 percent per annum:		
1st year, $93,600 at 4 percent		$3,744
2d year, $187,200 (2 years tax savings) at 4 percent		7,488
3d year, $280,800 (3 years tax savings) at 4 percent		11,232
4th year, $374,400 (4 years tax savings) at 4 percent		14,976
5th year, $468,000 (5 years tax savings) at 4 percent		18,720
Total interest saved on tax savings for 1st 5 years		56,160
Interest saved per year on tax savings for 6th and subsequent years, up to 50th year, is $18,720, less interest on additional taxes in 6th and subsequent years up to 50th year:		
6th year:		
Interest on tax savings for 1st 5 years	$18,720	
Less interest on additional tax of 6th year ($10,400 at 4 percent)	416	
		18,304
7th year:		
Interest on tax savings for 1st 5 years	18,720	
Less interest on additional tax of 6th and 7th years ($20,800 at 4 percent)	832	
		17,888
8th year	18,720	
Less $31,200 at 4 percent	1,248	
		17,472
9th year		17,056
10th year		16,640
11th year		16,224
12th year		15,808
13th year		15,392
14th year		14,976
15th year		14,560
16th year		14,144
17th year		13,728
18th year		13,312
19th year		12,896
20th year		12,480
(And so forth, to 50th year)		
50th year	$18,720	
Less $468,000 at 4 percent	18,720	
Total, 6th to 50th year		411,840
Total, 50 years		468,000

Mr. MORSE. Schedule 2 shows that for the first year the interest saved, computed at 4 percent per annum, would be $3,744 by reason of the tax reduction of $93,600 for that year—see schedule 1, part (B). For the second year the accumulated tax savings would be twice this amount, or $187,200. At 4 percent this results in interest savings of $7,488. For the third year the accumulated tax saving is $280,800, and the interest at 4 percent is $11,232. Continuing this process for the first 5 years, we find that in the fifth year the interest on the tax savings of $468,000 is $18,720 and the total interest attributable to tax savings for the first 5 years is $56,160.

The annual gain in interest of $18,720 continues in the sixth year and thereafter up through the 50th year, except that it is reduced by the interest loss on the additional taxes which the business would have to pay commencing with the sixth year. For the sixth year the additional tax is $10,400 which, at 4 percent, results in an interest cost of $416. Therefore, for the sixth year, we start with interest saving of $18,720 and reduce that by $416, leaving a net saving for the sixth year of $18,304. For the seventh year the interest on the additional taxes is computed on the accumulated additional taxes for the sixth and seventh years. The amount of additional tax is $20,800. At 4 percent this results in interest of $832. Again, taking our interest on the accumulated tax saving for the first 5 years—$18,720 per annum—and reducing it by $832 we find a net interest saving for the seventh year of $17,888.

This process is continued each year with the interest saving being reduced so that in the 50th year the reduction is the same as the original interest saving and there is no interest saving for that year. The total accumulated saving, however, for the 45-year period from the 6th year through the 50th year is $411,840. The total for the 50-year period amounts to $468,000. Mr. President, we now begin to appreciate the key significance of interest savings in our rapid amortization cases.

We should not overlook the fact, however, that the element of interest saving would have an effect on income taxes of the company involved. The interest saving would have to be reduced by the amount of additional Federal income tax which would have to be paid thereon. Any study of benefits gained must take into consideration the fact that the reduction will be equivalent to the rate paid by the taxpayer. In our hypothetical, that rate is 52 percent.

THE VOTER'S PHONY FIGURES

In a stupendous effort to obtain a result it very much desired to reach, the Voter, in its issue of December 12, 1953, ran an article entitled "Phony Figures." The phony figures are there all right but they were created by the Voter. These figments are included in a chart which appears on page 18 of the December 12 issue.

The chart is labeled: "Under Accelerated Amortization, Interest Loss on Extra Tax Payments Cancels Out Pretended Interest Gain." Though it may perhaps be considered unfeeling and even rude on my part, I have to ask the Voter this question: What happened to the interest on tax savings enjoyed during the first 5 years—the rapid writeoff years? Does the Voter have a conveniently forgetful memory? The plain fact is that this 5-year interest accumulation represents investable funds that are made available by accelerated amortization deductions. They are funds that would not otherwise be at hand.

One paragraph of the December 12 article referred to a "nutshell." Apparently, under this nutshell was placed by the Voter, never to be found again, the computations of the first 5 years' interests gains. Had the Voter not resorted to this crude version of the old shell game, it would have acknowledged under its 6 percent interest computations an interest saving of $84,240 for the rapid amortization period.

The Voter's December 12 phony chart is divided into two sections. That on the left hand side is captioned "So-Called 'Interest Benefits' Under Accelerated Amortization." The computations of this table produce a total sum of $631,800 interest benefits for a 45-year period at 6 percent. This total is reasonably accurate. However, the Voter conveniently omitted, as noted above, the interest accumulation based upon 5 years' tax savings. Had this sum been included, interest benefits under accelerated amortization would have been shown as $716,040 instead of $631,800.

In addition to this omission the "funds retained" figure is reduced by $10,400 beginning in the sixth year and each year thereafter over a 45-year period. This has the effect of reducing the annual interest saving each year. Presumably the Voter justifies such annual reductions on the ground that after the fifth year taxpayments are increased by $10,400.

It may be assumed that the accumulated tax savings of the first 5 years are being treated as a reserve set aside for the purpose of meeting the increased tax liability after the 50th year. However, once having made this choice, neither the Voter nor the business can proceed as has been done in the right-hand section of the December 12 chart entitled "Cancellation of 'Interest Benefits' via Interest on Extra Taxpayments," and count as an offset, interest on the $10,400 extra tax. This additional tax of $10,400 payable each year from No. 6 to No. 50 is already taken into consideration in the computation in the left-hand side of the table. Therefore, to show this also as cancellation of interest benefits, is a duplication of additional interest cost to the company and there is no justification either in arithmetic, accounting, or ordinary logic for taking these annual amounts of interest on $10,400 into consideration twice, as the Oregon Voter does in the article.

In all charity, the most that can be said of the Voter's "rigged" chart of December 12 is that it illustrates an attempt to have one's cake and to eat it.

COMPOUND INTEREST

The Voter, apparently an exponent of the idea that the best defense is an offense, launched an advance attack against the use of compound interest computations in cases of rapid writeoffs. It did not resort to the use of a phony chart on this point. Instead it peddled a mixture of vituperation and conclusion jumping. The best it could offer was the suggestion that it is "real ridiculosity" to bring compound interest into the picture. It would be most difficult to find a more shallow analysis than that presented by the Voter on this point.

In its endeavor to cast off the compound-interest benefits as immaterial, the Voter exposed itself to ridicule by wise businessmen. Surely the normal presumption is that when businessmen are put in command of working capital they will invest it in productive activity. Interest earnings, therefore, will not be buried in a vault nor will they be squandered in a spendthrift manner. Frugality, thrift, and financial sobriety have always been important attributes of business behavior; I leave it to the Oregon Voter magazine to make contrary assumptions if it cares to do so.

In the name of commonsense there is no reason why interest earnings on tax savings should not be put to work and thereby compounded, just as any other investment funds.

Mr. President, in order to present the facts concerning the effect of compound interest on the tax savings of our hypothetical holder of a $1 million certificate of necessity, I ask unanimous consent to insert in the RECORD at this point in my remarks a chart designated as schedule 3, entitled "Effect of 5-Year Amortization Compared With Depreciation—Interest Savings Compounded (4 Percent), Uniform Tax Rate."

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

SCHEDULE 3.—*Effect of 5-year amortization compared with depreciation—interest saving compounded (4 percent)—uniform tax rate*

Years to go	Interest saving	Factor	Compounded
49	$3,744	6.83334937	$25,584.06
48	7,488	6.57052824	49,200.12
47	11,232	6.31781562	70,961.71
46	14,976	6.07482271	90,976.54
45	18,720	5.84117568	109,346.81
44	18,304	5.61651508	102,804.69
43	17,888	5.40049527	96,604.06
42	17,472	5.19278391	90,728.32
41	17,056	4.99306145	35,161.66
40	16,640	4.80102063	79,888.98
39	16,224	4.61636599	74,895.92
38	15,808	4.43881345	70,168.76
37	15,392	4.26806936	65,694.44
36	14,976	4.10393255	61,460.49

4	1,664	1.16985856	1,946.64
3	1,248	1.124864	1,403.83
2	832	1.0816	899.89
1	416	1.04	432.64
0	0	0	0
Total			1,770,386.04

Mr. MORSE. Mr. President, upon referring back to schedule 2, we will observe that the interest saved for the first year of the 5-year rapid amortization at 4 percent was $3,744. The interest constitutes funds currently available to finance fixed capital investments or to invest, and it is proper to show this benefit by computing interest on the interest saving or compounding it.

Schedule 3, based on the data previously submitted, illustrates dramatically the effects of compounding this interest savings over the 50-year period under review. When compounded, the interest saving amounts to $1,770,386.04. Of course, this total will have to be reduced by the income tax to be paid by the company over the years. However, even if we assume a relatively high corporate income tax rate and cut the last mentioned figure in half, we observe how the amortized facility is practically paid for by interest benefits flowing from the certificate of necessity.

Yet this Oregon Voter magazine would seek to give its readers the impression that these businesses gain no financial advantage by a tax amortization plan. I repeat what I said here on the floor of the Senate many months ago, to which the Oregon Voter magazine took such a strong objection, and that is that this tax amortization plan constitutes a bonanza for the company that gets its benefit, and its results in the American taxpayer paying for a substantial part of the cost of the facility that is being built.

I say that is all right in the case of a war plant. I say that is all right in the case of a defense plant that has to be built to protect the security of this country. I say that is all right as a defense measure in those situations in which we need the plant for the prosecution of the war or a defense program, and which will have practically little value or use after the emergency is over.

That is not true of a private utility plant. Most of the private utility plants, because of changes in economic conditions, will be worth more money, as the economy expands, years and years after they are built than they were worth the first year they were built.

We are not dealing with something that is going to be of little value after there has been a period of use. We are dealing with something of value. We are dealing with something, the value of which really increases as the economy in the territory where it is used expands. It is the bringing of the power into the territory that results in the expansion of the economy. It is the increase in the power that brings in new businesses and new industries and produces improvements on the farm that supplies the power for the irrigation systems, thereby increasing the productivity of the farms, all of which economic activities result in a greatly expanding economy.

We are not dealing here with plants that are worthless after 50 years. We are dealing with plants that in all probability in most instances will have as much, if not more, value than when they were first put in operation.

To seek to give the impression to the people of my State through articles published in this magazine that they are not contributing to the payment of these facilities by way of a tax-amortization handout, is to fly in the face of the truth.

In passing, we should not overlook the fact that the Voter's phony chart on page 18 of its December 12 issue based its computations upon a rate of 6 percent rather than 4 percent. Apparently this rate was used by the Voter because it is the rate charged by the Government on delinquent taxes and is the rate paid by the Government in making tax refunds. The interest rate of 4 percent, as employed in our computations, is conservative, but the rate of interest does not alter the principle involved. It merely changes the amount of dollars employed in our example.

HIGH WRITEOFFS AGAINST HIGH TAXES

The Voter's article of November 21 touched gently upon the possibility of there being downward changes in tax rates after periods of war emergency. In comments that appear to blow hot and cold in the same breath, the Voter had this to say:

"The general presumption is that a cut or cuts in rate will occur. There might be the answer to this that though the tax may go down it is possible also that it may go up, especially assuming that the Government goes to pressing taxpayers real hard in an effort to reduce the national debt, or should there be war or depression."

The foregoing folksy, but quite meaningless, comments were followed by a bit of a concession: "It is admitted that a reduction in income-tax rate for corporations will result in some extra benefit for the corporations which availed of the rapid amortization opportunity."

I should think that the editor would have choked on that concession. However, when he conceded it, he conceded a great deal. When he conceded it, although he did not expand upon the subject, and he was not fair enough to his readers to point out what his concession really meant or what its significance was, he admitted a great big chunk of my case.

The latter quotation is the nub of the case, and alert businessmen will not be misled by the Voter's attempt to tone down the financial importance of tax-rate changes in accelerated amortization cases. An analysis of Federal-income tax rates indicates that downward trends are common in the years following the termination of a war emergency. This was true after World War I and likewise after World War II. For example, we have the 1951 testimony of the Treasury Department's tax legislative counsel that "possible tax reductions after the end of the emergency period should be taken into account in estimating net tax savings, as occurred following World War II when the excess-profits tax was repealed and the income-tax rate reduced to 38 percent for the years 1946–49. Corporations during World War II had the benefit of writing off their 'emergency' facilities at maximum excess-profits-tax rate of 95 percent (less 10 percent postwar credit) and sacrificed depreciation deductions at a rate of 38 percent in the postwar years. Subsequent rate increases have narrowed this disparity, but a substantial rate differential still remains." (Hearings, Subcommittee of the Committee on Expenditures in the Executive Departments—Certificates of Necessity and Defense Loans, pp. 336–337, Apr. 23, 1951.)

Where the certificated property continues to have value in use, and we know that substantial numbers of certificated facilities do have useful lives after the rapid writeoff period, taxable income is deferred to the postemergency period when tax rates are lower. Bringing the situation down to date, we know that the excess-profits tax of the Korean war expired at the end of 1953. Corporations holding emergency certificates of necessity in prior years have had the benefit of deductions against high excess-profits-tax rates.

We should also note that unless extended by affirmative action the post-Korean increase in the corporate surtax rate will expire in 1955.

The net result is that the Treasury has to borrow money and pay interest, borne by the taxpayers, to make up for the deficit in receipts caused by the tax postponement. The Federal borrowing must be done during periods of higher interest rates and the deficit in tax receipts can be made up only after we assume a uniform tax rate over the useful life of the facility. As we have seen, this is a very large assumption.

HANDY MONEY AND THE BIRD-IN-HAND THEORY

The taxpayer who holds a tax-amortization certificate of necessity has another important advantage. The enlarged depreciation deductions for the rapid writeoff period make available funds which otherwise would have gone to the Treasury pursuant to the normal depreciation provisions of the Federal tax law.

Tax-savings dollars have a special significance. This was brought out in the minority report of the House Committee on Ways and Means in the following comments concerning tax reductions proposed in section 167 of the revenue revision bill, H. R. 8300.

"Increased income as a result of tax savings to businesses can be much more advantageous than increased gross income. For example, it normally takes about $10,000 in gross sales to yield as much net profit as a $560 saving in taxes. This is based on the assumption that a business has a net profit, after taxes, of 5.6 percent on each dollar of sales. A dollar saving in taxes would be worth about 20 times more than a dollar earned in sales. (H. Rept. No. 1337, 83d Cong. 2d sess.)

Also, most companies electing to amortize emergency facilities over the 5-year rapid amortization period have the advantage of predicting operating results and taxes thereon. Generally a company with emergency facilities has Government contracts and some assurance of substantial taxable income at least for a few years. This means that the company is pretty well assured that it will be able to take full advantage of the amortization deduction in computing its income tax and that the tax will be at relatively high rates. It is much more difficult to predict operating results or tax rates over the longer period. It is a question of applying a bird-in-the-hand policy which is generally a wise business decision.

HANDOUTS FOR BIG BUSINESS THROUGH ADMINISTRATIVE INTERPRETATIONS OF THE TAX-AMORTIZATION PROGRAM

As I have indicated heretofore, we are committed, as a Nation to the incentive of rapid writeoffs to obtain the new facilities that may be needed in the interests of our national defense or in the prosecution of a war against aggression. But we were never committed to an acceptance of administrative interpretations which result in rapid writeoff benefits that are far afield of the basic purpose for which section 124A and its predecessor, section 124 of the Internal Revenue Code, were enacted.

A very revealing report on the many aspects of the maladministration of section 124A was issued early in 1952 by the Senate Select Committee on Small Business (S. Rept. No. 1068, 82d Cong., 2d sess., pp. 130–137). A brief summary of some of the observations made in that report will be worth considering at this point.

EXCESSIVE CERTIFICATION

The Senate Small Business Committee reported that certificates under section 124A were excessively high as early as 1952. For example, certificates for railroad facilities, it indicated, averaged 73 percent in spite of the fact that most of the facilities amortized would remain valuable equipment after the 5 years that were set up as a controlling factor in the regulations. Similarly, the regular rate on integrated steel facilities was early set at, and remained, 85 percent despite the fact that the new facilities, as at Morrisville, Pa., were the most up to date and efficient plants in the industry and, therefore likely to displace older and less efficient operations. Not only has the percentage of tax amortization been excessively high in view of probable post-emergency utility, but facilities have been certified which bear little relation to defense, or which represented little, if any, more than normal economic expansion.

IDLE PLANTS AND ADDITIONAL CERTIFICATIONS

In many instances, certificates were issued, as pointed out in the same report, while existing idle-plant facilities to produce the required items were available, even though the new construction strained an already tight materials situation. Such an example was the General Motors' Delco division application to build a $7,500,000 plant in Dayton, Ohio, to fulfill a $2,500,000 subcontract for the manufacture of landing-gear struts.

BIG BUSINESS FEASTS—SMALL BUSINESS GETS THE LEFTOVERS

The foregoing report clearly demonstrates that the larger companies, with full technical staffs and legal advisers, were able to file detailed requests for certificates of rapid tax amortization before small business was even able to formulate its plans. Thus, in many instances the expansion goals set for the emergency program, large as they often were, were within sight before the first applications filed by small business were received. Inasmuch as no further certificates were granted once those issued, together with existing facilities, making allowances for slippages, totaled the designated expansion goal, the role of small business in the certified expansion was necessarily limited. The precise way in which industry, and particularly big industry, is benefited by the provisions of section 124A, to the detriment of the average taxpayer, is not always readily apparent.

A further and more detailed discussion of the shortcomings of the emergency rapid tax amortization plan will be found in the May 1951 request of the House Committee on Expenditures in the Executive Departments—House Report 504, 82d Congress, 1st session.

RETIREMENT OF MARGINAL PLANTS

Mr. President, a benefit which is less direct, but hardly less important, is the freedom gained by the largest, multiple-plant-owning corporations, to retire their older, less efficient plants which have been fully amortized, and which cannot be further depreciated, while utilizing the new and efficient plants, which, at the peak of their efficiency, are being amortized more rapidly than is justified on a physical or economic basis. The result is a substantial gain in net income, a substantial reduction in taxes, and very little, if any, gain in production. Moreover, the financial impunity with which a company can close down one or more of its existing installations puts it in a most advantageous position to dictate unfair financial terms to its employees.

It is little wonder, then, that certificates of necessity have been issued under section 124A totaling nearly $30 billion, with rapid writeoffs authorized in the sum of nearly $18 billion. The tax-amortization program obviously has been administered in such a fashion as to be good business for big business.

THE COST TO THE TAXPAYERS

It is an interesting fact that current estimates of the cost to the taxpayers resulting from the operation of the emergency tax-amortization program are extremely scarce.

In April 1951 a representative of the Treasury Department testified before a House subcommittee as follows:

"As a result of amortization, the Government incurs a revenue loss which reflects the value of this privilege to industry. It is not possible to forecast the aggregate amount of necessity certificates which will be awarded, the percentage of amortization allowed, or the trend of future tax rates.

"However, on the basis of necessity certificates granted on or before March 23, 1951, on which $2,800,000,000 amortization is allowed, it is estimated that the decrease in income and excess-profits-tax liabilities during the next 5-year period would be $1,500,000,000, at the present corporation rates. If the rates proposed by the Treasury are enacted, the immediate loss in revenue is estimated at $1,700,000,000. Even higher rates in the future would, of course, increase this revenue loss correspondingly.

* * * * * *

"* * * since the statement was prepared we have estimated the immediate tax loss that will result from the applications which have been granted up to the present time, or up to April 13.

"On the basis of certificates granted on or before this later date, on which $3,370,000,000 amortization is allowed, it is estimated that the decrease in income and excess-profits-tax liabilities during the next 5-year period would be approximately $1,800,000,000, at the present corporation rates. If the rates proposed by the Treasury are enacted, the immediate loss in revenue would be approximately $2 billion." (Hearings, Certificates of Necessity and Defense Loans, Subcommittee on Expenditures in Executive Departments, U. S. House of Representatives, 82d Cong., Apr. 23, 1951, p. 337.)

Members of my staff have inquired of the Office of Defense Mobilization, the Treasury Department, and the Senate-House Joint Committee on Internal Revenue Taxation and have been advised that there are no current estimates of revenue lost and to be lost by reason of section 124A. However, according to estimates made by the Department of Commerce in 1952 in a publication entitled "Markets After the Defense Expansion," corporate funds available from depreciation allowances had been increasing at a rate of about $1 billion a year between 1946 and 1952.

With reference to the rapid amortization program of section 124A the Commerce Department publication estimated that "the rapid amortization program which is currently in operation will step up substantially this annual rate of increase since a sizable portion of current fixed capital program is under certificates of necessity."

It further noted:

"If fixed investment were maintained at relatively high levels—not far from recent rates—the annual increase in depreciation and amortization would amount to as much as $1.5 billion a year over the next 3 years and by 1955 the total of such allowances would reach between $14 billion and $15 billion."

It is evident from these data that corporate deductions from income have been increased by approximately one-half billion dollars a year directly as a result of the rapid amortization program. Using the 52-percent corporate tax rate we can estimate that since 1952 taxes which would otherwise have gone to the Treasury have been approximately $250 million annually. The Government has been making up this loss of revenue by borrowing. In recent months the average rate paid by the Treasury has been 2.4 percent—Treasury Bulletin, May 1954.

The cost of this emergency rapid writeoff program is of deep concern to the people of the United States and it is regrettable, if not somewhat startling, that reliable estimates of the losses to be sustained by the Treasury in the years to come as a result of this program are not available for consideration by the public. It is not beyond the realm of possibility to provide estimates of this type. We have statisticians who can be put to work with all the available figures. I am sure they can come up with information that is essential to a determination of whether the rapid amortization program is worth its cost. For that reason, I think it is important that studies of the costs to the Treasury resulting from section 124A be made in each session of the Congress.

PRIVATE ELECTRIC UTILITIES RIDE THE GRAVY TRAIN

The private electric utilities, with ever-watchful eyes on the easy dollar, whether it be that of the ratepayer or the taxpayer, were quick to scent the profits to be found in the rapid amortization trough.

Mr. President, if the test of economic usefulness of the facility for other than defense purposes after the initial 5 years were the sole criterion, not one of these electric utilities would have a claim on emergency rapid amortization benefits. Newly constructed facilities of this type have useful lives that range anywhere from 25 to 100 years. It would appear that ODM bases its certification of electric utility facilities upon some mysterious formula which takes into consideration many factors, including the departures from what is thought to be normal growth of the company. Electric utility certifications sometimes go as high as 65 percent of the cost of new facility.

The latest figures made available to me by the Office of Defense Mobilization show that the total amount certified for rapid depreciation in the electric utility industry since the inception of section 124A is $2,217,472,000.

The private utilities seem to like that. Private utilities seem to think that is pretty good. Now, first, if you listened to the Oregon Voter, you would come to the conclusion that it is of no benefit to the private utilities at all; and, of course, if that were true, they would not be after these certificates. What do they want them for? They want them for the tremendous financial advantages that I have brought out previously in this speech; and I say that, under this atomic energy bill, if you pass it in its present form, you give the private utilities the monopolistic control over the atomic-energy electric power development program, and you will have a rush to get certificates for amortization purposes; because it is just like going out and picking berries. Just go out and pick the money off the taxpayer's bush under this program.

It is a hidden subsidy in this bill. I am against it. I am for either getting, as I said earlier, some general legislation on this tax amortization problem, or I am for writing some safeguards in this bill. And I think we had better play it safe and write the safeguards in the bill, and pass some general legislation.

This $2,217,472,000 is truly amazing when we recall that under the World War II rapid amortization program all industries received certificates of necessity authorizing $5.7 billion in rapid writeoffs.

Mr. President, this anomalous situation is worthy of deep reflection. Here we have a case in which enormous Federal assistance, to the tune of $2.2 billion in rapid writeoffs

has been given to an industry that has conducted a huge and expensive propaganda campaign damning as creeping socialism most public benefits that are conferred by the Federal Government on individuals or groups outside the private electric utility field. Apparently Federal assistance that tends to swell the profits of the electric utilities is good business—at least for the private electric utility monopoly.

PRIVATE ELECTRIC UTILITIES STILL KNOCK AT THE FEDERAL HANDOUT DOOR

A few months ago the Office of Defense Mobilization placed the electric utilities on what is called the suspended list of its expansion goals—ODM release, January 29, 1954. Does this mean that these utilities have finished gorging themselves with rapid amortization benefits? In view of their selfishness, this is highly unlikely.

There are now pending approximately 25 private electric-utility applications in ODM for further certificates of necessity. Knowing of the persistence of the utilities and their highly paid lobbyists, it is quite likely that the electric utilities soon will be returned to the open list of expansion goals and that once again they will be shoving against each other for an advantageous place at the trough.

Included in this pending list are two applications for certificates of necessity on proposed new construction by that Maine corporation, the Idaho Power Co. These applications ask the Government for a rapid writeoff handout on two proposed projects, Oxbow and Brownlee, on the Snake River, which the company lists in its applications as involving outlays of $35,944,000 and $67,138,000 respectively.

Mr. President, you will recall that the Idaho Power Co. is using every means at its disposal to scuttle the development of the magnificent Federal multipurpose Hells Canyon Dam project on the Snake River.

I am so delighted that my good friend, the Senator from Idaho [Mr. DWORSHAK], is present to hear this discussion of mine about the Idaho Power Co., Hells Canyon Dam, and what I consider to be the scuttling attempts of this avaricious company to take from the people of the Pacific Northwest their heritage in the great natural resources belonging to the people, not to the Idaho Power Co. It proposes to do this by the construction of three low-head dams at the Hells Canyon, Oxbow, and Brownlee sites on the Snake River. If such construction materializes it will be impossible to go ahead with the high Hells Canyon project. In other words, the Idaho Power Co. is seeking to prevent full development of this tremendous river resource, which belongs to all the people, by substituting three puny dams which it will operate in the production of high-cost electric power. The irony of the situation lies in the fact that the Idaho Power Co. wants to deprive the American people of the benefits of a high Hells Canyon Dam, and at the same time it wants the American taxpayers to pick up the rapid amortization tabs on two of the low dams to assist its machinations against the public interest.

Does the absence of a pending application for rapid amortization on the company's low Hells Canyon Dam proposal mean that the Idaho Power Co. really does not intend to build this third puny project?

THE VIRGINIA ELECTRIC POWER CO. FIASCO

The Idaho Power Co. is not alone in its insistence on this form of Federal subsidy—the kind of hidden subsidy that I say is involved in the pending bill, and the kind of hidden subsidy that I say must be checked before this bill is passed.

Consider, for example, Mr. President, the case of the Virginia Electric Power Co. This company filed an application for a certificate of necessity on its investment in facilities at Roanoke Rapids—an investment estimated to total $33,095,000. These facilities were to be constructed in conjunction with the development of a power dam on the Roanoke River—a power site wrested from the people via a Federal Power Commission decision. This FPC decision granting a license amounted to a grant to VEPCO to skim the cream from the Roanoke River after the Corps of Engineers had built the great, expensive river regulating dam at Buggs Island. The Roanoke Rapids site was to have been the power-producing dam. Buggs Island Dam—now John Kerr Dam—was chiefly regulatory, with part of its cost to be recouped through power generated below at Roanoke Rapids. After the former Secretary of the Interior, Mr. Chapman, and the rural electric cooperatives had lost their fight to prevent this giveaway, VEPCO came up with its request for an accelerated depreciation certificate.

Mr. President, I call your attention to the fact that VEPCO had applied to the FPC for the license to build the Roanoke Rapids Dam, and had asserted that it needed and could market that power before a shot was ever fired in Korea; and I call your attention to the further fact that the certificate issued by ODM for these "defense facilities" was issued after an armistice had been declared in Korea. Yet ODM certificated almost 65 percent of this $33 million as eligible for accelerated depreciation, presumably on the grounds that VEPCO would not build the facilities without the certificate. This certificate covers $21,511,750 of the cost of construction and will entitle VEPCO to tremendous benefits from the American taxpayer. The total benefits which will accrue to VEPCO over a 50-year period—assuming a 50-year life of the project—will exceed the total cost of the Roanoke Rapids facilities. This will be readily ascertained by referring back to our table of computations, bearing in mind the fact that the bulk of the certification is for almost 65 percent, not merely 50 percent, as in our charts.

This is an illustration of the manner in which the accelerated tax-amortization program, authorized by the Congress, is being operated as regards private electric utility corporations. Defense certificates are being issued for facilities planned before the outbreak of hostilities in Korea and such facilities are being declared defense facilities more for the convenience and profit of the private utility corporations than for aid in national defense.

Moreover, the essence of such grants is that unless action is taken, the taxpayers of this country are paying for the cost of private electric facilities, but do not become owners of the plants.

WHAT BECOMES OF THE INTEREST WINDFALL ENJOYED BY THE ELECTRIC UTILITIES UNDER SECTION 124A?

We have seen that when a private electric utility obtains a certificate of necessity, it has excellent chances of enjoying large interest benefits on deferred taxes. What becomes of these interest windfalls? Do they go to the rate payers to relieve their burdens on electric bills rendered each month? In practically every instance the answer is "No."

The truth of the matter is that once the benefits from this accelerated depreciation program began to show up on the books of the utilities, they moved into the various State commissions, asking for accounting and ratemaking rules concerning these interest-free loans and the profits accruing under them. The language of the various State decisions and the actual decisions themselves, if we examine them, will leave no doubt but that there was a concerted national agreement among the utility corporations themselves as to the way in which these tax certificates should be handled by regulatory commissions.

Of the 21 State commissions which have ruled on these interest-free loans, 20 of the 21 have insisted that any benefits accruing therefrom should accrue to the utilities—not to the rate payers, not to the consumers; and only 1, the Georgia Commission, has ruled that the benefits, or at least a part of the benefits, should accrue to the electric consumer. The Georgia Commission ruled that since the withheld tax money had been collected from the rate payer in the form of electric power bills, the consumer should be looked upon as supplying capital to the utility corporation. Putting it briefly, the Georgia Commission held that for every dollar an electric utility corporation placed in its "deferred tax kitty" it should deduct $1 from the rate base on which rates are established for electric consumers. And why not, Mr. President? There is no reason in the world why that saving should not go to the benefit of the consumers. But not so, say the commissions of 20 other States.

The other 20 State commissions by one accounting device or another have told the electric utility corporations that they can use the interest-free loans from the Federal Treasury, which were originally collected from the rate payer in the form of Federal income-tax requirements. They can hold these interest-free loans and use them, but they must keep track of them, so that over the years the books will indicate that "the deferred Federal income taxes" have been repaid to the Government. This procedure disregards the fact that these deferred taxes constitute a tremendous and profitable resource of funds for the utility corporations.

Last year the Federal Power Commission wrestled with the problem of what to do with rapid depreciation under section 124A, for utility operations that come within its jurisdiction. The National Rural Electric Cooperative Association having a deep interest in the subject, filed a very comprehensive written statement with the Commission. The NRECA did this on behalf of the rural electric cooperatives, but in a larger sense it also represented the interest of consumers of electricity throughout the country.

On December 4, 1953, the Power Commission issued a statement of policy in its opinion No. 264. In this statement it indicated that for purposes of ratemaking depreciation should be computed on the basis of the actual service life of the facilities. It also decided that the utilities should retain the benefits flowing from accelerated amortization. This means that in computing costs to the consumer, Federal income taxes are computed on a normal depreciation basis, rather than on an accelerated basis, even though 5-year rapid amortization has been certified. This will not translate into lower costs to the consumers.

Federal Power Commissioner Doty disagreed with the majority in this case, and issued a powerful dissenting opinion, in which he stated, in part:

"I dissent from the action of my associates in their decision in the above-mentioned docket. In my opinion the decision will require rate payers to pay far more than a fair return for utility services, contrary to a long line of precedents established by this Commission which have been upheld by the courts. The decision will give utilities returns in excess of those necessary to render adequate service and to attract capital for proper expansion of facilities; it will impose unjust burdens on consumers equal to these excessive returns; it will unnecessarily complicate the regulatory process."

Later in the decision he said:

"The amounts which the utility will thus collect under the guise of taxes payable to the Government over some 25 to 100 years after the close of the amortization period will be available to the utility for its ordinary capital needs. The amount recouped

as taxes will be substantially in excess of the actual taxes payable for a long period in the future and the excess could be used to pay off pro tanto securities issued to finance the emergency facilities or to purchase other facilities, the cost of which would then be included in the rate base. Unfortunately, under the decision of the majority in this case, the consumers will not in any manner whatsoever receive any credit for these large payments which, as noted above, can readily be used for capital purposes.

* * * * *

"Suffice it to say that on the basis of a 6-percent return and an average life of 40 years, the additional income to the utility in excess of a fair return over the life of the property would amount to about $491,000 for every million dollars of investment subject to accelerated depreciation."

THE RATE PAYERS GAIN NO BENEFITS OF INTEREST SAVINGS ON RAPID AMORTIZATION

Mr. President, the huge savings of interest on deferred taxes will be used by the managements of the private electric utilities for purposes best known to themselves. Of one thing we are certain. They will not pass on the benefits of these rapid amortization interest savings to electric power consumers, with a possible exception of utility operations under the jurisdiction of the Georgia regulatory body.

Will overly generous management salaries be fattened by further dips into this interest windfall jackpot? Will fees of the utilities' lawyers be considerably increased? Will utility expense accounts, including liquor accounts, be even more liberalized? Will the American public be subject to even greater avalanches of private electric utility false propaganda?

Will these funds be used indirectly to sponsor private utility stooge candidates for elective office?

Mr. President, patterns of the past make it not too difficult to surmise what these private electric utility operators will do with any extra funds coming into their hands. But we know that the electric consumer will be left standing with his hat in his hands.

It is difficult to believe that in this age of great research and rapid communication any vested interest could have gotten away with so much without any general awakening on the part of the public. The principal reason is that electric consumers are not organized, but the power companies are. The only electric consumers in America that have a voice in their rates are those served by municipal systems, public utility and public power districts and the rural electric cooperatives. These nonprofit bodies are concerned with the consumers' interests because they are consumer controlled.

In view of the campaign of the National Association of Electric Companies denouncing alleged subsidies to Federal power projects and by implication, rural electric cooperatives, it is interesting to note that the interest-free loan arising from accelerated depreciation is equal to over one-third of all Rural Electrification Administration loans outstanding; and equal to over one-third of the cost of all power facilities of the Tennessee Valley Authority, Bureau of Reclamation projects, projects of the Corps of Engineers, Bonneville Power Administration, and the Southwestern Power Administration.

I wish to tell you, Mr. President, that I think this private utility monopoly gang have colossal gall ever to utter one word about subsidies, when they are the hoggish beneficiaries of tremendous subsidies in the form of tax-amortization certificates and the financial benefit that flows therefrom.

REA borrowers pay 2 percent interest on their loans from the Federal Government, and the various Federal power projects pay or earn from 3 to 4.5 percent interest on their costs. The consumer-owned, publicly or cooperatively managed, interest-paying cooperatives, power districts, and Federal power agencies are discriminated against. They get no interest-free loans.

Mr. President, the Independent Party believes in democracy and in free enterprise. It does not believe in and will expose at every possible opportunity unregulated monopoly and unjustified subsidy.

The enormous subsidy granted private utility corporations under section 124A of the Internal Revenue Act—and now given the blessing of the FPC—must be stopped.

This form of hidden subsidy, which I think is inherent in this atomic-energy power bill now pending before the Senate, must be stopped. That is why, among other reasons, a group of us are taking the position that this bill shall not pass until we work out at least some reasonable compromises of the most glaring injustices in the bill.

We feel that we have a tremendous duty to the American people to insist that these hidden subsidies be taken out of this bill. That was one of the reasons why some hours ago I went into a discussion of a historic precedent as to what happened in the year 1913 in a conflict between the White House and the Congress over the Federal Reserve Bank Act. It was because I think we find there a lesson of procedure that we ought to follow here. We ought to make certain that the President of the United States really understands the dangerous provisions of this bill. I am going to continue to believe that if he really understood them, which he obviously showed in his press conference the other day he does not, he would agree with us that at least some of the amendments we are insisting upon ought to be accepted as fair compromises by the proponents of this bill.

Mr. GORE. Mr. President, will the Senator yield for a question?

Mr. MORSE. I will yield for a question.

Mr. GORE. Does the Senator not think the amendment offered by the senior Senator from Oklahoma [Mr. KERR], substituting the McMahon Act provisions with respect to compulsory patents, instead of the unwise provisions in the pending bill, was one of the most important amendments to be offered to this entire bill?

Mr. MORSE. I most certainly do. I think it should have been debated. I think it should have been thoroughly considered by the Senate, and I think it was most unfortunate and unfair for the majority to lay it on the table immediately after the Senator from Oklahoma had presented his case in support of it, when there were others that wanted to speak on its pros, and when those of us who favored the amendment thought that we at least ought to have been extended the courtesy of getting into the RECORD the objections of the opposition to the amendment if they have any objections that they could really put down in argumentative form.

I am inclined to think that regarding some of these amendments, such as that one, the opposition knows it cannot answer. So it follows the course of action of moving to lay on the table. In my judgment, that is going to hurt the opposition.

Mr. GORE. Is that consideration the kind of consideration the junior Senator from Oregon thinks this important legislation is entitled to have?

Mr. MORSE. It is not. It is not, and I do not think that it is a credit to the Senate to have that kind of a parliamentary process followed in the Senate. I think that the American people are entitled to have the proponents of this bill come forward and meet us on the merits of our arguments, by setting forth any countersuggestions or any rebuttal points that they might have in mind.

Now, Mr. President, if the Federal Power Commission and State regulatory commissions refuse to protect the electric consumer, who will or who can?

The rural electric cooperatives already live precariously surrounded by these great feudal monopolies. These cooperatives, tied in here and there with low-cost Federal power plus some public power districts and municipally owned plants, are the only yardstick by means of which some competitive force is brought to bear upon electric rates.

It is apparent from these data that the private power companies have received or will receive subsidies that dwarf any assistance either Federal or rural electric cooperative power has received over the years. These subsidies arise largely as a result of the failure of State utility commissions to regulate, and of the recent ruling of the Federal Power Commission on rapid amortization.

There is real doubt that the certificates of necessity granted to power companies should have been granted at all, as a matter of policy, in terms of section 124A as written—that is, that facilities covered by certificates should be facilities "necessary in the interest of national defense."

In this country, for many years, there has been what has amounted to a shortage of power or a dangerously low reserve of generating capacity in many, many areas. As long as such a situation prevails, it is difficult to understand why power companies should not have met the shortage by adequate expansion without Federal subsidy. It is difficult to conceive of an industry where expansion of capacity involves less risk than it does to the electric-power industry.

This is not the case of a surplus; this is a case where there was a great shortage of supply, and the power companies could have sold their product, so to speak, just as rapidly as they could have got it off the generators. Here was no case, in my judgment, which met the purpose and the policy for the granting of certificates of necessity. This is not a case where business is being urged to build a defense plant, and is being offered an inducement for building it, on any theory that the plant would be worthless as soon as some emergency was over. There was no emergency which would have had the effect of destroying the value of these utility plants. To the contrary, the great demand for more and more power assured to the private utilities a good business and a good profit. It was not necessary for them to have had the assurance of a nice bonanza handout by way of the subsidy I have been discussing.

In the atomic-energy power bill there is the same availability of a hidden subsidy. All that is being done is to let the private utilities put their hands into the pockets of the American taxpayers and to take out the taxpayers' money legally. But it is larceny by law. That is what it is. In my judgment, it cannot be reconciled with political morality. It cannot be reconciled with statesmanship.

I am perfectly willing to be of help, through the Government, in legitimate subsidy programs, if it can be shown that the public interest requires it. There is no such showing in regard to the private utility plants. When it is seen what they do and the great savings which they make through interest, when it can be seen that 20 out of 21 State regulatory bodies—the State of Georgia being the only exception—hold that the savings on interest, as a result of the tax-amortization program, go to the utilities, and do not go to the consumers, one has a pretty clear idea as to what the private utility monopoly is up to.

Now we have the Federal Power Commission, as a result of the appointments of this administration, following the same line—with one dissenting opinion, that of Commissioner Doty.

I think it is most unfortunate that Congress sits idly by and allows this kind of exploitation of the rights of the American

taxpayers to continue, without the passage of a general law, other than is on the books at present, which would provide for some regulation of the entire tax-amortization plan.

I shall argue that point in connection with the bill, because I think here is one specific instance in which the situation can be remedied, just as I felt, when the tax bill was before the Senate not so long ago, that my amendment for the regulating of the acceclerated depreciation allowance should be included. As I said then, I am willing to take the advice of the experts on the staff of the House committee, who estimated that in that tax bill the American taxpayers would lose $19 billion in 18 years, as the result of the accelerated depreciation allowance provided for in the bill. To me that is shocking. The depreciation allowance provision of the tax bill is so wide open, Mr. President, that one can buy an office lamp for any business office, and depreciate it at the accelerated rate. Let anyone justify that on the basis of necessity, from the standpoint of the public interest. Let anyone justify it on the basis of any fairness to the American taxpayer. You know who pays that bill, Mr. President. Not the people of this country who have high incomes, who go in for the depreciation allowance, but the little fellow, the little fellows, the consumers in America having low incomes, incomes of $7,500 a year or less. They are the ones who get caught in that bite. They are the ones who really are paying the tax, to give away, really, the taxpayers' money to people who have the ability to pay their taxes without the hidden subsidy. It is not so hidden in the tax bill—without the subsidy of an accelerated depreciation.

As I said during the tax debate, I repeat this morning: Is there no limit to the selfishness of the people who have the ability to pay? Must we place an inequitable and unfair burden upon the books of the people least able to pay? For that is what is being done under the tax bill as it left the Senate. That is one of the reasons why I voted against it. It shall always be proud of the vote I cast against the tax bill. I shall always be proud that I was never a party to voting for a bill which does the injustices and places the inequities on the backs of the people least able to pay in this country, that that tax bill does.

Mr. President, a similar principle is involved in the pending bill. Again, there is the whole problem of hidden subsidy. We see greed, selfishness, and the private utility monopoly of this country trying to come in again, and to take advantage through law of the masses of the American people. That will not be done with my vote.

Something tells me that as the American people come to understand this problem, there will be some other people doing some of the voting in the Senate of the United States after November 1954.

Something tells me that once the American people come to understand the giveaway features of the atomic electric power energy development program, as set forth in the bill, they will take advantage of that election to provide themselves with some new Senators and Representatives—and I wish them well; I intend to do what I can to help them to that end.

Mr. President, the demands of the electric power industry in recent decades have led to a doubling of capacity every 7 to 10 years, an almost incredible rate of expansion when carried on over a considerable period of time. As long as demand on the industry is growing at this rate, it is difficult to conceive of the industry's being threatened with excess capacity. And even if the industry did temporarily overbuild its capacity, the regulatory commissions doubtless would rush through increases in rates to protect the investors in the industry.

Mr. MORSE. Mr. President, I am about through.

I wish to say that I understand that on Friday, there is to be a rather brief session of the Senate. On Friday, I shall discuss briefly another phase of this problem, because there is another phase to it.

Mr. President, I turn now to another subject.

The PRESIDING OFFICER. The Senator from Oregon has the floor.

THE SPEECH BY SENATOR MORSE AT DETROIT, MICH.

Mr. MORSE. Mr. President, last night I said that I would place in the CONGRESSIONAL RECORD the speech I made at Detroit, Mich., which caused all this furor. We have the tape of the speech, and it is being transcribed.

Let me repeat, as I said last night, that the tape bears out exactly what I have said I said at Detroit. We are having it transcribed, and I will have it ready for insertion in the CONGRESSIONAL RECORD on Friday, at which time I shall make a few appropriate remarks in regard to it.

Mr. President, in closing, let me say that although there has been some harshness in the exchanges between Senators during recent days, there is no harshness in my heart, insofar as my colleagues are concerned. I think they have made a great mistake in taking the position they have taken in regard to my right to exercise untrammeled free speech in the Senate of the United States.

I have noted with interest that the Republicans at best are still in meditation as to whether they are going to proceed with any censure motion or resolution.

I wish to say to my good friend, the Senator from Michigan [Mr. POTTER] who at the present time is the acting minority leader, that the longer my colleagues on his side of the aisle remain in meditation about the matter, the more encouragement I shall get, I am sure, from all parts of the country for the position I have taken, although I also realize that Senators on the other side of the aisle know that they do not have a leg to stand on, in respect to any censure proposal under the rules of the Senate. Furthermore, there is a great deal to what these Republican friends of mine are saying, when they either telephone to me or write to me, and ask me, "Did you pay those fellows to attack you?" They ask that question because the attack has focused attention on this issue and has caused it to be understood far better than it otherwise might have been understood.

But, Mr. President, I have been in battles before, and I have had Members of the Senate think harshly of me before, only later to come to realize that I am not so bad as they thought—disagree with me as they do, and as they will—and that, after all, those of us who serve in the Senate do have mutual respect for the right of each one of us to stand for what he thinks is right.

Therefore, Mr. President, tonight, on the floor of the Senate, I express my appreciation for some of the very kind things which have been said to me by Republican colleagues during the past 2 days, in the cloakrooms of the Senate, in demonstration of the fact that they did not really mean, on a personal basis, some of the unkind things they said. I am appreciative of that, and I want them to know there is no rancor in my heart because of past differences.

Now Mr. President, in accordance with the order previously entered——

Mr. POTTER. Mr. President, will the Senator from Oregon yield to me?

Mr. MORSE. I yield.

Mr. POTTER. First, I should like to say to the Senator from Oregon that I feel that tonight I have, for once, outlasted him, or at least lasted with him.

I wish to make a few remarks of my own; and I should like to obtain the floor in my own right, in order to make them.

Mr. MORSE. I am sorry that I did not know the Senator from Michigan intended to speak at this time.

Mr. POTTER. Let me add that I was an appreciative audience in listening to the speech the Senator from Oregon made.

Mr. MORSE. And I shall remain here to listen to the speech which I now understand the Senator from Michigan will make.

Mr. POTTER. Of course, I would have remained long enough to make my speech, regardless of whether the Senator from Oregon had made his.

Mr. MORSE. Mr. President, I yield the floor.

TAXES AND MICHIGAN

Mr. POTTER. Mr. President, on May 17, the junior Senator from Michigan introduced into the RECORD a letter from Gov. G. Mennen Williams, of Michigan, to Mr. Harlow H. Curtice, president of General Motors Corp. The letter stated that Mr. Curtice had predicted General Motors Corp. would move its operations out of Michigan if the legislature adopted a corporation tax now under consideration. The junior Senator from Michigan accused Mr. Curtice of "wielding a blackjack" and seeking to "blacken the name of one of the Nation's greatest industrial States."

It is not my purpose here to defend either Mr. Curtice or the General Motors Corp., both of whom have been able in the past to take care of themselves. No one can question Mr. Curtice's interest in the development of Michigan. I am concerned about one thing only: that the State of Michigan preserve an economic climate which produces more jobs, better living standards, and a healthy growth base for all business, large and small.

The remarks on the Senate floor on May 17 were emotionally charged. Certainly there has been an increasing wave of publicity concerning Michigan's business climate. The situation affects every worker in my State.

During the past weeks all of us have witnessed a vast ground swell of public sentiment for Government economy. Right-thinking individuals in Michigan also are concerned about their State government's economy. If a State's finances are manipulated so that workers'

jobs are endangered, or business is discouraged from establishing itself in Michigan while other States boom, then citizens have a right to know what is happening to them.

In the interest of clarity and fairness, I should like to place in the RECORD certain facts concerning Michigan's current financial status.

Comparing the tax "climates" of various States is difficult and painstaking. I have drawn upon the conclusions of expert and objective observers in this field.

On April 17, 1957, the Citizen's Research Council of Michigan reported as follows:

The State of Michigan faces its most serious financial crisis in many years. Spending proposals exceed all previous limits and are far beyond estimated revenues. The Governor's 1957–58 budget proposes appropriations from the general fund of $411 million, an increase of 24 percent over this year's (1956–57) appropriation.

On May 13, 1957, Mr. M. M. Hollingsworth, staff writer for the Detroit Free Press, summarized as follows a comprehensive study of comparative State taxes by the Pennsylvania Economy League:

A hypothetical $10 million manufacturing corporation would pay more State and local taxes in Mount Clemens, Mich., than in 184 other communities studied in Michigan, Pennsylvania, Delaware, Maryland, New Jersey, New York, Ohio, West Virginia, Illinois, and Indiana.

The first five communities in high cost were in Michigan. Ranking behind Mount Clemens in order were Plymouth, Detroit, Clio, and Romulus Township.

All of the 10 Michigan communities in the study were in the first 30 in rank of cost.

The report showed the corporation would pay a total of $338,778 in taxes in Mount Clemens. This would come from $239,661 in local taxes and $99,117 in State levies.

Largest tax imposed in Michigan on corporations is the personal property tax. This levy in Detroit would cost the hypothetical firm $202,904 and in Mount Clemens the tax would be $202,144 on plant and equipment worth $3,085,000.

Other Michigan communities included in the study were Flint, Pontiac, Mount Morris Township in Genesee County, Montague Township in Muskegon County, Trenton and Holly Townships in Oakland County.

Trenton would tax the corporation less than the other Michigan communities, the levy being $170,032 from $65,309 local levies and $99,117 State tax.

The study showed the corporation would pay a total local and State tax of $198,351 in Pittsburgh against $321,306 in Detroit.

Total State taxes on the corporation in the 10 States would be:

Pennsylvania	$141,850
Michigan	99,117
Maryland	89,162
New York	86,845
West Virginia	64,702
Indiana	44,440
Ohio	19,660
Illinois	14,020
New Jersey	13,640
Delaware	1,653

Michigan was second among the four States in the study that levied receipts or business activity taxes.

A spokesman for Governor Williams' Michigan Economic Development Commission was quoted early in May as saying that Michigan has been experiencing growing difficulty in luring new plants and jobs "because the decision to locate a new plant is based on sound economic facts."

The spokesman said that "If we manage to land 3 out of 100 companies available, we consider ourselves fortunate." He admitted that the State lost a large steel firm to Ohio principally because of the differential in taxation on business.

The Michigan Employment Security Commission lists the average motor-vehicle industry employment in Michigan for 1956 at 404,000, the lowest in the past 10 years. In 1953 the comparable figure was 503,000.

Market analysts interpret these figures as indicating the industry has been just holding its own in Michigan while expanding briskly elsewhere, principally in Ohio, which boasts of a more favorable business tax climate.

This would substantiate Mr. Curtice's statement concerning plant location. He did not threaten to move General Motors operations out of the State, but he did point to the level of taxes as a factor in location of new plants elsewhere.

I ask unanimous consent to have printed at this point in the RECORD Mr. Curtice's reply to Governor Williams.

There being no objection, the letter was ordered to be printed in RECORD, as follows:

MAY 24, 1957.

Hon. G. MENNEN WILLIAMS,
Governor of Michigan,
Lansing, Mich.

MY DEAR GOVERNOR WILLIAMS: This is in reply to your letter of May 14. In the opening paragraph of this letter you state:

"On April 28, you issued a statement saying in effect that General Motors Corp. would move its operations out of Michigan if the legislature adopted any additional taxes which would affect the corporation."

For your information and review, I am enclosing a copy of my letter to Mr. Lee Hills, executive editor of the Detroit Free Press, in reply to an inquiry Mr. Hills had directed to me and to the presidents of more than 30 other corporations operating in Michigan. This is the statement to which you refer.

In this letter I made no mention of existing operations in Michigan. The only references with respect to the location of plants or operations are as follows:

"Even the present level of business taxation in Michigan has already led us to locate plants in other States, where the taxes per General Motors job are less than one-half of the present taxes per job in Michigan. This also will be taken into consideration in the placement of additional plants. * * *

"Obviously, if the Governor's plan of taxation is adopted the resultant excessive tax level will be an even greater influence in our decisions with respect to locating new plants and providing new job opportunities. Michigan's advantages are not enough to overcome the additional handicap of the proposed taxation."

There is not even an implication in any of these statements of any intention on the part of General Motors to "move its operations out of Michigan." Your conclusion is a misinterpretation of my statement, and it is the publicizing of this misinterpretation that has had such a "widespread impact"—to use your expression.

Everyone acknowledges that Michigan should have adequate revenue to meet the costs of government, including the health and welfare programs which its citizens require and are entitled to receive.

However, it appears that a thoroughgoing, impartial analysis of fiscal policies and operating efficiency is needed at all levels of government in Michigan—State, county, and local.

General Motors considers Michigan its home State. The focal point of our operations is here. In fact, approximately 45 percent of our corporation's physical investment in the United States is in this State, and about 45 percent of our United States payrolls go to Michigan employees. These payrolls last year totaled more than $1,165,000,000 and they went to over 211,000 men and women in Michigan.

We purchase goods and services from 6,500 other Michigan firms to whom we pay out as much as $1¾ billion yearly. Taxes of all kinds paid by General Motors to State and local governments in Michigan in 1956 totaled more than $50 million.

Here in Michigan, as in all States where we operate, we seek no favored treatment. We are completely willing to bear our share of the cost of government.

Sincerely,

HARLOW H. CURTICE.

Mr. POTTER. Mr. President, I introduce these serious facts into the RECORD because the prosperity of Michigan's people is involved. Michigan is a great State. It has industrious workers, a pool of scientific know-how second to none, competent business managers, vast natural resources, and scenic beauties. It has many advantages to offer business enterprises, but its current financial mismanagement is not among them.

There is no question that Governor Williams faces an ominous tax dilemma. His administration has built an extravagant and topheavy State bureaucracy which has pyramided into hundreds of boards, commissions, and pilot groups.

The only way to pay the bills for such an establishment is to levy more taxes. Now comes the $64 question.

Do we study and analyze our State's operating and financial procedures? Do we try to trim some of the fat from State operating costs? Do we then try to work out an equitable tax structure for all segments of the State's economy? Or do we blindly slap a tax on one vital segment of the economy—the business community—when we already have the evidence before our eyes that taxes have become a factor in the businessman's preference for locating outside of Michigan?

This is indeed a most delicate and difficult situation, but one which the present State administration has brought upon itself.

If Michigan continues to display an uninviting attitude toward business, it is you and I who will suffer, but not the businessman. He will locate his plant where he receives the most advantages, and the people of Michigan will be left with soaring unemployment figures, plummeting paychecks, and nothing but memories of the good old days.

Through the foresight of its working men and women, Michigan has achieved an enviable position in the material and spiritual well-being of its labor force. This is something of which all of us are proud. It is something we should preserve. By slowly killing off industry we are harming our labor force, for we are doing harm to the other important half of the partnership—the employer.

Mr. President, I ask unanimous consent to have printed in the RECORD at this

point editorial comment on this subject from the Washington Star, the Detroit News, the Battle Creek Enquirer and News, and the Detroit Free Press.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Star of May 6, 1957]

TAXES WITH POLITICS?

Economics and politics appear to have become thoroughly mixed up in Michigan. Efforts of the Democratic administration of Gov. Mennen Williams to push through a State tax on corporation profits have brought blunt warnings from some of the leading industrial enterprises in the State that any substantial new burden on them will increase their interest in locating, or at least expanding, elsewhere. Spokesmen for the automobile manufacturing industry, Michigan's largest single industrial activity, have been foremost in their criticism, but steel, chemicals and other industries have expressed similar views.

President Harlow Curtice of General Motors, for example, has reminded the State legislature that the present level of business taxation in Michigan already has led his company to locate new plants in other States when the taxes per job are less than one-half those already applicable in Michigan. Ohio has been one of the beneficiary States in the postwar period, on grounds that the tax climate is more favorable while its geographic location and supply of skilled labor are not notably inferior to those of Michigan. Michigan already has a corporation franchise tax and a business activities tax, but up to now has imposed no tax on either individual or corporation incomes. The currently disputed program does not include an individual income tax, but aims at raising an estimated additional $132 million annually from a 6 percent corporation profits tax.

Michigan is not alone, of course, in finding its revenues strained to cover estimated public spending needs. Furthermore, many States already impose taxes on both individual and corporation incomes. The overlapping of taxes, Federal, State, and local, has been largely a post-World War II development, however, and many economists and tax experts view the trend with alarm. The policy of offering tax inducements already has played a large part in tempting shifts of industry, as well as of individuals, from some States and regions to others. It would be difficult, if not impossible, to establish a uniform structure for State taxation, but it is evident that there should be some reasonable balance between the tax burden and the advantages received in return. It is an area in which economic considerations, rather than political ones, should be prevailing.

[From the Detroit News of May 2, 1957]

HOW DOES OHIO DO IT?

Ohio is most often mentioned as the State whose tax "climate," being favorable to business and industry, has Michigan at a disadvantage. The disadvantage already existed before the current proposals to raise Michigan taxes still higher. So it is of interest to question what we can or should or want to do about it.

The facts of the case cannot be doubted. Ohio State taxes, particularly business taxes, are definitely lighter. Local taxes, so far as a quick look at typical cities shows, are at least no higher in Ohio than here. With less than half Detroit's population, Cleveland collects barely one-third as much from property taxes. There is no denying that in a close decision plant locations may be determined by tax differentials or that this has in fact happened and perhaps often happened as between Ohio and Michigan.

The people of Michigan will have to say what they want done about it. The only answer this newspaper has for the present is simply that whatever is done will have to be pretty fundamental. There are fundamental differences between the two States not confined to those of geography and natural resources.

Ohio seems somehow able to manage with less costly government than we in Michigan. Moreover, the State seems to have had a different view of how government should be paid for. For all we know at present, that may be the most important difference of all.

With a population bigger by 1,500,000, Ohio in 1954 (the last year for which comparable figures are at hand) had State government costs just about like Michigan's. It would not be wholly accurate to say that Ohioans got along with less government. The State's outlay per capita for public welfare and for highways was bigger that year than Michigan's. So was its capital outlay. But Michigan's spending was bigger both per capita and in absolute amount than big Ohio's for government salaries and wages, for education, for health and hospitals, and for what are termed "intergovernmental" purposes.

That term comprises various State payments for the support of local government. In Michigan these came to $52 per capita as against $33 in Ohio. Evidently Ohio local government tends to stand more on its own financial feet. So do Ohio schools, as reflected in the State outlay for education, which was less than half of Michigan's.

Why then are local taxes at least no bigger than in Michigan? We cannot say for sure, of course. But we may shrewdly guess that when more of the money for local government and for schools must be raised locally, the money is spent more carefully.

So it may be that any move by Michigan to neutralize its tax disadvantage would have to be a move adopting the Ohio view of local government responsibility. This would be for Michigan a fundamental change indeed and, we think, a healthful one.

[From the Battle Creek Enquirer and News of May 1, 1957]

WHAT'S THE MATTER WITH MICHIGAN?

Away back in 1896 the late William Allen White gained the Nation's ear when he wrote an editorial entitled, "What's the Matter With Kansas?" It's about time, some 60 years later, to write an editorial asking the same question about Michigan.

The State of Michigan has just received some very bad publicity. The blow has been a very severe one, from which the State will not make a healthy recovery unless the people of the State decide to do something about it. But that will take unity, and unity is pretty hard to find in Michigan.

The Detroit Free Press, in a copyrighted story, has told the State, and the world, that General Motors Corp.'s Harlow H. Curtice has said that Michigan taxes on business are forcing that firm to locate new plants in other States. There has been ample supporting evidence that General Motors isn't the only firm that views Michigan taxes as unhealthy. And the heads of these firms are quoted as saying so.

Accompanying the story was a chart showing the influence of taxes on a hypothetical $125 million corporation. It revealed that combined local and State taxes would be approximately half as much in Indianapolis or Cleveland as in Detroit, with Chicago, Buffalo, and Pittsburgh in the 60 percent bracket.

Since the story came out the Democrats of Michigan have cried "Foul" and have charged that it's all a big Republican plot. But it's pretty hard to argue with cold figures. It's pretty hard to argue, too, that the efforts of Governor Williams in seeking still higher business taxes, aren't being watched with apprehension by all businessmen. Governor Williams has sounded the warning that Michigan's high taxes on business will be even higher if he has his way.

What is the record for attracting industry in the face of this uninviting attitude toward business? The record shows that industry is leaving the State in some cases, and that record also shows that the nearby States of Ohio and Indiana are reaping the benefits of a more realistic attitude toward industry. Michigan's record of attracting new industry is on the pitiful side.

What's the matter with Michigan? Well, most of the matter is that the people seem to have been sound asleep. They have been about a decade behind most of the rest of the country in realizing the advantages to be gained from the tremendous surge of postwar industrial development, even though they have some of the greatest industries in the Nation. They do not seem to recognize, as do most other States, that it is industry that lays the golden eggs in any community, providing the jobs and taxes that pay the way for other enterprises.

There's something the matter with Michigan because as a State it has been entirely too complacent about industry. It has hiked the taxes until major plants are locating branches elsewhere, and other firms are refusing bids to enter Michigan. It continually reelects a Governor whose policies take away even more jobs from the people of Michigan under the guise of paying their bills through levying still higher taxes on industry.

What's the trouble with Michigan? One of the troubles is that its people would rather play politics than win ground in competition with other States in gaining industry. The people of Michigan are caught squarely between a regressive Republican faction and a strong camp of Democrats, who take their orders from Walter Reuther. The Democrats influence people and win votes on the theory that less work and higher pay will bring prosperity to all, and the Republicans lose votes because they're against this unsound but attractive proposition. But the Republicans fail to come up with an attractive program of their own.

Most folks can't agree on the question of the day in Michigan, which is whether Reuther controls Williams, or Williams controls Reuther, but it would be fine business if the people took over control of both. It will little profit the people of Michigan if Mr. Williams wins himself a seat in the White House on the basis of being Michigan's great benefactor of labor, if he has at the same time ruined Michigan's prospects industrially.

It is strange that the people of Michigan—a State which has seen such great industries built in years past—fail to see the omens of the new day. They refuse to provide the things that industry seeks, such as industrial parks and industrial financing, while at the same time holding to a forbidding tax schedule and constantly reelecting a Governor who would tax industry even more.

The great State of Pennsylvania was in Michigan's place a few years ago. Then it awakened. Now it is one of the leading States in the Nation in campaigning for—and winning—new industries. Michigan is overdue for an awakening. Let's tell our politicians to quit making faces at each other and get together to work out a sound program that will attract industry.

That great utopia of tomorrow won't perk unless there are plenty of industrial paychecks to help pay the bills.

[From the Detroit Free Press of May 4, 1957]

JOB FIGURES CAN SETTLE THE TAX DISPUTE FACTS

Denunciation can contain truth. But simply throwing denunciation back and forth does nothing to measure its degree of truth.

Michigan industry has denounced the State's tax policies, with special reference to Governor Williams' wish to impose a corporation profits tax in addition to present levies.

Industrial leaders say the height of Michigan's tax level is causing it to lose new plants to States where the level is lower.

If this is so, those who are really being hurt by Michigan's taxes on industry are the working people, and those who sell to them. For it means that payroll opportunities are not growing as they are elsewhere, and that Michigan workers are finding a decreasing competition for their services.

Governor Williams, in turn, has denounced industry.

He says it is using scare talk to frighten the legislature out of accepting his profits tax plan, and is trying to dictate government from the offices of corporate management.

By so doing, the Governor asserts, they are rendering incalculable damage to the economic welfare of Michigan.

Legislative voices have been heard on both sides of the dispute.

Time, of course, will infallibly tell which version is the correct one. But with the prosperity of Michigan's people at stake that could be a suicidally belated way of reaching the truth.

The day has come we say, for the legislature to insist on getting facts, and when it has the facts to lay them before the Governor and the people. And we wouldn't profess to know at this juncture which side of the case they would support.

Fundamental proof of what is or isn't happening to Michigan industry and work opportunity lies in the records of the Michigan Employment Security Commission.

There, all the employment records come together. From them could be ascertained everything essential that needs to be known on the subject of payroll shrinkage or expansion—not only in total but by areas and individual firms.

Because employers are taxed for employment benefits on a basis of the stability of jobs in their plants, it could also be told whether a man's assurance of steady work is going up or down.

With these statistics, legislators devoting themselves to State revenue problems would have a measuring stick to be held against population increases, plant migrations and, to some extent, conditions in other States.

If Michigan's payrolls—good stable ones—are lengthening, they can put sharp, informed questions to management when it talks of hazards to the Michigan economy.

Should it turn out that we are only holding our own, or starting to slip, in relation to other industrial States, they will be in an equally good position to cross-examine Governor Williams on his indictment of industry.

In either case, the real objective should be firmly held in mind. It is to be sure that Michigan is kept in or restored to the best possible competitive position it can have in the furthering of work opportunities for its people.

By "best possible" we of course mean in the light of maintenance of necessary public service. Nobody wants to see a tax structure that would retard needed progress in Michigan.

In citing this goal, we find doubt in our minds whether Governor Williams has kept it before him as well as he could have.

Any Michigan chief executive, when it comes to fiscal matters, is bound to be somewhat tied by unalterable money allocations. One of Michigan's basic revenue-and-outlay troubles is inflexibility.

Nevertheless, it does appear to us that Governor Williams hasn't shown all the endeavor an executive should to find ways to hold tax increases to a minimum. We don't think he has shown Michigan an earnest effort in the direction of managerial ingenuity.

His standard procedure is to seek to meet all difficulties by the simple, even if not always successful, expedient of demanding more money.

That is opinion, and naturally there will be opposed opinion.

One thing in the present controversy for which the Governor can unquestionably be taken to task without quibble is his own discouragement to industrial expansion here. We mean by that his defaming of management.

Business is susceptible to political climate. In his excoriation of industry this past week, he cannot have failed to leave the impression that his administration sees industry as equipped with horns and tail and diabolical purpose.

We can't imagine that a management in search of a plant site would be very quick to establish in a State whose Governor talks of industry the way Governor Williams has since the tax issue quickened.

[From the Detroit Free Press of May 13, 1957]

AN AIR OF OFFICIAL HOSTILITY CONFRONTS MICHIGAN'S INDUSTRY

How Michigan taxes put this State's chemical industry at a competitive disadvantage was told in Sunday's Free Press.

One spokesman for a chemical manufacturer said, for example, that because of more favorable taxes his firm's competitors in Ohio, Indiana, West Virginia, and New York can turn out products comparable with those made here, and do it at 15 percent less cost.

Other statements were in a similar vein.

They are disturbing when it is considered that Michigan's chemical industry employs 45,000 people and has a $325 million annual payroll.

Industry can only go so far in abiding competitive handicaps. After that it has to do something. When taxes are the handicap, that something is to move elsewhere.

Taxes, however, are but one side of the story. There is another that is much brighter.

It deals with Michigan's advantages as a site for industry, and especially the chemical industry.

In its unlimited supply of water, alone, Michigan has a tremendous appeal for that business. Access to a tremendous quantity of good water is essential to the chemical manufacturer.

Its presence there has much to do with Michigan having arisen to fifth-place State in the chemical industry.

And we have many advantages besides water—which is an attaction to all industries.

There is our extraordinarily large pool of skilled labor.

Our transportation assets are good, and will be greatly increased with completion of the St. Lawrence Seaway.

Power is plentiful, and if those throwing obstacles in its way are overcome Michigan will one day benefit by atom-generated electricity. That stride would be so long that what it could lead to industrially is beyond calculation.

Michigan has its own riches in raw materials. And it is adjacent to other States having a wealth of them—all within easy reach of the Michigan plant.

These things, along with a nearness to large markets, weigh greatly in Michigan's favor.

COSTS ARE HARD FACTS

Up to a certain place on the tax scale, they can outweigh the fact that Michigan taxes are high. Along with pointing out the tax structure's exceptional weight among Michigan cost factors, spokesmen also said that their firms' preference was to expand and invest in this State.

But the trend is not disputed. It is that industrially other States are growing faster and job opportunities which might come to Michigan workers are being created elsewhere.

Considering this fact and weighing it against the pull which Michigan's natural assets can exert, it occurs to us that as well as high levies, themselves, we are being hurt by Michigan's taxation atmosphere.

To some extent, too, we are being hurt by our labor climate—or probably more accurately, labor reputation.

Among the things not at all helpful to Michigan's reputation as to labor is the tendency of certain labor leaders to abuse management.

What they say presumably represents an attitude toward management in all States. But Michigan happens to be where these spokesmen make their headquarters and inescapably the feeling spreads that this is their chosen battleground—and to some extent it has been.

Nor can Michigan's steady plague of unauthorized strikes be overlooked. This evidence of bad union discipline in itself perhaps stems from nearness to the challenging voices of leadership.

If union heads think so ill of employers, then defiance of contracts with employers isn't hard to understand psychologically.

On this score of union-management relations, of course, the fault is not all on one side. Spokesmen who appear to represent the business community, whether they do or don't, often display a bitterness that contributes to the impression of strife.

ATTITUDE OF ENMITY

The bad tax atmosphere lies with the Michigan administration and most particularly with Governor Williams.

Industry might go far in putting up with uncommonly high levies if it could see reason to suppose that the State's government was also disturbed about them, and had an earnest desire to establish a hospitable reputation for Michigan when it comes to bidding for industry.

Unfortunately, Governor Williams' public attitude is that management is always evil, and that when it mentions taxes, costs and competition it is trying to bamboozle Michigan into giving it a free ride.

Nobody wants to see industry not paying its way. We have no use for lures to industry which involve gifts and concessions—and we have never noticed any substantial part of industry putting those artificial inducements ahead of such genuine advantages as Michigan offers.

Industrial managers, however, are likely to feel increasingly that they are in a hopeless predicament that can only be solved by departing when they not only put up with high taxes, but are derided by the Governor when they call their tax situation to public attention and ask sympathetic consideration.

Were we hunting a plant site, Gov. Williams' blast at industry in connection with the issue raised by his proposed corporation profits tax, would suffice in itself to make us very wary of coming into Michigan.

In short, while our high taxes are something of a discouragement to industry, the atmosphere created by the Governor has the capacity to be a vastly greater one.

THE GOVERNOR'S PART

There is no doubt that Michigan is in need of new revenues or a much better handling of the present ones. One reason they aren't handled better is because of earmarkings which remove altogether too much flexibility—and impose a handicap on the administration, no matter whose it is.

These things can't be gotten around entirely. What can be eliminated is a State

House philosophy which says that industry is filled wih cupidity, that the way to solve any problem is to hit it for more money and that it deserves just about the worst you can give it.

As we read Governor Williams, that's what he's been saying.

Nor is Governor Williams' political base one to inspire confidence in an industrial site seeker, or even in one who already has a site in our State.

Michigan is a great industrial State and it is a great union State. Both of these should be great assets.

But where there are two such prominent forces it behooves the State administration to be a third force.

Perhaps it is policy with organized labor to make the Governor to appear to be more in its league than he actually is. If so, it succeeds admirably, and appearances are what count.

Also, we've never seen the Governor do anything to disabuse us of the impression created.

Here again we have a large detriment to any hospitality Michigan tries to show industry.

Not only is management excoriated when it points out its tax situation, but outsiders looking in are given a feeling that Michigan is a State run by the unions.

Unions are entitled to the same administrative consideration as management, no more or no less.

In a State where both are as powerful as they are here, the State's government should stand up strongly as a third force representing all the people. Michigan's decidedly does not.

Well meaning people, some of them in the Governor's own camp, have prescribed remedies for this condition.

They suggest that Governor Williams personally participate in the solicitation of new industries for Michigan. He ought, it is said, to be more in evidence at new plant openings and other occasions encouraging to industrial expansion.

Those devices strike us as artificial and empty.

We doubt that they'd get anywhere against the Governor's frequent inveighings and the absence of evidence that there is an administration in Michigan equally attentive and sympathetic to the problems of management and labor.

These drawbacks are infinitely easier to correct than it is to solve Michigan's revenue problems.

It doesn't even call for a new Governor. All that's needed is a change of attitude and utterance on the part of Michigan's present Governor.

We add quickly that the impression of strife would be further corrected if some of those representing Michigan's people in the legislature limited their partisanship to being either Democrats or Republicans, and didn't extend it to being diehards on behalf of one or the other of Michigan's two great powers.

More objectivity and less of the causist stance would be beneficial all around.

WHAT'S GREATLY NEEDED

Plainly Michigan is in a poor competitive position with regard to taxes on industry. Just as obviously it is in a splendid position when attractions to industry are toted up.

It seems to us that industry would be far more disposed to bear with its tax problem in this State, and consider that it can be outweighed by the attractions if it were not for a sort of hopelessness inflicted on it by the atmosphere we've dwelt on.

Get rid of that, everybody get together on the problems with all the amiability of which he is capable, let there be a showing of good will all around and there will be much less to worry about on the matter of Michigan's industrial future.

In that atmosphere industry will be far less ready to consider benefits to be had from moving, and new industry will be greatly more willing to benefit itself with Michigan's natural assets.

For the benefits of either moving or not coming here will appear infinitely more transient than they do now.

"LETTER TO ST. PETER"—POEM BY ELMA DEAN

Mr. POTTER. Mr. President, tomorrow will be Memorial Day. It was my good fortune last year to dedicate one of our national cemeteries in France. I was the chairman at the dedication of St. James Cemetery, in Brittany, France. While I was on the platform, attending the dedication, someone handed me a poem. I used the poem at the dedication. The poem was given to me in the form of a letter which was sent by a schoolteacher in England. The schoolteacher stated that she and her class had visited the cemetery the previous year, and that the cemetery had greatly impressed them.

At that time I used the poem without giving credit to its real author.

At this time I ask unanimous consent to have printed in the RECORD, as a part of my remarks, a reprint of the poem. It is a beautiful poem, and certainly is fitting this Memorial week. The poem was written by Elma Dean, of Oakland, Calif. The poem has been copyrighted, and it is one I should like all my colleagues to refer to at this particular time of the year.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

LETTER TO ST. PETER

Let them in, Peter, they are very tired;
Give them the couches where the angels sleep.
Let them wake whole again to new dawns fired
With sun not war. And may their peace be deep.
Remember where the broken bodies lie . . .
And give them things they like. Let them make noise.
God knows how young they were to have to die!
Give swing bands, not gold harps, to these our boys.
Let them love, Peter—they have had no time—
Girls sweet as meadow wind, with flowering hair—
They should have trees and bird song, hills to climb—
The taste of summer in a ripened pear.
Tell them how they are missed. Say not to fear;
It's going to be all right with us down here.

—*Elma Dean.*

ADJOURNMENT TO FRIDAY

Mr. MORSE. Mr. President, pursuant to the order previously entered, I move that the Senate adjourn until 12 o'clock noon on Friday next.

The motion was agreed to; and (at 9 o'clock and 20 minutes p. m.) the Senate adjourned, the adjournment being, under the order previously entered, until Friday, May 31, 1957, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 29, 1957:

DEPARTMENT OF STATE

Loftus E. Becker, of New York, to be Legal Adviser of the Department of State.

DEPARTMENT OF THE TREASURY

Robert Bernerd Anderson of New York, to be Secretary of the Treasury.

IN THE AIR FORCE

The following-named officer, under the provisions of section 8066, title 10, United States Code, to be assigned to a position of importance and responsibility designated by the President in rank as follows:

Maj. Gen. Richard Clark Lindsay, 476A, Regular Air Force, in the rank of lieutenant general, United States Air Force.

CONFIRMATIONS

Executive nominations confirmed by the Senate May 29, 1957:

DEPARTMENT OF THE AIR FORCE

Malcolm A. MacIntyre, of New York, to be Under Secretary of the Air Force.

DEPARTMENT OF THE NAVY

Rear Adm. Robert E. Dixon, United States Navy, to be the Chief of the Bureau of Aeronautics in the Department of the Navy; term of 4 years in accordance with title 10, United States Code, section 5136.

PUBLIC HEALTH SERVICE

The following candidates for appointment in the Regular Corps of the Public Health Service subject to qualifications therefor as provided by law and regulations:

To be senior assistant dental surgeons

George E. Mitchell	Russell Ross
Charles S. Stitt, Jr.	Carl E. Anderson

To be assistant dental surgeons

William R. Wallace	Erwin R. Schumacher
James E. Hardwick III	Richard A. Coulson
Kenneth C. Lynn	Richard C. Doub
Ralph S. Johnson	John L. Ames
Herald D. Green, Jr.	John T. Bauer
Samuel Kakehashi	Richard H. Fender
Raymond Berlin	Alfred Hamel
James W. Smith, Jr.	

To be senior assistant scientists

Philip S. Chen, Jr.	George R. Bernard, Jr.
Sidney S. Chernick	Charles R. Peebles

To be assistant scientists

Norman T. Briggs
Howard Goldfine

IN THE ARMY

The following-named officers under the provisions of title 10, United States Code, section 3066, to be assigned to positions of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

To be lieutenant generals

Maj. Gen. William Stevens Lawton, O14024, United States Army.

Maj. Gen. Paul Donal Harkins, O17625, United States Army.

The following-named officer for appointment in the Regular Army of the United States to the grade indicated, under the provisions of title 10, United States Code, sections 3284 and 3307:

To be major general

Maj. Gen. Aubrey Strode Newman, O16099, Army of the United States (brigadier general, U. S. Army).

The following-named officers for temporary appointment in the Army of the United States to the grades indicated under the

provisions of title 10, United States Code, sections 3442 and 3447:

To be brigadier generals

Col. James Hedges Forsee, O18265, Medical Corps, United States Army.

Col. Robert Hall McCaw, O38722, Judge Advocate General's Corps, United States Army.

UNITED STATES MILITARY ACADEMY GRADUATES

The nominations of Jack Emerson Adams and others, cadets, United States Military Academy, for appointment in the Regular Army of the United States, effective June 4, 1957, upon their graduation, in the grade of second lieutenant, under the provisions of Public Law 737, 84th Congress, subject to physical examination required by law, were confirmed today, and will be found in full in the Senate proceedings of the CONGRESSIONAL RECORD of May 9, 1957, under the caption "Nominations," beginning with the name of Jack Emerson Adams, which is shown on page 6695, and ending with the name of Durl Dale Zachgo, which appears on page 6696.

ADDITIONAL CONFIRMATIONS IN THE REGULAR ARMY

The nominations of Franklin D. Bell, and others, for appointment in the Regular Army of the United States, in the grades and corps specified, under the provisions of title 10, United States Code, section 3294, as amended by Public Law 497, 84th Congress, and as amended by Public Law 294, 84th Congress, and Public Law 737, 84th Congress, were confirmed today, and may be found in the Senate proceedings of the CONGRESSIONAL RECORD for May 8, 1957, under the caption, "Nominations," beginning with the name of Franklin D. Bell, which appears on page 6586, and ending with the name of William J. Zigmant, Jr., which is shown on page 6588.

IN THE AIR FORCE

The following officers under the provisions of sec. 8066, title 10, U. S. C., to be assigned to positions of importance and responsibility designated by the President in the rank as follows:

To be generals, United States Air Force

Lt. Gen. Frank Fort Everest, 366A (major general, Regular Air Force).

Lt. Gen. Thomas Sarsfield Power, 481A (major general, Regular Air Force).

To be lieutenant generals, United States Air Force

Maj. Gen. William Evens Hall, 460A, Regular Air Force.

Maj. Gen. Walter Edwin Todd, 361A, Regular Air Force.

Maj. Gen. John Koehler Gerhart, 525A, Regular Air Force.

To be Senior Air Force member, Military Staff Committee, U. N., under the provisions of section 711, title 10, United States Code

Maj. Gen. William Evens Hall, 460A, Regular Air Force.

The nominations of James D. Boyle and others, for appointment in the Regular Air Force, which were confirmed today, were received by the Senate on May 16, 1957, and may be found in the Senate proceedings of the CONGRESSIONAL RECORD of that date, under the caption "Nominations," beginning with the name of James D. Boyle, which appears on page 7102 and ending with the name of James Warren Zimmer, which occurs on page 7104.

IN THE NAVY

VICE ADMIRALS

For commands and other duties determined by the President to have the grade, rank, pay, and allowances of vice admiral while so serving

Rear Adm. James S. Russell, USN.
Rear Adm. John H. Sides, USN.

HOUSE OF REPRESENTATIVES

WEDNESDAY, MAY 29, 1957

The House met at 10 o'clock a. m.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

Eternal God, our Father, Thou art always standing at the door of our hearts waiting to be welcomed and to make them aglow and radiant with the vision of lofty ideals.

Thine is the kingdom, the power, and the glory, and may it be ours to do justly, to love mercy, and to walk humbly before Thee all our days.

Show us how in these days of grave responsibilities we may lay hold of the great sources of insight and inspiration, of wisdom and understanding, of faith and fidelity.

Make us more eager and zealous in the high endeavor of gaining a larger measure of health and happiness, of peace and prosperity for all mankind.

Hear us in Christ's name. Amen.

The Journal of the proceedings of yesterday was read and approved.

DEPARTMENTS OF STATE AND JUSTICE, THE JUDICIARY, AND RELATED AGENCIES APPROPRIATION BILL, 1958

Mr. ROONEY. Mr. Speaker, I call up the conference report on the bill (H. R. 6871) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies, for the fiscal year ending June 30, 1958, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. No. 492)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 6871) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies, for the fiscal year ending June 30, 1958, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 4, 5, 6, 7, 10, 12, 13, 17, 18, 19, 20, 23, 24, 26, 28, 31, 32, 33, 36 and 37.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 8, 9, 11, 16, and 22, and agree to the same.

Amendment numbered 2: That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same with an amendment, as follows: In lieu of the figure stricken and inserted by said amendment insert "fifteen"; and the Senate agree to the same.

Amendment numbered 3: That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$98,088,500"; and the Senate agree to the same.

Amendment numbered 14: That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$20,800,000"; and the Senate agree to the same.

Amendment numbered 15: That the House recede from its disagreement to the amendment of the Senate numbered 15, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,387,500"; and the Senate agree to the same.

Amendment numbered 21: That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$49,600,000"; and the Senate agree to the same.

Amendment numbered 25: That the House recede from its disagreement to the amendment of the Senate numbered 25, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$12,000"; and the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$95,100,000"; and the Senate agree to the same.

Amendment numbered 34: That the House recede from its disagreement to the amendment of the Senate numbered 34, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$12,400,000"; and the Senate agree to the same.

Amendment numbered 35: That the House recede from its disagreement to the amendment of the Senate numbered 35, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$6,500,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 27 and 30.

JOHN J. ROONEY,
PRINCE H. PRESTON,
ROBERT L. F. SIKES,
DON MAGNUSON,
CLARENCE CANNON,
F. R. COUDERT, Jr.,
FRANK T. BOW,
CLIFF CLEVENGER,
JOHN TABER,
Managers on the Part of the House.

LYNDON B. JOHNSON,
ALLEN J. ELLENDER,
JOHN L. MCCLELLAN,
J. W. FULBRIGHT
(except as to amendments No. 14 and No. 29),
STYLES BRIDGES,
LEVERETT SALTONSTALL,
B. B. HICKENLOOPER,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 6871) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies, for the fiscal year ending June 30, 1958, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the

accompanying conference report as to each of such amendments, namely:

TITLE I—DEPARTMENT OF STATE

Administration of foreign affairs

Salaries and Expenses

Amendment No. 1: Deletes House language, as proposed by the Senate.

Amendment No. 2: Provides for the purchase of 15 passenger motor vehicles instead of 10 as proposed by the House and 20 as proposed by the Senate.

Amendment No. 3: Appropriates $98,088,500 instead of $93,088,500, as proposed by the House and $99,088,500 as proposed by the Senate.

The conferees were not in agreement on the wisdom of using appropriated funds for official residence allowances for deputy chiefs of missions, for medical benefits for dependents, or for recreational facilities. Therefore, it is the consensus of the committee that before utilizing any funds for these purposes more detailed presentations and justifications should be made to the Appropriations Committees of the House and the Senate.

"Transfer allowances" are not to exceed a total of $75,890. No specific amount is earmarked for the Passport Office.

Amendments Nos. 4, 5, and 6: Restore House language relative to the purchase of motor vehicles.

Representation Allowances

Amendment No. 7: Appropriates $600,000 as proposed by the House instead of $800,000 as proposed by the Senate.

International organizations and conferences

Missions to International Organizations

Amendment No. 8: Appropriates $1,357,500 as proposed by the Senate instead of $1,350,000 as proposed by the House.

International commissions

Passamaquoddy Tidal Power Survey

Amendment No. 9: Inserts Senate language limiting to ten the number of temporary employees that may be hired at any one time.

Amendment No. 10: Permits payment of not to exceed $50 per day for temporary employees as proposed by the House instead of $75 as proposed by the Senate.

Amendment No. 11: Appropriates $1,344,000 as proposed by the Senate instead of $935,000 as proposed by the House.

International fisheries commissions

Amendment No. 12: Appropriates $1,600,000 as proposed by the House instead of $1,654,000 as proposed by the Senate.

Educational exchange

International Educational Exchange Activities

Amendment No. 13: Places a limitation of $1,000 on entertainment as proposed by the House instead of $5,000 as proposed by the Senate.

Amendment No. 14: Appropriates $20,800,000 instead of $17,575,000 as proposed by the House and $24,000,000 as proposed by the Senate.

Amendment No. 15: Provides that not to exceed $1,387,500 may be used for administrative expenses instead of $1,275,000 as proposed by the House and $1,500,000 as proposed by the Senate.

General provisions

Amendment No. 16: Inserts language as proposed by the Senate relating to household and personal effects.

TITLE II—DEPARTMENT OF JUSTICE

Legal activities and general administration

Salaries and expenses, general administration

Amendment No. 17: Appropriates $3,250,000 as proposed by the House instead of $3,175,000 as proposed by the Senate.

Salaries and expenses, general legal activities

Amendment No. 18: Appropriates $10,800,000 as proposed by the House instead of $10,650,000 as proposed by the Senate.

Special temporary attorneys and assistants

Amendment No. 19: Appropriates $150,000 as proposed by the House instead of $300,000 as proposed by the Senate.

Federal Bureau of Investigation

Salaries and Expenses

Amendment No. 20: Appropriates $101,450,000 as proposed by the House instead of $101,300,000 as proposed by the Senate.

Immigration and Naturalization Service

Salaries and Expenses

Amendment No. 21: Appropriates $49,600,000 instead of $50,000,000 as proposed by the House and $49,500,000 as proposed by the Senate.

Federal Prison System

Buildings and Facilities

Amendment No. 22: Appropriates $1,000,000 as proposed by the Senate instead of $1,750,000 as proposed by the House.

General provisions

Amendment No. 23: Deletes Senate proposal to pay up to $75 per diem.

Amendment No. 24: Deletes Senate proposal relative to transfer authority.

TITLE III—THE JUDICIARY

Courts of appeals, district courts, and other judicial services

Travel and Miscellaneous Expenses

Amendment No. 25: Provides not to exceed $12,000 for expenses of attendance at meetings instead of $10,000 as proposed by the House and $17,500 as proposed by the Senate.

Administrative Office of the United States Courts

Amendment No. 26: Appropriates $840,450 as proposed by the House instead of $915,450 as proposed by the Senate.

TITLE IV—UNITED STATES INFORMATION AGENCY

Salaries and expenses

Amendment No. 27: Reported in disagreement.

Amendment No. 28: Provides a limitation of $500 on entertainment as proposed by the House instead of $3,000 as proposed by the Senate.

Amendment No. 29: Appropriates $95,100,000 instead of $105,000,000 as proposed by the House and $89,100,000 as proposed by the Senate.

Amendment No. 30: Reported in disagreement.

Amendment No. 31: Provides not to exceed $50,000 may be used for representation abroad as proposed by the House instead of $250,000 as proposed by the Senate.

Amendment No. 32: Restores House language and deletes Senate language relative to purchase of passenger motor vehicles.

Amendment No. 33: Deletes language proposed by the Senate. The Conferees unanimously agreed that no part of this appropriation shall be used by the Information Agency to duplicate or compete in the general news, film, or picture coverage activities at home or abroad with the services of independent American news, film, or picture agencies.

The Agency is further directed to investigate and act promptly upon any complaint made to them that their Information Services are competing with such private services.

TITLE V—FUNDS APPROPRIATED TO THE PRESIDENT

President's special international program

Amendment No. 34: Appropriates $12,400,000 instead of $10,900,000 as proposed by the House and $14,390,000 as proposed by the Senate.

Amendment No. 35: Provides that $6,500,000 shall be available for the Universal and International Exhibition of Brussels instead of $5,000,000 as proposed by the House and $8,490,000 as proposed by the Senate.

Amendment No. 36: Deletes Senate language relating to purchase of uniforms.

Amendment No. 37: Restores House limitation relating to representation.

JOHN J. ROONEY,
PRINCE H. PRESTON,
ROBERT L. F. SIKES,
DON MAGNUSON,
CLARENCE CANNON,
F. R. COUDERT, Jr.,
FRANK T. BOW,
CLIFF CLEVENGER,
JOHN TABER,
Managers on the Part of the House.

Mr. ROONEY. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ROONEY. Mr. Speaker, I am confident that there will not be one word of disagreement in this body this morning with reference to this conference report. The managers on the part of the House bring back to you this bill H. R. 6871 making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for fiscal year 1958, in the reduced amount $562,891,293. This amount is $908,500 less than the amount contained in the bill when it was passed by this House on April 17 last. It is $194,000 less than the amount included in the bill when it was passed by the other body on May 15 last. I shall include at this point in my remarks the following summary of the action taken on this bill by both Houses:

Department or agency	Appropriations, 1957	Estimates, 1958	House bill	Senate bill	Conference	Conference compared with budget estimates
Department of State	$221,700,072	$227,714,552	$180,382,743	$193,478,243	$189,024,243	−$38,690,309
Department of Justice	216,343,650	234,655,000	227,855,000	226,380,000	226,705,000	−7,950,000
The Judiciary	36,321,435	40,780,250	38,562,050	38,637,050	38,562,050	−2,218,200
United States Information Agency	113,000,000	144,009,000	106,100,000	90,200,000	96,200,000	−47,809,000
Funds appropriated to the President	18,400,000	18,500,000	10,900,000	14,390,000	12,400,000	−6,100,000
Total	605,765,157	665,649,802	563,799,793	563,085,293	562,891,293	−102,758,509

Conference bill is $908,500 below the House bill.
Conference bill is $194,000 below the Senate bill.
Conference bill is $102,758,509 below the budget estimates.
Conference bill is $42,873,864 below the amount appropriated to date for the present fiscal year exclusive of funds in the 3d supplemental, 1957.

It should be brought to the attention of the House that the House-Senate conferees were in unanimous agreement with regard to the following language contained in the statement of the managers on the part of the House:

The conferees were not in agreement on the wisdom of using appropriated funds for official residence allowances for deputy chiefs of missions, for medical benefits for dependents, or for recreational facilities. Therefore, it is the consensus of the committee that before utilizing any funds for these purposes more detailed presentations and justifications should be made to the Appropriations Committees of the House and the Senate.

"Transfer allowances" are not to exceed a total of $75,890. No specific amount is earmarked for the Passport Office.

I am constrained to remind the House that the Committee on Appropriations of the House had the following to say concerning the Passport Office of the Department of State in its report on this bill submitted to the House on April 12 last:

The Director of the Passport Office when appearing before the committee last year stated:

"I don't think that the answer to more work in the Passport Office is more people, and that is why this year I am not asking for additional Passport Office help. The eight persons being requested are for the Chinese Fraud Branch, and that is a project apart."

Last year the committee was requested to recommend an appropriation of $250,000 for equipment for the Passport Office. The following is a quotation from last year's hearings in regard thereto:

"Mr. SIKES. Ordinarily in industry, when new equipment is installed, it is assumed that such installation will be accompanied by a decrease in labor and personnel requirements. That does not seem to be the case in your office.

"Miss KNIGHT. No, sir.

"Mr. SIKES. Why not?

"Miss KNIGHT. I do not think it will be necessary to increase the personnel because the type of machinery——

"Mr. SIKES. I said a decrease in personnel requirements would be anticipated.

"Miss KNIGHT. It will not decrease during this conversion period, but I would say next year it might very well decrease in number of employees despite the fact that we expect to have more passport applications.

"When we get the machinery in operation, it seems to me we could decrease the number of persons we have even if we increase the number of passport applications."

The Congress thereupon appropriated the full amount requested for this Office including the $250,000 for new equipment, with these results: Fifty-five additional positions were established, over and above the number then requested of and allowed by the Congress. A new passport office was opened in Los Angeles at a cost of $110,601.51 without notifying the committee, by the use of funds appropriated for other purposes. The new equipment has not been placed on order and money appropriated for this equipment has been spent for additional personnel.

Such fiscal irresponsibility on the part of the State Department cannot be tolerated. The committee should not be asked to spend day after day and week after week listening to testimony as to what the funds are required for, if at the conclusion of the hearings and passage of the bill and approved by the President, the Department then proceeds to spend the money as it sees fit without regard to the justifications presented the committee during the hearings.

I am pleased to note, however, that the conferees in behalf of the other body unanimously saw fit to restore the amount of $150,000 which the other body had deducted from the budget request for the Federal Bureau of Investigation which annually submits a tight sensible budget which it fully describes and justifies.

It may be seen at page 7 of this conference report that the conferees unanimously agreed that no funds shall be used by the Information Agency to duplicate or compete in the general news, film, or picture coverage activities at home or abroad with the services of independent American news, film, or picture agencies. The Agency is directed to investigate and act promptly upon any complaint made to them that their information services are competing with such private services.

Under the terms of the pending conference report the amount of $1,500,000 has been added for the Universal and International Exhibition at Brussels.

I am sure that the House will unanimously adopt this conference report. I should say at this time that there are only two amendments in disagreement, amendments numbered 27 and 30, and with regard to these, following adoption of the conference report I shall move that the House recede from its disagreement to these amendments and concur therein.

Mr. CANNON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CANNON. Mr. Speaker, the conference report just adopted is one of the encouraging signs of the times. For the first time in recent years both Houses have cooperated in a conference reducing a bill below both the Senate totals and the House totals; below the budget estimates and below the appropriation for the preceding year.

The conference report is $194,000 below the Senate bill. It is $908,500 below the House bill. It is $102,758,509 below the budget estimates. And it is $42,873,864 below the appropriations for the fiscal year 1957 to date.

It is most heartening in that it is indicative of a turn in the tide of reckless spending that has characterized appropriations in recent years.

I congratulate Chairman ROONEY and his able committee on the successful conclusion of one of the important bills of the session.

Mr. ROONEY. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

The SPEAKER. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 27: Page 30, line 17, insert "and their dependents."

Mr. ROONEY. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 30: Page 32, line 19, insert "and of which sum not less than $350,000 shall be available by contract with one or more private international broadcasting licensees for the purpose of developing and broadcasting under private auspices, but under the general supervision of the United States Information Agency, radio programs to Latin America, Western Europe, Africa, as well as other areas of the Free World, which programs shall be designed to cultivate friendship with the peoples of the countries in those areas, and to build improved international understanding."

Mr. ROONEY. Mr. Speaker, I move that the House recede from its disagreement to the amendment of the Senate No. 30 and concur therein.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the several motions was laid on the table.

CONSTRUCTION OF FEDERAL BUILDINGS

Mr. HOFFMAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HOFFMAN. Mr. Speaker, the morning press carries a statement that construction of a number of Federal buildings for which we have appropriated money will be held up because of a strike. If the drivers of cement trucks in Washington are to fix the costs of buildings, it will be necessary that the Committee on Appropriations ask the union—all unions interested—about what it is going to cost to construct the proposed buildings, so that the money appropriated will be sufficient to meet their demands; otherwise we will not get the buildings. It has been said that the new Senate Office Building will cost as much as $50 million more than the original estimate. Why not just quit or at least postpone such construction until a more opportune time?

THE LATE LUTHER PATRICK

The SPEAKER. The Chair recognizes the gentleman from Massachusetts [Mr. MCCORMACK].

Mr. MCCORMACK. Mr. Speaker, it was with regret that I learned of the recent death of our late esteemed and beloved colleague, Luther Patrick, former Representative from Alabama. With every year that one remains in these Halls one sees, as it were, one more colleague, or former colleague, join the shadowy procession of the Great Majority, and I have seen a great many of them do so. In each case there is that peculiar poignancy which accompanies the realization of the finality of death.

But O for the touch of a vanished hand,
And the sound of a voice that is still.

Luther Patrick was born near Decatur, in Morgan County, Alabama, on January 23, 1894. He attended the public schools, later Louisiana State University and Purdue University. In 1918 he was graduated from the law school of the University of Alabama. During the First World War he served as a private, being assigned to the Army training detachment and to the Central Officers' Training School from June 14 to December 4, 1918. Admitted to the Alabama bar in 1919, he commenced practice in Fairfield. The rapidity of his rise in his profession testified both to his ability and the esteem in which he was held by his fellow citizens. City attorney of Fairfield 1920–1922; assistant attorney general of Alabama 1927–1929; assistant United States district attorney for the northern district of Alabama in 1933 and 1934, he added to his professional duties by becoming a writer and radio commentator on public affairs. In 1936 he was elected Representative from the 9th Alabama District to the 75th and the 2 succeeding Congresses, serving from January 3, 1937, to January 3, 1943. In 1942 he was an unsuccessful candidate for reelection. He retired to become the senior member of the law firm of Patrick and Appelbaum in Birmingham. During the war years he served as a consultant to the War Production Board in 1943–44. He was elected to the 79th Congress, serving from January 3, 1945, to January 3, 1947, following which he retired once more to Birmingham to the practice of his profession.

During our service together in this body I learned to know Luther Patrick. A close friendship developed between us which continued until his death. We kept in touch with each other through an exchange of letters.

Luther Patrick was a progressive legislator which he evidenced by great courage on many occasions.

Such was the record of an active and busy life. He was not merely a conspicuous public figure in the political and legal life of Birmingham and the State of Alabama; he was an active and eager participant in the community life of the city of his adoption. He was for more than 25 years a daily commentator over two radio systems, dating from 1925 in the very infancy of radio programs. He was a member of the Methodist Church, of the Knights of Pythias, the Junior Order of the United American Mechanics, and the Eagles. More, he was the author of several books of verse of delightful and kindly humor whose titles, to those here who remember the man, are at once reminiscent and characteristic: "Hope You're Livin' an' Doin' Well, Friends, Nabors, Kinfolks"—do these topics not recall our old friend?

In closing, I should like to quote some lines from a poem by Henry Van Dyke, called Work, which Patrick himself, when he was in Congress, once selected as fitting tribute to a friend who was leaving the House. By coincident, it was I who yielded the floor to Mr. Patrick. At this hour the lines seem to be very applicable to our friend himself, who will return to us no more:

To suit my spirit and to prove my powers
Then shall I cheerful greet the laboring hours,
And cheerful turn when the long shadows fall
At eventide to play and love and rest,
Because I know for me my work is best.

And now the long day is over, the working hours are done, and the shadows of the long evening have fallen upon our friend.

CALL OF THE HOUSE

Mr. H. CARL ANDERSEN. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 90]

Andresen, August H.	Forrester	Kilburn
Barden	Grant	Lennon
Baumhart	Gray	Lesinski
Beamer	Gregory	McGregor
Blatnik	Gwinn	McMillan
Blitch	Hays, Ark.	Miller, Md.
Bolton	Hemphill	Murray
Bowler	Hoeven	Powell
Buckley	Holland	Rains
Celler	Holtzman	Saund
Coad	James	Schwengel
Dawson, Ill.	Jenkins	Siler
Diggs	Kearney	Smith, Calif.
	Kearns	Wolverton

The SPEAKER. On this rollcall 385 Members have answered to their names, a quorum.

By unanimous consent further proceedings under the call were dispensed with.

DEPARTMENT OF COMMERCE AND RELATED AGENCIES APPROPRIATION BILL, FISCAL YEAR 1958

Mr. PRESTON. Mr. Speaker, I ask unanimous consent that the managers on the part of the House have until midnight tonight to file a conference report on the bill making appropriations for the Department of Commerce and related agencies for the fiscal year 1958, and for other purposes.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

DEPARTMENT OF DEFENSE APPROPRIATION BILL, 1958

Mr. MAHON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H. R. 7665) making appropriations for the Department of Defense for the fiscal year ending June 30, 1958, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H. R. 7665, with Mr. KEOGH in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday the Clerk had read down to and including line 16 on page 8 of the bill.

Mr. CANNON. Mr. Chairman, under the established practice of the House a Member desiring to reflect upon another Member by name waits until he is present or notifies him in advance.

The theory is that it is poor sportsmanship to attack a man when his back is turned. Yesterday while absent from the floor in the discharge of pressing Congressional duties, two Members of the House referred to me in critical terms by name.

I do not desire to discuss these gentlemen. I shall not discuss their childish remarks. But I do wish to refer briefly to the issue involved.

We are discussing a bill providing money for defense against the attacks of foreign enemies.

We know that if attacked, it will be by Russia. There is no other nation which desires or which would dare to attack America but Russia. That is the first premise.

Happily, the danger of war is receding. Internal difficulties are changing the program of the Communists for world conquest and there is now little likelihood of another world war.

But if Russia should attack, the attack will come by air. Not by sea or by land—not by ship or by regiment but by bomber and missile. That is the second premise.

If attacked by air, how could the Navy intercept bombers and missiles flying at supersonic speed so far above as to be neither seen nor heard. And with 468 Russian submarines attacking from below. Our own *Nautilus* by token sunk every surface ship sent against it in actual maneuvers. I ask anyone here to answer. The Navy would be helpless.

How could the Army protect Detroit, San Francisco, Cleveland, or New York?

One modern bomb dropped within 5 miles of Washington would wipe out the entire United States Government. How could the Army, with all its divisions, and all the money they are asking in this bill, prevent the bombing of a single city? Let anybody answer.

The war will be lost or won in the air. If won it must be won by airpower. That is the third premise.

Every capital ship of the Navy would be sunk in the first few hours. Pearl Harbor would not be a circumstance. Within 6 hours nothing would remain of the United States Navy but the submarines.

If our Air Force lost control of the air, our armies would be panic-stricken mobs in full flight, each man seeking shelter from above. With the enemy in control of the air nothing could save them.

Carefully analyze every speech made on this floor since this bill was taken up and you will not find in any of them or all of them the answer to these questions.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. CANNON. Mr. Chairman, I ask unanimous consent to proceed for an additional minute.

Mr. MARTIN. Mr. Chairman, I regret to do this, but I am going to serve notice that there is going to be no extension of time today. Too many Members of the House have other engagements for tomorrow and want this bill concluded.

The CHAIRMAN. Objection is heard.

Mr. BROOKS of Louisiana. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise at this time to clear up a point that arose in the course of debate just before adjournment yesterday. I think it is important that I do so.

Mr. Chairman, there has been some misunderstanding regarding the Reserve program. I did not have an opportunity to clear it up yesterday so I wish to do so at this time. I want to say at the outset that we have received very fine cooperation from the Committee on Appropriations in reference to the Reserve program. However, I notice in the report, and mention has been made in the discussion, about different programs—the 6 months trainee below 18½ years of age and the 6 months trainee above 18½ years of age. In my mind, it is all one program, Mr. Chairman, not separate programs. The 6 months training program was instituted because of the fact that we had certain individuals in our Reserve program who had had no field training whatsoever. Consequently, the Reserve was weak because it lacked the necessary manpower who had had field and service training. Therefore, we wanted some way to fill up the Reserve with prior trained personnel. And the 6 months training program is the way we decided it could best be done. So our subcommittee reviewed the problems that the Reserves encountered over a period of many years in getting trained personnel into the program. In the recent hearings, we state to this effect:

> The Department is asking for funds for an Army Reserve program of 300,000 paid drill strength which is an increase of 44,000 over fiscal year 1957 strength. This figure will include an authorization to enlist about 42,500 6-month trainees although the Army Reserve is not entirely happy with this limitation. The subcommittee believes we should support this request and not ask for additional funds for the Army Reserve provided the funds requested will result in fiscal year 1958 in paid drill strength of 300,000 exclusive of 6-month trainees while engaged in active-duty training.

That is the end of the committee recommendations. In other words, we want a United States Army Reserve of 300,000, but every one of those ultimately will have at least 6 months' training.

There is a misunderstanding on the part of some that we are striving to get the utmost in the number of 6-month trainees for an indefinite length of time and perhaps for an indefinite purpose; but the program is set forth in the law. The recommendation of the committee is for a reserve of 300,000 men in the Army, but each one of those men ultimately will have at least 6 months' training.

Something was said about the age of 18½ years. We arrived at that age because that was the age set by law for induction under selective service for men coming up of eligible age. But as the manpower pool increased selective service has raised the age for induction to 22½, so men now are being inducted at that age. We had trouble getting men below 18½ in the program because young men of 17 do not think they are going to be inducted, when the induction age is as far off as 22½; therefore, the Army raised the limit for the 6 months' program to age 26. So ultimately our manpower in the Army Reserve will be all prior-trained men with at least 6 months' training.

We do not want any misunderstanding that is going to confuse the issue, and we do not want anything to tear down the training in the Army Reserve. We should be united in our effort to get prior-trained men with at least 6 months' training. That is not a hard task to accomplish. For the first time in the history of this Republic we are building up a Reserve that will really be able to stand the test when it comes to meeting that test, and I do not think it is time to seek to tear down a program for which we have been battling for 25 or 30 years in this Congress. We see the end in view now.

Mr. FORD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I believe the Army panel and the subcommittee feel to a substantial degree in agreement with the gentleman from Louisiana. We want every person in the Army Reserve to have prior training. I think, however, we ought to look back and review the history of the Reserve Forces Act of 1955 to see the current situation. At the time that act was enacted into law we were told in this Chamber that the military wanted 6 months of training and a 7½-year Reserve obligation; and they wanted young people from 17 to 18½ so their manpower pool would be available and trained over the long pull.

I believe everybody in this Chamber who voted for that legislation accepted the bill predicated upon that theory.

Unfortunately, however, when the Army started to recruit people for this program they had some difficulty getting them initially, and the buildup was slow. Then the Department of the Army officials felt they were behind the eight ball, and had to do something to stimulate greater enlistments in this program.

They did two things: First, they reduced the Reserve obligation from 7½ years to 3 and 4 years, undercutting all of us who supported the original program predicated on a long active Reserve training period.

Mr. BROOKS of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. FORD. Let me finish. I did not ask the gentleman to yield. I refuse to yield at this point. In other words, the Army in order to build up numbers in effect ruined a real factor in their real Reserve program. They will not be able in the future history of this legislation to get that back up to 7½ years where they told us they needed it and wanted it for a good, competent, qualified Reserve.

In addition to that, they could not get at the time this recruiting problem arose an adequate number of people for this 6 months training out of the age group 17 to 18½. In order to build up numbers again, not particularly the quality they wanted but solely numbers, they increased the age limitation so those in this group from 18½ to 26 could qualify, again pulling the rug out from underneath the Members of Congress who voted in good faith for that legislation on the theory on which the Department of the Army presented it to us. Of course, all the fellows who were over 18½ who could not have gotten into the program before and were faced with 2 years of active duty rushed down and signed up. The Army wound up with more enlistees than they could handle but not necessarily those they wanted, as they told the Congress. In my opinion, and I think in the opinion of the committee, the feeling is that the Army has not been fair with the Congress by the revision of these regulations.

Mr. BROOKS of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Louisiana.

Mr. BROOKS of Louisiana. I may say that I do not place the blame on the Army because the Armed Services Committee of the House approved all this. We went into it quite fully. Let me say to the gentleman the 6 months trainee above the age of 18½ who goes in has a Reserve obligation of 6 years, not an obligation less than that. The 6 months trainee below the age of 18½ still has an obligation of 8 years now in the Reserves.

Mr. FORD. He does not have the same obligation that was included in the regulations initially drafted thereafter after we enacted the Army Reserve Act. The only reason was to get numbers and not to get quality. What we want is a reserve that has quality.

Mr. Chairman, the point I want to make and emphasize is that our committee and the Committee on the Armed Services, I am sure, are insistent that these men should have prior training before they go into the Reserve program. That is important. We also want the kind of people in the Reserve program that the Army in good faith told us they wanted at the time they proposed the legislation. We feel that it is unfair to Congress to substitute these people who are not in that category in order to just build up numbers.

Mr. KILDAY. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I take this time to call attention to the language of the committee report on dependent medical care appearing at page 17 of the report and I would like to state that I was chairman of the subcommittee of the Committee on Armed Services which formulated and reported the dependent medical-care legislation.

This is a new program that became effective on the 7th day of December 1956, so that it has had not quite 6 months of operation. I am concerned

about the language used by the committee in its report and specifically that portion which reads:

It is the committee's belief that this joint directive should be revised at an early date to the degree that the free-choice element be amended so as to not permit dependents to utilize civilian medical and/or hospital services unless a positive determination is made by appropriate authority that, without augmentation, the military medical hospital facilities and medical personnel in the general area in which dependents reside are inadequate.

That has to do with the directive issued by the Secretary of Defense which permits the dependents of the military to choose either civilian or military hospital facilities. The law contains a provision to the effect that should an inordinate number of eligible dependents go to either civilian or military hospitals, the Secretary of Defense can control it. This program depends, for its success, on the cooperation of the medical profession, and the medical profession is very sincerely concerned about any infringement upon free choice in this connection.

I have read the testimony before the committee by Admiral Hogan, Surgeon General of the Navy. Admiral Hogan is an excellent, personable gentleman and the highly efficient Surgeon General of the Navy. However, I do not believe that on his ex parte statement alone such drastic action should be taken. He has given figures which would indicate that medical care in the military hospitals is cheaper than in a civilian hospital, but I feel that an adequate cost accounting of the cost of military care would indicate to the contrary. He has the fear of the military medical men that all of the dependents will go to civilian hospitals. The civilian medical man has a sincere fear that they will all go to military hospitals. The record will show that I have never agreed with either position. As recently as May 7, Gen. Silas Hays, Surgeon General of the Army, testified before the Committee on Armed Services and confirmed that that is true. I am quoting from the recent hearings held before the committee on the question of compelling doctors to enter the service:

General HAYS. Now there is a considerable reduction in workload in maternity and obstetrical care. While I don't have the figures with me for the Navy and the Air Force, we have had in the Army approximately—between 15 and 20 percent reduction in the maternity care in this country.

You will recall that the medical-care law provides for free choice on the part of the patient between military facilities and civilian facilities, unless the Secretary of Defense should declare a certain area as being restricted. It has not been necessary to declare any such area restricted. So all over the United States patients—dependents of active duty military personnel—have free choice between civilian facilities and military.

As I said, so far in the overall it looks like there will be a very, very slight reduction only in our workload in military hospitals.

The CHAIRMAN. Thank you General.

Mr. KILDAY, any questions?

Mr. KILDAY. General Hays, you mean that the dependents are pretty generally just going to—there hasn't been any trend of them going either to military or to civilian? They have gone just about as they did before?

General HAYS. We don't have any figures on what they did before, as far as civilians are concerned. We can only take a reading on our military workload.

Mr. KILDAY. It was just more or less a matter of curiosity with me, because the military doctors were so afraid that they would all go to civilian hospitals and the civilian doctors were so afraid they would go to the military hospitals, and I didn't thing either would happen, but we had to put a provision in the bill to prevent it. Apparently it is working out the way the committee thought it would, rather than the way doctors thought it would.

General HAYS. I think your prediction was right, Mr. KILDAY.

This is a matter of such importance to the success of this program that I hope the Secretary of Defense will continue his directive in effect until more experience has been accumulated, so that we can then act with all the information before us.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from Illinois.

Mr. ARENDS. I would like to say to the membership of the House that I completely agree with what the gentleman from Texas said. I hope we will continue with this program to see what history will develop. The chairman of the subcommittee, the gentleman from Texas [Mr. KILDAY], has made an extensive study of this, as did our whole subcommittee. I believe we are on the right track. I believe the privilege of free choice should be continued and that we should not follow the recommendation as set forth in the Appropriations Committee report at this particular time.

Mr. KILDAY. I thank the gentleman.

I want to point out that last week the House passed a bill dealing with the compulsory service of doctors. I do not believe that so long as we continue any degree of compulsion of doctors and dentists to enter the military service that this is the time to do anything which might increase or fail to reduce the load in military hospitals. I hope the Secretary of Defense will continue his regulation in effect until more information is available.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I simply take this time to concur with the gentleman from Michigan [Mr. FORD] in his criticisms of the 6-month Reserve training program. He says that the rules were changed because they were slow in getting enlistments.

Well, let me go a little further and say that the rules were changed because the original 6-month program turned out to be a dismal failure, and everybody in this House knows that it was a dismal failure. That is why the age limitation was raised, that is why the pay was increased, and that is why the obligated service in the Ready Reserve was decreased. Now an injustice is being worked upon those who are conscripted to serve for 2 years. I say to the Committee on Armed Services that the time is past due, if the 6-month program is to be continued, that the obligated service of those drafted under the Selective Service Act be reduced. An injustice is being worked on these conscripts that ought to be rectified and rectified now.

Mr. Chairman, the Army by accepting and expanding the 6-month program has finally admitted that men can be trained for field duty in that period of time. It follows then that the 2-year period for conscripts ought to be immediately and drastically reduced. On no other basis can it be held that the present training programs are fair and equitable.

Moreover, almost every other nation in the world is reducing the training time obligations of trainees. The British Government is officially proclaiming that it will abolish all conscription in 1960. While the defenses of this country must be maintained, I insist that it is not incumbent upon the youth of America to carry the military load for Britain or any other nation, and I insist that training programs which must be maintained in our own self-interest be administered in such manner that every trainee, whether brought into service under the 6-month program or drafted, be treated fairly and equally.

Mr. DIES. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, after I concluded my speech yesterday, the gentleman from Indiana [Mr. HALLECK] stated that the Eisenhower administration has restored fiscal responsibility to this Government. I take issue with that statement. Let us look at the record. The Eisenhower administration has been in power for 5 years, and during the most prosperous period in the history of this country under this administration the national debt has increased by $9 billion. Furthermore, the 5 Eisenhower budgets are $73,600,000,000, more than Harry Truman's last 5 budgets.

I have here the figures of the Roosevelt administration from 1934 to 1941, one of the most dangerous periods in the history of this country. Those of us who served, as I did, during the depression and immediately preceding World War II realize and will agree that we were confronted with the greatest economic and defense problems that ever faced this country. During that entire period the expenditures were $67,041,000,000. The budget of this administration this year exceeds all of the budgets of President Roosevelt's administration during that difficult period.

Mr. Chairman, in spite of the statement of the gentleman from Indiana [Mr. HALLECK] I maintain that this administration has not restored fiscal responsibility. I maintain it because, if I owe the bank $10,000 or $20,000 and make no payment upon my obligation year in and year out, and especially during my most prosperous period, then I have not balanced my budget. I only balance my budget when I not only live within my means but make payments upon my honest obligations.

In spite of the condition of our country, the Eisenhower administration recommended and secured the passage of a substantial tax reduction. I voted against it and I voted against the Democratic proposal, because I did not believe it was sound and honest for our country

to reduce taxes at a time when we faced the greatest national debt in our history.

I cannot agree with the gentleman from Indiana that this administration has restored fiscal responsibility or even recognized it because at this very moment it is advocating Federal aid to education. Whatever position anyone takes on that issue, I think he will agree that once we embark upon it, it will grow in dimensions until it will require billions of dollars to fulfill our assumed obligations to the schools of this country. Not only is the administration advocating that, but it supported the flood insurance measure in the last session of Congress. I succeeded in getting an amendment approved to require the States to contribute to that proposal.

The Eisenhower administration has failed to shoulder the responsibility that this ccuntry has a right to expect. I want to say to my Republican friends that all over the country today the conservatives are disappointed and alarmed. By conservatives, I mean those who believe that government should be honest, that its policies should be sound, that it should pay its debts and stabilize the purchasing power of the dollar so that those who depend upon fixed income from pensions and social security and from a lifetime of savings, and from insurance policies will not be paid back in worthless money.

I want to warn some of my friends from the great industrial cities, it is true that you have agreements with industry under which, when the cost of living increases, wages increase. But all over our country there are millions of people who do not work under cost-of-living contracts. In my State and in every State of this Union today the white-collar worker and the millions who have to live upon pensions and social security and annuities are finding that every month for the last 14 months the purchasing power of their dollar has decreased.

Mr. DONOHUE. Mr. Chairman, I move to strike out the last word. Let me preface my remarks by emphatically stating that there is no attempt here on my part, or on the part of any other Member, to continue a district activity for any practical, political, or selfish reason. As a matter of fact and truth, insofar as the area economy would be affected, it would be more practically beneficial and politically wise to accept the military recommendation instead of the committee's because of the additional jobs that would be available by the intended expansion of use of the facility requiring larger numbers of civilian personnel. However, in my sincere conviction, there are much deeper and more serious questions of economic wisdom, national preparedness, and moral principle involved.

One of those urgent questions is whether or not, in the event of war, this hospital unit is a vital part of the military-hospital network needed to adequately fulfill the military obligation. The answer to that question appears simple and obvious. The record shows that in the war year of 1942 the military themselves requested and recommended the erection and use of this permanent modern type installation where it now strategically stands. This hospital is the only general hospital within the New England area and has been serving the population of that whole region; the next such hospital is at Valley Forge, Pa. This plant is admittedly ideally accessible by train, plane, and automobile. It is advantageously located next to one of the greatest and most renowned medical centers of the world. The New England area is among the very highest, if not the highest, potential military recruitment sections of the country in time of peace and in time of war. The expansion of military bases at Limestone, Maine, and at Otis and Bedford Air Fields in Massachusetts, with accompanying military-housing construction, is constantly bringing an ever-increasing military population to our area, thus projecting an ever-higher potential of military medical requirements for service people and dependents; these are undoubtedly reasons, and they still exist, why the military officials originally recommended the hospital. In this striking respect, the present officials have never pretended that it was a mistake to build it in the first place or flatly stated that it would not be of essential need in case of emergency. If and when they forthrightly would do so I would be personally inclined to accept their sincerity, but I do not think they will ever dare.

They would like us to forget—but the committee did not forget—their unfortunate planning that resulted in the economic fiasco of closing the hospital just 2 months prior to the outbreak of the Korean war. Needless to relate, they were forced to reopen it at tremendous and unnecessary cost to the American taxpayer. In view of the tense atmosphere existing in the world today, I think it is quite reasonable to question—and the committee did question—whether their judgment can be any better now than it was when they made this mistake.

And while I am dwelling on the economic side of this matter, let me reveal to you information that I think you will agree is most astounding and utterly contradictory in the light of pretentions and contentions that have been made by the military officials concerning this issue. This information is contained in the official record of the committee hearing, and I do not believe that the majority of the membership are aware of it. These hearings show that while certain representatives of the Defense Department were testifying to the Appropriations Committee that the hospital facility at Waltham was not needed, other representatives, at practically the same time, were testifying before the Armed Services Committee requesting authorization to build some 25 more hospitals and 1 or 2 more in the vicinity of Murphy Army Hospital. General Shuler and other aides testified that the hospital facilities current at Fort Devens were such old buildings, so disconnected and so inefficient in operation, that they desired to tear the facility down and build a new hospital. All this, mind you, at a time when, in another breath, they are advocating the abandonment of the Waltham facility as a hospital, which is a permanent modern-type construction, and its replacement cost today is conservatively estimated to be approximately $20 million; it was originally completed in 1944 at a cost of about $5 million. Unquestionably, it would cost well over $20 million to build a new hospital at Fort Devens. Does that sound like sensible economy to any reasonable person, and does it show any earnest intention or attempt of the military to be economical in their planning? I will let you answer that question.

I would rather recommend and implore the officials of our armed services to patriotically and dutifully concentrate their efforts upon the elimination of the frightening and staggering waste and extravagance as repeatedly revealed by subcommittees of this committee and the Armed Services Committee. The only gamble involved in that wholesome objective would be a substantial profit and saving to the burdened taxpayer. It appears from the facts of this sorry and unhappy record that some military officials are unwittingly overlooking the certain savings to the taxpayers by scrupulous correction of admittedly existing extravagant and wasetful methods of procurement and inventory and are more intent upon gambling with military morale and military career incentives for the sake of a very dubious and comparatively small reduction in our medical program.

Let me further remind you the President himself has expressed his concern over the vital necessity of improving military career incentives to prevent the large military turnover involving staggering training costs for repeated short service enlistments. The Secretary of Defense also expressed himself in this matter and I quote as follows: "Medical care for dependents is one of the strongest inducements for servicemen to continue in a military career. Yet, today approximately 40 percent of our military dependents cannot be given medical care through service facilities. This is one of the major obstacles in our efforts to enhance the attractiveness of military service because it affects the wives and children of servicemen directly." That is his statement.

Mr. Chairman, I certainly do not have to emphasize here that despite possession of the most advanced weapons, the only true measure of the fighting efficiency of any military unit is the height of their morale. In my judgment, the duty of the Congress is to exercise every effort to insure the maintenance of the highest possible morale among our military personnel. It is impossible for me, then, to understand how we can meet that duty if we cooperate in a military gamble involving adequate military medical treatment to members of the Armed Forces and dependents within a large area of the country and to which they are morally and legally entitled. Especially is it difficult for me to understand, when this gamble was proved wrong on the one occasion that it was tried.

The only attempted answer of the military to these grave and serious considerations is the unproved and untried

contention that the Military Dependents Assistance Act provisions authorizing private medical treatment for dependents will take care of the situation with an accompanying financial savings. Now these people know, but they would like to have it overlooked, and I know that their own testimony before the Appropriations Committee discloses they themselves have requested funds to take care of expected private medical treatment based on the conservative cost of $50 per day to the Government whereas an extravagant cost of military medical treatment is based on a range of $20 to $26 per day—Navy appropriations, page 888. Now do those authoritative figures sound to you like anything that has even the vaguest promise, not counting the cost of the redtape, of a potential savings to the taxpayer; I rather think not.

The record shows that Murphy General Hospital was originally and wisely recommended by the military as a vital war unit and it proved its worth. It was closed once and that proved to be a serious mistake. It is located outside the main target area of military installations in the Boston vicinity and its type of construction affords maximum protection against bombing attacks. Chelsea Hospital, suggested as an alternative, is 120 years old and located in the midst of a heavy industrial section. Murphy was built in 1944, comprises more than 90 acres and has plenty of room for expansion. To replace it today would cost about $20 million. I, and many others, have earnestly suggested that this location and space be fully utilized by building expansion which could then provide an ideally situated combined service hospital which could adequately take care of the military medical needs of the whole of the New England area under the best possible conditions. Regretfully it seems no official comment or exploration of this sound practical economic suggestion has been made.

It appears that these current military officials would rather take a reckless gamble with military morale which they cannot justify on the record, cannot demonstrate to be economically wise, which once proved a sorry error and the alternatives to which they cannot adequately answer.

In my most earnest judgment, the question of the wisdom of the moral, patriotic and economic gamble is the fundamental issue involved here and on that question I ask only the individual conscientious action of the Members of this House.

Mr. Chairman, I have also taken this time for the purpose of obtaining some information relative to the figure that appears on page 8, line 1—that figure of $3,145,000,200. I should like to inquire of the gentleman from Florida [Mr. SIKES] if this figure includes a sum for the continued operation of the military hospitals at Hot Springs, Ark., and the Murphy General Hospital in Boston, Mass.

Mr. SIKES. Let me say to my distinguished friend from Massachusetts, and I also direct this to the gentleman from Arkansas [Mr. NORRELL], who also has a very great interest in this, that the Army hearings which are before you, show on page 887 the following: "Funds included in fiscal year 1958 budget for operation of Army and Navy Hospital," under the appropriation item "Operation and maintenance, Army," $1,028,000. Under the appropriation "Military personnel, Army," the amount is $703,500. That is for the Army and Navy Hospital in Hot Springs.

On page 888 the hearings show this: "Funds included in fiscal year 1958 budget for operation of Murphy Army Hospital," under the appropriation item for "Operation and maintenance, Army," $1,142,000, and under the appropriation item, "Military personnel, Army," $735,500.

If my friend will yield to me just a moment longer, may I say that the parliamentary action by which the language requiring the continued operation of the Army and Navy hospital at Hot Springs and the Murphy General Hospital in Boston was stricken from the bill on a point of order does not change the fact that this committee intended those hospitals to operate, and does not express the will of the House.

May I state further that the money I have referred to is a budgeted item approved by the Department of Defense and the Bureau of the Budget, and kept in the bill by the action of the committee. The money is still in the bill. It is my personal expectation that it will be used for the operation of those hospitals. They perform a valuable and needed service.

If I can again impose on the gentleman's time, may I make this further observation: There is another side to the picture about the operation of the two hospitals. The picture is not all black. The closing of the hospitals will not result in great savings to the Government. A considerable part of the expenditure that is proposed in this bill and which I have quoted would have to be made anyway whether or not the hospitals were operated.

The point has been made that these hospitals are only partly filled. In peacetime all military hospitals are only partly filled. They are built with capacity to take care of wartime needs. Naturally, in peacetime they are not operated to capacity. That is true of every military hospital.

Even though we close these hospitals we still have the cost of the maintenance of the buildings. If they are used for other programs they have to be maintained. We are not going to let the buildings stand there and fall down, for lack of repairs whether or not they are used. The cost of the personnel is going on. If the personnel is not used in these hospitals they will be used elsewhere. Therefore, they have to be paid just the same. The cost of the operation undoubtedly would be less because the cost of the operation would be merged, presumably, with the cost and operation of other hospital facilities. But there would be a cost at the other facilities.

May I point out just one other thing. The services are constantly seeking to build new military hospitals. Some of them are in the general area of these hospitals that we are talking about. Hospitals nowadays are built at a great deal more cost than was the cost of those that have already been built. We must be certain we are not swapping a small savings for a large expenditure. The committee is on proper grounds in its action.

Mr. DONOHUE. I thank the gentleman.

Mr. Chairman, may I ask another question of the gentleman from South Carolina [Mr. RIVERS].

Is it not so that after the Surgeon General's office recommended the closing of these two hospitals, the Surgeon General through General Shuler appeared before your subcommittee and asked for an authorization to build 25 more new military hospitals?

Mr. RIVERS. I do not know what the number is, but they have asked for the construction of new hospitals throughout the country, and one is in the general area of which the gentleman speaks.

Mr. DONOHUE. That is right—one of these is to be built in the State of Massachusetts where one of the hospitals, the Murphy General Hospital has been recommended to be closed; is that not correct?

Mr. RIVERS. One is in the general area of the Murphy General Hospital; I think at Fort Devens there is one, too. If I may be permitted to volunteer this statement, I think the closing of the Murphy General Hospital would be a tragedy to this country.

The CHAIRMAN. The time of the gentleman from Massachusetts [Mr. DONOHUE] has expired.

Mr. MARTIN. Mr. Chairman, I move to strike out the last word and I yield to the gentleman from Massachusetts [Mr. MCCORMACK].

Mr. MCCORMACK. In connection with what the gentleman from Florida [Mr. SIKES] said, and also the gentleman from South Carolina [Mr. RIVERS] concerning a new hospital, the Murphy General Hospital originally cost $5 million and a new hospital would cost at least $20 million. The same thing would apply to the hospital located at Hot Springs, Ark. Furthermore, about 3 or 4 years ago the proper representatives of the Department of Defense promised the Massachusetts delegation that if an appropriation were made by the Congress, they would keep the Murphy General Hospital open. I do not know what promises they made in relation to the Arkansas Hospital, but I know they made the promise in relation to the Massachusetts Hospital.

Mr. SIKES. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield.

Mr. SIKES. The importance and the value of the Murphy General Hospital is being discussed and very properly so. If I can proceed for one moment further, I want to say a few things about the Army and Navy Hospital at Hot Springs. The building there is the best hospital building that the military services own within the continental limits of the United States. There is only one better hospital facility owned anywhere in the world by the United States and that is the Tripler General Hospital in Hawaii. The hospital at Hot Springs is

the only one in the general geographic center of the United States. There is not another one for a thousand miles. Most of them are concentrated on the east coast and on the west coast where they could, unfortunately, be subject to attack by guided missiles from submarines or aircraft. The hospital in Hot Springs is the nearest one to the maneuvers which are conducted year after year in the Louisiana-Texas area. They are very important maneuvers testing new weapons and new concepts of warfare. Only last year it was proposed that the Army-Navy Hospital at Hot Springs be used to absorb a part of the overload of patients at the Veterans' Administration hospital in Little Rock, adequate facilities and staff were available at the Army-Navy Hospital. Of course, the departments of Government threw up their hands in holy horror at the idea of anything as simple and as thrifty as transferring patients from one hospital to another one only 70 miles away.

I have given you only a part of the overall picture. This is a valuable hospital, just as the one in Boston that my friend is now discussing. Both should continue to operate for the good of the services.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. Mr. Chairman, I would like to remind the committee again what happened just before the Korean war when the Murphy General Hospital was closed down. It was very expensive to close it; it was very expensive to reopen it when several months later the Korean war started. A great deal of money was lost thereby, the care of patients was impeded, and I know the committee realizes that we have a tremendous shortage of beds in Massachusetts civilian hospitals. If we had any emergency we would have greater shortages in every hospital.

The people in Massachusetts today cannot get proper care in civilian hospitals because of the shortage of nurses and doctors. The expense I maintain would be just exactly as great if not greater if, for instance, the Chelsea Naval Hospital had to use its personnel to take care of these men and women. It is a very old hospital and I feel it is really an improper location for patients. It would mean added expense in equipment, added nurses and doctors, all types of personnel. They give fine medical care there, but the location is very bad.

Fort Devens is many miles away. It is in my own district and part is in the district of the gentleman from Massachusetts [Mr. PHILBIN]. We need a hospital at Devens desperately, and if Murphy were closed additional funds for still added personnel would be made. The buildings are old. I am sure the committee sometime will authorize a new hospital at Devens. National defense has already endorsed it. We will feel an even greater need as time goes on. It is an extremely important post in every way. It is the only Army post in all New England. When it is built Murphy General will still be needed.

Mr. MARTIN. Mr. Chairman, I yield to the gentleman from Massachusetts [Mr. BATES].

Mr. BATES. Mr. Chairman, the question has arisen as to the needs of the Army. I attended the hearings the day when General Schuler testified. He said the Army needs 25 new hospitals. Fort Devens, in Massachusetts, was considered among the four most urgently needed. As a matter of fact, the condition is such at Fort Devens today that General Schuler said the Army would probably tear down the present Fort Devens Hospital if a new one were built. Obviously, the question arises in my mind as to the advisability of transferring people from the Murphy General Hospital to Fort Devens if it is a hospital which should be torn down.

Mr. MARTIN. Mr. Chairman, before my time expires I want to say I agree with the gentleman from Massachusetts [Mr. DONOHUE] it would be poor economy to close this hospital at this time.

Mr. PHILBIN. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

MURPHY GENERAL HOSPITAL

Mr. PHILBIN. Mr. Chairman, in the debate there has been reference made to the location of Murphy General Hospital and the distance from the Greater Boston area of other military medical facilities.

I think I can best clarify the facts by a brief statement. First, there are two service hospitals in eastern and central Massachusetts besides Murphy—one at Fort Devens about 45 miles distant from the Greater Boston district, and the other a Navy hospital at Chelsea, about 11 or 12 miles away.

The Army hospital at Fort Devens is an old one and the Army is already planning to replace it; in fact, authority for a new Army hospital at Fort Devens has already been discussed by the Army in the House Armed Services Committee, and without doubt some action will be taken, perhaps next year. However, the present facilities at Devens are remote from the centers where the major part of armed services personnel and their dependents are located. Treatment at that facility would involve very long travel for most of the personnel. For example, the personnel located on Cape Cod would have to travel as far as 135 or 140 miles to reach this facility. The fact that the Army is seeking a new hospital at that post indicates present facilities are inadequate.

The situation at Chelsea Naval is not much better. This facility is 120 years old. It is located near an industrial area and is not easily accessible for many servicemen and their families.

If Murphy General is closed it will work a great hardship upon thousands of members of our armed services and their families who would be required, if they needed treatment at an Army general hospital, to go several hundred miles all the way to Valley Forge, Pa. That is, I submit, my friends, a condition that this House would not want to bring about because it involves not only personnel located in Boston and Massachusetts, but also personnel located in all New England, and of course their dependents.

Murphy General was established in the first instance to insure adequate hospital service for this area, and with the recognition that facilities of this kind should be accessible, well staffed with good doctors and nurses and technicians, and close to the Boston area where unexcelled, expert medical consultation was available.

I am for economy, but I think it is a shabby, picayune, shortsighted, yes, if you will, a calloused kind of economy that is effected at the expense of those who are serving in the defense of the Nation and their loved ones. The thought of a young child suffering from a serious disease, polio, or muscular dystrophy or anything else, having to travel miles and miles away from home to get urgently needed medical care, attention, and skilled treatment is revolting, yet that is what the closing of Murphy General would mean.

The present occupancy census at Murphy is understandable in the light of the Army's persistent efforts over a period of years to close this facility. Obviously, the policy and practice is currently to siphon medical cases into the private hospitals, already overcrowded and pressed for staffing, to create greater problems for the private hospitals and sick people in civilian communities at a cost to the Government under the new dependents care law said to average $50 per day as compared to $20 per day in Murphy General or any other well-run service hospital.

Mr. Chairman, to my mind, all these facts, factors, and considerations in this situation compel the continued approval of the House of the maintenance and operation of Murphy General. In the interest of our fighting men, their wives, and children, I urge that favorable action be taken on this question.

I compliment my distinguished colleague, Congressman DONOHUE, for his very able floor fight for Murphy General, and Army-Navy Hospital at Hot Springs, in which he was so ably joined by our distinguished colleague, Congressman NORRELL. As a result of his skillful parliamentary measures during the debate on this question, he has elicited from the able chairman of the subcommittee, Mr. SYKES, the able chairman of the House Armed Services Committee on real estate having to do with hospitals, Mr. RIVERS, the distinguished majority and minority leaders, and others plain, incontrovertible, Congressional intent to continue the operation and maintenance of these two hospitals. Clearly the House, by its action in adopting the item of $3,145,000,000 on page 8 of the bill, which includes sums to operate and maintain these hospitals for 1958, has indicated to the Army and Department of Defense what its specific intentions are in respect to these hospitals. If, therefore, the respective Departments fail to keep these facilities open, they will be deliberately ignoring and flouting the expressed will of the House. I do not be-

lieve they would ever pursue such a course.

Mr. FORD. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. FORD. I am very glad to yield to the gentleman if it is not taken out of my time.

Mr. MAHON. In view of the fact we have so many items and that this hospital matter has already been resolved, it would seem to me that we ought to move along to the reading of the bill and the consideration of other amendments as soon as we can. It is early in the day and I realize everybody is fresh and wants to make a speech, but I think it would be well if we could go on to other issues. I am sure the gentleman from Michigan will agree.

Mr. FORD. Mr. Chairman, in view of the fact that this hospital problem has been brought up I think it essential to say a word or two.

It is true that the language directing the Department of the Army to operate this hospital, which has the effect of law, is no longer in the bills. If the bill continues in this form when finally enacted there will be no legal requirement that the Department of the Army continue the operation of the hospitals.

In other words, if the law remains as it is in the bill today the Department of the Army has full legal authority, and in fact, the responsibility to exercise its own good judgment as to the further operation of these two hospitals.

The record shows that the President, the Secretary of the Army and the Surgeon-General of the Army all concur in the desirability on the ground of efficiency and on the ground of economy in the closing of these two hospitals. I hope the proper authorities take the necessary steps to save this $1 million annually.

Mr. Chairman, it has been brought up that the Army wants to build 25 new hospitals. They would like to build a lot of new things including hospitals. But the Department of the Army did not request of the Armed Services Committee authority to build a new hospital in the fiscal year 1958 at Fort Devens. It is on the eligibility list but it is not in the program for authorization in the fiscal year 1958.

I would like to present 1 or 2 facts to show why the Army feels we should not operate these hospitals. In 1952 we had a strength in the Army of 1,596,000 men. In 1957 we had 1,073,000. In 1952 we had 5,514 doctors. In the fiscal year 1957 we have 3,908 doctors. In 1952 we had 61 hospitals. Today the Army is operating 60 hospitals. In 1952 the Army had a bed capacity of 41,421. Today in their hospitals they have a bed capacity of 40,921. In 1952 they had 26,972 beds occupied. Today they have 11,545 beds occupied.

The Army's bed occupancy has dropped 65 percent, their troop strength has dropped 33 percent, their doctors' strength has dropped 22 percent and they closed only one hospital in this 5-year period.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Michigan.

Mr. JOHANSEN. I thank the gentleman. The one hospital that the Army closed is the Percy Jones Army General Hospital at Battle Creek, the closing of which in 1953 was consented to by my distinguished predecessor, Mr. Shafer, because he practiced what he preached about economy. May I ask the gentleman from South Carolina whether there are some new hospitals projected in the area in which the Percy Jones Hospital was located?

Mr. FORD. Mr. Chairman, the House has not directed the Army to keep these hospitals open and, although I respect the opinions and judgments of my very close personal friend, the gentleman from Florida, I hope and trust that the Department of the Army exercises its own judgement.

I might mention one other point. The money for the operation of these hospitals was in the $3,400,000,000 for operation and maintenance of the Army. The subcommittee of the Committee on Appropriations cut that figure $150 million. It would seem to me that the Army would be using good sense and sound judgment to save a million dollars by closing these two hospitals, thereby making the monetary pressure against other needed programs less in the fiscal year 1958.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that any Member of the House may extend his remarks at this point in the RECORD or at other points in the proceedings of today in regard to the military defense appropriation bill.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas [Mr. MAHON]?

There was no objection.

Mr. BENNETT of Florida. Mr. Chairman, I speak in behalf of retaining the committee's decision for continuing the Army and Navy General Hospital, Hot Springs, Ark. I speak from a study I have made of this subject; and inspired by my own personal experiences as a patient in this hospital for about a year and a half at the close of World War II. My experiences there led me to believe that there is no better hospital in the Armed Services of the United States.

From page 886 of the Committee hearings we read from the Army report on this hospital as follows:

> The Army and Navy Hospital is a multistory hospital of permanent construction and is one of the best physical plants in the Army Hospital system.

Unique features are included in this hospital. A $100,000 therapeutic pool equipped with elevators and lowering devices for seriously crippled patients is a facility available in no other service hospital. Devices for the use of radiation as a method of cure are available in this hospital to a degree realized in few, if any, other military hospitals. In a single year more than 11,000 patients were treated with radium or X-ray for cancer, tumors, or spinal arthritis in this hospital.

Hot Springs, Ark., is a study center for crippling diseases, and this hospital and a civilian hospital in this community are focal points for such studies. Specialists in private practice and therapeutic bathhouses broaden the picture of this type of study in this area.

The city of Hot Springs, Ark., has geared itself for assisting those who are seriously crippled. Ramps take the place of curbs at street intersections and take the place of steps in churches, theatres, and amusement locations. There is a resort atmosphere in this town of great aid to the rehabilitation of convalescents. This atmosphere is enhanced by the presence of the national park, which extends to the downtown streets in some locations.

The hospital is capable of expansion in wartime because of the availability of fine, large, nearby hotels which cater to resort patronage in peacetime.

There are special equities urging the maintenance of this hospital in Hot Springs which arise from the large number of seriously crippled former military personnel who have established homes near this hospital in order to be available to the excellent services rendered there.

The only real argument made against the maintaining of this hospital is the financial argument. Some of the things I have said show that I feel that economics should not necessarily control this decision: because of the need for this special type of therapeutic center and because of the special facilities available in this hospital and because of the establishment of homes of crippled, retired service personnel in the area, as well as the other things which I have mentioned.

Actually, the only reason I can see why this hospital can be considered as a financial burden is that the Army has not kept this hospital up by assigning enough doctors and patients to it. Naturally, they can make a showing that it is expensive to maintain a large institution of this type when they do not assign adequate patients to it and keep a staff there which would justify the patients assigned. So, as far as I can see, the argument that this is an uneconomic matter really arises from the fact that the Army is not doing what it should in assigning an adequate patientload to the facility, commensurate with its capabilities.

The Army urges post hospitals, ones established at Army posts, as an alternative for this offpost hospital. In fact, there are millions of dollars in authorizations for military hospitals in the public-works bill which the House Armed Services Committee, of which I am a member, is considering. I looked through some of this material this morning and I believe my calculation is accurate in saying that there is in excess of $10 million for new military hospital construction in this new public-works bill for the armed services, including millions for hospitals at several Army installations. Further, there is testimony before our committee that many millions more will be brought to us in successive years, starting in the next fiscal year. While we are doing all this new construction at Army posts, it would seem to me to be good commonsense to maintain in active status this fine Army and Navy general hospital at Hot

Springs, Ark., because its facilities are already constructed and do not require new appropriations for costly new construction.

Finally, I believe that this should be done because of the very fact that this hospital is located away from any major target area such as a military camp or post would be. America is no longer immune to attack and it would seem to me to be good commonsense to maintain a hospital like this one in the foothills of Arkansas away from any probable attack. This is particularly true in view of the fact that its facilities can be readily expanded by the addition of adjacent hotels if a wartime situation occurs.

I also favor the continuation of the Murphy General Hospital in Massachusetts instead of building expensive duplicating facilities in a nearby location.

Mr. NORRELL. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I appreciate so much what has been said, regarding the Army and Navy hospital at Hot Springs, Ark., an institution that has been serving the sick people of our Nation for about 80 years. The panel chairman, Congressman SIKES, has already said much about the importance of the Army and Navy hospital, and others have also indicated how they value the Army and Navy hospital. As stated yesterday this hospital was authorized by the Congress about 80 years ago. At that time we had a population in our Nation of about 50 million people. Now we have a population of about 180 million people. We had a need for this hospital in 1870 and we have a need for it now. In 1929 Congress passed a bill to enlarge it and when it was completed the bed load was 425 and there never has been constructed a better hospital anywhere in the world. At least anywhere in the continental United States. However, at the outbreak of World War II the hospital was filled beyond its capacity, and for a time they had more than 1,000 patients per day. The Army further enlarged the hospital in 1942 by additional beds, making a total, if needed, by about 1,700 beds per day. Actually if needed, Hot Springs could care for a patient load of 2,500 or more patients per day. Hot Springs, Ark., is a resort city. They are an international health center, known all over the world. Hot Springs has hundreds of good hotels and many hundreds of roominghouses. The Government has built the Army and Navy Hospital and it has a total of 59 buildings, and it contains 200,000 square feet of space. The entire post is located in a 28-acre landscaped slope of Hot Springs Mountain. The Department of the Army spent several millions of dollars in making the plant up to date in every respect, and only a few years ago added air conditioning. We have a staff of more than 60 physicians, including outstanding specialists in half a dozen fields. Mr. Chairman, certainly this is a great institution, valued now at probably about $25 million or $30 million, but if it had to be constructed now at present costs, it would cost probably $100 million. Hot Springs is known for its healing hot waters all over the world. Arkansas is located about the center of our Nation. The hospitals are all about 1,000 miles from Arkansas. Practically all of our hospitals are on the Pacific or Atlantic coasts except Denver and Arkansas. I say again, if you would draw a ring on your map you would find that there is not another Army hospital within a radius of about 1,000 miles from Arkansas.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. NORRELL. I yield to the gentleman from Arkansas.

Mr. HARRIS. I want to commend the gentleman, my colleague from Arkansas, for the splendid efforts he has made over the years with reference to this very outstanding facility at Hot Springs, Ark. Many of us wonder why it is that the department involved here, with a facility that has proven itself over the years at a cost of millions and millions of dollars, would want to completely wreck and dispose of it as surplus and practically give it away and at the same time go to other areas of the country to build new hospitals. The gentleman is making a very splendid contribution, as he has over the years. He has been intensely interested in this program and has expended great efforts to continue this facility for the benefit of our armed services.

Mr. NORRELL. I thank the gentleman.

The last point I want to make is this. You see on this map here the location of the Army hospitals throughout the country. You will see on the east coast a few; you will see on the west coast a few. Then, in Arkansas you will see this little area here. This is the Arkansas area here. Here you will notice is located the hospital at Denver, Colo. Now, if you take out the hospital in Arkansas, you would find that there would not be an Army hospital anywhere around 1,000 miles from Hot Springs. So, I think they are entitled to a little consideration.

Now, in conclusion, may I say that I regret that the point of order was made. However, after it was made, I was reasonably sure that it would have to be sustained. The Armed Services Committee reported the matter out with nearly a unanimous vote. The full Committee on Appropriations was overwhelmingly for the bill as reported by the subcommittee, and I think if the House of Representatives had been permitted to have expressed themselves they would have adopted it regarding the hospital matter. Therefore, since the Bureau of the Budget has recommended sufficient money for the hospitals to be maintained for another year, since Congress has approved the money for the maintenance for the next fiscal year, I hope the other body will put the language back in the bill that was deleted, and that the two hospitals shall be continued for the next fiscal year.

Mr. CANNON. Mr. Chairman, the House will be interested in the forthcoming announcement of the resignation of Hon. George M. Humphrey, as Secretary of the Treasury and the acceptance of his resignation by the President.

It is of particular interest to the House just at this time as we are now engaged in the consideration of a budget which Secretary Humphrey decried as too big, and in the specific disposition of the military budget which in a formal interview a few days ago he indicated was excessive. It is gratifying to note that the House is giving every indication of taking the admonition of the Secretary to heart and is now proposing to cut $2,500,000,000 out of the estimate.

The resignation of Secretary Humphrey from what had become an untenable position is a milestone in the record made by this administration. Since the adoption of the budgetary system the Secretary of the Treasury traditionally has had the last word in the formulation of the budget. So far as is known this is the first exception to that rule. The administration in 1952 and again in 1956 had promised economy, retrenchment and reduction of the national debt. The Secretary himself had consistently urged reduction in Federal expenditures. He had opposed tax cuts and deficit spending. He counseled a budget below that of 1957, up to that time the high watermark in peacetime budgets.

But unexpected opposition developed. The Washington Post carried a column suggesting that Vice President NIXON "already campaigning for the Presidency in 1960" forced through the "welfare State budget" on the ground that "only a liberal Republican can win." And the President sent to Congress the largest peacetime budget in the history of the Nation.

It is not the first time Secretary Humphrey has found himself out of step with party chiefs. Only recently when called before a Senate committee he declined to defend the grant of a fast tax writeoff to the Idaho Power Co. and made the statement that the writeoff policy had cost the United States Treasury $3 billion over the past 6 years.

But his resignation comes at a rather critical time. Under the personal direction of the President his party is this afternoon waging a determined, if hopeless, battle to restore the budget cuts in the bill now before the House. The Treasury must refinance more than half the public debt in the next few months—must shortly ask Congress for a fourth successive increase in the statutory ceiling, while the cost of financing the debt has steadily increased and is now approaching $7½ billion a year. The excess of savings bonds redemptions over sales is so marked as to force the Treasury to raise new funds the last half of this calendar year. And the 3⅝ percent on new notes offered by the Treasury is the highest since the week following the close of President Hoover's administration.

The cost of living has risen 4 percent in the last year, dislocating the national economy to an alarming degree. Never before was a steady hand so desperately needed in the responsible position which Secretary Humphrey is today relinquishing with the President's blessing.

The resignation of Secretary Humphrey at this time is a significant commentary on the untoward trend of the fiscal policy of the Government. It is a turning point, the beginning of an exodus which will sweep from the Cabinet some of the ablest members of the President's official family. With coming resignations, it foreshadows unmistakably the final verdict on the success of this administration.

Mrs. ROGERS of Massachusetts. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise to pay a most wholehearted tribute to the gentleman from Arkansas [Mr. NORRELL]. I know how much this able gentleman has done for his district in many ways. I do not know what we would have done without him concerning our hospital in Massachusetts. He has been tireless and resourceful and loyal. I know how valuable he is to his State. I know the patriotism of his fine State. I remember in World War I when Arkansas made its terrific contribution in wheat and in servicement in every war. It deserves a great deal of sympathy and a great deal of appreciation.

I visited a number of years ago the gentleman's hospital at Hot Springs and I call it his hospital because of his great interest in it, that military hospital that they have tried at times to close. I know of the many cures that have taken place there. I think the last time an addition was made to the hospital it was made from Veterans' Administration funds, because it was felt to be so necessary and important. They were caring for veterans there and getting cures. I was going through the hospitals at the time I visited Hot Springs seeing the sort of care both the soldiers and the veterans were receiving. I am delighted, may I say to the gentleman from Arkansas, that his hospital will continue.

I should like to add right here that I am very sure that these orders do not come from the Surgeon General. I think he is under wraps because word came to me from his office that they could not speak without consulting the Secretary of the Army. He is under wraps because a little group of men who make recommendations of hospitals decided to close these hospitals. I doubt if anyone really wants to close them in national defense but that little group, no matter what they say.

The Clerk read as follows:

RESEARCH AND DEVELOPMENT

For expenses necessary for basic and applied scientific research and development, including maintenance, rehabilitation, lease and operation of facilities and equipment, as authorized by law, $392 million, to remain available until expended.

Mr. FORD. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FORD: On page 10, line 5, strike out "$392 million" and insert "$400 million."

Mr. FORD. Mr. Chairman, this amendment increases the committee bill by $8 million. It restores the research and development funds to the figure that was included in the President's budget. The restoration of $8 million again conforms with the recommendations of the Army panel, composed of the gentleman from Florida [Mr. SIKES], the gentleman from South Carolina [Mr. RILEY], the gentleman from Pennsylvania [Mr. FLOOD], and the gentleman from Maryland [Mr. MILLER]. I repeat, the gentleman from Maryland [Mr. MILLER], who is unfortunately in the hospital, asked me specifically to indicate that my views on this matter were exactly the same as his own.

Let me give you the background of this amount. The Department of the Army requested for research and development $596 million for the fiscal year 1958. The President submitted in his budget the figure of $400 million. In fiscal year 1957 the Army will obligate for research and development $418 million. The President's budget for fiscal year 1958 called for a figure of only $400 million. So fiscal 1957 was $18 million higher than fiscal 1958. The committee has in addition reduced it by $8 million plus and a $9-million absorption which the Army must take in this account because of the Civil Service retirement program. In other words, in fiscal 1958 if this reduction stands there will be a $35 million cutback in Army research and development.

Mr. Chairman, I know there are many people who feel that we can go wild in the field of research and development, but I submit that this research and development program has been most carefully considered. It has the endorsement of the Defense Science Board, which was an organization set up on the recommendation of the Hoover Commission. It endorsed the research and development program across the board for all three services. Incidentally, the Assistant Secretary of Defense for Research and Development, Dr. Furnas, in his testimony on page 349 of the Department of Defense hearings, part I, said in response to an inquiry by the gentleman from Alabama [Mr. ANDREWS] the following:

Dr. FURNAS. I personally feel that we could spend somewhat more money effectively.

Anyone who knows Dr. Furnas, I am sure, is impressed with his knowledge and his competency.

Let me take up one other problem which is related to the funding of research and development. The Department of the Army for several years has been proceeding with research and development of what we call the antimissile missile. We have heard mostly about the ICBM and the IRBM, and we have been told that on a certain date in the not too distant future both will be operational. Some people contend that both of these weapons are the ultimate in weapons. But the Department of the Army several years ago felt that maybe some research and development should be done in the antimissile missile, and to date they have invested about $20 million in the program. The Army is confident this weapon is feasible. In this budget for the research and development of the Army, there is $12 million for that program. At least, there was out of the program as submitted by the President. Out of the $596 million program which the Army requested, there would have been $20 million for the anti-missile-missile-development program. The decision of the subcommittee and the Committee on Appropriations in reducing this appropriation by $8 million, in my opinion, is bound to have some impact on the anti-missile-missile research and development program.

In conclusion, let me say we have as the head of the research and development program for the Department of the Army, in my opinion, one of the most competent military men in the Pentagon, Lieutenant General Gavin. I have confidence in his judgment on this matter, and he firmly believes the full amount of the funds in the President's budget for research and development should be available. I concur and urge the adoption of the amendment.

Mr. SIKES. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do not think there is any question but that the Army research and development branch does some of the finest work done anywhere in the Nation. They are contributing very materially to the readiness posture of the Nation. In their work on guided missiles the Army has assembled probably the best team known outside the Iron Curtain. They have developed the Jupiter, which is the intermediate range ballistic weapon possessing great promise. I think the decision to take responsibility for future developments in this field from the Army and the failure of the Department of Defense to budget specifically for this missile is a mistake. However, we do have assurance the Secretary of Defense will continue the development of Jupiter as long as there is justification and do so from his own emergency fund. May I point to the fact that this bill carries an emergency fund of $85 million plus the right to transfer from other funds an additional $50 million. This money as used largely to exploit unanticipated developments in the field of research, to take advantage of scientific breakthroughs. From this fund Jupiter is to be financed.

One of the great services of Army research and development is the development of the antimissile missile. It is still largely a hope and a prayer, but it is pointing in the right direction. If there is to be a defense against the ultimate weapon, the intercontinental ballistic missile, this is the defense. General Gavin who is one of the great figures in the Armed Forces today is very hopeful about the prospects.

The medical branch of research and development is contributing very significantly to medical knowledge including extremely important work in developing techniques for treating burns, including the type associated with excessive radiation from atomic exposure.

Now, Mr. Chairman, the Army panel did not recommend this cut. The Army panel recommended the full $400 million which was carried in the budget. However, I concurred in the cut of 2 percent proposed in the full subcommittee.

I make that statement frankly and freely. I felt that a small reduction in research and development, servicewide,

would require an economic belt tightening all along the line. I would not vote to cut research and development excessively, but I do not rule out the possibility of wise reprograming which will eliminate unnecessary or obsolescent projects.

I must point out that the Army research and development program does not carry as much money as it did last year. Last year after the special weapons projects were eliminated, the Army research and development fund was $380 million. For fiscal year 1958, after the special weapons projects are eliminated it is proposed to provide $372 million less the $8 million reduction made by the committee, leaving $364 million of net funds compared to the $380 million last year. The fiscal year 1958 program does not include Jupiter, and that is a substantial item, considerably more than the $16 million reduction I have mentioned.

However, research and development in fiscal year 1958 now must absorb $9 million of retirement money and must absorb a general increase in costs all along the line. Nevertheless I do not believe this cut is a serious one. I know the Secretary has a substantial emergency fund which he can use to help carry on any part of this program if it appears there is justification for doing so.

Mr. JONES of Alabama. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield.

Mr. JONES of Alabama. The gentleman spoke of an emergency fund being in the hands of the Secretary of Defense. Does the gentleman care to disclose how much the Secretary of Defense would have with which to carry on these extracurricular activities that have been carried on by the Department of the Army?

Mr. SIKES. The Secretary has $85 million in an emergency fund carried on pages 3 and 4 of this bill which he can use as he sees fit; and it is used primarily to exploit break-throughs in scientific research and to speed up unanticipated developments in weapons or techniques. The bill carries transferability authorization from other funds to the extent of another $50 million. The estimated cost of carrying on the developmental work on Jupiter in the next fiscal year is $37 million. We have the assurance of representatives of the Secretary of Defense that the money will be made available if it appears that Jupiter justifies the expenditure. I feel that we can rely on this.

Mr. MAHON. Mr. Chairman, I rise for the purpose of fixing time on the amendment now pending.

Mr. Chairman, I ask unanimous consent that all debate on this amendment close in 20 minutes, the committee to have the last 5.

Mr. JOHANSEN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. JOHANSEN. I have a substitute amendment at the desk. I wonder if that should be offered before the time limitation is set.

The CHAIRMAN. The Chair understood the gentleman from Texas to ask that debate close on the pending amendment and not other amendments.

Mr. JOHANSEN. Would that preclude the offering of a substitute amendment?

The CHAIRMAN. No, it would not.

Let the Chair clarify the Chair's position on that. If the time is fixed on this amendment and all amendments thereto there would be no reason for a Member not to offer another amendment, but there would be no time for debate on other amendments.

Mr. JOHANSEN. Mr. Chairman, may I offer the amendment at this time?

Mr. MAHON. Mr. Chairman, I withdraw my request.

Mr. JOHANSEN. Mr. Chairman, I offer a substitute amendment.

The Clerk read as follows:

Amendment offered by Mr. JOHANSEN as a substitute for the amendment offered by Mr. FORD: On page 10, line 5, strike out "$392 million" and insert in lieu thereof "$400 million" and on page 10, line 6, immediately before the period insert the following: "*Provided*, That appropriations made by this title shall, without impairing national defense, be reduced in the amount of not less than $8 million through the apportionment procedure provided for in section 3679 of the Revised Statutes of the United States (38 U. S. C. 665)."

Mr. MAHON. Mr. Chairman, I reserve a point of order against the amendment offered by the gentleman from Michigan [Mr. JOHANSEN].

Mr. JOHANSEN. Mr. Chairman, this substitute amendment is offered pursuant to the statement that I made yesterday and pursuant to the line of questioning which I made of the distinguished chairman of the subcommittee, and the gentleman from Michigan.

The purpose of the amendment is simply to provide for the restoration of $8 million proposed by the amendment offered by the gentleman from Michigan [Mr. FORD] and then to provide that an equivalent amount be reduced from the total appropriation under title III, the appropriation for the Department of the Army.

I am concerned that we provide either by the authority for transfer or by specific appropriation for those particular items or for those particular accounts in which there are valid grounds for an increase, but that we do it on the basis whereby the total aggregate reduction made by the subcommittee with respect to the total appropriation for defense will be maintained.

The purpose of my amendment is simply to provide, as I said yesterday, the scalpel to be used where it can be used skillfully by the experts to do the least harm and whereby we can provide additional funds where the experts insist they must be provided and still preserve the basic economies that have been proposed in this budget by the subcommittee and by the Appropriations Committee.

Mr. MAHON. Mr. Chairman, I renew my point of order that the gentleman's amendment is legislation on an appropriation bill, also that it imposes additional duties.

The CHAIRMAN. Does the gentleman from Michigan [Mr. JOHANSEN] desire to be heard?

Mr. JOHANSEN. Mr. Chairman, may I say that in the appropriation bill in the 81st Congress, second session, which became Public Law 759, there was a provision, section 1214, to the effect that appropriations, reappropriations, contract authorizations, and reauthorizations made by this act for departments and agencies in the executive branch of the Government shall without impairing national defense be reduced in an amount of not less than $550 million.

It is on the basis of that sort of limitation that I offered the amendment.

The CHAIRMAN. The Chair is ready to rule.

The gentleman from Michigan [Mr. JOHANSEN] offers an amendment in the nature of a substitute to the pending amendment, on page 10, line 6, by adding language contained in the proviso of the substitute. That language indicates that the appropriations made by this title shall without impairing the national defense be reduced in the amount of not less than $8 million through the apportionment procedures provided for in another section of existing law, which section vests authority in the executive branch to make certain apportionments.

It is the opinion of the Chair that the language of this proviso imposing, as it does, an obligation and requirement on the executive branch to make reductions without impairing the national defense and without establishing any standards therefor is legislation on an appropriation bill, is subject to the point of order, and the Chair sustains the point of order.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on this amendment close in 20 minutes, the last 5 minutes to be reserved to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Alabama [Mr. JONES].

Mr. JONES of Alabama. Mr. Chairman, in view of the discussion that I have just had with the gentleman from Florida [Mr. SIKES] relative to the continuation of the research and development program on the missile Jupiter, it prompts me to direct this question to the chairman of the committee. I call his attention to page 69 of the report under the heading "Major Force Equipping." In the second paragraph it reads as follows:

In the strategic missile squadrons there will eventually be a combination of the Snark, an air-breathing missile; the Thor or Jupiter, the intermediate range ballistic missiles (IRBM)—

And so forth. My question is, in view of the statement made by the gentleman from Florida that eventually under the appropriation to the Secretary of Defense there will be a transfer of funds for the continuation of the research and development on the Jupiter, therefore the language is in the disjunctive "Thor or Jupiter." Now, is it the meaning of the committee that it should be "Thor and Jupiter"?

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. JONES of Alabama. I yield to the gentleman from Texas.

Mr. MAHON. It would, of course, be Thor or Jupiter; in other words, we are giving the Army the necessary funds for finding the best ballistic missile. The sky is the limit on this program, and they can select either the Thor or the Jupiter. We are not telling them which one to select; we do not know which one to select. The gentleman from Alabama would not want to do that.

Mr. JONES of Alabama. I understood from the gentleman from Florida that there had been assurance given to the committee that there would be a continuation of the research on Jupiter by the Army.

Mr. MAHON. That is correct.

Mr. JONES of Alabama. And that there would be a transfer of funds in order to carry out a continuation of development and research on Jupiter.

Mr. MAHON. They can take all the money they need to perfect it, and then, if they want to, put it into the squadrons. They can do that.

Mr. FORD. Mr. Chairman, will the gentleman yield?

Mr. JONES of Alabama. I yield to the gentleman from Michigan.

Mr. FORD. I think the testimony is precisely what the gentleman from Florida and the gentleman from Texas say, namely, that the financing of the Jupiter program after June 30, 1957, will come out of funds held by the Secretary of Defense. There is no funding in the program for the Army.

Mr. JONES of Alabama. My question at that point, I will say to the gentleman from Michigan, is this: Is there assurance that there will be a continuation of research and development on Jupiter from funds appropriated by this appropriation bill?

Mr. FORD. Well, it is certainly the committee's understanding that the Secretary of Defense would continue the funding and the research of the Jupiter program until they have this great contest between Thor and Jupiter; maybe not a contest, but at least it is going to be an analysis and evaluation as to which is the better of the two weapons.

Mr. JONES of Alabama. That satisfies my question, and I am glad to know that the language that was intended there should have been in the conjunctive and that there would be a continuation of the RBM program. I thank the gentleman.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. FLOOD].

Mr. FLOOD. Mr. Chairman, I rise in support of the amendment introduced by the gentleman from Michigan [Mr. FORD]. Had I been present at the subcommittee meeting when this was marked up I would have made a reservation. I was absent on official business of my subcommittee for the Department of Commerce. However, when the bill came before the full Committee on Appropriations I did make a reservation there. So I am in proper order in supporting the gentleman from Michigan.

The curious thing about this guided-missile controversy insofar as the Army is concerned is this. It is my opinion, and I believe the opinion of many experts who know more than do I about this matter, that the greatest team of scientists ever assembled in the history of the world is the Army team now at Redstone, Ala., working on this Army guided missile Jupiter, and has been for some years under the brilliant German-American, now, thank goodness, American scientist, Von Braun. There is no reasonable doubt about that. I believe the Army missile Jupiter is so far ahead of the Air Force's Thor or any other operation of that kind that when the time comes, unless there is an extraordinary development of some kind that takes place at the Pentagon, it will be the Jupiter of the Army that will be adopted.

But this is why I rise to try to help the gentleman from Michigan [Mr. FORD] and I appeal to my friends on the Democratic side. There is not one dime in this Army budget for Jupiter—not a dime. There is money in this budget for the Air Force's Thor. If this Army missile is as good as I say it is and as the Secretary of Defense and others admit, then why is not the money in here? Do you know what they say? Well, Mr. Wilson says, "If it is good I will see you get the money and I will give you money if you need it to develop it further to see if it is that good."

The only catch, Mr. Chairman, is now that Secretary Humphrey has resigned it is even money that Mr. Wilson will not be here when the time comes to make the decision. I do not think he will be. That being the case, the man who takes his place, other than as a matter of high morals, probably would not be bound by Mr. Wilson's agreement. Let me point out to you that the present Chief of Staff for Air is going to become the Chairman of the Joint Chiefs of Staff and the chances are even that Mr. Quarles may become Secretary of Defense. That does not look so good for the Army Jupiter, does it? Indeed not.

The President has an emergency fund. The only catch in that is that one-third of it belongs to the Navy, and the gentleman from California [Mr. SHEPPARD] would have something to say about that fund, and the other third belongs to the Air Force, the same Air Force. There is not going to be money in the President's emergency fund to give the Army the money they need to perfect and develop what undoubtedly is the greatest progress so far made in the world in an intermediate-range ballistic missile, the Army Jupiter, down at Redstone, Ala.

The gentleman from Michigan [Mr. FORD] who knows as well as anybody in this House or as well as anybody in the Pentagon the need for this money I want to support, and there is nothing inconsistent with our position on this whole budget. This bill is no more sacred than is the budget. We do not claim to be cloaked with this aura of infallibility about which you hear, $8 million. It will be said, "What difference does it make? What army cannot absorb $8 million?" I submit, Mr. Chairman, in all seriousness, we need the $8 million, or the gentleman from Michigan [Mr. FORD] and I would not be here appealing for it in the face of my own committee.

The CHAIRMAN. The Chair recognizes the gentleman from Kansas [Mr. SCRIVNER].

Mr. SCRIVNER. Mr. Chairman, as I stated on Friday, it is never pleasant to find yourself in a position opposite from your party leader in the House and the President, especially when he is of your political faith. Particularly do I dislike to find myself in disagreement with the gentleman from Michigan [Mr. FORD], who is indeed one of the hard-working members of this subcommittee. However, I think the House should know that over the years this subcommittee has been almost profligate in providing funds for research and development. We have in essence placed a halo around research and development and been with them most liberal.

I should point out, as has already been pointed out, that this cut is a mere 2 percent. I, too, have high regard for General Gavin. He is indeed an outstanding military man, and outstanding in his own field. He believes that research and development is the only salvation of the Nation. But if General Gavin, as great as he is, and the men under him, as great as they are, cannot do a proper job with $392 million they cannot do it with $400 million.

As the gentleman from Florida has pointed out, if in these research and development programs they come to something that is an exceptional breakthrough, they can request some of these $135 million emergency funds to which we have referred.

There has been mention of the anti-missile missile. This reduction does not and should not interfere with any development of that program. Right now it is an idea. It is not in the formulative stage as yet.

If the research and development people in all of the branches of the service would use the scientists for the jobs for which they were hired instead of requiring them to shuffle papers, and do administrative work, they would have adequate funds to do not only as good a job as they are doing but a better job. Right in that field alone there is terrific waste, because the scientists will tell you themselves that they do not have the time to put in on their scientific work that they should have because they have to do so many other nonscientific tasks.

Let us look on page 1921 of part II of the Department of Defense hearings and see what the situation is. You will read there that the research and development funds have progressed from $3,400,000,000 in 1955 to $3,800,000,000 in 1956 to $5,200,000,000 in 1957 to $5,300,000,000 in 1958. In other words, this one phase of the Army research and development program is only a small portion of the entire Department of Defense research and development program.

I may also say, Mr. Chairman, that as a member of this committee any prospect of the possibility of a tax reduction by reason of reducing defense appropriations had no part in my decision whatsoever. In the years past and even in recent years I have been accused of being a flag-waver and a super-patriot and many other things because I have

supported the program of big spending for national defense. National defense must come first before any tax reduction. You can replace tax dollars but you cannot replace lives or blood.

One closing comment in answer to something that was said yesterday, an allegation of some kind that there was whip-cracking on the Republican side. There has not been from the White House any whip-cracking over me. Our minority leader [Mr. MARTIN] has recognized my position on this committee and he has not cracked any whip over me. The decisions I make are those which I myself have made. That is exactly the way all the decisions should be made by every House Member.

As far as I am concerned, if the House says this $8 million ought to go back in, that is all right with me. I am not mad at anybody. But, if it does not go in—just remember what I told you yesterday. The military as they have for years and years and years, as far as man can remember, as they always do, can always go to the other body and make reclama and complain about this cut and then give the Senate Appropriations Committee the specific reasons why this $8 million should be restored.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. MAHON] to close debate on the pending amendment.

Mr. MAHON. Mr. Chairman, the subcommittee on defense appropriations after meeting for 4 months sat down and marked up the bill and agreed on cutting research and development a little bit in the Army, a little bit in the Navy and a little bit in the Air Force in an effort to get more efficiency and economy in the programs. The gentleman from Michigan [Mr. FORD] was not in agreement with these reductions.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I would like to yield to my able fellow committee member who has a fine grasp of the defense situation but would like to first complete my remarks.

Mr. Chairman, I feel this way about legislative responsibility. When we make up our minds and when we do what we think is best for the Nation, I think we ought to stand by our work. The tough-fisted Secretary of Defense, Mr. Wilson, for whom I have much admiration, once said this: "If you cannot stand the heat, stay out of the kitchen and let somebody else do the cooking." Well, that is the way I feel when we make up our mind as to what should be done with respect to appropriations.

Why did we make this token cut? Because we want to get more efficiency and economy. The Army has seven or eight hundred projects. That was the answer given me. Of course, they have a crash program on missiles. None of this should affect missiles in the slightest way. But, we wonder about things like this. One research project is on the subject of sleep. There may be some justification for it but that is doubtful. A newspaper story, perhaps with some degree of facetiousness, has this to say in regard to the project: "The psychologists say that they hope to find out how dreams affect sleep, but they hold out no hope of being able to tell what the sleeper is dreaming of."

We have been so kind toward research and development, that some have tried to make a grab-bag out of it. That is exactly the situation. I am inclined to exclaim, "Oh, what crimes have been committed with the taxpayers' money in the name of liberty and in the name of research and development." This is such a popular area. We nipped the Air Force a little bit. They have projects in which they are studying automobile collisions. Because, as reported, the Air Force loses more personnel annually through automobile accidents than they do through aircraft accidents, the Air Research and Development Command is supporting a collision research program and the tests will include head-on collisions in which 25 automobiles will be smashed to pinpoint ways in which injuries occur. How utterly ridiculous and wasteful can we be? This is a great national problem that requires every consideration but the Air Force is not the agency to handle this sort of thing. Just because we have been tender with them in research and development, some people have gone too far overboard. So we gave the Army $392 million. We cut off $8 million, making small reductions also in the other services. The Secretary of Defense has a total of $135 million that he can transfer at any time to any of the services for special research work.

We give the whole Department of Defense for research and development over $1,500,000,000; and if you include these experimental missiles, and experimental aircraft that are never used in combat, and hundreds of other items under development, we have given them in this bill $5,300,000,000 for research and development, yet here we are debating a little $8 million economy effort made to stop some of these very questionable projects and secure a better program.

I agree with Mr. James N. Bridges, who is Director of Electronics, in the office of an Assistant Secretary of Defense, speaking in Washington on the 22d of May. He said:

> If this country is to stay ahead in weapons development without going into bankruptcy we must find ways to be more economical in the conduct of our program.

Is there anything wrong with that?

Is there anything wrong with our giving them a little encouragement to help this good man do a better job in this field? I just do not think so.

Here are figures written on a typewriter at the Pentagon showing that even with the cut the Army, for research and development, will have $12 million funds that will not be obligated by the end of the fiscal year, June 30, 1958.

So I am concerned that we keep this thing in proper focus.

The Army is competing with other branches of the service for scientists. A man goes to work on one program and a contractor on another program has so much Government money he hires him away from the first program. It is a very unsatisfactory situation.

I hope you will help us in trying to do something for economy and stability in the field of research and development.

The CHAIRMAN. The time of the gentleman from Texas has expired. All time on the pending amendment has expired.

The question is on the amendment offered by the gentleman from Michigan [Mr. FORD].

The question was taken; and on a division (demanded by Mr. FORD) there were—ayes 73, noes 97.

Mr. FORD. Mr. Chairman, I demand tellers.

Tellers were ordered and the Chair appointed as tellers Mr. FORD and Mr. MAHON.

The Committee again divided; and the tellers reported that there were—ayes 133, noes 137.

So the amendment was rejected.

Mr. ANDERSON of Montana. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, while we were fighting our way across Europe in the summer of 1944, we used to hear the buzz of German V–1 rockets winging their way overhead to wreak destruction on the British Isles. Later, that winter and the next spring, we came across installations where the mighty V–2 rockets were built and launched. That was more than 12 years ago. Enemies or not, I could not help but have a great deal of respect for those German scientists who were so far ahead of any allied pioneers in that field.

I know that the Russians spirited many of these scientists to their country where, with or without brainwashing, they have undoubtedly made major contributions to the present advanced state of Soviet missiles, which is comparative with our own.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Montana. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. May I observe to my colleagues that I am sure you know that the gentleman from Montana now speaking is a major general in the United States Army Reserve. He is a leader who has been battle tested as the commander of an armored task force from Normandy to the Elbe during World War II, his troops being among the first to break through the formidable Siegfried line. He served with bravery and his decorations include five battle stars, the Silver Star, and the Croix de Guerre. After World War II he organized an infantry Reserve regiment and since 1948 has been commanding general of the 96th Infantry Reserve Division. This division now is one of the largest in the United States and is located in the Rocky Mountain region of the West, with units extending from the Canadian border to the Mexican border. So General ANDERSON speaks now not only with eloquence but with experience and learning on this subject.

Mr. ANDERSON of Montana. I thank the distinguished gentleman from Pennsylvania for his very flattering remarks.

It is comforting to know that the United States Army was foresighted, too,

and that a team of top rocket scientists has been working with the Army in that field since 1947. That partnership between these scientists and the United States Army has been most fruitful. From the Army Ballistic Missile Agency, Huntsville, Ala., has come the 200-mile Redstone missile which has been extremely successful. The senior scientist in charge is world-famous Dr. Werner von Braun, a man who has been in the missile business since 1932 and has had more experience with ballistic missiles than any one individual west of the Iron Curtain, or perhaps in the world. From this same partnership has come the most successful intermediate-range ballistic missile, the Jupiter. Its development is an extension of the teamwork, the principles, and the know-how that went into the Redstone. The Jupiter is an extension of an already proven precise system, the Redstone system, a ballistic missile for which the first tactical battalion is already in training. The Jupiter program is actually ahead of its original schedule by several months and has had a very successful development history.

Just as testing of advanced models was scheduled, Secretary of Defense Wilson moved to take the Jupiter away from the Army and give it to the Air Force. When it became evident that the development must be completed by the Army scientist team which had the know-how, the Secretary said he would take the missile away from the Army later but they should develop it first.

I have not time now to argue the point as to whether or not the Army should lose control later—although I can make a strong case for the continued use by the Army of this surface-to-surface ballistic missile—the "ballistic" meaning it is just a long-range artillery shell.

The point I want to make now is that the Army has been told to go ahead with work on the Jupiter but given no money to do it with. On page 1310 of the hearings we see that Department of Defense promised to make money available and Monday, in response to my question, the gentleman from Michigan [Mr. FORD] said this was to come out of the Department of Defense emergency fund. Committee members expressed considerable skepticism as to whether the money would ever be made available—and I recommend that section of the report to your attention. Almost every day we read that the Secretary of Defense, Mr. Wilson, is about to resign, and that Mr. Quarles, former Secretary of the Air Force, will take his place, while Admiral Radford's successor is General Twining of the Air Force.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Montana. I yield to the gentleman from Texas, the distinguished chairman of the Subcommittee on Department of Defense Appropriations.

Mr. MAHON. May I say that, in my judgment, no one in the Department of Defense will overrule the will of Congress that the Army have adequate funds to continue with the Jupiter until a final decision is reached.

Mr. ANDERSON of Montana. I thank the distinguished gentleman from Texas. That was the point I hoped to make clear by my presentation here. I very much appreciate that statement from the distinguished chairman.

Mr. SIKES. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Montana. I yield to the distinguished chairman of the Army panel.

Mr. SIKES. I have been very much impressed with the enthusiasm and helpful interest which our distinguished colleague from Montana has shown in matters pertaining to national defense and to other matters in the Congress. May I point out that I subscribe completely to what the chairman [Mr. MAHON] has just said.

If the gentleman will bear with me a moment, may I point out also that this missiles race is not a one-sided thing. We are in a horserace with Russia on guided missiles. They overran much of the area where the V–2 weapons were being manufactured. They recruited forcibly and otherwise great numbers of German scientists, among the most expert in the world on this matter, and they went immediately into a crash program of developing missiles that are of a type close to the intermediate-range ballistic-missile program in order to have all of Europe under their weapons. That is the situation today.

Mr. ANDERSON of Montana. I thank the gentleman for his excellent and accurate contribution.

Do you think the officials I have just mentioned are going to channel a fourth or a third of the emergency fund of all 3 services into 1 Army project. The distinguished gentleman from Pennsylvania [Mr. FLOOD], a committee member at that hearing said in part: "I am concerned that you do not get euchered out of money to continue with your Jupiter program," and "I know that the Navy and the Air Force are going to tear a wing off the building before you get any of their mixed funds for your silly Jupiter business."

This is not an emergency item. Sure it is a crash program, for it is vital that we get this most advanced and most successful of all the missiles operational quickly—for this is a critical part of our race with Soviet Russia. It is critical and important, but it is not emergency in the sense that it is unexpected. We know this money is going to be spent—and today there is no one who will deny that the Army must spend it if we are to develop the Jupiter quickly and economically. Then let us put it in the Army budget where it belongs—out where everyone can see it—and where there will not be any temptation for selfish conniving that may cost our defense dearly.

The Clerk read as follows:

ALASKA COMMUNICATION SYSTEM

For expenses necessary for the operation, maintenance, and improvement of the Alaska Communication System, including purchase (not to exceed one for replacement only) and hire of passenger motor vehicles, $5 million, to remain available until the close of the fiscal year 1959, and, in addition, not to exceed 15 percent of the current fiscal year receipts of the Alaska Communication System may be merged with and used for the purposes of this appropriation and charges for station-agent agreements may be paid from receipts of the Alaska Communication System.

Mr. BARTLETT. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, although the committee cut $700,000 from the budget request of the Alaska Communication System and reduced the figure to $5 million, I do not seek here any increase in funds. Most assuredly I do not seek to subtract any funds from this section, but I would like to discuss a situation which is developing, and I think most unfairly from the standpoint of my constituents, and I should like to seek information and, I trust, guidance from the committee.

Now, the Alaska Communication System is unique, I think, in this country. It has been in Alaska for over 50 years. It is operated by the United States Signal Corps, a branch of the United States Army. It has provided not only service for the military, for the civilian agencies of the Government, but for the civilian population as well. The relationships have been most harmonious through the years.

On July 1 next the Alaska Communication System proposes a rate increase for the civilian users of this system on the order of 30 percent for telegraph service. Now, it may well be that that increase is brought about by the fact that the committee report before us now says: "It is felt that there may be justification for increases in rates for civilian users that will help to offset the cost to the Government in operating the system." I am just wondering whether anyone knows what the proper division between the cost to the Government for civilian operations on the one hand and military and Government agencies on the other may be in this connection. I seriously doubt it. The first I knew about this 30 percent rate increase, which certainly is a very high one, was when I read about it in the newspapers, and I think all Alaskans were similarly informed. This is a public utility service. I think there should have been hearings in Alaska and elsewhere. I think there should have been hearings in Alaska and elsewhere; informal, perhaps it may be necessary that they be informal since there is no absolute requirement, but let us look at the situation. What does the Signal Corps say? The Signal Corps informs us that the cost of operation and maintenance of the whole system for this fiscal year will be about $4,700,000. What is the estimate that the Signal Corps gives as to the revenues that will come in from civilian use of the long distance telephone and of the telegraph? It is $3,685,000. So right now the civilian users of this system are paying all the maintenance and operation costs except $1,300,000.

I would like to know what would happen if we were to move 50,000 more troops into Alaska next month requiring a much greater use of communication facilities by the military. The maintenance and operation costs would go up, of course. Well, would we have to have a 100 percent rate increase to civilian users so the Government could come out even?

I should like to ask my friend from Florida [Mr. SIKES] or my friend from California [Mr. SHEPPARD] as the case may be, if they would not agree that this rate increase ought to be deferred until we know more about this? I do not say that a rate increase is unjustified. Actually, I do not know and I suspect no one knows, even the Signal Corps itself. I am wondering if we could not have a deferment of this rate increase or an indication to the Signal Corps that it ought to be deferred until we can go into this subject a little further and get a fair division of the costs as between the military and civilian agencies of the Government and civilian users.

Mr. SIKES. Mr. Chairman, will the gentleman yield?

Mr. BARTLETT. I yield to the gentleman from Florida.

Mr. SIKES. Mr. Chairman, I want to commend my distinguished friend for his zealous efforts through the years in behalf of the Territory of Alaska. It is very important country and the gentleman has done a very fine job as its Delegate here.

Mr. Chairman, in response to the geintleman's question, there is nothing in this bill which requires a rate increase. The committee does feel that in consideration of the services rendered to the Territory a rate increase is justifiable. Yet I certainly agree with my friend that all of the facts should be known before there is a rate increase. It would be my expectation that complete hearings would be held by the proper agencies and all the facts known so that fairness to both sides, the users and the Government, would be had in this matter.

Mr. BARTLETT. Mr. Chairman, I am glad to hear the gentleman say that. It might be that the Signal Corps will develop an absolute need for this on the basis of the hearings. It may be no adequate justification can be offered. But all of us—and I believe principally the people of Alaska—are entitled to know.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. BARTLETT. I yield to the distinguished gentleman from Texas.

Mr. MAHON. The gentleman has made a fine contribution to this problem. We are interested in that great area of Alaska. We are always interested particularly in what the Delegate from Alaska has to say and I want to thank him for his comments.

Mr. BARTLETT. I thank the gentleman. I would hope, as a result of what has been said here, that that rate increase will not be imposed unless and until justification is proved on the basis of hearings which I hope will be held in Alaska and in Washington, too.

The Clerk read as follows:

PROCUREMENT AND PRODUCTION, ARMY

For expenses necessary for the procurement, manufacture, and modification of armament, ammunition, equipment, vehicles, vessels, and aircraft for the Army and the Reserve Officers' Training Corps; purchase of passenger motor vehicles for replacement only (including 13 and 15 at not to exceed $3,000 and $2,400 each); expenses which in the discretion of the Secretary of the Army are necessary in providing facilities for production of equipment and supplies for national defense purposes, including construction, and the furnishing of Government-owned facilities and equipment at privately owned plants; and ammunition for military salutes at institutions to which issue of weapons for salutes is authorized; $67 million, to remain available until expended.

Mr. SIKES. Mr. Chairman, I ask unanimous consent to revise and extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. SIKES. Mr. Chairman, one of the great chapters in medical research today is being done by the Medical Research and Development Branch of the United States Army.

Defense efforts are primarily directed toward developing and maintaining constantly improved means for destruction of an enemy aggressor, in order to protect the Nation from attack. However, certain elements of the defense program provide constructive advances of remarkable value to the continuing welfare of our people and of all mankind. The Army Medical Service Research and Development program is a clear example of such beneficial, constructive activity.

Historically, Army doctors have been leading pioneers in the improvement of American medicine, ever since Army Surgeon John Jones wrote the first American textbook on surgery in 1776. Maj. Walter Reed, famous to everyone, made possible the practical control of the scourge yellow fever, and thereby enabled construction of the Panama Canal. Similar historical Army victories in medicine are too numerous to detail. More important, Army medical research continues to make valuable contributions to the health and welfare of our people. Although directed to solving the problem of preserving fighting strength in combat, results achieved are immediately applicable to civilian disease and injury.

New and improved treatment of severe burns, proven at the United States Army Surgical Research Unit, have been widely adopted by the civilian medical profession.

Research on blood-vessel surgery, emphasized during the Korean conflict, carried out in part at frontline hospitals, and since pursued at both Army laboratories and Army contract supported universities, has helped to save innumerable lives and limbs. The torn arms and legs of automobile-accident victims, as well as the weakened arteries of the older aged group, are now more effectively repaired.

In the event of either natural disaster or enemy attack, large quantities of whole blood are always needed. Heretofore the storage life of this precious commodity has been far too short. The problem of storage life was particularly acute when American forces fought at the end of thousands of miles of supply line. Army medical research has now discovered means for greatly extending the useful storage life of human blood so that soon it is expected that stockpiling for national emergency will be made easier—an advance which could be lifesaving to any one of us.

Thanks to another facet of Army medical research, stock handlers, slaughterhouse workers, and others who work with livestock will work in greater safety from Q fever.

In another area, rapid progress is being made by the Army Medical Service in developing a fat emulsion suitable for intravenous use. Such an emulsion provides needed food to those badly injured or ill individuals who cannot take food by mouth.

All of these examples are only random samples of immediate benefits accruing to our Nation from constructive efforts of the Army Medical Service's research and development program.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time to ask some member of the committee a question or two. Am I correctly informed that entirely new uniforms are being purchased to equip the Army throughout?

Mr. SIKES. That is right. The Army is purchasing new uniforms. However, it is being done at very little additional cost other than the higher costs now associated with all items of supply. The Army has been able to phase out its old olive drab uniforms—most of them through its own use requirements or through issue to troops of the Republic of Korea. As the old stocks are phased out the Army is replacing those with the new uniforms. Therefore, the cost of procuring the new uniforms, which have been very enthusiastically received by the troops, is going to be at a very low figure. The gentleman need have no concern about waste in that matter.

Mr. GROSS. May I ask the gentleman why the Army is being outfitted with new uniforms?

Mr. SIKES. We want the Army to look and be a splendid fighting force. The Army has worn its old uniform for many years. That uniform has been made available to troops and even to civilians of other nations all over the world. Practically every Allied force in the world has been equipped all or in part with our Army uniforms. Anyone can go into nearly any clothing store and buy them. They have become old hand-me-downs and can be bought at any Army-Navy surplus store. Unfortunately the old uniforms have ceased to carry the connotations of pride and distinction that the United States wants to have associated with the uniform of its soldiers. The Army has developed in response to a general demand in the service a new uniform for its troops, and I am glad that they have done so.

Mr. GROSS. May I ask the gentleman this question. When may we expect the Navy to adopt a new uniform?

Mr. SIKES. The Navy's uniform has not been so generally scattered throughout the world and made available to every Tom, Dick and Harry.

Mr. GROSS. I would not know of any place in the world that the United States Navy uniform has not been in years past and at present, and I know of no real change in the Navy uniform in my lifetime.

Mr. SIKES. The Navy uniform is worn only by American forces. It has not been made available to forces and civilians in all parts of the world as the Army uniform has been made available.

Mr. GROSS. So the answer then to the question of the expense of outfitting the United States Army with a new uniform, as the Air Force was outfitted with a new uniform only a few years ago, is that somebody says a new uniform is needed; is that correct?

Mr. SIKES. That is exactly right. The new uniform is smart and comfortable and it has added to the esprit de corps of the Army. I am glad to say it is costing but little money to phase in the new uniform.

Mr. GROSS. Then they need a new uniform simply because the present one has too long been the uniform of the United States Army?

Mr. SIKES. They have worn it with slight modifications for about 30 years, I think, and prior to that time the same color was in use for another 20 years.

Mr. GROSS. I had the privilege of wearing one of those O. D. uniforms for some 3 years and I never found it too uncomfortable.

Mr. SIKES. Well, that is not the problem involved. As I said to the gentleman a moment ago, the old Army uniform has been made available to other forces throughout the world. It has been made available to the civilians here and throughout the world. The Army has to clothe its forces and in response to general demand developed a new and more distinctive uniform, one very attractive to the service and to the people of the United States, I may add. It developed the new uniform at very little cost by gradually phasing the new uniform into the supply stocks.

Mr. GROSS. But it is still going to cost the taxpayers a good many millions of dollars to get this job done.

Mr. SIKES. Not a good many millions of dollars. I am picking this figure out of the air, but as I recall it, $2 million to $3 million represents the additional cost. My friend, the gentleman from Michigan [Mr. FORD] may have some additional comments to make on this.

Mr. FORD. I think the gentleman from Florida is entirely accurate. The cost of substituting the new uniforms for the old uniforms is practically negligible primarly because the Army has been able to dispose of their vast stocks of olive drab cloth to other allies and to other sources. The net result is that we are going to have a negligible additional burden.

Mr. GROSS. The Army is, of course, disposing of present uniforms to people who are not paying us anything for them. Is not that true?

Mr. SIKES. Not entirely; no sir.

Mr. GROSS. Who is paying for the uniforms that we discard?

Mr. FORD. In the case of South Korea we are paying a part of the cost, but other factors are also significant.

Mr. GROSS. Where does South Korea get money to pay for anything if we do not give to them?

Mr. SIKES. I think in our turn we get something very helpful in 20 divisions of active combat forces.

Mr. GROSS. Now the gentleman is talking about something else.

Mr. SIKES. I am talking about one of the most effective fighting forces that has been developed outside of our own; one whose loyalty we have never had reason to question.

Mr. GROSS. Would my friend from Florida have said the same thing about Formosa a few days ago which he is saying about Korea now? I cannot believe he would.

Mr. SIKES. I would not have made the same comment, I do want to say this. I do not always agree with my good friend from Iowa, but there is no one whom I respect more or who I think renders more valuable service in his constant efforts to achieve economy in the Congress.

Mr. FLOOD. Mr. Chairman, I move to strike out the last word.

Since we are about to leave the Army I would like to reemphasize if I may my concern over the lack of adequate airlift for the purpose of transporting combat army divisions to one or more theaters of operation should the necessity arise within a matter of a few days rather than the weeks or months that have been indicated by the Chiefs of Staff.

Mr. Chairman, I arise in support of the general position taken on this appropriations bill by the illustrious chairman of our Committee on Appropriations, the very distinguished gentleman from Missouri [Mr. CANNON], and the chairman of the Defense Appropriations Subcommittee, the very distinguished gentleman from Texas [Mr. MAHON].

I am not impressed by the argument of those few persons who oppose the basic cuts made in the bill on the grounds that we are cutting into muscle. The 10 million and more Americans who have been drafted into service in the Army and Navy and Air Force all know from their own experience how wasteful these three services can be. Wasteful of time—usually the soldiers' and sailors' time—and wasteful of money—the taxpayers' money, of course.

Let me give you an example of a $110 million boondoggle which was unearthed at our Defense Subcommittee hearings, which I know particularly well because it was I who conducted most of the cross-examination.

We found that in the first year of the Eisenhower administration Congress appropriated $110 million for the purpose of buying a fleet of planes capable of carrying Army tanks. The general concept was a sound one and approved by the Congress and frequently advocated by numerous Members including myself: the idea of a highly mobile Army. Our idea was that if trouble were to break out in Vietnam, we could have a division of troops there with their guns and tanks within 24 hours. If trouble were to break out in Suez or Syria we could have a division of troops there with their guns and tanks within 24 hours. We wanted, and still want, aerial fire brigades capable of putting out brush fires in any part of the world; yes, capable of putting out 3 brush fires at once, even in 3 different parts of the world at the same time.

The Congressional concept was a sound one, what happened to it?

In the second year of the Eisenhower administration a reprograming conference was held by certain leaders of the Defense Department. Those of us who are familiar with these bureaucratic words, please read the words "misappropriation of the funds" as being the real meaning of "reprograming."

So these men, in this second year of the Eisenhower administration, sitting there in their infinite wisdom, reprogramed out the aerial tank carriers and took the money that had been appropriated for those aerial tank carriers and used it to buy 2 dozen plushed up DC–6 passenger planes instead.

Now, gentlemen, do not worry; our committee was told by the Pentagon people that the gentleman from Pennsylvania, Congressman FLOOD, was misinformed and that these were not plushed-up passenger planes at all, but that they were cargo planes designed to accomplish serious military missions. Being challenged as to my facts, I sought to get out the facts. I asked the General Accounting Office to send a squad of photographers up to McGuire Air Force Base in New Jersey and bring back photographs of the interiors of each of these DC–6's so that we might let the members of the Defense Appropriations Subcommittee judge for themselves whether they were plush jobs or whether they were aerial trucks.

I hold in my hand a photograph, one of the ones taken by the General Accounting Office, showing the interior of these DC–6's. Please notice the built-in seats. The neat linen headrests on each seat. Thick carpet, hatracks, the ashtrays, the shiney galleys capable of serving up to 10 different kinds of hot meals, reading lamps, the curtains on the windows, and so forth; this is strictly first-class plush stuff, nothing but the best for all those military people who are riding on these planes between the Atlantic coast and Frankfurt, Germany, and Paris, France, 6 round trips a day.

And what use are these plush jobs in event of war? Practically none. Let us bear in mind the original purpose of our appropriation 4 years ago to purchase a fleet of planes capable of carrying Army tanks. Will these planes carry Army tanks? I refer to page 1544 of our hearings on the Air Force appropriation for fiscal 1957, where it is definitely established that the MATS version of the DC–6, known as the C–118, the maximum cargo lift capacity is only 24,500 pounds and the door is only 10 feet 3 inches by 6 feet 5 inches.

Now the Army tells me that the lightest tank that they have weighs 50,000 pounds, almost twice the carrying capacity of the DC–6, and, if that were not so, the door to these plush jobs that the Military Air Transport Service is running is too small for the tank to be able to even get into the door.

Then we have experimental models T–92 tank of the Army, which weighs 36,000 pounds, the lightest tank which

we are likely to have in the next year or so, and it is still 1½ times too heavy for these DC–6's, and it also cannot get in the door.

Now there are other planes, such as the C–124, which can carry Army tanks; but these were thrown out in favor of these DC–6 plush jobs.

What is the result? There has been no increase whatsoever as a result of the spending of $110 million in the ability of the Air Force to carry divisions of the Army and their guns and tanks to trouble spots throughout the world.

The taxpayers are out $110 million plus the annual maintenance on these planes which runs to many additional millions. And the commercial airlines have a "mad" on, because what do these DC–6's do but MATS people start to grab off business such as the movement of wives and children of Army men stationed in Europe to fly them in these DC–6's so that they will not be going half empty half the time, and this business which used to be bid out to nearly all United States air carriers has now been grabbed off by MATS.

The situation is comparable to one in which one of the distinguished farmers of this body were to take $5,000 and give it to his daughter and say "please go and buy the best kind of truck that you can get for our farm which we can use to haul tractors and farm machinery about in." The next thing he knows, there is a spurt of gravel in the driveway and there is his daughter in a shiny new Jaguar convertible.

Now I say to my farmer friends here in the House of Representatives, if your daughter reprogramed your $5,000 from a farm truck into a Jaguar convertible, at least I am sure that you would have brought her up well enough so that she would have a feeling of guilt about it and would try to do her best to make amends.

Not so with the Air Force. They display no sense of shame whatsoever about this boondoggle. When confronted with the recommendations of the Hoover Commission, the directives of our congressional committee in House Report 2104 of the 84th Congress, 2d session, inveighing against competition with private enterprise and general wastefulness of the taxpayers' funds, these gentlemen in the Air Force say, "Well, we have got them now, and we are stuck with them so we had best fill them up a little bit by taking business away from commercial airlines."

I say to them, this type of logic reminds me of the child who murdered his parents, then begged clemency of the court on the grounds that he was an orphan.

If our hypothetical farmer's daughter made the mistake of blowing the $5,000 with which she was supposed to buy a farm truck, all is not lost and it is not necessary that she continue to keep driving the Jaguar convertible around just because it has been purchased. A convertible car can always be sold or rented out and at least a good part of our hard-working farmer's $5,000 recovered so that it can be applied to the purpose which it was originally intended for, that is, purchase of a genuine farm truck.

So it is with these DC–6's. Reading our House hearings on the Navy Department appropriation for fiscal 1958, particularly at page 28 and at page 34, I find that the Navy Department has caught the drift of our report of last year and I quote the Assistant Secretary of the Navy:

> The aircraft-lease program, which provides commercial carriers with aircraft temporarily excess to the Navy's needs, have been further implemented during the last year. Twenty-three more transport aircraft have been placed in service with carriers at lease rates comparable to industry levels. Twenty-seven aircraft now on lease provide the Treasury with an annual return of $1,416,000 while the mobilization capacity of the aircraft is maintained on an immediate basis.

In other words, the Navy Department is leasing out their DC–6's at a rate of about $20,000 a month and at the end of 5 years—and I think they have only 2 or 3 to go—these planes will be 100 percent paid for so that the taxpayer will not be out of pocket and nevertheless they will be on 24-hour call ready for the Navy for immediate mobilization.

But a different policy seems to obtain in the Air Force where that Frankenstein known as the Military Air Transport Service states:

> The Air Force has no intention at this time of leasing more aircraft to carriers. (House hearings on Defense Department appropriation, part 2, p. 1641.)

Information on the same page indicates the Air Force has only 8 planes on lease to commercial airlines in contrast to 27 stated by the Navy despite the fact that the Air Force has about 5 times as many such transport planes as the Navy has.

Now, despite the fact that these 6 dozen plushed up DC–6's have very little value in moving Army divisions with their guns and tanks to battle scenes, the Air Force seems to feel that they have to hang on to them, operate them at the public expense, pilot them with people in blue suits on the Air Force payroll, have them greased and gassed by more people on the Air Force payroll with oil and gas paid for by the taxpayers and in general try and justify themselves by a grabbing away of Government business which has usually been considered quite suitable for commercial airlines to handle.

The Navy Department is quite right. Transport planes operated by commercial airlines are just as ready for immediate mobilization as planes which are operated by uniformed people at the public expense.

For example, through several wars now, we have had experience with the surface merchant marine. We've learned that there is no reason at all to doubt the patriotism or quick reaction of these civilian sailors.

By contrast, the MATS people put their whole case for having a huge Government-owned airline, and I refer to our Defense Hearings, part 2, on page 1782, on the basis of "reaction time and responsiveness."

I submit that there is not much evidence in 6,000 pages of hearings to indicate that we have any reason to doubt reaction time, responsiveness or patriotism of the civilian crews, pilots, copilots, navigators, stewards and stewardesses of our civilian air merchant marine.

If the sailors of our civilian merchant marine could make the dangerous voyage to Murmansk without having been in blue suits and having been on the Navy payroll for 10 years, ship also having been owned by the Government, we can count equally well on the civilian crews of our air merchant marine to make the flights to Frankfurt, Suez, or Saigon without having to be in Air Force suits or being on the Air Force payrolls for 10 years until the time has come for these emergency flights.

So I say that here, in the cost to the taxpayers of approximately $1 billion a year of these Government-owned airlines, is a place where some substantial economy can be effected without any loss of wartime mobilization strength.

If we place a greater degree of reliance on the civil air fleet and do what is needed to build up that civil air fleet instead of trying to tear it down by Government competition, we will save the taxpayers millions of dollars and we will be just as ready if not more so for war.

I refer Members to page 1785 of part 2 of our committee's hearings on the Department of Defense budget for fiscal 1958, where I asked a question:

> I would like the Air Force to supply a statement of how much of the total traffic carried by MATS in the most recent year available was traffic for which United States commercial airline service was available or could have been obtained?
>
> Answer. All traffic carried by MATS in any year could have been transported, with certain exceptions, by United States registry carriers.

I will not burden this Chamber with a recital of the other startling pieces of information available in the 550 pages of the hearings concerning the military use of commercial air transportation and the tendency to build empires with its own Government-owned airline.

Last year our committee report—House Report No. 2104, 84th Congress, 2d session, pages 45–47—dealt at length with the Military Air Transport Service, as did the reports of the Senate committee and did the excellent letter of August 3, 1956, signed by Chairman CHAVEZ of the Senate Military Appropriations Subcommittee and our own Chairman MAHON for the House.

I include relevant excerpts from the reports from the letter of the conference committee at this point in the RECORD:

CONGRESSIONAL INTENT AS EXPRESSED IN REPORTS OF HOUSE AND SENATE COMMITTEES ON APPROPRIATIONS REGARDING POLICY TO BE FOLLOWED BY THE DEPARTMENT OF DEFENSE IN USING COMMERCIAL AIR TRANSPORTATION AND REGARDING THE MILITARY AIR TRANSPORT SERVICE (MATS)

1. House Report No. 2104, 84th Congress, 2d session, May 3, 1956, on Department of Defense Appropriation bill for fiscal year 1957, pages 45–47:

"The Military Air Transport Service has, for some time, been one of the most controversial activities of the Air Force. The controversial aspects of this service result primarily because, to some extent, it is com-

petitive with commercial air facilities. MATS, as the Military Air Transport Service is called, is an integrated Air Force Command providing strategic air lift, technical services, and a global air route system. Since it was originally organized in 1948, it has been the subject of much comment and numerous studies and recommendations. Several years ago, the Committee on Appropriations recommended that the air transport portions of MATS be set up under an industrial fund type operation. The last so-called Hoover Commission has made a similar recommendation. The President's budget for fiscal year 1957 contained a provision for placing the air transport portion of the MATS operation on an industrial fund basis during that year.

"The MATS organization is an enormous operation supporting more than 110,000 miles of global air routes, and employing approximately 105,000 military and civilian personnel. Of this total, over 16,000 are civilians. It should be pointed out, however, that approximately 63,000 of those employees are assigned to technical services and independent units of the MATS operations, and that only 42,000 are assigned to the air transport activities. MATS has 506 four-engine aircraft of the C-54 and larger variety assigned to the transport mission. The total operating costs for fiscal year 1955 are reported to have been about $560 millions, of which approximately 40 percent was for technical services, 22 percent for base support, 30 percent for strategic transport operations, and the remainder for miscellaneous activities.

"From the foregoing data, it is evident that the MATS operation is one of the major commands of the Department of the Air Force. It is also evident from the testimony given the Committee that the mission assigned to MATS is of major strategic importance. It is more than just a convenient air transportation system. It is a significant portion of our over-all Air Defense Forces. Because of its size and the complexity of the problems involved, witnesses from the Air Force stated that it would be impossible to accomplish conversion of the air transport phases of MATS to an industrial fund type operation during fiscal year 1957. Therefore, the committee is not providing the necessary funds for this purpose during fiscal year 1957. Nevertheless, it is expected that the agencies of the Department of Defense will continue to work toward the objectives of setting up a consolidated air transport organization which can be placed under an industrial fund method of operation. The committee strongly favors such procedure.

"As noted in the previous paragraph, the committee recognizes the strategic importance and necessity of a strong MATS type of operation. At the same time, the committee notes that it is apparent that commercial air facilities, including scheduled and nonscheduled airlines, are an essential part of the overall mobilization transport strength of the United States, and as it has been stated by Air Force representatives, will provide a major part of the ability of the Nation to meet the huge demands for transport in the event of a sudden war emergency.

"Because of the significant role that the Military Air Transport Service plays in our mobilization, the committee does not desire to set an arbitrary limit on the size of the MATS operation. However, it is the opinion of the committee that the Air Force should give attention to handling its air transport business in such a way as to assist in keeping the nonscheduled and other airlines in a reasonably sound financial and operating position. In this regard, President Eisenhower's Air Coordinating Committee 1954 report on 'Air Policy' (p. 17) had this to say:

"'The Government should to the greatest extent practicable adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers.'

"The committee strongly endorses that statement.

"As was stated in the hearings, the committee will require complete annual operating statements from the Air Force and the MATS organization for consideration in connection with the annual appropriation requests. At the time of the fiscal year 1958 hearings, it is expected that the Air Force will have a firm statement on its plans for industrialization of the Air Transport organization. The statement to be prepared for the committee should contain firm information with respect to the following points:

"(1) The basis for determination of the number of aircraft to be assigned to the consolidated Air Transport organization.

"(2) The number of hours, by type and model, that it is planned to fly the aircraft assigned to the Air Transport organization during fiscal year 1958.

"(3) The policy to be followed with respect to the assignment of cargo and passengers to the Air Transport organization and commercially operated aircraft.

"(4) The routes to be regularly serviced by the consolidated Air Transport organization.

"(5) The policies to be followed in contracting for commercial airlift.

"(6) The policies to be followed in dividing Department of Defense peacetime traffic between the consolidated Air Transport organization and commercial carriers.

"(7) The policies to be followed in leasing aircraft owned by agencies in the Department of Defense to private operators.

"(8) The extent to which transport-type aircraft are to be retained by other operating elements of the Department of Defense and the purpose for which such aircraft are to be utilized.

"(9) A statement of accounting principles to be followed in determining the costs and the method by which the using agencies are to reimburse the industrial fund operation."

2. House Report No. 2076, 84th Congress, 2d session, April 27, 1956, on Department of Commerce and related agencies appropriation bill for fiscal year 1947, page 4:

"For a number of years, the committee has been concerned about the necessity for the Military Air Transport Service to occupy a considerable portion of the airport. With the constantly increasing demands being placed upon this airport by civilian traffic, the committee is at a complete loss to understand how responsible officials of the executive branch can continue to allow this situation to exist. The committee feels that the Secretary of Commerce should insist that the Military Air Transport Service be located at some other field convenient to Washington."

3. Senate Report No. 2039, 84th Congress, 2d session, May 23, 1956, on Department of Commerce and related agencies appropriation bill for fiscal year 1957, page 5, commends congressional efforts "to achieve increased commercial air carrier revenue, with accompanying decreases in subsidies, by pressing for curtailment of MATS services, where commercial service is available."

Page 4: "The committee joins with the House committee in its statement that the Secretary of Commerce should insist that the Military Air Transport Service be located at some other field convenient to Washington to relieve the increasing demands being placed upon Washington National Airport by civilian traffic."

4. Senate Report No. 2260, 84th Congress, 2d session, June 18, 1956, on Department of Defense appropriation bill for fiscal year 1957, page 8:

"The committee wishes to make it clear that the Department of Defense should, in the future, utilize the services of commercial transportation to the fullest extent possible when it is more economical, and that in evaluating relative costs of transportation, the Department should recognize the element of time saved as an important factor."

The Department of Defense appropriation bill (H. R. 10986, 84th Cong., 2d sess.) for the fiscal year 1957 was considered in the conference committee (H. Rept. No. 2529), passed by both Houses, and signed into law as Public Law 639, 84th Congress, 2d session, July 2, 1956.

UNITED STATES SENATE,
Washington, D. C., August 3, 1956.

Hon. CHARLES E. WILSON,
Secretary of Defense,
Washington, D. C.

DEAR MR. SECRETARY: During the recent conference by Senate and House managers on the Department of Defense appropriation bill for 1957, the subject of Military Air Transport Service was discussed at some length. The committee of conference agreed to express its position in this matter in a joint communication to you and empowered the undersigned to act in its behalf.

The agreement, in substance, reiterates and endorses the statements of MATS as contained on pages 45 through 47 of the House report on the bill (No. 2104), which statements should be considered as a joint expression of the intent and desires of the two Committees on Appropriations.

We would like to see MATS converted to an industrial fund basis at the earliest practicable date and on a basis to insure efficient and economical operation.

Without deemphasizing any portion of the House report herein referred to, we wish to quote the following from page 46, which is a statement from the President's Air Coordinating Committee 1954 Report on Air Policy:

"The Government should, to the greatest extent practicable, adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers."

Sincerely yours,

DENNIS CHAVEZ,
Chairman, Subcommittee on Department of Defense Appropriations, United States Senate.

GEORGE MAHON,
Chairman, Subcommittee on Department of Defense Appropriations, House of Representatives.

(Source: House hearings on Department of Defense appropriations for fiscal year 1958, pt. II, p. 1703.)

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 17, 1957.

Congressman ROBERT L. F. SIKES,
New House Office Building,
Washington, D. C.

DEAR BOB: You doubtless noticed the very interesting figures in our Army hearings, page 257, on the average annual cost per man.

The Army estimates their average cost per man at $6,964.

Dividing this figure by 365 days gives us an average cost to the taxpayers of over $19 per day per man.

It is thus apparent that a soldier's time is valuable.

It is equally apparent that economy and efficiency require that a soldier's time be saved as much as possible, and not wasted or lost.

Accordingly, I venture to suggest including the following sentence in your section of the committee report dealing with the Army:

"In selecting the method of transportation to be used, the Army is expected to consider the specific value of time saved."

Cordially,

DANIEL J. FLOOD,
Member of Congress.

SUGGESTED QUESTIONS TO BE DIRECTED TO THE SECRETARY OF THE ARMY AT HEARINGS OF SENATE DEFENSE APPROPRIATIONS SUBCOMMITTEE

Mr. Secretary, I would like to quote from the report of the committee on the Defense Appropriations bill for the present fiscal year, 1957 (S. Rept. No. 2260, 84th Cong., 2d sess., June 18, 1956, at p. 8):

"The committee wishes to make it clear that the Department of Defense should, in the future, utilize the services of commercial transportation to the fullest extent possible when it is more economical, and that in evaluating relative costs of transportation, the Department should recognize the element of time saved as an important factor."

It is obvious from the wording of this report that it applies to the Department of Defense and covers all three services.

We are all familiar with the general concept of flying people around in order to save their time.

Since our report of last year, your Department of the Army has developed figures which are shown on page 257 of the House hearings showing that the average cost per man in the Army is $6,964 per year.

Dividing that figure by 365 days in the year brings me to the conclusion that the average Army man costs $19 a day to keep him in the Army.

It follows, I believe, that the soldiers' time is valuable.

It is equally clear to me, and it is apparent that such was the intent of our committee last year, that a soldier's time should be saved and not wasted.

Question: What I want to know is this: Taking the intent expressed by this committee last year, and taking the specific figures worked up by the Army since, is the Army now prepared to direct its transportation people to consider the specific monetary value of time saved in selecting a method of transportation for Army soldiers?"

Question: "It is apparent to me that to put a soldier on a slow boat that takes 10 days to get there is still costing the taxpayers some $19 a day and during those 10 days at sea, let us say, the taxpayers are not getting any work out of him. Thus presumably, if he could be flown to the destination in 1 day, instead of taking a slow boat which would take him 10 days, the taxpayers would get 9 more days work out of him or 9 times $19 using your figures, or a total of $171 more of service out of that 1 man. Cannot this concept be written into an appropriate directive to your traffic management people?"

Question: "Now I ask you to look at this same problem, the value of a soldier's time, from another point of view. We are confronted with the possibility of having to do more military work with fewer soldiers. Hence we must not allow soldiers' time to be wasted."

I want to read a short statement made by the then Under Secretary of the Army, Mr. Earl D. Johnson, on August 21, 1953:

"Let us look at another facet of the Army's operation which, if geared to airlift, might affect our appraisal of costs. Within the Army alone at any given time, there are upwards of 100,000 people in travel status. If these people could be moved by air rather than by present means of transportation, and if this faster method of travel decreased the time required for their journey by only 20 percent—a truly conservative figure—that would mean that the Army would have available for duty at any given time, 20,000 more soldiers—more than an entire infantry division—than we currently have. It is possible that there may—I stress may—be some increase in travel costs in moving large groups by air. However, the savings which would result from having an entire division available for duty rather than in travel status would certainly more than offset any additional costs.

I believe a similar statement was made by General Maxwell Taylor, the Chief of Staff, in a speech in Boston on September 3, 1955:

"If we can air transport a regiment, we can transport a division providing we plan realistically now. Although the expense of this kind of movement may seem great, strategic air mobility multiplies the effectiveness of our central reserve and reduces the number of troops which must be kept overseas. Thus, it can be, in fact is, a great economy."

Question: "First I want to ask the Secretary of the Army if he agrees with the policy statements which I have just read?"

Question: "What I have been led to believe is this: These policy statements from on high which you apparently agree with are apparently not translated into day-to-day action by your traffic management people.

"What I am driving at is this: My understanding is that the transportation-management people in the Army still operate on the theory that it would cost, let's say, the steamship ticket costs $150 and an airline ticket charter price costs $170 per soldier, they will send them on the steamship even though several days' time of the soldier is wasted in the process and he does not get to his duty station overseas until several days later than would otherwise be the case. I am, therefore, wondering if the Army is prepared to translate the policies expressed by the Under Secretary and by the Chief of Staff into directives governing the day-to-day decisions made by the traffic-management people in the Army as to what method of transportation to use in moving the soldiers around?

"It appears to me that unless this is done, these policy statements are going to be an ivory-tower expression which is never translated into day-to-day action."

A select committee on estimates of the House of Commons report of over 3 years ago (the Aeroplane, London EC 1, England, July 31, 1953, p. 146) had this to say about air travel for military personnel:

"Generally the direct cost of moving troops by commercial scheduled air services is higher than by surface transport, but when there is a requirement for a regular service * * * chartered aircraft can be obtained, to perform certain tasks, at no greater cost and in some cases even more cheaply than * * * ship."

This policy has resulted in some improvement in getting the military to use some of the unused capacity of United States air carriers, but I refer Members to the industry survey which I conducted of every air carrier of the United States, summary figures of which are found on page 1716 of part 2 of our defense hearings for fiscal 1958, indicating that these airlines estimates for the year ahead they will have more than $900 million of unused space—a very, very substantial part of which would be available for military traffic. It is obvious to me that in that event we do not need to go on supporting a Government-owned airline on the scale which we have been doing.

We had discussion of this matter at the end of the full Appropriations Committee session on May 21, 1957. The distinguished committee chairman confirmed my understanding that we reiterate the intent set forth in our House report of last year and in the letter sent in response to the unanimous resolution of the conference committee—cited above—and in particular the policy which was so strongly endorsed by our committee, using the wording of President Eisenhower's Air Coordinating Committee 1954 Report on Air Policy:

The Government should to the greatest extent practicable adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers.

Last year the committee report, House Report 2104, page 46, stated clearly:

The committee strongly endorses that statement.

So that the Pentagon people across the Potomac will have no misunderstanding I asked the committee chairman to confirm here on the floor of the House that our committee has not in any way backed down on the very sound principle and reiterates and endorses it again. He concurred fully.

I also feel that I have caught the sense of our committee, our distinguished committee chairman confirmed this, I believe that in order to carry out our policy that the Defense Department reduce its expenditures on the Military Air Transport Service and other Government-owned air transport activities—I say here parenthetically that there appear to be more four-engine transport planes outside the MATS than are inside of MATS—and that these funds be devoted to making far greater use of United States air carriers.

I believe our distinguished committee chairman confirmed my belief, that our committee expects more extensive use by the military of United States air carriers, as is being directed, will result in a considerable net savings to the American taxpayers, as well as a reduction of undesirable Government competition with private tax-paying business.

The report of the distinguished gentleman from Texas [Mr. MAHON] last year, to which I referred, and in frequent remarks by the distinguished gentleman from Florida [Mr. SIKES], and the distinguished gentleman from California [Mr. SHEPPARD], and the leading role played in the last 2 years on this subject by the distinguished gentleman from Mississippi [Mr. WHITTEN], and the oft-expressed attitude of the distinguished gentleman from Michigan [Mr. FORD], the distinguished gentleman from Maryland [Mr. MILLER] in opposing Government competition with business and in seeking economies for the taxpayers, I think that they as well as the other distinguished members of our Defense Appropriations Subcommittee feel as I do that the time has come to reaffirm our principle laid down in last year's report so that our friends at the Pentagon will not think that this was an item of merely passing interest to the Congress which we have forgotten and to tell them again that we should spend less within their appropriation on MATS and other Government-owned air transport activities and devote these funds to making far greater use than is being done at present of the unused space of United States air carriers.

If any Member of this body dissents from this principle, I wish you would speak now so that I might answer any questions.

If not, I then believe we have made our congressional intent clear as to what we want the Pentagon to do on this item.

The testimony reveals that there is not a single point within the United States, a single point on the face of the globe, that MATS or other Government are now serving that is not already served by regularly scheduled airline services or for which commercial airline services cannot be obtained upon a charter basis.

United States air carriers have built up a fabulous network within this country and around the world. Members of the House should look over the replies of every airline in the country on pages 1712 through 1716 of part 2 of our Defense hearings for 1958 and they will see enormous amounts of unused space quoted as having been available in the past and going to be available in the year to come for military traffic. We spend huge amounts for airports, navigation aids, subsidies, mail pay, safety regulations and enforcement, and all sort of aids to civil aviation, and I see no point in paying double and building up a Government-owned airline empire parallel to services offered by all these United States air carriers.

The larger these United States air carriers become, the more useful they will be as a mobilization reserve for airlift in event of war, and our Government should do everything to encourage their growth and not try and pull them down by Government competition with their commercial activities.

For these very sound reasons we are saying to the Pentagon: In your appropriations, spend less on MATS and your other Government air-transport activities and spend more on United States air carriers. Since, as noted particularly on pages 1588 and 1589 of our 1957 hearings on the Air Force and page 2096 of part of our Defense hearings for 1958, the civil lines are a great deal more efficient than the Government airlines, and it is quite clear that a dollar spent on United States air carriers will get twice as much passenger and cargo service as will a dollar spent on MATS.

Furthermore, we must never forget that out of a dollar spent on a United States commercial air carrier, considerable part will come back again to the Federal Treasury in the form of taxes, whereas out of a dollar given to MATS, not one cent will come back to the public-tax collectors.

I say again that redirecting the expenditures within the appropirations chapter headings will accomplish a significant economy for the American taxpayers without sacrificing any of our wartime airlift potential.

A transport plane is a different article from a gun or a tank. If you want to have guns or tanks ready when war comes, you have to spend the money on them even though they are of no commercial peacetime value whatsoever. But a transport plane is a different article. It has a definite use, and a profitable use in time of peace, as well as an essential use in time of war. It is both a sword and a plowshare. We should recognize this fact by placing a far greater reliance on civil airlines than is being done at present. If we do this we will not only save money but also assist in creating large air transport reserves which will be able to earn its own keep hauling peacetime commercial and Government traffic in time of peace and yet be instantaneously available, as it has been in World War II, the Berlin lift and the Korean lift, in time of war.

The spokesman for the Chamber of Commerce of the United States, who was formerly Chairman of the Hoover Commission Subcommittee on Transportation, testified before our committee—part 2, defense hearings, fiscal year 1958, page 2132:

> The largest commercial activity operated by the military services is the Military Air Transport Service.

We have been to a great deal of length to cut down on business activities operated by the Pentagon in competition with private business in such fields as laundry, dry cleaning, shoeshine parlors, etc. Why should we be scared to tackle a really big commercial-type activity such as MATS?

The Navy, and I am sure my distinguished friend who has been chairman of the Navy panel for so long, Mr. SHEPPARD, of California, has not felt that it was necessary that the Military Sea Transport Service should own and operate itself at public expense a Government-owned shipping line of a size equal to all the big lines of the country.

I refer to page 1762 of part 2 of our Defense hearings where the Assistant Secretary of the Navy wrote me that privately operated lines are currently handling 70 percent of the military dry cargo movement.

That is MSTS, the Military Sea Transport Service. If you will also examine page 1759 of those same hearings, you will see that MSTS has maintained itself as a genuine nucleus and has not tried to increase itself in size during the last 8 years, whereas during that time MATS, the Military Air Transport Service, has tripled itself in size and that the result is that whereas 70 percent of the military sea cargoes go on privately operated lines, only 13 percent of the military air traffic is sent on privately operated airlines.

I also note another difference, that people cannot ride on ships of the Military Sea Transport Service for free; they have to buy a ticket. But on MATS no ticket is required, and of course a lot of people like free rides for which they cannot be blamed, but we have to remember that while it may be free for the colonel who rides on it, it is not free for the taxpayer who pays for it.

I also make note of the astonishing number of "administrative aircraft" operated by the Air Force as noted on pages 1752–1754 of part 2 of our Defense hearings.

There is something like 700 4-engine transport planes in different parts of the Defense establishment outside of MATS as compared with 500 and some inside of MATS. That is not much of a consolidation if you ask me. The Hoover Commission recommended strongly "That the number of administrative aircraft be drastically reduced."

This move the Pentagon has resisted continuously claiming that they have to have these administrative aircraft because a lot of the trips have to be protected for "security reasons."

Apparently that means that they do not trust MATS with some confidential military trip and they do not seem to trust the commercial airlines. I have no doubt that a certain few number of the trips operated by these administrative aircraft are of a genuinely confidential nature, but we must admit that there are enormous possibilities of abuse when somebody wants to go hunting somewhere at the public expense and does not want anybody to know about it.

If any Member of this House will examine page 1711 of part 2 of our Defense hearings they can see that transport planes operated by the Air Force, and they admit to being in the "administrative, executive, and special mission categories" total the amazing number of 573 planes. It should be obvious to every one of us that only a small portion of the trips made by a small portion of this fleet of private planes could possibly be operated for secret missions. There are just not that many secret missions going on.

Of course what is happening time and again is that General X has himself a private plane which sits around for a week doing nothing, eating its head off at the taxpayers' expense and he and some other general take off in it to go from point A to point B and of course sending a private plane from point A to point B is costing the taxpayers about 200 times as much money as it would if the Government were to buy 2 tickets on an airline between those same 2 points.

I mention the matter of these administrative aircraft since if we are going to deal effectively with Government competition with private business in the air-transport category, we must recognize that MATS is less than half the problem of Government-owned air-transport activities.

All of these facts point steadily to the conclusion that the more Government traffic that is steered to commercial airlines, the less money that is spent on Government-owned air-transport activities, the larger will be the savings to the American taxpayers. In conclusion, I trust that our committee chairman will now rise to reiterate for all of us our policy in last year's report: "The Government should to the greatest extent practicable adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers," and confirm the intent of the committee that the Defense Department spend less on Government-owned air transport activities and should devote these funds to making far greater use of United States air carriers.

Mr. Chairman, I want to make it clear, however, that in those many, vital and essential services, other than this one I have discussed, MATS is one of the best and efficient of all Government agencies in the entire Department of Defense, and I am the first to sing their praises

and applaud their dedication to the service of this Nation's welfare and security—without these many other duties of MATS we could not be properly defended or properly attack.

[From Nation's Business for June 1956]

MILITARY AIRLINE OUTGROWS THEM ALL—DESPITE HOOVER COMMISSION RECOMMENDATIONS FOR SAVINGS, MILITARY AIR TRANSPORT SERVICE FLIES GLOBE-CIRCLING NETWORK WITH MORE PLANES THAN ALL DOMESTIC COMMERCIAL AIRLINES

The Military Air Transport Service is tooling up for more expansion of its already gigantic world airline and cargo service.

The expanded operations could cost the taxpayers as much as $1 billion a year.

This expansion—particularly the luxury airline and cargo-carrying services—are in direct defiance of the Hoover Commission's recommendations that the Air Force cut back and eliminate, wherever possible, operations which compete with commercial airline facilities.

While the total cost for national defense has declined almost $11 billion since 1953, the cost for operating this service has grown at an enormous rate.

With one-fourth more aircraft than all domestic commercial airlines combined, the military airline operates scheduled and nonscheduled passenger and cargo flights throughout the United States and 37 other nations along 110,000 miles of air routes.

The network circles the globe. A MATS aircraft will be crossing the Atlantic or Pacific Ocean at the rate of 1 every 24 minutes during 1956. In 1955 the service averaged 1 ocean crossing every 32 minutes.

To assure passenger comfort, the service operates a special school where enlisted personnel, men and women, are trained as flight attendants.

Besides its passenger and cargo transport service, the command operates a variety of other services including weather reconnaissance, air rescue, photography and charting, aircraft ferrying, flight testing new equipment, and so-called special mission flights. The command was created on July 1, 1948. To it was delegated the responsibility of providing all branches of the Armed Forces and other agencies of the United States Government with effective air transportation. It has world headquarters at Andrews Air Force Base in Maryland, just outside Washington, D. C.

The Hoover Commission said that most of the Government airline routes were parallel to those of United States commercial air carriers.

The Hoover investigation found, for example, that an Air Force band was flown once a month from Westover, Mass., to Bermuda. There was no band in Bermuda and the flights were justified by the Air Force for morale purposes.

The Commission did not challenge the justification but noted that two United States airlines which operate regular schedules along the route could have transported the band at less cost to the taxpayers.

The Hoover task force on air transportation learned further that commercial airline payments amounting to $42,900,000 in fiscal 1954 could have been reduced 88 percent if the airlines had flown only 25 percent of the passenger volume and 50 percent of the mail moved by MATS in the course of the year.

Today the Government-operated airline provides service to Asia, Europe, Alaska, Africa, South America, the United Kingdom, and the Pacific Ocean area.

Assets of the Government airline now total $1,468,280,529.

This includes $990,420,529 for aircraft and $477,860,000 for stocks, land, construction in progress, and other property. The figure is described as including certain property of other Air Force units stationed on MATS bases, but not including equipment stationed at bases of other Air Force units.

From 1954's cost of $481,400,000, annual operating expenditures increased to $560,024,000 for fiscal 1955. It is estimated that MATS expenditures will be about $644,275,000 in fiscal 1956 and 1957 expenditures will total about $740 million.

Some estimates, however, place the total cost to taxpayers as high as $1 billion a year.

The gross operating expenditure is described as including costs for interceptor defense, air rescue, weather reconnaissance, air evacuation, aerial surveys, ferrying aircraft, and turboprop tests, in addition to transportation services. The operating figures do not include cost of depreciation on capital assets. Nor do they include salaries.

The Military Air Transport Service operates approximately 1,500 airplanes. All United States domestic commercial airlines combined operate 1,212.

Of the service's total, 506 are four-engine aircraft. All United States airlines together operate 548 four-engine planes.

The Navy operates 50 of the newer four-engine transports in regular passenger service. These are assigned to MATS. The Navy also has 149 of the C–54 type aircraft used during World War II. Another 36 twin-engine transports make up the Navy's air transport system.

When a planned reorganization of the Military Air Transport Service is completed, the service will take over the operation of all regular-route military air transport. This includes the Navy's Fleet Logistic Air Wings, known as Flogwings.

MATS has approximately 104,500 personnel assigned to it. These include Air Force and Navy personnel and civilian employees. In 1955 the service logged 1,180,000 hours flying time, a 24 percent increase over 1954. Transport planes flew 568,000 hours, carrying 733,400 passengers and patients and moving 139,000 tons of cargo and mail.

On its global network of air routes, the military service transported 418,933,707 ton-miles of cargo and mail during fiscal 1955. For comparison, the total express, freight and mail moved by all United States domestic commercial airlines together last year total 316,516,000 ton-miles.

The military airline last year flew 2,138,002,924 passenger-miles. That compares to 4,265,962,000 revenue passenger-miles flown last year by the largest domestic commercial airline.

The rise in traffic by the military service is continuing this year. Flights to Europe are running about a third ahead of last year. Here is a comparison:

	1955	*1956*
January	574	941
February	565	786
March	720	825
April	678	[1] 825
May	564	[1] 825

[1] Estimated by MATS.

From January through May this year an estimated 142,160 passengers were transported by the service between the United States and Europe. That compares to 120,126 in the same period last year.

Trans-Atlantic cargo and mail is estimated at 36,332 tons, which compares to 30,542.8 tons carried in the like period of 1955.

MILITARY AIRLINE

Flights to Europe leave from McGuire Air Force Base at Wrightstown, N. J., Dover Air Force Base in Delaware, and National Airport in Washington, D. C. Other overseas flights leave Mobile, Ala. (to be closed soon), and Charleston, S. C. On the west coast, flights for points in the Far East depart and arrive at Travis Air Force Base, Fairfield, Calif. From McCord Air Force Base planes depart for Alaska.

The military service follows the practice of the private airlines in giving exotic, gilt-edged names to its plush transoceanic aircraft.

To Europe, for example, passengers may ride the *Atlantic*, departing Washington, D. C., at 3 p. m., Monday, Wednesday, and Friday, with stops at Terceira, Azores, and Paris. Destination is Frankfurt, Germany.

From McGuire, passengers may board the *Rhine*, which also goes to Frankfurt. This flight leaves daily at 4 p. m.

Other European flights are the *Benefactor*, bound for Frankfurt; the *European*, going to Paris; the *Madrid*, which arrives in Paris after a stop in Spain; the *Ambassador*, which terminates at Prestwick, Scotland; the *Lajes*, which goes only to the Azores; and the *Hamilton*, which goes from McGuire Air Force Base to Bermuda. Other flights are also available.

Supplementary schedules are printed each month.

Luxury flights crossing the Pacific include the *Fujiyama*, the *Waikiki*, the *Waikiki II*, the *Air-Evac*, the *Johnston* (terminated at Johnston Island), the *Midway*, the *Ginza*, the *Bangkok*, the *Meteor*, and others.

Another page borrowed by the military from the private airlines is the issuing of passenger flight insurance. For example, Parker & Co., Inc., provides 1-day $5,000 coverage for $1. Amounts up to $50,000 ($10 for 1 day) are available. Trip insurance may also be obtained for longer periods, up to 90 days, which costs $13.50 for $5,000 worth of insurance.

Like its commercial counterpart, the military schools flight attendants for duty on its planes. The flight attendant school at Palm Beach Air Force Base, in Florida, has trained more than 1,600 young men and women since the fall of 1952, when the training program was begun.

Service to the customer is stressed. The airwomen (WAF's) chosen for this duty are picked for their good appearance and winning personalities, two of the qualifications which the private airlines insist upon when selecting young women for stewardess training.

Two flight attendants are provided for each flight where passenger load is 66 or less. Regulations call for three qualified flight attendants on each aircraft where load exceeds 66 passengers.

In transporting military dependent personnel, rules say it is desirable that at least one flight attendant be a registered nurse.

Additional passenger conveniences are provided by carpeted floors (to insure comfortable floor-level temperatures), no less than 1 blanket and 1 pillow for each passenger, a supply of palliatives for relief of airsickness, clean headrests for each seat prior to loading, washroom facilities, airsickness cups for each seat, and so on.

Meals are served in flight. Usually the passenger pays for each meal. The cost is 75 cents for all civilians and officers.

Enlisted personnel pay 40 cents per meal. Those, however, who are receiving no subsistence allowances are given meals at Government expense. Meals for children cost 40 cents each.

Hot cakes with sausage, bacon or ham, eggs, cereal, beverages, and so on may be served for breakfast. Some planes feature pop-up toasters. Lunch may consist of soup or juice, beef or fowl, vegetables, salad, rolls, butter, beverage and dessert. Dinner features similar menus, except that regulations specify that the entree must be of a different variety than lunch.

Airplanes utilized for passenger operation are equipped with a galley suitable for preparation of such hot meals.

The Military Air Transport Service is organized into three divisions, the Atlantic, Pacific, and the Continental.

The Atlantic Division operates from the East Coast of the United States through Europe to the Middle East. It links up in Saudi Arabia with the Pacific Division, operating from the West Coast of the United States through Far East bases.

The Continental Division completes the network of global air routes. It operates from coast to coast and throughout the Western Hemisphere from Alaska to Rio de Janeiro, in Brazil.

Here is the record of the Atlantic Division:

It completed more than 8,000 Atlantic crossings last year, an estimated 50 percent more crossings than were made the year before.

It transported 321,500 passengers and patients, about 110,000 more than in 1954.

Cargo totaled about 88,000 tons, an increase from 48,732 tons.

The first scheduled nonstop flight from Paris to Washington, D. C., was made in the course of the year with 53 passengers and crew of 10. Time: 16 hours, 25 minutes.

Here is the Pacific Division's record:

It completed more than 6,100 Pacific crossings during the year.

It airlifted 316,000 passengers and patients, an increase from 239,471 the year before.

Cargo tonnage was up from 33,682 in 1954 to 46,000.

Here is the Continental Division's record:

It airlifted 316,000 passengers and patients, up from 86,432 in 1954.

Cargo reached 13,000 tons, compared with 8,597 tons moved the previous year.

Continental Division planes made 1,260 Atlantic crossings and 1,422 Pacific crossings.

In addition to transport services, MATS operates five technical services. About 60 percent of the command's operations are devoted to these. Here is the Air Weather Service record:

It has about 400 weather stations, 25 mobile weather units, and 7 aerial reconnaissance squadrons. It operates worldwide, processing and evaluating weather conditions from the North Pole to the tropics. Planes flew nearly 12 million miles throughout the world making 3,990 weather flights.

Hurricane and typhoon chasers flew 59,000 hours tracking storms.

A tropical hurricane was airwatched at night for the first time. After a night penetration of Hurricane Connie last year it was decided that future hurricane flights would be made into the center of storms every 6 hours.

The Air Rescue Service flew 30,000 hours, traveling more than 4,500,000 miles.

MATS planes also spent 10,000 hours in aerial survey work. The Air Photographic and Charting Service at St. Louis provided 11,000 charting and air information publications, distributing about 92 million copies throughout the world to authorized users. The Photographic Service also prepares training and educational motion pictures and still photographs for all branches of the Air Force.

The command's fiscal operations include a transfer of funds sometimes made by Government agencies which use its facilities. A small share of the traffic is reimbursable, mostly from mutual security funds. In fiscal 1955 total reimbursement was $15,791,638. The Service plans a switch to an industrial funding method of operation, but that will not be done until 1958.

At present, a Government agency may pay $195 an hour for the use of a C–54. Cost to other than United States agencies is $445 an hour. The minimum daily charge is one hour.

Charge to Government agencies for the use of C–118 or C–121 series aircraft is $325 an hour; other than United States agencies pay $795 an hour.

The charge for a C–124, carrying cargo, is $410 an hour to Government agencies, $975 an hour to others.

A C–47 charge is $100 an hour for Government agencies, $215 an hour to others.

These rates have been in effect since July 1955. New rates will become effective in July this year. Some will be lower, some higher.

Commercial airline facilities are not normally quoted by hourly rates. Charges for these facilities are based on a cost per mile basis.

However, using the average speeds for the various aircraft, an approximate hourly charge can be arrived at. This was done for Nation's Business by a major airline, using figures on file with the Civil Aeronautics Board.

These prices for four-engine planes, the airline said, are realistic comparisons:

The Government's charge per hour for C–54 (DC–4) is $445, compared to $350 by a commercial airline. The Government's charge for a C–118 (DC–6) is $795 per hour, compared to the airline's charge of $650.

The commercial all-cargo DC–4 would be slightly cheaper than the passenger DC–4.

The activities of the Military Air Transport Service were brought out recently in hearings by a congressional subcommittee on Department of the Air Force appropriations. The committee noted in its report that "the controversial aspects of this service result primarily because, to some extent, it is competitive with commercial air facilities."

The committee recognized the strategic importance of the transport service.

"At the same time," the committee noted, "it is apparent that commercial air facilities, including scheduled and nonscheduled airlines, are an essential part of the overall mobilization transport strength of the United States, and will provide a major part of the ability of the Nation to meet the huge demands for transport in the event of a sudden war emergency.

"Because of the significant role that the Military Air Transport Service plays in our mobilization planning, the committee does not desire to set an arbitrary limit on the size of the MATS operation."

However, it was the committee's opinion that the Air Force should handle its air transport business in such a way as to assist in keeping the nonscheduled and other airlines in a reasonably sound financial and operating position.

Mr. MAHON. Mr. Chairman, several hundred pages of the hearings were devoted to a consideration of the Military Air Transport Service, better known as MATS. The civil air carriers want to get a proper proportion of the business of the Department of Defense. For this attitude the civil air carriers are to be commended. This is a free-enterprise country, and we like to see free enterprise carry the load in the defense program to the extent that such a course may be proper and practical and in keeping with the best interests of national defense.

MATS is a terrifically big organization. We do not wish to encourage a course of empire building. That course must be avoided, and the MATS program must not be permitted to mushroom beyond proper limits.

The committee has discussed all of the major problems involving MATS with the Secretary of the Air Force and with the big and little commercial air carriers of the Nation. I think our studies and investigations have been helpful. I would like to serve notice on the Department of Defense that the committee expects to continue to keep the MATS program under close observation with the hope that commercial air carriers can receive as much consideration as may be desirable in the transportation of personnel and cargo. We realize that MATS must be a large organization by reason of requirements which would be instantaneous in the event of war, but we do not want this program to get out of hand.

Last year we put quite a statement in the committee report on the defense bill in regard to MATS. We did not think it necessary to repeat the language in the report again this year, but our concern and interest in this field have not diminished. I trust that the commercial air carriers and military officials will be able to work out an arrangement which will be reasonably fair to business, the Defense Department and the taxpayer.

Mr. HOFFMAN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, on July 20, 1956, the senior Member from Maine serving in the other body, because of misrepresentations by the Congressional Quarterly, suggested that something should be done to end the practice. See the CONGRESSIONAL RECORD, volume 102, part 11, pages 15067–15072.

Last week the gentleman from Missouri [Mr. CURTIS] called attention to the same situation. See the CONGRESSIONAL RECORD, pages 7599–7600.

In the morning press there is an article by the executive editor of the Congressional Quarterly stating among other things that the two bills, H. R. 7803 and H. R. 7804, which were introduced by me yesterday, were for the purpose of preventing the public learning what the Congress was doing, that is, suppressing the news, denying the right of the people to know what the Congress was doing. That statement is characteristic of the misleading and deceptive policy and methods of that publication's irresponsible people.

No effort is being made through either of those bills to suppress any news.

Neither bill deals with the exercise of the rights guaranteed under the first, or any other, amendment.

The executive editor, according to the morning press, claims that because the Congressional Quarterly shows that my support of the President's program consistently has been among the lowest in Congress, my direct opposition to the President's program among the highest, I am personally peeved.

The purpose of the two bills is to get the news not, under the guise of "news," the conclusions or opinions of those who publish the Quarterly.

No attempt has been made or will be made as far as I know by any Member of this body to keep the RECORD of the Congress secret. No one is dumb enough to make such an attempt. No one is finding fault—so far as I know, with the conclusions of any publication or the interpretation put upon the news by any publication. The point is that, when a publication claims a monopoly of any source of information; as to what the Congress is doing; how the Members are voting and when it publishes what it claims as the facts under the title of "The Authoritative Reference on Congress," that together with the name "Congressional Quarterly," carries the impression that it is an official publication and was so intended. If the Pure Food and Drug Department had supervision over

thought—and we have been told many times that we must first win the minds of men in order to make effective our foreign policy—if the Department had authority to control the Congressional Quarterly, it would have been denied the use of the mails long ago on the ground that it was—shall we say poisonous, deceptive, and fraudulent? There is no doubt but that is what it is. All those two bills that were introduced yesterday seek to do is to obtain a hearing before some committee where the Quarterly can be heard on the charge that it is guilty of false statements when it says it is "The Authoritative Reference on Congress." That it is intentionally deceiving people when it uses the term "Congressional Quarterly." That is all that is being done, that is all we are attempting to accomplish by the introduction of those two bills. If the Members are individually in favor of having their actions accurately recorded, if they wish to prevent fraud, we should get a hearing on those two bills. Give the witnesses who say they can establish the fact that the purpose of the publication is to deceive the people as to what Congress and its Members do, an opportunity to be heard and then let the publishers come in and answer.

Here is one illustration, as I think was pointed out by the gentleman from Missouri [Mr. CURTIS] of how they count a vote. One Member called my attention to that this morning. You are sick, you are in the hospital—this particular Member was in the hospital when the vote was taken. He did not vote, yet the Quarterly recorded him as being against a particular bill. That was most unfair. Certainly it is not only absurd, it is unfair to record a Member of this body as voting either way when he is not here and does not vote at all. On the face of it that is a fraudulent, deceptive method.

The Congressional Quarterly, of which Mr. Schroth is executive editor, admits that the Quarterly's method of keeping score is fraudulent. Permit a quotation from volume 9, page 82, of the Congressional Quarterly Almanac for 1953, where you will find this statement:

> Failures to vote are counted as "times at bat," so that such failure reduces effective-support score as much as an "anti-Eisenhower" vote.

Once more: There is no question of the first amendment, free speech, or free press, involved. We are justified when we attempt to prohibit the use by a publication of a title that is false and which falsely indicates it is the mouthpiece of the Congress.

The Clerk read as follows:

AIRCRAFT AND RELATED PROCUREMENT

For construction, procurement, and modernization of aircraft and equipment, including ordnance, spare parts, and accessories therefor; specialized equipment; expansion of public and private plants, including the land necessary therefor, without regard to section 3734, Revised Statutes, as amended, and such lands, and interests therein, may be acquired and construction prosecuted thereon prior to approval of title by the Attorney General as required by section 355, Revised Statutes, as amended; procurement and installation of equipment in public or private plants; and departmental salaries necessary for the purposes of this appropriation; $1,812,000,000, to remain available until expended.

Mr. OSTERTAG. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OSTERTAG: On page 15, line 15, strike out "$1,812,000,000" and insert "$1,862,000,000."

Mr. OSTERTAG. Mr. Chairman, this amendment seeks to restore $50 million of the $120 million cut from the Navy aircraft and related procurement program. This reduction strikes at the very heart of naval air power.

The objective of the program for which these funds are requested is to develop a new supersonic all-weather fighter to protect the fleet and to carry the attack, if necessary, to the enemy. When they are fully tested and proven—and I am referring to these all-weather fighters—these planes will replace the slower, less flexible subsonic aircraft with which the Navy is presently equipped. At the present time the F8U3 and the F4H are both in the experimental stage. Neither has gotten off the ground, both have tremendous potentialities.

The point of the amendment is that it is impossible to say which will prove superior in meeting the vital tests which must be made if we are to maintain naval air superiority. Both of these have such potentialities that it is possible both may be needed and both may be used. To direct the discontinuance of the testing of one or the other of these models at this point when neither has been fully tested would be indeed a folly. I refer to the language of the report calling for the acceptance of one or the other, which is on page 52.

Now, the only way we can realize on and profit from the immense amount of effort and brainpower and funds that have gone into this program so far is by maintaining it until a sound decision can be reached. At present there is no real basis for that decision.

Let me call your attention to the fact that the present schedule calls for flight testing of the F4H next January and for similar testing of the other model, F8U3, that is, by a year from next month, that is, June of 1958. It is anticipated that both will fly at Mach 2, that is Mach 2 range. That means twice the speed of sound, and both will be all-weather aircraft equipped to function around the clock and throughout the year. It is self-evident that aircraft of this order must be exhaustively tested to insure dependability and capability. At present it is anticipated that the tests will be completed and production begun in time to deliver these planes to the fleet by the year 1960. And, I might call your attention, too, to the fact that eventually 600 of these planes will be necessary for our Navy and for our fleet throughout the world.

The recommended cut of $50 million would certainly slow down the schedule and thus immeasurably impair the strength and productivity of the naval air arm.

I should like to call your attention, too, to the fact that only yesterday, just yesterday, Congress and the country were warned by the sixties the Soviet Union would be capable of delivering a hydrogen bomb attack on this country that could kill some 82 millions of persons. In the light of that I think it would appear reckless, indeed, for this Congress to cripple this program, this aircraft production program, that might well be crucial in the protection of our country against the holocaust of a hydrogen war. In my judgment we should do everything possible to expedite rather than hamper the development of these Navy fighters, and we can do it by restoring $50 million out of a total of $120 million provided for in my amendment. I hope that this amendment will be approved and that this vital program can go forward as scheduled.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. OSTERTAG. I yield to the gentlewoman from Illinois.

Mrs. CHURCH. Is there no money any place in this proposed bill, or from funds previously appropriated, with which the Navy could continue this investigation, if the gentleman's amendment is not carried?

Mr. OSTERTAG. I might say to the gentlewoman from Illinois that it is not a question of transferring of moneys. The committee made a direct reduction of $50 million, with language in the report that the Navy should decide at this time which of the two models they are going to develop and produce.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mrs. CHURCH. Mr. Chairman, I move to strike out the last word, for the purpose of continuing for 2 minutes, if I may, to have an answer to my question. May I supplement it with a second question? Is it then simply a matter of forcing the Navy at this time to make up its mind which type of plane it will develop; and will the $50 million cut actually prevent the continuation of both experiments simultaneously?

Mr. OSTERTAG. The sum and substance of the cut was directed toward reducing the funds on the basis that the Navy should and must make up its mind which of these two models it will eventually produce. But, on investigation, it is clear, by virtue of the situation and the developments thus far, that the Navy is not in a position to decide. The tests and the evaluations are going on. We have already put about $158 million into this program. By cuttting it off at a given point without definite knowledge as to what the effect will be, would be like pouring a great part of that $158 million right down the drain.

Mrs. CHURCH. Would the gentleman go so far as to say that the acceptance by the House of this $50 million amendment would actually permit and in fact force the Navy to continue this program?

Mr. OSTERTAG. It would in no way force them. The program calls for the production of 16 planes of one type and 5 planes of the other during this next year.

Mr. Chairman, permit me to make one correction. Already $242 million has been expended on one plane and $49 million on the other and the program calls for $158 million. This bill as written,

reduces the program by $50 million. Consequently we are back to $108 million. That means by virtue of the language of the report, that the Navy must abandon production of one of these planes. This is what the Navy has to say on that. I quote from a memorandum from the Chief of the Bureau of Aeronautics to the Chief of Naval Operations, which says in part:

Statements from various sources have inferred that an early choice must be made between the F8U3 and the F4H. This was based on the cost of carrying 2 programs forward. As neither has flown, there is no real basis on which to make such a decision. In addition, the following factors are pertinent.

But I shall not read that. In other words, the Navy makes clear that the program has not developed to the point where these planes can be tested in the air, and until that point is reached they cannot make a reasonable decision, and all that has been done up to now is for naught.

Mrs. CHURCH. I thank the gentleman.

Mr. MAHON. Mr. Chairman, will the gentlewoman from Illinois yield?

Mrs. CHURCH. I yield to the gentleman from Texas.

Mr. MAHON. Perhaps this will help clarify the lady's thinking on this matter, if I point out these facts. Beginning with the fiscal year July 1, 1957, with this bill as approved, without the gentleman's amendment, the Navy will have for aircraft and related procurement $7,331,000,000 available for expenditure and of that sum $1,500,000,000 will be unobligated for any other purpose. So this whole program is probably overfinanced. If we give them $7.3 billion, with the amount in this bill, we feel that they can certainly accommodate the program within that area. In fact, the program is overfinanced with the funds in this bill, from my standpoint.

Mrs. CHURCH. My specific question is whether or not any amount of money added to this bill will do away with the recommendation by the gentleman's subcommittee that the Navy take its choice between the two models in experimentation.

Mr. MAHON. No, that would not affect the recommendation of the subcommittee.

Mrs. CHURCH. As long as there is sufficient money to carry on the experiments, those experiments may be continued?

Mr. MAHON. Those experiments may be continued in accordance with the wishes of the Navy.

Mrs. CHURCH. Is it the gentleman's opinion that they will be so continued?

Mr. MAHON. I am not prepared to give the details on this as well as some other Members, but I know that the Navy, as always, will do a good job for the American people. I know they can do a good job with the total availability for aircraft and related procurement of $7,300,000,000 on July 1.

The CHAIRMAN. The time of the gentlewoman from Illinois has expired.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 25 minutes, the last 5 minutes to be reserved to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from California [Mr. SHEPPARD.]

Mr. SHEPPARD. Mr. Chairman, I am at the moment considerably nonplussed that an amendment of this character is being offered. My reason for that is that I have worked with my colleague who has just offered this amendment and with the other members of our committee for a long time, line item after line item.

When we sat down in the Navy panel for our consultation, which was previous to the markup of the bill, there were some comments that perhaps in places we had cut a little bit deep. There was no offer, however, of an amendment at that time. When we went into the markup by the entire Subcommittee on the Department of Defense no amendment was offered. When we appeared before the whole Appropriations Committee there was no amendment offered. Consequently this particular approach I find extremely interesting because of its recent origin and perhaps the recent reasons for its origin.

Mr. OSTERTAG. Mr. Chairman, will the gentleman yield?

Mr. SHEPPARD. I yield to the gentleman from New York.

Mr. OSTERTAG. I have great respect and affection for my good friend from California, who presides over our Navy panel of the Defense Department subcommittee and I have a great respect for his knowledge and judgment with regard to our defense needs, particularly in relation to the Navy. However, I want to call to his attention the fact that the language in the report, which did not reach me until it was fully printed, carries with it the meaning and the intent of cutting $50 million out of aircraft and related procurement for the Navy by implied duplication.

Mr. SHEPPARD. We are now working under a very rigid 5-minute rule with no unanimous consent requests for extension because of the attitude expressed on his side of the aisle. I want to comply with it. I want to be as generous and courteous to the gentleman as I can. His comments about the report are absolutely correct insofar as he quoted them. I also call his attention to the fact that he did have the privilege of reading the report if he so desired, and that was announced by the chairman, [Mr. MAHON], at the time we were all in conference. If for some reason the gentleman did take advantage of that opportunity, which I am sure was legitimate, that is his responsibility and not mine.

Insofar as this particular amendment is concerned I say this, The only thing that we are doing here is telling the United States Navy, "Make up your mind between two types of planes." They have been playing around with these two particular types of planes all too long. They are spending money on a two-way operation where somebody in the United States Navy ought to make up his mind and save the taxpayers excessive money.

What have you heard on this floor? You have heard duplication, duplication, duplication, until sometimes it becomes slightly nauseating. Let me say this to you, the only thing the action of our committee does or is going to do to the United States Navy is make somebody make up his mind which plane they are going to procure, and then save money accordingly. That is all.

With my long association with the Navy I would be one of the last men to do one thing I thought would impair its efficiency. I am in no manner in accord with the comments made on the floor of the House the other day by the gentleman from Missouri [Mr. CANNON] in his evaluation of the three branches of the service. I say that with due respect to him, because he has equal rights with me to his opinion. But I have lived long enough with the military in the 20 years I have been here to have some knowledge of what goes on. I have no claim to omnipotence of judgment, either judicial or otherwise. But, I do believe beyond any question of doubt that your committee has done a reasonable job on the cuts and reductions in this bill. In no way will any of these operations be impaired. If we have made an error, as my friend the gentleman from Massachusetts [Mr. WIGGLESWORTH] said in his speech on the first day of debate on the floor of the House, it would be in an area of discretion to making a choice which we had as much right to take as anybody else.

I am completely mystified as I had examined the statement of the gentleman from Massachusetts [Mr. WIGGLESWORTH] on the floor in the general debate on this bill in which he said, "I might also mention with respect to the Navy that there appear to be 2 or 3 cuts which may prove to be too heavy and which might well justify if assumptions are not realized a request for supplemental funds." I would be the first to say that if the experience data on which certain cuts recommended by the committee were based were not realized, we should make additional funds available. I do not think that this amendment fits into this category at all. We have not even had a chance to find out, as he said, whether or not our assumptions are to be realized.

Now let us look at this program. These are two test and evaluation aircraft. They are follow-ons of two existing, operating aircraft in the fleet, both with excellent performance data. Neither aircraft has been flown. If they are out of the blueprint stage they are still in the factory because the first flights are not even scheduled for calendar year 1957.

Your committee has not deleted all of the funds for this program. Prior years programs have also contained the appropriation of funds for quite a few planes of both types. The committee has left a good chunk of money in the

1958 program for the continued procurement of these planes. We believe, that with the background of capable performance of the original planes now flying in the fleet, that it will take less aircraft to prove these models than has been anticipated.

Much has been said about duplication in the armed services. Yet here we are asked to appropriate additional funds for more duplication.

There are two schools of thought in the Navy on these all-weather fighters. Both schools are wedded to their own ideas. If Congress does not step in and force a decision to be made by those responsible, the two schools of thought can go on and on, continuing to procure aircraft to back up their own ideas while the taxpayers foot the bill and the fleet suffers in operational efficiency.

Your committee believes that this decision should be made between these two aircraft and should be made promptly. May I stress again that if you return this money to the bill, as requested by the gentleman from New York, you are not adding one single, solitary operating aircraft to the fleet. As a matter of fact, you are merely implementing wasteful duplication while delaying the time when a new, badly needed, supersonic, all-weather fighter is available to the fleet. I personally cannot take that responsibility. I trust the amendment will be defeated.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. H. CARL ANDERSEN].

Mr. H. CARL ANDERSEN. Mr. Chairman, in my 15 years on the Committee on Appropriations I hope I have established a reputation for at least two basic principles. First, I never disagree with committee or subcommittee action unless I have compelling reasons for doing so. Second, I have consistently voted on the side of real economy and have tried to resolve all borderline decisions on the basis of economy.

Today, I must disagree with the subcommittee on both points. I should not have to take the time of the committee to point out that you do not build airplanes like you build bridges, but maybe we do need a reminder. Those of us on the Committee on Appropriations—and especially our colleagues who served on the committee during World War II or the Korean war—know that there is a great lapse of time between the drawing board and the firing line where airplanes are concerned. If I am not mistaken, I do not think any of the aircraft in the development process at the time of Pearl Harbor ever saw action in World War II. Even those on the drawing boards were obsolete the day the bombs fell on our fleet.

The discussion here today concerns two particular types of aircraft the Navy has in the development stage. I understand something like $291 million is programed for expenditure on these aircraft through fiscal year 1957. About $124 million is obligated and an additional $28 million already disbursed. These vast sums of money have been and are currently being spent to develop the most effective plane for use by the Navy in protecting the United States. There is nothing unusual about the fact that all this money will be spent before either of these planes ever takes to the air. We know that in the long run this is the most economical and the most efficient way to develop ultramodern aircraft which we must have for national security.

The point at issue is much more than a simple budget cut. The subcommittee in its report has placed restrictions on the Navy in the development and procurement of the F4H1 and the F8U3 aircraft. First, it directs the Navy to "take prompt action to decide which of these aircraft it will place in production." So far as I can determine no one in the Navy Department knows for sure what "prompt action" means, although they do seem agreed that they, too, want action at the earliest practicable date. But they are faced with this situation. Something like $253.7 million has been programed for the F4H1 through fiscal 1958, and about $169.2 million for the F8U3. Until they have exhaustively tested both planes, how can they say which is the best instrument of defense? Until they have done that, how can they say which of the two great investments in design and development shall be abandoned?

Bear in mind that we are not dealing with one-of-a-kind experimental aircraft to be produced for test and experimental purposes only. We are dealing with a major development which may determine in the end whether we shall be effective in our aerial defense of this Nation. No one wants a second-best airplane in the air defending us, and yet we know that one of these aircraft has to be second best. What kind of economy would it be, after all this money has been spent on development, to require the Navy to take the unnecessary chance that the kind of decision called for in this subcommittee report would entail? What a costly gamble is involved, and we are all agreed that we cannot gamble with our national security.

Just last week, Mr. Chairman, our great Speaker took the floor to point out that we had invested so much money in plans and preliminary work on a new House Office Building that it would be extremely wasteful to cancel construction. I agreed with him on that point and voted against the amendment to strike out funds for the new building because of the scandalous waste that would be involved in abandoning construction after so much money had been spent and obligated.

The same principle is involved in these aircraft. The Navy has, wisely I trust, spent a vast sum of money to bring these aircraft designs to the stage of construction and testing. It would be uneconomical in the extreme to say to the Navy, as the subcommittee report says, that much of this money shall be wasted and benefits of research and design abandoned.

The second point involved in the subcommittee report is the language directing the Navy to make this "prompt decision" at an earlier date "with fewer test and evaluation aircraft than is presently scheduled." That language, unless set aside by the approval of the amendment now before us, says in effect that the Navy shall not proceed with its intention of procuring a few of each type aircraft for the exhaustive flight and other tests so absolutely necessary to determine which is the better aircraft.

We have heard the gentleman from Missouri [Mr. CANNON] emphasize the fact that we have an inadequate defense against air fleets coming in from abroad to bomb our country. We have read today a report that 82 million of our people could be killed in such an attack with atomic weapons. Now, we have before us an appropriation item for the development of Navy planes with sufficient speed and other characteristics to do the defense job we all say must be done, and yet it is proposed that we waste research and development money running into many millions of dollars and require the Navy to select a type aircraft without the necessary testing and evaluation the technicians believe is required for such a choice.

Let us not, in the name of economy, gamble with the security of our Nation and the safety of our people. Nothing could be more directly opposed to real economy than to take such a gamble. If there is any man or woman in this Congress who has a consistent record of voting for real economy, I honestly believe I have that reputation. I am in my 19th year here, and I have never knowingly voted for a single appropriation I did not feel was in some substantial way in the best interests of our Nation and our people. In this instance I feel compelled to join the plea for approval of the amendment offered by the gentleman from New York [Mr. OSTERTAG] to restore, in part, the budget for this critical item.

I think this is one of the two crucial amendments which has been or will be offered to the bill. I sincerely hope, Mr. Chairman, that this amendment will be accepted.

The CHAIRMAN. The Chair recognizes the gentleman from Alabama [Mr. ANDREWS].

Mr. ANDREWS. Mr. Chairman, I yield to no man when it comes to appreciating the United States Navy any more than I do. I served in the Navy during World War II. I have a commission in the Reserve today and I have served on the Navy subcommittee for the last 3 years. Therefore, I would be the last to do anything to cripple the Navy. The purpose of this reduction of $120 million is to try to get the Navy to decide which of two planes, the F4H or the F8U3, they desire to use permanently with the fleet when they get into the production of 1 of those 2 types. There is in this bill $100 million for the Navy to use in making that decision, and in trying out those two planes. Quite a number of each type of plane has been produced. The number is confidential and I cannot tell you that. The evidence before us, however, disclosed that there is a sufficient number of F4H and F8U3 in production and in use to enable the Navy to make up its mind as to what type they want to adopt for fleet use. Bear in mind that there is $100 million in this bill to carry out that mission. The decision has to be made some day,

and the sooner it is made the cheaper it will be for the taxpayer.

How many of you recall that only a few years ago the Navy produced at least a quarter of a billion dollars worth of planes that were put in storage in St. Louis, not one of them ever getting off the ground?

That is one reason we had in mind when we asked them to go ahead and make this decision. They have been working on these two planes for a long time. As I said a moment ago, they have a sufficient number to test and evaluate and make up their minds as to which type they want to use.

What have we done in this case? We have cut this item for aircraft and related programs $120 million. If my friend from New York wanted to carry out Mr. Eisenhower's program and Mr. Eisenhower's budget, he should have made his amendment $120 million instead of $50 million, because that was the budget request.

After careful consideration the whole committee concluded that $120 million could safely be taken from this budget activity of aircraft and related procurement, without crippling the program.

But if you will take a look at the figures in this bill, you will find that the Navy will have a total of unexpended and unobligated funds plus the new money contained in this bill of $7,331,346,775.

What is $120 million compared to that $7 billion plus figure? It figures out at 1.6 percent—1.6 percent.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. ANDREWS. I yield to the gentleman from Texas.

Mr. MAHON. Putting it another way, there still remains 98.4 percent.

Mr. ANDREWS. That is a very fine way to describe it.

Mr. Chairman, I make this statement without fear of successful contradiction, that any business on this earth whether it be private, Government, or Armed Services, that cannot absorb a 1.6 percent reduction is topheavy and needs new management.

The CHAIRMAN. The gentleman from California [Mr. HOSMER] is recognized.

Mr. HOSMER. Mr. Chairman, I rise in support of this amendment because I am disturbed about the matter of a direction to the Navy in the committee report to choose between two lines of research in a hurry before it is actually time to make the choice based on adequate information as to which of two airplanes being researched will best fit our needs. I want to point a parallel to you. Suppose the Congress of the United States back in the days of the Manhattan District had directed that the District make up its mind between the uranium approach and the plutonium approach to nuclear weapons. Actually, one of those approaches turned out to be vastly superior to the other. But if, at the direction of Congress, the Manhattan District had been required to make up its mind which line it was going to follow and had chosen the wrong one, you see how very weak we would have ended up respecting nuclear weapons even after the vast amounts of money we spent on the program. Fortunately Congress legislated no such choice and we accomplished our objectives.

These airplanes are not nuclear bombs but they are still very complicated devices for the protection of our country, and I think that all the time needed should be given to selecting that which is most suitable for the safety of the United States.

I rose also because I was somewhat disturbed about the fact that the naval budget was being cut. There is a function of the naval service that has been traditional, it has been historic, and I refer to the part the United States Navy plays in conducting the diplomacy of the United States. We saw an example of this in the last few weeks in the Middle East where the Navy played a tremendous and successful part in the diplomacy carried on there by us to bring a measure of order to that troubled area and stave off Soviet threats. So that type of value in time of trouble short of war characterizes the Navy more than any other service, not because of its inherent excellence, but because of its inherent mobility and because of the fact that traditionally the people of the world have associated strong national power with a strong seapower.

In speaking of national power, I come to my third worry about this budget. We are told it is 97 percent of what has been requested. But how good would a dam be if it stretched only 97 percent across the gorge when the time came to hold back a raging flood? Are we doing only 97 percent of the job needed to hold back the raging flood of communism? Or even less?

I ask that because not only do we depend upon what military force we have, but in the anatomy of modern-day national power, there are three elements that go to make up the strength of a nation amongst other nations.

One is its military capability, the second is its economic capability and the third, and becoming more important every day, is a nation's power over opinion, its power to influence public opinion in other nations and thus help shape the policies of their governments.

On the news ticker tape today regarding the USIA appropriation we read that the amount of money has been cut by one-third that we are going to spend to influence the minds of the people of other nations. So we are weakening that facet of national power upon which we have to depend for our security and safety in today's and tomorrow's raging battle against the Communist forces. With that kind of weakening of one element of our national power, perhaps we are being foolish to weaken one of the other, the military side. Perhaps we should be strengthening it at this particular point.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. MAHON].

Mr. MAHON. Mr. Chairman, I would like to recall the last words of the previous speaker who said he felt we ought to do something to strengthen the position of the United States. According to the statement of Admiral Radford, Chairman of the Joint Chiefs of Staff, shown on page 4 of the report, we are fully prepared at this time to meet almost any emergency.

In this bill we provide $34.5 billion more to carry on this very fine program.

The gentleman spoke about our just giving the Pentagon 97 percent of what the Pentagon wanted and asked what we would think of a dam if it stretched only 97 percent across the stream. Well, that is the trouble with the military at times. They might possibly build a dam 97 percent across the stream like they built all those Navy aircraft that would not fly costing millions of dollars; but ordinary people with any gumption, in building a dam across the stream would build it completely across the stream and as high as it could reasonably be built with the funds available. We have many men of fine ability and judgment in the Department of Defense.

I have great respect and admiration for my friend, the gentleman from New York [Mr. OSTERTAG] and I regret that I cannot support his amendment.

Mr. Chairman, there is nothing here to be confused about. Here is what we provide. We have given the Navy at least a quarter of a billion dollars to develop a fighter. They have not spent it all. They are building and experimenting with two types of planes, designed to perform the same mission. In this bill, in addition to the quarter of a billion we have already given them, we give them $100 million to continue now with one of these fighters. They have the necessary time to make up their minds. They have $100 million with which to make up their minds plus a quarter of a billion dollars that they already have—to make up their minds and get production underway.

Mr. SHEPPARD. Mr. Chairman, if the gentleman will yield, the funds are to continue with both of the fighters; not one but on both of them.

Mr. MAHON. The gentleman is correct. The power of decision is not to be made by the Congress on these matters, but it is to be made by the Pentagon. The Navy will have $1.7 billion unobligated in this account at the end of the year, and we are giving them about $1.8 billion in this bill. And, if we approve the bill without the gentleman's amendment, the Navy will have available for expenditure for aircraft and related procurement the total of $7.3 billion come July 1.

Now, I ask you in the name of all good management and good judgment if we should not go along with this figure, which is only 1.6 percent below the figures which the Navy would like to have as available for obligation and expenditure on July 1. So, it seems to me that we have here a good program. We make some compromises in this. We have the $314 million atomic carrier in this bill. We worked hard on these things. We did the best thing we knew how to do in this bill. We have spent much money on our great Navy, and we are proud of our great Navy.

So, we have dealt gently and judiciously, in my judgment, and I believe

that the House will go along with this program designed to get more efficiency and economy. Out of the $7.3 billion, by better contracting perhaps the Navy could save 1.6 percent, the amount of the overall cut in availability.

I ask you to stand with us on this sort of judicious program of economy and efficiency in defense of this great and important field.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from New York [Mr. OSTERTAG].

The question was taken; and on a division (demanded by Mr. OSTERTAG) there were—ayes 73, noes 115.

So the amendment was rejected.

The Clerk read as follows:

SHIPBUILDING AND CONVERSION

For expenses necessary for the construction, acquisition, or conversion of vessels as authorized by law, including armor and armament therefor, plant equipment, appliances, and machine tools, and installation thereof in public or private plants; procurement, production, and modernization of electronic equipment and material for ships; procurement of critical long lead time components and designs for vessels to be constructed or converted in the future; expansion of public and private plants, including land necessary therefor, without regard to section 3734, Revised Statutes, as amended, and such land, and interests therein, may be acquired and construction prosecuted thereon prior to approval of title by the Attorney General as required by section 355, Revised Statutes, as amended; and departmental salaries necessary for the purposes of this appropriation; $1,534,000,000, to remain available until expended.

Mr. BALDWIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BALDWIN: On page 16, line 21, strike out "$1,534,000,000" and insert "$1,594,000,000."

Mr. BALDWIN. Mr. Chairman, this amendment would restore one-half of the cut in shipbuilding and conversion. The committee has brought in a bill which has a cut of $120 million in this item. This amendment would restore one-half of that sum or $60 million.

The committee report on page 54 states that the reason the committee made a reduction of $120 million in this item is because of four factors. They say in the report:

The first of these is as a result of repricings in prior years shipbuilding programs which have resulted in savings of approximately $40 million. This item is referred to on pages 659 and 660 of the Department of the Navy hearings.

On those two pages of the Department of the Navy hearings, 659 and 660, there is testimony given by the Chief of the Bureau of Ships of the Navy on the 1957 shipbuilding program. His testimony pointed out that the 1957 shipbuilding program had increased this year by a total net amount of $138 million and that they were asking for that additional sum in this year's budget.

He was asked the specific items in that figure and he said there were certain increases and certain decreases. He was asked to give a specific tabulation of the net results of the price changes and he listed on page 660 a number of price changes that totaled $40 million.

The committee on that basis said that they had a savings of $40 million. But actually this was just a portion of a series of changes, both upward and downward, that had a net result of $138 million increase. I have checked this carefully with the Department of the Navy and they have confirmed that that is the case, that there is no savings of $40 million in this item whatsoever; and that actually the net of all changes in the 1957 shipbuilding program is an increase of $138 million. Therefore, the $40 million that the committee deducted is not substantiated by the actual facts in the Department of the Navy figures.

Secondly, the committee says that, based upon repricings of previous years, they are estimating that they should have a saving of $60 million. This second item which the committee has listed as a basis for the cut is set forth on page 54 of the committee report as follows:

As can be seen from an examination of the tables on pages 648 and 649 of the committee hearings, and the discussions on pages 656 through 659, the past history in this appropriation item has been one of substantial savings in repricings, which take place periodically after the funding of these programs. Based on this experience $60 million has been eliminated from the budget estimates.

However, if you will refer to the Navy testimony, you will find that when they have added up all the changes in all the individual shipbuilding programs from 1952 to 1957, and they show the summary on page 647 of the hearings, they say the net of all those is that they are requesting $22.6 million additional for these previous programs. In other words, when they added up all the changes for the last 6 years of shipbuilding programs they had a total net increase of $22.6 million.

The committee has said on the basis of these two items it is going to cut the shipbuilding program by $100 million. I submit that the facts do not substantiate this cut. If this cut is made on those two hypotheses, we are going to have a cut in our actual shipbuilding program, and some of the ships programed for the Navy in the 1958 shipbuilding budget are not going to be built. The Navy has submitted that the ships in this particular budget are extremely important. The Russians, they have pointed out time and again, are far ahead of us in the number of submarines they have now ready to be used. The ships in this particular budget this year are designed primarily to add to our defenses from the standpoint of antisubmarine warfare.

I think it would be a tragic mistake at this time to use a couple of doubtful computations of this kind to make a cut of $100 million. It is not justified by the facts and by the hearings, and runs the risk of reducing our actual ship construction program, and reducing the effect of this on our antisubmarine warfare program, at a time when we should not be making such dangerous reductions.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from California [Mr. SHEPPARD] for 5 minutes.

Mr. SHEPPARD. Mr. Chairman, while I am in complete disagreement with my colleague from California I do want to pay him this compliment. He was gentleman enough to come over and tell me that he was going to offer this amendment, and that is something I have not had the courtesy of receiving on other issues.

I should like at this time to call attention to a particular aspect of the cut that was made upon the following terms.

The past history in this appropriation item has been one of substantial savings in repricings, which take place periodically after the funding of these programs.

I would like to read this to you. I am reading from page 659 from a statement made by Admiral Mumma who is the Chief of the Bureau that we are referring to. I quote:

There are other increases and decreases which are more or less in comparison with these, but the net result is an increase of $138,212,000 in that year's program, which, fortunately, is in the estimates. Since this was made out, we have been able to make a slight saving against that account, because we have been able to get some slightly better prices than initially anticipated.

Of the ships contracted for, we have actually been able to get prices that are $56 million less than originally estimated, though there have been other offsetting increases.

So the gentleman's position that we were taking advantage of a hypothetical cut here is quite erroneous because there is the testimony of the Chief of the Bureau. If time proves this to be erroneous and additional funds are needed, you may be assured that we will be glad to go into the matter with the Navy.

We have exerted every possible effort here to do what we think is compatible with good procedure, good economy, and commonsense management. In other words, there is no difference in our approach in this particular regard than there was to these previous matters. So far as I know if there were any reservations, they must obviously have been mental because nothing was said in our committee at the time we marked up the bill pertaining to this particular matter. So where this question arises other than originating with the gentleman himself remains to be seen. I want to say this to you, this whole situation compares with the estimated unobligated balance of $2.5 billion and direct obligations of $1.5 billion leaving an unobligated balance of $1 billion for a carryover to fiscal 1959. Of this unobligated balance, it is estimated that $701 million will not even be committed by the end of fiscal 1958. Why add more money to a balance that is already large and uncommitted and that cannot possibly be used in fiscal 1958. I ask that question of those Mem-

bers of the House who have been expressing their views for a long time about unexpended balances and the proper application thereof.

Mr. Chairman, I urge the committee to reject this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Alabama [Mr. ANDREWS] for 5 minutes to close debate on the pending amendment.

Mr. ANDREWS. Mr. Chairman, there is available for expenditure in this bill for this item the sum of $4.661 billion. The cut is $120 million. What has the committee done? We have cut the funds available for expenditure by the Navy for shipbuilding and conversion by about 2 percent. In other words, we have given them 98 percent of all the money they requested for this activity. I have been listening for years to talk about the increased efficiency in the shipbuilding program of the Navy. If the Navy cannot absorb a $3 million specific reduction in their shipbuilding program, then it is time that we took a look at the management of that program and see if they cannot be replaced with more efficient personnel. I personally think they are efficient enough to absorb this small reduction. If the gentleman from California [Mr. BALDWIN] and his colleagues on the Republican side of the aisle do not think so and want this money restored, I suggest that they make their wishes known to the President who has the power to remove such men from the job that they now hold.

The CHAIRMAN. The time of the gentleman has expired.

All time has expired.

The question is on the amendment offered by the gentleman from California [Mr. BALDWIN].

The amendment was rejected.

The Clerk read as follows:

NAVAL PETROLEUM RESERVES

For expenses necessary for exploration, prospecting, conservation, development, use, and operation of the naval petroleum reserves, as authorized by law, $825,000.

Mr. PORTER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have a question I should like to put to the distinguished minority leader.

I want to ask if the gentleman from Massachusetts confirms the news story printed on the front page of the Evening Star, May 14, 1957, under the byline of Garnett D. Horner.

The first three paragraphs of this story were as follows:

President Eisenhower told Republican congressional leaders today he would not want to assume any responsibility for security of the country if Congress cuts funds for missiles and airplanes in the Defense Department budget.

House Republican Leader MARTIN reported this after a conference at the White House as the President prepared to appeal to the Nation in a television-radio address tonight for support of his $71.8 billion budget against the surging economy drive in Congress.

Mr. MARTIN said the President expressed concern during the conference with GOP House and Senate leaders over reports that a House Appropriations Subcommittee had recommended cuts in money asked for the missile program and the Air Force.

Does the minority leader confirm the accuracy of these paragraphs? Did the President really tell the Republican congressional leaders that he did not want to assume any responsibility for security of the country if the Congress made cuts in funds for missiles and airplanes?

Mr. MARTIN. I may say to the gentleman from Oregon that the President did not say quite that. The President said that if these cuts were made he could not be held responsible directly for the security of the country. He needed all this money if he were going to keep this country secure and at peace.

Mr. PORTER. I thank the minority leader.

Mr. MARTIN. Perhaps if the gentleman had gone down and seen the President he would have been more able to make it clear.

Mr. PORTER. The impression from this was that the President was reluctant to do his duty, were these cuts to be granted, and I was wondering if perhaps the example given by Postmaster General Summerfield of cutting service was also finding another place in this administration.

Mr. MARTIN. The new Member knows all the answers.

Mr. PORTER. Thank you.

Mr. ROGERS of Colorado. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise to make an inquiry with regard to the naval petroleum reserve which is on page 21 and for which the sum of $825,000 is provided. The Navy Department has completed operating the Rifle plant for the development of oil shale at Rifle, Colo. What I would like to know from the committee is whether or not this fund can be used to maintain that plant in a standby position; that is to say with watchmen and caretakers, so that the plant may be preserved for future use. Can the gentleman give me an answer to that question?

Mr. SHEPPARD. May I say to the gentleman that his question pertaining to the fund to which he has just referred appearing at the top of page 21 under "Naval petroleum reserves" does not provide money for the project to which the gentleman has referred.

The President's budget on this project was in the Interior Department. It was not a part of the Navy's presentation to our committee for consideration; consequently, there is no money there.

The only funds that might be even remotely used in that connection would be unexpended balance of funds appropriated in the past fiscal year for that category.

Mr. ROGERS of Colorado. I call attention to page 63 of the report. The last sentence indicates that these funds will be sufficient to allow for the operation of the petroleum reserve program of the Navy in an orderly and efficient manner. It is my understanding that the Navy may be given jurisdiction of this shale plant.

Mr. SHEPPARD. I am very sorry, but that is not the case. As the situation stood at the time we wrote the bill, and a precedent was established, the Navy has no jurisdiction in that field. It is now the responsibility of the Department of the Interior.

Mr. ROGERS of Colorado. I thank the gentleman. I wanted to know whether or not this could be used in the event it was turned over to the Navy.

The Clerk read as follows:

TITLE V

Department of the Air Force

Aircraft and Related Procurement

For construction, procurement, and modification of aircraft and equipment, armor and armament, spare parts and accessories therefor; specialized equipment; expansion of public and private plants, Government-owned equipment and installation thereof in such plants, erection of structures, and acquisition of land without regard to section 9774 of title 10, United States Code, for the foregoing and other purposes, and such land, and interests therein, may be acquired and construction prosecuted thereon prior to the approval of title by the Attorney General as required by section 355, Revised Statutes, as amended; reserve plant and equipment layaway; and other expenses necessary for the foregoing purposes, including rents and transportation of things; $5,846,000,000, to remain available until expended.

Mr. WIGGLESWORTH. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WIGGLESWORTH: On page 22, line 1 after the word "things", strike out figures "$5,846,000,000" and insert in lieu thereof "$6,021,000,000."

Mr. WIGGLESWORTH. Mr. Chairman, as the members of the subcommittee in charge of this bill appreciate, I have been concerned throughout the consideration of this bill by the cuts proposed in respect to the Air Force, resulting, as you will note, if put into effect, in giving to the Air Force in 1958 $676 million less than it had in the fiscal year 1957.

There is a very heavy cut proposed in respect to operation and maintenance of $162,800,000.

There is another heavy cut proposed in respect to procurement other than aircraft of $100 million.

On top of this there is the heaviest cut of all, in the item now under consideration, "Aircraft and related procurement," of $354 million.

If that cut stands, Mr. Chairman, the Air Force will have over $1 billion less in 1958 than they had in 1957—and this in an appropriation item which deals with airplanes, which deals with guided missiles, which deals with spare parts, and with the modernization of all three of them.

If you will look at page 75 of the committee report, you will see the proposed cut of $354 million broken down. It breaks down, roughly, into three subheadings.

The first item is in respect to guided missiles and spare parts for those missiles, a reduction of $75 million.

As far as I know, no one knows where this reduction is to be applied. It has been taken out of the thin air somewhere, and if it is applied in the manner that has been suggested as possible by the Department, it means 7,500 less guided missiles in 1958 than have been requested by the President.

I am against touching the guided missile program at this time. It is too vital a program to cut blindly.

My amendment restores the $75 million that the committee recommends as a cut in the guided missile program.

The second item is in respect to the modernization program, the modernization of planes, guided missiles, and spare parts to bring them up to date so that they may be suitable for combat.

There is a reduction proposed here of $83,500,000, a reduction of 13.2 percent in the modernization program.

The Air Force assures me this cut cannot be put into effect without cutting directly into our tactical aircraft program. I am against that. The proposed cut is too deep.

My amendment restores not the whole of the $83.5 million but $40 million, or about half of it.

The third item is in respect to the spare parts program. A reduction of $195 million is recommended.

Mr. Chairman, when the subcommittee walked out of the committee room at the end of its deliberations what do you suppose the decision was as to the spare parts program?

The decision was to reduce it not by $195 million but by $60 million.

It was also decided to reduce the airplane program by $135 million.

I protested against this cut, because I was no more anxious to cut our aircraft program than I was to cut our guided missile program.

Subsequently, and I am not saying this by way of criticism, without any further committee meeting to consider the matter, $135 million was taken off of airplanes and added on to the $60 million which it had been decided to apply to spare parts, giving a total reduction of $195 million.

Mr. Chairman, this savors a little too much of the well-known meat ax. It suggests a little too much the desire to obtain a specified overall reduction in respect to the Air Force, regardless of how the objective is arrived at.

My amendment would restore not all of the $135 million transferred, but somewhat less than half of it, $60 million.

In summary the amendment would restore $75 million in respect to guided missiles; $40 million in respect to modernization of planes and missiles; and $60 million in respect to spare parts.

Mr. Chairman, if you want to take 7,500 guided missiles out of the program, if you want to cut directly into our tactical aircraft program, if you want to take $195 million out of the spare parts program, then you will of course vote against this amendment.

In my opinion, the amendment is a conservative proposal, and I hope sincerely, Mr. Chairman, that it will be adopted by the House in the interest of adequate military power, vital to the peace of America and of the entire Free World.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 50 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Vermont [Mr. PROUTY].

Mr. PROUTY. Mr. Chairman, it will be interesting to learn how those who voted for a third House Office Building are going to justify voting for cuts in national defense appropriations which involve our very life as a nation.

The CHAIRMAN. The Chair recognizes the gentleman from Florida [Mr. SIKES].

Mr. SIKES. Mr. Chairman, with such a fine example for brevity, I will try not to use all of the 5 minutes. But, I do want to call to the attention of the committee a statement from American Aviation Daily of May 23 which I think will be of considerable interest to the committee. American Aviation Daily is one of the important publications associated with the aircraft industry.

Here is what I want to quote:

HOUSE SPURNS MEAT-AX APPROACH TO DEFENSE MONEY BILL

Fears that Congress will take a meat ax to the military funds request for next fiscal year seem to have been largely dispelled by the careful work of the House Appropriations Committee in reporting out the Defense appropriation bill (daily May 22). The military services, of course, aren't happy with the cuts, but no one in the Pentagon is comparing the committee's $2.6 billion reduction with the kind of all-out cuts ordered back in the days of former Defense Secretary Louis Johnson.

An examination of the committee's actions in major hardware accounts shows a substantial degree of restraint and careful reasoning in practically all of the reductions. In no case does it appear that the lawmakers have hamstrung any of the major military programs.

The Air Force's $2,719,300,000 request to buy 1,515 completely manned aircraft in fiscal 1958 was left intact. The committee said it was reluctant to touch this request for fear of a delay in modernization of the defensive fighter force.

A $195,500,000 cut was ordered in the Air Force's $2,359,700,000 request for spare parts and components, but the committee backed this action with what appears to be solid reasoning. It pointed out that the spare parts account normally encounters large unobligated carryovers from year to year, so the reduction "will in no way handicap the Air Force in its program of modernization." The lawmakers also made it clear that the ratio of initial spares procurement to complete aircraft procurement has been climbing for several years, and urged the Air Force to find ways to hold the line on these massive outlays. The ratio was 47.6 percent in 1956, 75.2 percent this year and 79.6 percent next fiscal year, as a result of the committee's action. The Air Force had wanted a ratio of 86.8 percent.

Mr. Chairman, that seems to be solid, sound reasoning to which this committee can well subscribe.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. SIKES. Of course.

Mr. GROSS. Is there any money in this particular appropriation for aircraft that would go to Yugoslavia?

Mr. SIKES. No; this is not for aircraft for Yugoslavia. All of this money is for aircraft for our own forces.

Mr. GROSS. Could not combat planes be constructed with these funds and then some of those planes be turned over to Yugoslavia?

Mr. SIKES. That could be a possibility, but properly the planes which would go to Yugoslavia would be from MAP funds, not from the funds carried in this bill. There is the possibility that the administration could order some of these planes turned over to allied nations, but normally they would be financed in the mutual aid bill.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield for a question?

Mr. SIKES. I yield to the gentleman.

Mr. JOHANSEN. Will the gentleman comment on the statement of the gentleman from Massachusetts [Mr. WIGGLESWORTH] that the reductions will result in 7,500 fewer guided missiles?

Mr. MAHON. Mr. Chairman, will the gentleman yield to me?

Mr. SIKES. I yield to the gentleman.

Mr. MAHON. I have just assembled some rather interesting figures for the missile program for the fiscal year 1957. For that year the Air Force has an availability of $3.1 billion. The Air Force is developing 18 missiles, and, as I say, for the current year they have $3.1 billion. Up to March 31 they had expended less than $1 billion. It is believed that they will have a carryover of about $1½ billion into the next fiscal year on June 30. We have $1½ billion in this bill for the guided missile program for the Air Force and that does not include funds in this area for the Army and the Navy.

The CHAIRMAN. The Chair recognizes the gentleman from West Virginia [Mr. NEAL].

Mr. NEAL. Mr. Chairman, when the Military Establishment has at its disposal the astonishing, if not unbelievable, sum of $68 billion available for fiscal 1958, with probable commitments extending into 1959, I find it difficult to believe that failure in restoring a mere $357 million to the committee's recommended budget can in the least degree endanger the Defense Department's ability to maintain adequate protection in peacetime, or minimize its ability to wage war, if that last disastrous necessity arises.

Should we become threatened by a general war to a degree greater than that existing at the moment, I am certain that Congress can and will be called upon to provide whatever funds are needed for each arising emergency.

Instead of embarrassing the Defense Department, these reductions are but timely notice that the citizens of this Republic firmly believe that the cost of maintaining our military strength constitutes a very real danger to the whole economy. They demand daily that every conceivable economy must be applied by the leaders entrusted to administer the conduct of our national defense.

There is a moral aspect to this, also. Our steady buildup of military power offers ample, if false, evidence to people abroad who have been constantly propagandized by Soviet Russia on the theme that we propose to initiate global conflict with our immense military machine.

Many of the so-called neutral nations believe this bold Soviet falsehood, and,

further, they believe it to a point where they are so fascinated at the sight of a growing United States Military Establishment that they fail to see Communist infiltration of their own countries.

The recent demonstrations of inherent national animosity in Formosa, one of our strongest and most assured supporters, should be fair warning that stability and dependability of allied help from people whose traditions and age-long habits can never be expected to conform to American ideals.

It takes little imagination to predict the plight of American civilians and military personnel in our farflung outposts should they be the unfortunate victims of mass action by resentful insurgents whose government executives either intentionally or sympathetically refuse to prevent anti-American demonstrations. The reported decision of the State Department to reduce the military and civilian personnel in Formosa may well be extended to other parts of the world where potential national uprisings could place America in the position of losing face or fighting to uphold our national dignity.

The CHAIRMAN. The Chair recognizes the gentleman from Arizona [Mr. UDALL].

Mr. UDALL. Mr. Chairman, I have not intruded on the time of the committee during this debate and I do so now really to make one point. I support the committee on this amendment and I am in opposition to the amendment offered by the gentleman from Massachusetts. One reason, of course, is that I have the very highest regard for the integrity and good judgment of the members of this subcommittee.

However, I think there is one other theme that has been a minor theme during our debate of three or four days on this bill that really should have been a major theme, and I want to bring it up again and hammer it home at this time. I think this argument is perhaps the best argument in favor of the committee throughout this entire debate.

That argument is simply this, that the time has come for the Congress to serve notice on the President and the Pentagon—and all those who make our military policy—that we want new significant steps made in unification of the services in order to cut down defense expenditures. On page 20 of the report of this fine committee you find this quotation:

> It is the firm belief of a majority of the committee that this matter of rivalry—

I say to you we have seen it here on the floor the last 3 or 4 days—

> is getting completely out of control. It is expensive and undesirable, and points up the urgent need for more effective control and direction. A sincere and self-sacrificing effort must be made by all concerned to substitute real unification for the present loose federation.

During the war and postwar period Dr. Vannevar Bush headed research and development at the Pentagon. In my opinion he is the most eminent scientist-statesman we have in this country today. A few days ago Dr. Bush called the New York Times and made a statement I want to read because I think it is highly significant. Said Dr. Bush:

> The heart of the matter, it seems to me, is this: The President can, if he wishes, cut his budget substantially and at the same time improve his defense if he will merely put his house in order at the Pentagon.
>
> The thing that needs to be done—

And note this carefully—

> The thing that needs to be done there is to see that the Joint Chiefs of Staff do some unified planning—

Some people think unification refers only to unification of procurement. "Unified planning," he says.

> so that we don't have 3 war plans, 1 for the Army, 1 for the Navy, and 1 for the Air Force, and buy everything that every Service wants to buy but buy the stuff for 1 war plan.
>
> He added that the President knew all this, but that the job of unification of the services and definition of an overall strategic plan—

This is the real point of my speech here.

> would not be achieved unless Congress insisted upon it.

I say to you that by these cuts that are being made we are serving unmistakable notice upon the Pentagon and on the President that we want significant steps to be made in the future toward a real unification. In the long run this is where the real savings are to be made. The gentleman from Texas [Mr. MAHON] has reiterated that over and over again. I say to you that this should be one of the major themes and major developments of this debate.

As we have been told, the President has great prowess as a military man and I say there is a great challenge to him during the coming year to do something in that field about real unification. There is great future challenge to him, to the Secretary of Defense, and to the Joint Chiefs of Staff.

Let us support the committee, because that is one way I see that we can say to the President that we want economy and we want more unification.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. PRICE].

Mr. PRICE. Mr. Chairman, each year at this time considerable and concentrated effort on our part is devoted to the budget for our military services. That we do devote so much attention to these matters is only proper for in these perilous times the appropriations for our Nation's security deserve the closest scrutiny.

I have read with a great deal of interest the report just rendered by the Committee on Appropriations dealing with our military budget. I know that each and every member of the committee has labored long and arduously in an attempt to come up with a bill that will insure this Nation having an adequate military posture and at a minimum cost.

Because I have read the report I must in all candor express my concern relative to the adequacies of the proposed appropriations for the Air Force. I recognize that the amount recommended for the Air Force is slightly less than 50 percent of the total military budget.

Unfortunately, however, percentages can be misleading far too often. For instance, the bill now before us totals, in the case of the Air Force, approximately $670 million less than that requested by the administration. This represents a reduction of some 3 percent. Therefore, it would only be natural for the Congress to tend to accept this proposed reduction because it seems so small.

Mr. Chairman, when we compare this 3 percent or $670 million with the $5 billion cut in the Air Force appropriations pushed through by the Republican Party back in 1953, this reduction is, in fact, peanuts.

But, Mr. Chairman, military budgets cannot be based on political expediency or party lines, nor can reductions be based for the sake of economy alone. If, in our deliberations, political expediency or false economy are permitted to influence the outcome of this budget we will, in fact, be tampering with the peace and security of this Nation.

I do not wish to go into any great detail as to the specific recommendations made by the Appropriations Committee, yet it should not be difficult to understand that through scientific achievements both military science and tactics have been brought to the threshold of new horizons.

It is the Air Force that stands to gain the most by the marvelous changes that we see occurring about us each and every day. But, Mr. Chairman, these changes cannot be realized nor be taken advantage of without some cost. Consider, for example, that a bomber of World War II cost but a small fraction of today's B–47 or B–52. It should come as no surprise to us that the weapons of the future will likewise increase in cost. But it is not equipment costs alone that have suffered because of rising prices. Today to enlist one American, to clothe, house, and feed him, to make him effective and move him about the world costs, on the average, between twelve and thirteen thousand dollars a year. As more complex weapons are developed this annual cost can be expected to increase as much as 50 percent. Two decades ago, the comparable figure was only $3,000.

Apart from these increasing costs, and because of scientific achievements, the Air Force has to remain modern and at the same time anticipate the military requirements of the immediate future. It must move down two different roads.

At the same time, it must divide its billions and its energies between two drastically different weapons systems. One is the manned force in being. This is the nuclear carrying strategic and tactical Air Forces, as well as the air defense forces for the protection of our continent. Based upon testimony of countless numbers of experts the conventional force of today must be maintained for at least 7 to 10 years.

At the same time, the Air Force must bend its energies to another weapons system: the whole oncoming weapons of long-range guided missiles, unmanned aircraft, and finally ballistic missiles. I am afraid that we would be merely shirking our responsibilities if we do not accept the fact that these programs are expensive and for the immediate future will become more expensive.

If it were not for the fact that the Soviets were frantically engaged in the creation of a military machine dedicated solely to bring about the demise of the United States, I would be the first to recommend a reduction in our military expenditures. However, the facts being what they are, we must avoid taking any foolhardy steps.

By this administration's own admission it requested some $3 billion less than Air Force experts considered to be the absolute minimum requirement. Because of this reduction the Air Force will now only be able to procure less than one-half of the new aircraft it requires to replace obsolete aircraft. Further, the production schedule for B–52's had to be cut back and the procurement of jet tanker aircraft so vitally necessary to maintain a lead in strength over the Soviet Union has been similarly reduced. Finally, it has been forced to abandon such necessary projects as the development of nuclear power aircraft.

Is it no wonder, therefore, that I am alarmed over these further recommended reductions in funding for aircraft and related procurement, maintenance and operations, and in procurement other than aircraft. Such contemplated action is truly frightening when we reflect on known Soviet technical and scientific achievements. It does us no good to buy planes if we do not supply enough money to provide the necessary spare parts and adequate ground handling equipment or to make available sufficient fuel and oil products with which to train our air crews so that they might maintain an adequate state of combat readiness. We have only to look at the appropriations for the current fiscal year to see how unwise reductions have brought about a crimping of Air Force operations, and a reduction in the flying-hour program.

Yes, Mr. Chairman, 3 percent is not very much but it may well be that this 3 percent may spell the difference between success or failure, victory or defeat. It was not too long ago that we possessed a peace of mind through our knowledge of qualitative and quantitative military superiority. We have lost our quantitative lead. Our margin of qualitative advantage is no longer so great that we can afford to remain complacent or secure in the thought that military funding can or should be reduced.

Let us not take any further calculated risks beyond that which has been taken by this administration's military budget.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. SCOTT].

Mr. SCOTT of Pennsylvania. Mr. Chairman, in this great debate between those advocates of a weaker defense budget and those advocates of a stronger defense budget, I think it is timely to report that Tass dispatches, the Soviet press bureau, reporting in the Soviet press, have been strongly critical of the President for his opposition to the proposed cuts in the military budget in the House of Representatives. As of May 23, reports datelined Washington and published in Moscow on May 21 and May 22 through Tass, the Soviet agency, are extremely critical of the President because of his statements to the Congress and the public opposing cuts in the defense budget and cuts in foreign aid generally. I quote from the Soviet news agency:

[The budget] allows the United States to set up with the least possible expense large Armed Forces in the countries bound to it by various military blocs and alliances.

I think it is interesting to allow the Soviet Government's views to be heard here, and I will leave them with whatever implication they may mean to each Member in considering whether or not it is of interest and importance to us to know that the Soviet Government cheers every possible reduction in numbers of guided missiles, in reduction of technical aircraft, in reduction of procurement, training, spare parts or anything else which the weaker national defense budget advocates urge upon us here in this House.

I regret, too, that the distinguished chairman of this committee is not present because I do find it necessary to disagree with him. With all due respect to him, he appealed to this House to believe that all we need is a defense in the air, and that the Air Force is the only arm of the service which requires budgetary help in any substantial amount; I am quite sure that the gentleman would hardly mean the implication of his remarks. We are all for ample defense in the air by the Air Force, but at the same time I wish the gentleman had had some opportunity to see the operation of the Navy's carrier task forces, with guided missile capabilities, in action, and what it means to our defense to have adequate missiles and adequate naval aircraft. I wish he had some opportunity to know what the Army is doing with its intermediate missile program and its entirely new tactics of missile and nuclear warfare. I wish the gentleman had given some consideration to the quite possible fact that future wars do not necessarily have to be all out wars, any more than were the wars in Korea, Vietnam and Egypt. I wish the gentleman had given some consideration to the fact of the grave submarine menace. It has been categorically stated in debate here that Russia already has more than 400 submarines which also offers them an opportunity to attack us by devastating means other than from the air—I am sorry that these things have to be said in the absence of the distinguished gentleman who is apparently under the impression that no comment should be made in disagreement with him except when he is present. I wish he were present even though our debate cannot wait upon his pleasure. But it is a fact that we have and urgently require a balanced system of defense. It is a fact that the aircraft carrier task force presents a highly mobile form of defense which makes it extremely difficult for any enemy to launch an attack against that force with anything like the assurance of reaching the target which such an enemy would have if the attack were launched against a fixed land position. I do not know what so-called expert, if any, ever gave him the information that the Russians would sink a nuclear-powered carrier in the first 2 hours of a conflict. It is equally true that the hunter-killer tactical developments by the Navy offers a tremendous advantage for our security, as does the antimissile missile program and many of the other things that are embodied in this budget. I hope the House will not cut out the 7,500 guided missiles or reduce the number of technical aircraft needed by the Navy.

The CHAIRMAN. The gentleman from Mississippi [Mr. WHITTEN] is recognized.

Mr. WHITTEN. Mr. Chairman, I am sure that the intention of all the Members is the same, and that is to provide adequate appropriations to maintain our defense. Having sat on this committee for some 4 months trying to arrive at what the true facts are I would like to point out some facts that I have not yet heard discussed in connection with this bill.

The Air Force will have on July 1 $17 billion unexpended though committed to a degree when this appropriation is made available to them.

The Air Force will have $3.7 billion July 1 not even obligated.

Not only that, but also the Air Force has on hand funds which have been appropriated for other purposes in prior years—and I point this out in my additional views in the report—they have so much money on hand that has been appropriated in prior years for various purposes that actually they have had to set up an operation they call "Smokeout," in which a great number of Air Force personnel is put to the job of searching out in their own records to see just how much money they did have in old accounts which they could recoup.

Up to this point the Air Force through the operation Smokeout, smoking out its own accounts, has recovered so far $1,700 million. This they call recoupment. When we say that this slight reduction in an operation where you have $17 billion unexpended, plus your appropriations here, plus a $3.7 billion of unobligated funds, with the right of transferability that they have, certainly I do not see how anyone can figure that in the next year there can by any possible chance they will not be able to meet any emergency that will arise.

Let me point out the only real issue involved in this amendment. The air contractors, the manufacturers of aircraft have had most of their facilities provided by the Government; not only that but with regard to most of the share that the aircraft companies put up the Government allows them to write off in 5 years.

Fifty of the chief manufacturers of this country had $80 billion of contracts with the Government in the last 5 years. During that time their stock increase in value from an average of $57 per share 5 years ago to $149 per share this year.

If we analyze the situation further, the aircraft companies as of the present have $10 billions in orders. The Aircraft Daily says that they have $4 billion of orders in the backlog. Involved in this is the question of whether you wish to give another $175 million of

additional backlog of orders, and that is about all that is involved here. I say that in view of the record as to the handling of contracts, in view of the tremendous profits that have been paid out, in view of the fact that the Air Force has all this money I have described to you, I say there is no real sound basis for adding to the backlog of orders to the aircraft companies at this time, and I say that advisedly.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Texas.

Mr. MAHON. And probably it would be for spare parts from the aircraft companies.

Mr. WHITTEN. That is true. I have made my point with regard to the overall aircraft companies. The aircraft spare parts are largely produced by the same manufacturers, or the same financial interests.

Mr. SHEPPARD. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. SHEPPARD. In the information the gentleman has accumulated does the gentleman know how long it would take the producing element in the Air Force category to catch up with the backlog of orders?

Mr. WHITTEN. I could not give the gentleman a definite answer.

In the subcommittee I offered an amendment which would have reduced this considerably more than the amount that would be restored and somewhat more than the committee action took out. One of the top aviation men in the Pentagon was sitting by my side. The committee did not cut as much as I would have cut, but he made the side remark to me, he said: "Mr. WHITTEN, if they cut as you say, there goes a further increase in aircraft stock values this year."

It is my opinion you can safely vote down this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Kansas [Mr. SCRIVNER].

Mr. SCRIVNER. Mr. Chairman, as I stated on last Friday, and earlier today, it is always most unpleasant to find one's self in opposition to the party leader in the House and to his President, especially when he is of your political party.

Yet, the conclusions I reached after 4½ months of hearings and discussions, after having considered right at 25 Defense Department budgets, I felt were sound and that the reductions made could be made without impairing our national defense.

I can recall in 1954 Mr. Truman's last budget called for $40,719,931,000. That was reduced to $34,434,140,000. In fact, Mr. Eisenhower's revised 1954 budget $35,771,563,000, was reduced $1,337,423,000. Mr. Wigglesworth, unfortunately was ill. It became my responsibility to bring the 1954 Defense appropriations to the floor. At that time, many of those now advocating decreases were advocating as much as $1.5 billion increase. My recollection is that the bill left the House in exactly the same amount we recommended. By my side were men who fought those proposed additions who today are asking restoration of funds.

My further recollection is that when the conference was over, for the first time in history, the figure was slightly lower than either the Senate or House—$34,371,000,000.

My further recollection is that I was commended from the White House on down to individual House Members for the good job done in holding the line and reducing the budget request.

I am still seeking to bring about practical reductions without impairing our national defense.

THIS IS NOT A WEAK DEFENSE BUDGET

Since 1953 our military power has grown. We have provided the Department of Defense with right around $130 billion in the past 4 years, together with the military aspects of atomic spending, the 4-year spending is over $200 billion. This bill adds another $33 billion. If national defense can be bought, that sum should buy it.

PLANE PROCUREMENT

If $33,500,000,000 will not give us a strong national defense, neither will $33,840,000,000.

Let us get one fact clear for now and all times. Funds for procurement of aircraft were not reduced. See page 75 of the report. Yet, I feel they could be. A few weeks ago production of the C–132 was stopped. Last week a new tactical bomber TBX by Martin was stopped according to this press release. There are other highly experimental planes including the F–106 that may or may not prove out. The present program of B–52 for which we provided funds for an additional 101 at about $8 million each, establishes 45 per wing as compared to 30 B–36's. It also provides about 50 spares—to be on hand when other planes are undergoing repair and overhaul—and in addition they provide for advanced attrition—loss by accident and loss on the ground from enemy bombing.

Now, if these planes are to be subject to enemy bombing, we have wasted billions and should be going into all-out war preparations.

Surely a cut of 10 B–52's at $8 million would not seriously impair that strength—10 out of 603.

A modest reduction could be made in the jet tanker, by converting at much lower cost some of the planes we now have becoming surplus—and then perhaps by using this jet transport fleet obtained under the guise of tankers—we could get rid of a lot of old planes and do a better, cheaper, faster job of transporting troops and equipment.

MISSILES

Now, Mr. Chairman, the missile program is the popular horse to ride. It is the "red tag" program. It used to be the "Mach" or jet program and the atom weapon program.

All the services want in on it. We have 47 different missile programs. No expense is spared—there is no limitation of funds in case of a breakthrough. Plants are being built. Salaries are fantastic.

For the Air Force or any one to say there is no way to save $70 million in a $1½ billion program is unreasonable. The time has come to pick and choose. The time has come to decide which to carry on and which to drop—and the Air Force itself has some question about the Rascal and the Air Force might well look to the Navy Petrel air-to-surface missile. Tighter contracting could save this sum. Tighter limitations should be fixed upon the fantastic salaries paid by the contractors.

SPARE PARTS

I defy the Air Force to prove with facts and figures that this modest $20 million of the modest 1-percent cut was made in relation to spare parts which will not be consumed because of the reduction in flying-hour funds.

The $175 million reductions in a $2⅓ billion request is most modest. In fact, these figures given us were, quite frankly, an estimate based upon what the Air Force called factoring.

Right now, the Air Force has over $9.6 billion in spare parts. This fund would raise that to $11 billion.

In fact, the money request for spares runs almost as much as the request for planes themselves, just a few percentage points less.

No, Mr. Chairman, if $2,164,200,000 will not give the Air Force the needed spare parts neither will $2,224,200,000.

In fact, there is no doubt in my mind but that we could have cut this item another $125 million without harm to the program and left it in just about the same relative position it is in 1957.

This budget allows 79 percent spares as it relates to complete aircraft. In 1957, it was 75.2 percent and we thought that was excessive.

The Air Force itself realizes their methods of estimating spares is most unsatisfactory and they themselves are seeking ways to work out a more satisfactory program.

MODERNIZATION

The report on page 78 discusses thoroughly the modernization program.

Many older planes are being refitted, which from an economy standpoint probably should be eliminated from the inventory.

When some of these planes are refurbished some of the plush could be eliminated, and the job done on a more austere basis.

The committee has provided $550 million—over one-half billion dollars.

That is one-fourth as much as we are providing for the procurement of brand new planes. This reduction is reasonable.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. MAHON] to close debate.

Mr. MAHON. Mr. Chairman, my good friend, the able gentleman from Pennsylvania, has said that this is a contest between those who advocate weaker defense and those who advocate stronger defense. Well, there are some elected representatives of the people who think you get stronger defense if you get more efficiency and better management, fewer unnecessary military and civilian personnel. A stronger defense program is not necessarily the most expensive defense program. We cannot

buy friends abroad with wasted dollars nor can we buy security at home with wasted billions.

The same gentleman, my friend, quoted as his authority for his position on this bill representatives of the Soviet Union. I had not thought that I would see the day when Members on either side would quote as their authority for their position on legislation the views and recommendations of the Soviet Union. I had thought and I firmly believe today that there is no greater repository on earth of duplicity and double talk than the Soviet Union, and I merely make reference to that matter in passing.

Now let me talk a few figures, and I know figures are boresome. We have used them a good deal in this debate. But, before I do that, let me compliment the gentleman from Kansas who just spoke for his fine understanding of this problem. The gentleman from Massachusetts [Mr. WIGGLESWORTH] had some concern about this, and he reserved his position in committee, and was perfectly free to offer the amendment. I would just like to give a few figures.

Let me give you the biggest one first. With the funds provided in this bill the Air Force will have on July 1, 1957, $17 billion for aircraft and related procurement. Four and five-tenths billion dollars will not be obligated. The new request was $6.2 billion, and we cut it down a bit, by $350 million, which is a relatively small sum compared to the terrific amount involved in this bill.

So, the unexpended funds will be over $11 billion on June 30, and with the appropriation in this bill you have over $17 billion for aircraft and related procurement. Boeing alone in Seattle and Wichita has in backlog orders over $2 billion. In this bill we have an additional 101 B–52 aircraft. Some have said there was more money last year in this part of the bill than this year. Last year we were told that the Soviet was building intercontinental bombers faster than we were. The other body originated the additional funds. We provided addition funds because of that alarm from the Pentagon. Later in the year, and this year, officials in the Defense Department have said that their apprehension was unfounded, that they had given us a false report, though they had done it in good faith. Most of that additional amount granted last year remains unexpended.

Speaking of missiles, there are 18 types of missiles in the Air Force program, 4 of them of the 5,000-mile range. There was available in the missile program for the Air Force $3 billion unexpended for the current fiscal year 1957. They have expended as of March 31 about $1 billion this year on missiles. The sky is the limit on the ballistic missile program. We allow in this bill $1.5 billion for missiles. I do not think this cut in funds by the committee will be reflected in the aircraft program. The Air Force has about $10 billion in spare parts. There is much waste because of the rapid change in weapons, and that is where we really rapped them on the knuckles here in making this reduction. I think that when the Air Force marches up to the starting line July 1, 1957, beginning the fiscal year with $17 billion in total, they are going to do a good job for us in keeping this country strong.

Mr. Chairman, I ask that the amendment be defeated.

The CHAIRMAN. The time of the gentleman from Texas has expired. All time has expired.

The question is on the amendment offered by the gentleman from Massachusetts [Mr. WIGGLESWORTH].

The question was taken; and on a division (demanded by Mr. WIGGLESWORTH) there were—ayes 71, noes 119.

So the amendment was rejected.

Mr. ROOSEVELT. Mr. Chairman, certain remarks were made yesterday questioning the good faith of those who had wired to the President in support of his efforts not to have the budget cut irresponsibly where services to the people would be harmed or national defense seriously impaired. It was clearly indicated that, if any of the signers vote to support the Appropriations Committee cuts, we will be contradicting our own previously stated position.

It seems to me, therefore, only fair to point out, first, that the President admits as stated that he can live with approximately half of the budget cuts suggested by the Appropriations Committee on the ground that they are mostly "paper cuts"; second, the Republican caucus held after the minority leader had attended a consultation at the White House indicated that, as members of the President's party, they would only seek to restore approximately $340 million of the suggested cuts or about 25 percent of the so-called "nonpaper cuts." A normal person might then well conclude that the President had again lowered his sights to at least this figure.

I am now reliably informed that a statement will be made later that even this proposal has been cut in half which, frankly, seems to me to justify the position of any one of the Democrats who will support the Appropriations Committee and the able and brilliant explanations made by Chairman MAHON and the members of his committee in pointing out that they only suggested cuts amounting to less than 4 percent of the entire budget. Certainly, this amount cannot be held to be crippling our national defense. From personal observation and experience, as well as from testimony by the committee, waste and inefficiency in the military services is fully established. I, therefore, while fully maintaining the position expressed to the President, will support the Appropriations Committee in the belief that we can have at least the same amount of national defense for a slightly less amount of money in the overall which, nevertheless, can be a significant amount to the individual taxpayer.

Mr. MARTIN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, for the information of the House I should like to outline the motion to recommit on which we shall probably vote in a short time. The committee reported the bill which they say included cuts of $2,586,000,000. The motion to recommit will seek to restore $313 million, which represents practically the same amendments that the committee has already rejected. In other words, 87½ percent of the committee's cuts would be sustained and we are only asking to restore 12½ percent out of respect to the views of the President and the General Staff. I ask you if that is too exorbitant a request.

Mr. TABER. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from New York.

Mr. TABER. Mr. Chairman, I have been over these cuts. I have been over the motion to recommit involving the 2 amendments offered by the gentleman from Michigan [Mr. FORD], to the Army portion of the bill; the amendment offered by the gentleman from New York [Mr. OSTERTAG], to the Navy portion of the bill, and the amendment of the gentleman from Massachusetts [Mr. WIGGLESWORTH], offered to the Air Force portion of the bill.

I believe that the United States Department of Defense would be in much better shape if the motion to recommit is adopted and we salvage 12½ percent of the cuts that the committee has made.

Mr. H. CARL ANDERSEN. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Minnesota.

Mr. H. CARL ANDERSEN. Mr. Chairman, as the gentleman from Massachusetts has stated, out of the $2,586,000,000 cut reported to the House a restoration of $313 million will be asked for in a motion to recommit. After all, Mr. Chairman, this is simply an honest difference of opinion in this House as to the needs of the armed services. I personally am in accord with the committee as to at least $2 billion of their cut. I feel as does the gentleman from Massachusetts [Mr. MARTIN] that the cut has been a little severe. Personally, I would not like to gamble; I would rather have them have a little bit too much than not enough.

Mr. MARTIN. Needless to say, I will support the motion to recommit.

Mr. MAHON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I think we all feel that we should give too much rather than too little when it comes to national-defense programs. As one who has worked for 17 years on these appropriations, I know how liberal we have been at times with the Armed Forces. I trust we have not made a mistake on this bill, and if we have I hope it has been on the side of strength.

I think the adoption of the bill may mean in the long run that we will get better defense for fewer dollars. I know that there will eventually come a bitter revulsion against defense spending if we do not do our duty and try to keep it within bounds. Greater and greater appropriations tend to accelerate the inflation spiral.

It seems to me that we have done a fairly good job. The Department of Defense will have available to it, with the bill as approved to date, in excess of $67 billion come July 1, 1957, for expenditure. A gesture toward a demand for more efficiency and economy is in the best inter-

est of national defense and in the best overall interest of the taxpayers generally. The actions of the committee in almost rubber stamping the request of the Pentagon certainly represent a position of going as far as we can afford to go under the circumstances. I hope the House will continue to support this program of strength and moderation in the House of Representatives.

Mr. FEIGHAN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it should be obvious to anyone that the huge Defense appropriation bill now before us is made necessary by the threat of Russian communism and the desire of our people to preserve the American way of life. Were it not for the conspiracy of communism and the desire of the Russians to colonize the world, it would not be necessary for us to provide the large funds authorized in the bill. But the fact remains we have no alternative other than to establish and maintain a Defense Establishment capable of deterring the Russians from further aggression in the world.

In recent weeks there has been increasing talk of the possibility that the United States could arrive at an enforceable understanding with the Soviet Union on limited disarmament. In fact, it seems as though every move made by Harold Stassen is given wide publicity, accompanied by the usual contradictory statements, but nevertheless creating the general impression that we are close to an agreement with the Russians on disarmament.

The reason why agreement in the general field of disarmament is unlikely stems from the following basic facts:

First. Communism, by its very nature, seeks to colonize the entire world for the Russians.

Second. Communism rejects all moral or ethical principles and lives by the evil axiom that might makes right.

It therefore follows that the Russian Communists use every possible device including conferences and treaties as a means to attain their goal of world conquest. They use the conference table as a powerful propaganda weapon because they know that the free press reports objectively on all nonsecret developments at international conferences attended by the Russians. They also use these conferences to wear down the opposition, confuse and divide allies, and generally to prepare the way for open end clauses in any treaties or understandings to be arrived at. These open end clauses always provide an escape hatch for the Kremlin to break any treaty entered into and simultaneously wage aggressive war against the other party to the treaty or agreement.

The record of performance on treaties entered into with the Soviet Union by non-Communist countries demonstrates beyond any reasonable doubt that the Russians only enter into treaties or undertakings that advance their goal of world conquest, that such treaties or understandings are lived up to by the Russians only so long as they advance their purpose, and that the Russians always have a convenient escape clause written into every such treaty and agreement which they quickly exercise when it serves their purposes.

It is a fair question to ask, therefore, whether any new elements have entered into the international picture which would change the black record of the Russians on the question of breaking treaties and agreements. Have the Russians demonstrated by any reasonable means that they have given up their goal of world conquest, have stopped terrorizing the people of the countries they illegally occupy, and whether we can expect them to behave as civilized human beings do? The answers to these questions are all in the negative because they are found in the cold realization that communism has not altered its basic nature. Moreover the leaders of the Communist conspiracy know that communism can survive in the world only by preserving its original aggressive, despotic, and treacherous behavior.

Less than 10 days ago the Chairman of the Joint Chiefs of Staff, Adm. Arthur W. Radford, stated:

> We cannot trust the Russians on this or anything. They have broken their word too many times.

He was referring to the Russian disarmament proposals being talked over in secret sessions in London. This statement of the obvious by Admiral Radford caused a great stir in certain quarters. A number of newspapers reported that Harold Stassen, who has been carrying on these secret talks with the Russians for a number of months, demanded a showdown at the Security Council level, on the remarks made by Admiral Radford.

When Stassen returned to London last weekend, it was reported that he carried the message that the United States was prepared to go halfway with the Russians on the question of disarmament. This immediately raises the question—What new evidence does the administration have to demonstrate the good faith of the Russians? President Truman made it clear that he was prepared to go halfway in meeting the Russians if they would first demonstrate their good faith.

This makes me curious as to just what the administration means by going halfway. It is difficult for Members of Congress to judge what this means because the talks going on in London between Stassen and the Russians are shrouded by the air of secrecy. Only time will tell what President Eisenhower means when he referred to "going halfway." It struck me as most unusual that a professional military man of proven integrity should be brought to question for standing up for what should be obvious to anyone who has made even a casual study of Communist behavior during the past 40 years. There have been sly inferences that men who, like Admiral Radford, face up to the hard cold facts of life, are nothing but warmongers. Admiral Radford knows from hard experience how terrible war really is and I am convinced that he and men like him have done and will do more to prevent world war III than all the unrealists, opportunists, and pacifists put together.

It is my conviction that until the Russians demonstrate beyond any reasonable doubt that they can be trusted, Congress will find it necessary each year to provide enormous funds for our national defense establishment. The American people are prepared to pay whatever price is necessary to preserve their freedom and individual liberty and they will not stand for a "peace at any price" attitude in resolving the Russian Communist problem.

The chairman and the members of the subcommittee are to be congratulated for the great care that has been taken in examining the original budget request and arriving at the figures recommended. We must give the taxpayer a full dollars' worth of national defense for every dollar they pay in taxes. I hope the committee will continue to look into production methods authorized by the Defense Department, particularly the Air Force. Congress must be certain that the most efficient, inexpensive, and modern production methods are used by all prime contractors because it is in this area that we can quickly lose or save billions of tax dollars.

Mr. ROOSEVELT. Mr. Chairman, I ask unanimous consent to revise and extend my remarks at that point just prior to the remarks of the distinguished minority leader.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The Clerk read as follows:

PROCUREMENT OTHER THAN AIRCRAFT

For procurement and modification of equipment, supplies, and materials, and spare parts therefor, not otherwise provided for; ground electronic and communication equipment; and the purchase of passenger motor vehicles for replacement only (including 10 and 8 at not to exceed $3,000 and $2,400 each); $1,125,000,000, to remain available until expended.

Mr. LAIRD. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LAIRD: On page 22, line 9, strike out all after the semicolon and insert $1,146,500,000 to remain available until expended, of which the amount of $21,500,000 shall be transferred to "Establishment of air navigation facilities," CAA for the Department of Defense share of the cost of the 1958 program for the air navigation system known as VORTAC.

Mr. MAHON. Mr. Chairman, I reserve a point of order against the amendment.

The CHAIRMAN. The gentleman from Texas reserves a point of order against the amendment.

The gentleman from Wisconsin [Mr. LAIRD] is recognized.

Mr. LAIRD. Mr. Chairman, the Commerce Appropriations Subcommittees of both the House and Senate have been concerned with how the Nation could be provided with a system of aids to air navigation known as VORTAC (very high frequency omni-range tactical air navigation facilities). This equipment contributes to the safety of air traffic. The VORTAC units are signal devices necessary to the high performance aircraft now being utilized by the military

and will be essential to the new civil jetliners now being manufactured.

Detailed questioning by the committee has brought out that over 40 percent of the use of enroute air navigation facilities is made by military aircraft in bad weather conditions. The need for this equipment has been exhaustively studied and is strongly supported as a technical requirement by both Department of Defense and civil officials. Based on the best technical information available, it is necessary that a national system of improved air navigation aids, providing azimuth and distance data obtainable from VORTAC equipments, be in operation by July 1, 1960.

These facts are known to the House Appropriations Committee and the Commerce Subcommittee, as indicated in paragraph 5 of page 5 of our report, intended to provide adequate funds for the system but reasoned that, first, the military would for some time be the exclusive user of a portion of the VORTAC system; second, the military uses about 40 percent of the capacity of the Federal airways; and third, the military agencies had developed components of the system and have requirements which make it necessary to adopt and use VORTAC in lieu of other equipments suitable to civil purposes. These and other facts made it clear to the committee that in the adoption and use of VORTAC equipments for common civil-military navigation and traffic control of aircraft the Department of Defense has substantial vested interest. The committee, therefore, concluded that approximately one-third of the cost should be provided from Defense funds.

There is no difference of opinion as to the need for this equipment. If there is to be an effective system for navigational use of both civil and military aircraft, some 367 VORTAC units must be in operation by July 1, 1960. However, funds appropriated for this purpose will permit only 243, or approximately two-thirds of the requirement, to be installed by that date.

The purpose of the amendment I propose is to assure the availability of necessary equipment and associate the cost appropriately with the defense requirements. At this stage of the process of Congressional action on the 1958 budget, this much-needed equipment, which has been extensively considered in both the executive and legislative branches, can be assured by adopting my amendment which would increase the Department of Defense appropriation bill by $21.5 million.

I sincerely hope the gentleman from Texas will withdraw his point of order and will allow the House to vote on this important amendment.

I believe it is necessary for us at this time to increase the Air Force appropriation for procurement other than aircraft to provide that the Air Force will fulfill its responsibility for this new navigation facility which is so necessary for the Air Force now and will be vital as far as civilian aircraft is concerned when the jets come into being in 1960.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

The gentleman from Texas reserves a point of order; does he wish to withdraw the point of order?

Mr. MAHON. Mr. Chairman, I realize and I think we all realize that this amendment is subject to a point of order, and I am troubled as to what should be done about it. It is true that in the Commerce bill the Appropriations Committee in its report said it felt these funds—the gentleman from Georgia [Mr. PRESTON], knows about this—that it was the thought of the committee that these funds should be provided by the Air Force for this general air navigation purpose. That report was approved by the Committee on Appropriations and by the House, I assume, in approving the bill.

The other body took similar action.

I personally do not understand the problem well enough to be completely convinced as to what action should be taken, but I realize that we are to some extent committed to provide the funds. I do not like to do this in this way, but the gentleman from Kansas, who perhaps knows more about the Air Force budget than any other Member of the House of Representatives, feels very strongly about it. In view of the fact that undoubtedly the funds will have to be provided from some source in the interest of safer navigation I am willing not to make the point of order, and I shall vote for the amendment. It is all right with me to approve the item. Before it goes to the other body I shall ask the Department of Defense to thoroughly explore the matter. Then, when the matter goes to the other body I shall feel free to appear before the other body in connection with it as spokesman for our subcommittee if this appears desirable.

So under the circumstances I withdraw my point of order reservation.

Mr. SCRIVNER. Mr. Chairman, I move to strike out the last word.

As has been explained by the gentleman from Wisconsin, [Mr. LAIRD], the situation resolves itself this way and this simply: That in the Commerce Appropriations Subcommittee a $21-million reduction was made with the proviso that it would be forthcoming from the Air Force.

We cannot at this time reduce this item in the Air Force budget any further, and to carry out the commitment made by the full Appropriations Committee of 50 members, I feel that this amendment should be adopted.

Mr. MAHON. Mr. Chairman, I ask for a vote.

Mr. HASKELL. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Delaware?

There was no objection.

Mr. HASKELL. Mr. Chairman, I wish to speak in support of the amendment offered by the gentleman from Wisconsin which would provide $21.5 million for additional VORTAC, an electronic, navigational system which has been requested by the Civil Aeronautics Administration to improve our national air traffic control system.

I have talked with my good friend from Wisconsin about this matter, and I know of his great interest in seeing that action is taken to provide better air safety for commercial, private, and military aviation.

Military aviation, as well as our commercial and private aviation, depends heavily on our national system of air traffic control to fulfill its training and defense missions. It is proper that the the defense budget should make some provision for the acquisition of these units which would be of direct benefit to the military as well as the civilian. The adoption of this amendment would demonstrate the intention of Congress to see that effective steps are taken to correct the dangerous situation which exists in air traffic control today.

I have been deeply concerned with the air safety situation in the United States. Two weeks ago, I attempted to bring the problem to the attention of the House by pointing out that near collisions in midair are occurring between aircraft of all types several times a day over our major cities. Our present control system is outmoded and inadequate and I believe we must take immediate action.

These VORTAC units are part of CAA's overall program which I believe we must have to avoid a series of major air disasters in this country.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin.

The amendment was agreed to.

PROGRAM FOR WEEK OF JUNE 3

Mr. MARTIN. Mr. Chairman, I move to strike out the last word and take this time to ask the majority leader if he can outline the program for next week.

Mr. McCORMACK. I shall be happy to.

With the completion of this bill today, if it is completed, and I hope it will be, there will be no more legislative business this week, tomorrow being May 30.

As to the program for next week:

Monday we will call the Consent and the Private Calendars.

There will be one suspension: H. R. 7238, to amend the Social Security Act relative to more effective distribution of Federal funds for medical and other remedial care. That was reported out of the Ways and Means Committee today.

That will be followed by H. R. 6974, to extend the Agricultural Trade Development and Assistance Act.

On Tuesday a Senate bill will be taken up for consideration, S. 469, termination of Federal supervision over the Klamath Indians.

On Wednesday, Thursday, Friday, and Saturday we will consider H. R. 6127, the Civil Rights Act of 1957. On Wednesday the rule will come up for consideration first. The rule provides for 4 days of general debate.

Mr. MARTIN. It is the purpose of the gentleman from Massachusetts to meet on Saturday to expedite passage of that bill?

Mr. McCORMACK. Exactly. From now on the Members might be alerted to the fact that we will meet on Saturdays, if necessary. We will meet constantly

throughout the week as the legislative business demands.

The usual reservations that conference reports may be brought any time and any further program will be announced later. I understand the Commerce Department conference report may be brought up Monday.

The Clerk read as follows:

MILITARY PERSONNEL

For pay, allowances, clothing, subsistence, transportation, interest on deposits of enlisted personnel, and travel in kind for cadets and permanent change of station travel for all other personnel of the Air Force of the United States on active duty including duty under sections 265 and 8033 of title 10, United States Code (other than personnel of the Reserve components, including the Air National Guard, on active duty while undergoing Reserve training), including commutation of quarters, subsistence supplies for issue as rations to enlisted personnel, and clothing allowances, as authorized by law; and, in connection with personnel paid from this appropriation, for rental of campsites and local procurement of utility services and other necessary expenses incident to individual or troop movements (including packing and unpacking and transportation of organizational equipment); ice, meals for recruiting parties, monetary allowances for liquid coffee for troops when supplied cooked or travel rations, and commutation of rations, as authorized by law, to enlisted personnel, including those sick in hospitals; transportation, as authorized by law, of dependents, baggage, and household effects (including storage thereof) of personnel paid from this appropriation; rations for prisoners of war and general prisoners; subsistence supplies for resale, as authorized by law; commutation of rations, as authorized by regulations, to general prisoners while sick in hospitals; subsistence of supernumeraries necessitated by emergent military circumstances; expenses of apprehension and delivery of deserters, prisoners, and members of the Air Force absent without leave, including payment of rewards (not to exceed $25 in any one case); confinement of military prisoners in nonmilitary facilities; and donations of not to exceed $25 to each civilian prisoner upon each release from a military prison, to each enlisted man discharged otherwise than honorably upon each release from confinement under court-martial sentence, and to each person discharged for fraudulent enlistment; $3,801,600,000.

Mr. YATES. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I had intended to offer an amendment to this section of the bill on a matter which I feel deeply; but this is an appropriations bill and legislative provisions are improper. Hard as I have worked to draft one which would be in order and avoid the prohibition against provisions legislative in nature, I have been unable to find a proper form. Accordingly, I shall file a bill which will present the matter to the appropriate legislative committee.

But I could not in good conscience permit this bill to leave the House without making my protest against the flagrant discrimination toward military personnel of Jewish faith—American citizens, mind you—which exists today in the Middle East.

Mr. Chairman, tomorrow is Memorial Day, a day revered by all Americans. It is a day when with deep humility and gratitude we pay tribute to the heroic men and women of our armed services who gave their lives that our Nation might live. To many, the holiday brings special memories of loved ones who have gone—of thrilling deeds of courage—of examples of total sacrifice like that of the four chaplains of the *Dorchester*. You will recall that the *Dorchester* was a troopship which was struck by a torpedo in the mid-Atlantic. As the ship began to sink, some of the soldiers became frightened. In an effort to calm the boys, the 4 chaplains aboard—a priest, a rabbi, and 2 Protestant ministers took off their life belts and gave them to 4 soldiers who had none. Then, as the ship began to settle beneath the waves, the 4 chaplains placed their arms around each other's shoulders, looked heavenward and prayed to God, each in his own way. In this brotherly embrace, they went to their deaths together.

It is entirely fitting and proper that the appropriations bill for our Armed Forces should be considered during Memorial Day week. It is proper, too, because of the significance of Memorial Day that we review one of the items contained in this bill, rather small by comparison to other appropriations, but a meaningful one, nevertheless. It concerns the assignment of personnel for the Dhahran Airbase in Saudi Arabia. The United States does not own the base. We have a 5-year lease for its use under certain conditions. One of the conditions has been interpreted by the Government of Saudi Arabia to exclude all American military personnel of Jewish faith from service at the base. In response to objections which I have made against this intolerable condition, and which other Members of Congress have made, the State Department has filed protests with the Saudi Arabian Government, but has been unable to alter its attitude.

Last year the Senate took note of this abhorrent condition and passed a resolution reading as follows:

Resolved, That it is the sense of the Senate that it regards any such distinctions directed against United States citizens as incompatible with the relations that should exist among friendly nations, and that in all negotiations between the United States and any foreign state, every reasonable effort should be made to maintain this principle.

The principle to which the resolution was directed was the principle of religious freedom, which is one of the cornerstones of our Constitution. But nothing has been done by the executive branch to implement this resolution.

Some people may say that soldiers of Jewish faith are fortunate in not having to serve in such a desolate area. Others would say there is nothing we can do under the circumstances. We need the base. These viewpoints sound the triumph of expediency over principle, and represent an attitude which is basically inimical to our way of life. The principle of religious liberty has been a foundation of our foreign policy since the birth of our Nation. Time and again our Government has denounced attempts to interfere with the religious freedom of American citizens and has taken drastic action to correct efforts to flout the principle. Almost 75 years ago when Mr. Keiley was appointed American Minister to the Austro-Hungarian Empire, our State Department was advised by the Austro-Hungarian Government that this appointment was unacceptable because Mr. Keiley was married to a lady of Jewish faith. Our then Secretary of State Bayard indignantly rejected the Austro-Hungarian Government's note and immediately dispatched a reply:

It is not within the power of the President, nor Congress, nor of any judicial tribunal of the United States to take or even hear testimony in any mode, or to inquire into or decide upon the religious belief of any official, and the proposition to allow this to be done by any foreign government is necessarily inadmissible * * * to suffer an infraction of this essential principle would lead to a disfranchisement of our citizens because of their religious belief, and thus impair or destroy the most important end which our Constitution of Government was intended to secure.

A former Secretary of State of the United States, Louis Cass, stated the object of our foreign policy to be:

Not merely to protect a Protestant in a Catholic country, a Catholic in a Protestant country, a Jew in a Christian country, but rather to protect an American in all countries.

In another instance, under the leadership of Secretary of State Foster, grandfather of our present Secretary of State John Foster Dulles, a treaty of friendship with Russia was abrogated in 1911 because of Russia's discrimination against American citizens of Jewish faith.

Admittedly King Saud may establish conditions for entry into his sovereign state, but the United States is not required to accede to them. Jewish servicemen are not now permitted to serve with their comrades at the Dhahran Air Base. What would we do if King Saud were to extend his religious prohibition and exclude United States soldiers of Catholic or Protestant faith from entering his domain? After all, it has been reported that religious services for members of such faiths are subject to certain restrictions. Let us consider, also, what might have occurred a few weeks ago when the Government of Jordan was tottering and President Eisenhower dispatched the 6th Fleet and a Marine division to the eastern Mediterranean to show his readiness to implement the Eisenhower Middle East resolution. Would marines of Jewish faith have been removed from the troops sent to repel the aggressor?

Once having relented on our determination to sustain the principle of religious freedom, where would we draw the line against the same abject surrender in other instances of discrimination? We have bases in other nations of the world. If such nations were to impose provisos as intolerable as this, could we insist upon sustaining the constitutional principle having looked the other way in the Middle East? Expediency leads inevitably to frustration and the destruction of our ideals.

Many years ago, when Archbishop P. J. Ryan was a very young priest, he was stationed at a parish in St. Louis where Archbishop Kendrick presided over the diocese. The latter lived in a

very small, unpretentious house, scarcely in keeping with his position in the church. One day when Father Ryan was passing the house of the archbishop accompanied by a visiting priest, he pointed out the house as that in which the head of the St. Louis diocese lived. The visiting priest exclaimed in surprise: "Why, you should see the splendid residence we have in New York City for our archbishop." "Yes," said Father Ryan, "but you should see the splendid archbishop we have in St. Louis for our residence."

America is unique among the nations of the world for its democratic traditions and ideals. The world respects and admires the spiritual values we cherish. There is no question but that the airbase in Saudi Arabia is of great value. The principle of religious freedom is also of great value. If such values conflict, is not our choice—a splendid house or a splendid archbishop?

Mr. Chairman, it is unthinkable that this abhorrent and un-American situation shall be permitted to continue. Our Department of State must press relentlessly for its termination.

Mr. ROONEY. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from New York.

Mr. ROONEY. Mr. Chairman, I rise to say that I am in thorough accord with the distinguished gentleman from Illinois in his just and rightful criticism of this situation. I feel that he should be highly commended for accentuating the deplorable agreement with King Saud in such eloquent fashion.

Mr. ROOSEVELT. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Chairman, I have had the privilege of working with the distinguished gentleman from Illinois in his efforts to find appropriate amendments to this appropriation bill.

It would seem incredible that a country of the standing of the United States ever would have to give in to the conditions such as demanded by Saudi Arabia, and I find it hard to belive that firm leadership in the beginning would not have overcome such demands or that, if insisted upon, our country could not have negotiated an equally advantageous base some other place.

I join with the distinguished gentleman from Illinois in hoping that legislation may be later approved which will prevent a reoccurence of this disgraceful situation and that never again will the United States ever give rise, even by implication, to the premise that we allow any distinction among our citizens in their equality or rights.

The Clerk concluded the reading of the bill.

Mr. ROOSEVELT. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Chairman, section 609 of this bill repeats in general form the intent of the Congress which has previously been stated as far back as the first War Powers Act of 1941. It was repeated when this act was amended in 1951. It was included in such measures as the Defense Production Act of 1950, the Armed Services Procurement Act of 1947, the Universal Military Training and Service Act of 1948, the Federal Property and Administrative Services Act of 1949, and the Department of Defense Appropriation Act of 1957.

These declarations come from recognition by the Congress that small business is a vital and necessary part of a rounded defense effort, as well as vital to the sound economic system in a democracy. Unfortunatey, the statement of Congressional policy, in spite of protestations to the contrary, has not been reasonably carried out by the Department of Defense. I merely cite the fact that, whereas in 1956 the Department of Defense in the continental United States spent $17,750,840,000, small-business concerns received only approximately $3½ billion or 19.6 percent. In 1957, the current fiscal year, according to current estimates, the percentage awarded to small business will decline to approximately 16.5 percent.

It is, therefore, my hope that the Appropriations Committee will find it possible to induce the Department of Defense to achieve the following program:

First. Raise the share of small-business concerns in purchases and prime contracts entered into by the military services to not less than 25 percent of the procurement dollars expended by the Department of Defense.

Second. Have the military services award a much higher percentage of their prime contracts in the procurement of supplies and services which small-business concerns are readily capable of furnishing in order to compensate for procurements which by their nature are beyond the capacity of small business.

Third. Conduct an extensive review of the products not now considered to be within the production capability of small business in order to determine whether some of these products cannot, in fact, be obtained through small business.

Fourth. Increase markedly the participation of small business in the research programs of the Department of Defense.

Fifth. Give added emphasis to the set-aside program now in operation in cooperation with the Small Business Administration. Make sure that in the awarding of prime contracts and supplies and services now considered by the Defense Department to be actually within the capacity of small business they actually are awarded to them.

Mr. Chairman, may I conclude by again congratulating the Committee on its handling of this profoundly important budget and in its devotion to the principles of providing for the United States the greatest possible national defense at the lowest possible cost to the country.

Mr. MAHON. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. MAHON. Mr. Chairman, I wish to make a reference to the problems of small business and insert in the RECORD at this point some reference to contract awards to small business.

CONTRACT AWARDS TO SMALL BUSINESS

I am happy that the gentleman from California [Mr. ROOSEVELT] has raised this very important question. The subcommittee on Department of Defense Appropriations has for many years expressed interest in the welfare and stability of our small business enterprises, not only from the standpoint of keeping this important segment of our economy strong, but also from the standpoint of encouraging greater competition for orders for military items of equipment and supply with resultant savings to the Government.

I am informed by the Department that from July 1956 through March 1957 small business received 57.6 percent of their potential. The term "potential" is used to designate the areas in which small business may compete and excludes such areas as guided missiles, aircraft, aircraft engines, and battleships, where there are no known small business sources. This small business potential during this period represented 29.3 percent of the total awards by the military departments. The Department of Defense has conducted a thorough analysis of the reasons why small business did not receive a higher percentage than 57.6 percent of their potential. Of the potential that was lost, 77.8 percent of it was due because small business was not competitive. Nearly 20 percent of this loss to potential was occasioned by the fact that small business did not bid on these items considered within their scope.

I also note that on page 692 of the RECORD for May 27, the gentleman from Massachusetts [Mr. PHILBIN] gives a rather thorough analysis of the situation surrounding small business and defense procurement. Mr. Philbin seems to feel that considerable progress has been made in the Defense Department with respect to expanding opportunities of small business to participate in defense procurement.

I also feel that the Department is giving serious and helpful consideration to small business. The bill continues language under section 609 which expresses the continued interest of Congress in this matter. The gentleman may rest assured that the committee will continue to encourage the expansion of the participation of small business enterprises in the large and varied procurement program of our defense establishment.

Mr. SIKES. Mr. Chairman, I wish to have inserted in the CONGRESSIONAL RECORD the article by Donald Baldwin entitled "Tour of Korean Front Finds United States Force Weak," which appeared in the Washington Post and

Times Herald on May 27, 1957. Mr. Baldwin's story follows:

TOUR OF KOREAN FRONT FINDS UNITED STATES FORCE WEAK

(By Donald Baldwin)

SEOUL, May 26.—United States forces in Korea today are woefully weak. Their unmanned battle positions are overgrown with weeds—an invitation to Communist attack.

In contrast, the North Koreans and Red Chinese across the demilitarized zone have built up an army in 4 years of armistice far more powerful than at any time during the Korean war.

The Communists have new jet planes, new tanks, new artillery, and in the opinion of South Korean intelligence officers they may also have atomic weapons. All the weapons in South Korea are either obsolete or obsolescent.

TEN-DAY INSPECTION MADE

A 10-day inspection by an Associated Press team found alert, seemingly well-trained South Korean soldiers manning 150 miles of the front from well-entrenched positions, although they were equipped with old, World War II weapons.

But a 5-mile-wide sector, athwart the classic invasion route north of Seoul, is entrusted to an American division only 60 to 80 percent of normal strength. The South Koreans—criticized during the war for failing to stand and fight alongside Americans—call the American sector the weakest link in the battle line. United States field commanders openly express concern.

This is how the opposing sides stack up today:

In the south, there are about 700,000 South Korean troops, about 80,000 Americans including 2 Infantry divisions and logistics and command units, and fewer than 5,000 other United Nations troops, including a British regiment in the process of being withdrawn.

This compares with an 800,000-man U. N. army at the end of the Korean fighting in 1953—but the weapons are old now and have not been replaced because of a ban in the armistice agreement against introduction of new-type equipment.

RED STRENGTH GREATER

In the north, according to intelligence reports, the North Koreans have a reorganized and reequipped a 400,000-man army and the Chinese Communists have a 350,000-man garrison. There are also at least a million Red Chinese troops across the Yalu River in Manchuria. The Communist forces in Korea during the war were estimated at more than a million.

The Communists have ignored the ban on new weapons. They have shipped in 1,672 artillery pieces, 340 new tanks, in addition to the 480 they already had, 500 jet and 300 propeller-driven planes.

There are recurrent—but unconfirmed—reports that their new artillery includes atomic cannon with a range of 15 to 20 miles, which is manned by Soviet technicians.

The Red jets include about 250 Mig-17's—later model interceptors than the Manchuria-based Mig's which were bested by United States Saberjets during the Korean fighting.

The U. N. forces still have about 150 Sabres, half flown by American pilots and half by South Koreans. Other United States fighter-bombers and light bombers have been withdrawn because of their age. Even the Sabres have been superseded elsewhere by newer fighters.

United States strategy appears to be based on the assumption that the Communists will not attack so long as there are any American forces in South Korea, even though understrength. South Korean generals, however, feel sure the Communists will invade the country again as soon as they feel able.

YANKS EXPENDABLE?

On the Allied side is the knowledge that a fast jet bomber could deliver an atomic bomb from its Okinawa base to a Korean target in under 2 hours, and the general assumption here is that no holds will be barred if fighting breaks out again.

In that event, some officers here say, American troops on the scene might of necessity be expendable if evacuation proved impossible. Asked what would happen if there was another Communist attack, a high officer in United States headquarters, said:

"We'd be in a terrible position."

On paper, both United States divisions are fully manned for action, with Americans firing every gun. But a visit to the two units showed both were far below strength.

All but one of the frontline regiments are miles from the frontline. It would take them from 1 to 3 hours to reach their battle positions, now weathered and overgrown with weeds in the almost 4 years of suspended combat.

The regiment that is close to its positions is located north of the Imjin River above Seoul, and in event of attack would probably have to pull back quickly behind the natural barrier or risk annihilation.

All across the American-held sector, however, continuous and active training programs are under way and morale appears to be good.

Still, a lieutenant colonel commanding a United States tank battalion said:

"If my outfit had to go into combat today I'd be forced to leave 15 or 20 tanks behind because I haven't the crews to man them."

Mr. MAHON. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. KEOGH, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H. R. 7665) making appropriations for the Department of Defense for the fiscal year ending June 30, 1958, and for other purposes, had directed him to report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The SPEAKER. Without objection, the previous question is ordered.

There was no objection.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

Mr. CANFIELD. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. CANFIELD. I am, sir.

The SPEAKER. The gentleman qualifies.

The Clerk read as follows:

Mr. CANFIELD of New Jersey moves to recommit the bill to the Committee on Appropriations with instructions to report the bill back forthwith with the following amendments:

Page 8, line 1 (under Army operation and maintenance), after the word "Government", strike out the figure "$3,145,200,000" and insert in lieu thereof "$3,225,200,000."

Page 10, line 5 (under Army research and development), after the word "law", strike out the figure "$392,000,000" and insert in lieu thereof "$400,000,000."

Page 15, line 15 (under Navy aircraft and related procurement), after the word "appropriation", strike out the figure "$1,812,000,000" and insert in lieu thereof "$1,862,000,000."

Page 22, line 1 (under Air Force aircraft and related procurement), after the word "things", strike out the figures "$5,846,000,000" and insert in lieu thereof the figures "$6,021,000,000."

Mr. MAHON. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

Mr. CANFIELD. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 151, nays 242, not voting 40, as follows:

[Roll No. 91]

So the bill was passed.

The Clerk announced the following pairs:

Until further notice:

Mr. Hébert with Mr. Baumhart.

Mr. Holtzman with Mr. James.

Mr. Smith of Virginia with Van Pelt.

Mr. Buckley with Mr. Smith, Calif.

Mr. Dawson, Ill., with Mr. Schwengel.

Mr. Lennon with Mr. Mason.

Mr. Hays of Arkansas with Mr. McGregor.

Mr. Aspinall with Mr. Cole.

Mr. Coad with Mr. August H. Andresen.

Mr. Diggs with Mr. Hillings.
Mr. Hemphill with Mr. Jenkins.
Mr. Rains with Mr. Kearney.
Mr. Forrester with Mr. Kilburn.
Mr. Powell with Mr. Siler.
Mr. McMillan with Mr. Wolverton.
Mr. Murray with Mr. Hoeven.
Mr. Grant with Mr. Beamer.
Mr. Sieminski with Mr. Fino.
Mr. Bowler with Mr. Gwinn.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members speaking on the bill today may be permitted to revise and extend their remarks and insert appropriate extraneous matter, and that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

COMMITTEE ON WAYS AND MEANS

Mr. COOPER. Mr. Speaker, I ask unanimous consent that the Committee on Ways and Means may have until midnight Friday night to file a report on the bill H. R. 7238, to amend the public assistance provisions of the Social Security Act so as to provide for a more effective distribution of Federal funds for medical and other remedial care.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CHANGES IN FEDERAL EXCISE TAX LAWS

Mr. DELANEY, from the Committee on Rules, reported the following privileged resolution (H. Res. 270, Rept. No. 493), which was referred to the House Calendar and ordered to be printed:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 7125) to make technical changes in the Federal excise tax laws, and for other purposes, and all points of order against the bill are hereby waived. That after general debate, which shall be confined to the bill, and shall continue not to exceed 2 hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Ways and Means, the bill shall be considered as having been read for amendment. No amendment shall be in order to said bill except amendments offered by direction of the Committee on Ways and Means, and said amendments shall be in order, any rule of the House to the contrary notwithstanding. Amendments offered by direction of the Committee on Ways and Means may be offered to any section of the bill at the conclusion of the general debate, but said amendments shall not be subject to amendment. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion, except one motion to recommit.

POLICY AND PROCEDURE IN CONNECTION WITH CONSTRUCTION CONTRACTS MADE BY EXECUTIVE AGENCIES

Mr. MADDEN, from the Committee on Rules, reported the following privileged resolution (H. Res. 271, Rept. No. 494), which was referred to the House Calendar and ordered to be printed:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 7163) to prescribe policy and procedure in connection with construction contracts made by executive agencies, and for other purposes. After general debate, which shall be confined to the bill and continue not to exceed 2 hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on the Judiciary, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion, except one motion to recommit.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McBride, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendements of the Senate to the bill (H. R. 6871) entitled "An act making appropriations for the Departments of State and Justice, the judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes."

STABILIZATION OF DOMESTIC LEAD AND ZINC MINING INDUSTRIES

Mr. METCALF. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. METCALF. Mr. Speaker, I have just introduced a bill to stabilize the domestic lead and zinc mining industries.

The bill would set the minimum price for lead at 18 cents a pound, for zinc at 15 cents. Lead is now selling for 15 cents, zinc is bringing 11½ cents.

Under the bill, an import tax of 6 cents a pound would automatically replace the existing tariff upon imported lead whenever the domestic market price averages less than 18 cents for 1 calendar month. The President would suspend the special tax after the domestic market price of common lead delivered at New York City averaged at least 18 cents a pound for 2 consecutive months.

An import tax of 6 cents a pound would automatically be imposed on zinc whenever the average domestic market price is below 15 cents a pound f. o. b. East St. Louis, Ill., for 1 calendar month. The President would suspend the tax after the average domestic market price of zinc averaged at least 15 cents a pound for 2 straight months.

Passage of this bill will set a price at which domestic miners can produce and sell in this country. The average production cost in this country is close to 17 cents for lead and just under 15 cents for zinc.

In 1950, United States mine production of lead was 430,827 short tons. In that same year, we imported 521,796 short tons, or 28 percent more than the domestic mine production. In 1956, domestic mine production had fallen to 348,329 short tons. Last year, we imported 458,553 short tons of lead, still 28 percent more than domestic production.

In 1950, domestic mines produced 623,375 short tons of zinc. That year, we imported 434,547 short tons, or 70 percent less than domestic production. In 1956, domestic production fell to 537,643 short tons—but we imported 770,775 tons, or 43 percent more than domestic production.

In the past 7 years, foreign producers have retained their dominance of our lead market and have virtually taken over zinc production. This has brought a recession to the miners of the West and to the business communities which serve them.

The administration program, outlined last Friday by Secretary of the Interior Seaton, is nothing.

As one miner told me, the administration's sliding-scale import tax proposal is slow death. If we cannot have something better, we might as well make it quick.

THE ANTI-AMERICAN RIOT ON FORMOSA ISLAND

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. ZABLOCKI. Mr. Speaker, the subcommittee on the Far East and the Pacific of the Committee on Foreign Affairs has already inquired into the causes of the recent anti-American riots on Formosa, and demonstrations in other parts of the Far East. The subcommittee has received only preliminary reports and statements on this subject from officials in State and Defense Departments. It will want to know much more before it can make an accurate assessment.

It appears certain that the demonstration of the type which occurred in Taipei could not materialize spontaneously, without some preparation, and without some realization of the possibility that it was forthcoming on the part of the Chinese Nationalist Government, and of our own intelligence. If neither our own intelligence, nor that of the Nationalist Government, was aware of the

impending possibility of such a riot, such ignorance warrants an explanation.

The violence of the riot, the extensive damage it caused to United States property, and the physical violence it inflicted on American personnel on Formosa, cannot be lightly passed over. They call for a thorough reexamination of our position with respect to Formosa, and of our programs and actions affecting that island.

It would be shortsighted if we tried to delude ourselves into believing that a riot of such proportions does not point to the presence of factors and attitudes on Formosa which touch the very basis of our relationship with the Chinese Nationalist Government.

We have proceeded on the assumption that the Nationalist Government is the embodiment of the hope of the non-Communist Chinese and that its policies are supported by the people of Formosa, and that its course is securely bound to that of our Nation. We have considered it fundamental to our own security that Formosa not fall into the hands of the Communists.

The riot in Taipei, particularly in view of its proportions, raised a question about the extent to which the population of Formosa approves the course chartered by the Nationalist Government, and its relationship to our country and to our basic foreign policy. These aspects of the situation, in my opinion, warrant continued examination by the executive branch and by the Congress.

ADDITIONAL PROGRAM FOR NEXT WEEK

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, in addition to the program I announced earlier, I was later informed that there might be an agreement reached on the Commerce Department appropriation bill, in which event that bill will come up for consideration on either Monday or Tuesday, probably Monday.

Mr. Speaker, there will be no legislative business tomorrow. We are meeting tomorrow in order to adjourn over until Monday, otherwise we would have to adjourn from today to Friday and from Friday to Monday. We will adjourn until tomorrow and then meet on Monday next.

ADJOURNMENT FROM THURSDAY TO MONDAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns tomorrow it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

JUSTICE FOR THE SELF-EMPLOYED

Mr. OSMERS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. OSMERS. Mr. Speaker, America is penalizing ambition, initiative, thrift, and self-reliance. This is a shortsighted policy which we must act to rectify at once.

I seek tax justice for the 10 million self-employed Americans who earn their living in the best American tradition.

Many are physicians, dentists, lawyers, accountants, architects, veterinarians, and members of other professions which serve mankind.

They spent years preparing themselves for their lifework—years of expensive education for which many of them went heavily into debt. Often their peak earning years are crowded into a shorter span than those of the person who works in a salaried position. The years during which they might accumulate savings for retirement—are the years during which Uncle Sam takes the largest tax bite from their income.

Other self-employed taxpayers are our independent businessmen and farmers.

I believe that these fine people should not be penalized as they are today by full taxation on the accumulation of savings for old-age retirement, just because they have the ambition, the determination, and the self-reliance to work for themselves.

If they became employees, they would in many cases enjoy a tax break on some of their retirement income—a tax break for which they are now ineligible as self-employed workers.

This tax break is accorded to the beneficiaries of company pension plans which now cover some 15 million employees. These employees receive the benefit of Federal income tax liability deferment.

These company pension plans benefit not only the man behind the lathe in the plant, but to an even greater extent the executive behind the desk in the company office.

Here is how tax deferment works under present law to benefit a high-salaried executive.

For example, corporation Vice President Smith draws a $20,000 a year salary on which he pays the regular income taxes. In addition, his company pays $3,000 a year additional into its qualified employees' trust for Mr. Smith. This $3,000 benefit for Mr. Smith is not regarded as part of his taxable income until he actually receives it many years later from the trust.

By then, having retired, his income is probably less, and he is likely to be in a lower income bracket.

But self-employed people who set aside funds for their retirement have no such right to defer income tax liability on these savings.

I am a strong supporter of legislation proposed to correct this inequity. The Jenkins-Keogh bills, H. R. 9 and H. R. 10, would extend this tax deferment principle to America's self-employed on some of their savings for retirement income.

Here is what this legislation proposes:

In general, a self-employed person would be able to defer income tax liability on a specified portion of savings which are, first, put into restricted retirement life insurance or annuity contracts; or, second, into restricted retirement funds held by a bank as trustee or custodian.

The annual amount which could be put into such funds or insurance, with tax liability deferment, would be limited to 10 percent of earned income or $5,000 per year, whichever is less—up to a total of $100,000 during an individual's lifetime.

A special rule is proposed for taxpayers who would have passed the age of 55 on the effective date of the bill. They would be allowed to put additional money into such funds under the same conditions, with the additional amounts determined by their age.

Cash benefits would be subject to Federal income tax when received from these trust funds and insurance policies. In case of a lump sum distribution, they would be taxed as a long-term capital gain if the fund has accumulated over a period greater than 5 years.

Passage of this legislation would benefit the entire Nation as well as those individuals who would gain more equitable tax treatment.

It would encourage long-term savings which are an influential factor in combating inflation. This insidious enemy victimizes everybody, but is most harmful to those who live on fixed incomes from such sources as pensions and insurance.

According to most economists, a strong inflationary factor exists when the demands for capital for new construction, plant expansion, and so forth, are greater than the supply of money available for long-term investment.

This legislation facilitates an increase in the amount of long-term savings available for expanding our economy in a noninflationary manner.

The fact that many Americans are protected against destitution in old age through social security, company or government pensions, or a combination of these does not mean that it is no longer wise to be thrifty.

Many people put off retirement year after year because of economic necessity. They would not starve if they retired, but they would have to reduce drastically their standard of living.

To these people, additional retirement income could mean the difference between a dreary old age and a happy one.

But with present high taxes, much of the surplus which used to go into savings or the retirement annuity now goes to the tax collector instead. Many who are earning good money, at the peak of their earning powers, find themselves on a taxpaying treadmill.

Thrift is especially important to the self-employed. Often their major capital is their health and energy. An

increase in capital must come from earnings, or from loans paid back out of earnings. The tax structure is such that it is difficult to accumulate capital through savings.

A man's business or his professional practice may be doing very well, but an emergency or illness may incapacitate him and leave nothing to show for his years of hard work.

If our self-employed and professional people were encouraged, by an income tax deferment provision, to provide for the future with trust funds or annuities, they would be helped to provide their own future security on a more equal basis with employed citizens.

Our American system of life is based on free enterprise. It has long been an ideal for many Americans to start their own business, or to enter a profession, and to be their own boss, so to speak.

American business, the jobs of those who work for others, our general prosperity, are all based on this spirit of individual enterprise. Every person who works for a company on a salary gets his paycheck because someone else started a business and made a go of it.

People who work for themselves should be encouraged, not penalized.

Unfortunately, the trend of much legislation from the early thirties into the early fifties has been to penalize the independent entrepreneur.

The Jenkins-Keogh legislation will grant the self-employed equal tax justice in providing for retirement income. It is a step in the right direction. It is endorsed by many groups of professional men. It has strong bipartisan support. I sincerely urge the Ways and Means Committee to report favorably these bills and their passage at this session of Congress.

NEW FARM PROGRAM FOR COTTON

Mr. WHITTEN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. WHITTEN. Mr. Speaker, Senator RUSSELL, of Georgia, and I are introducing a bill today, which would establish a new farm program for cotton. We have attempted to recognize and meet on a fair basis existing problems of the cotton farmer, though of course there is no perfect answer to the farm problem. In preparing this measure, we have had the full cooperation of the Office of the General Counsel of the Department of Agriculture.

To determine the relative merits of this measure, which would require no financing from the Treasury, it should be compared with: Existing law, with its acreage controls—which have proven self-defeating—with the production of basic commodities flowing into and out of the Commodity Credit Corporation, the Government paying the difference between the domestic support price and that at which such commodities are sold in world trade, and the Brannan-Benson plan for compensatory payments where the difference between farm income and a fair income would be paid direct from the Federal Treasury.

We would point out that this Brannan-Benson approach has one significant defect. It would make the farmer dependent for part of his cost and all his profit on annual direct appropriations of the Congress. The level of the farmer's income would then be subject to the strong economic and political pressures which develop from year to year. For the farmer to rely upon any such program would be exceedingly risky, since 87 percent of the American people, whom the Congress represents, are nonfarmers.

The principle of protecting a farm program, deemed essential to the general welfare, from being destroyed by competition which might take advantage of the farm law itself, as provided in this bill, is the same as that which supports section 22 of the Agricultural Adjustment Act, which authorizes the President to prevent the destruction of farm programs by foreign competition by imposing a tariff or even an embargo.

To meet the problem of preventing advantage to either cotton or synthetics, the greater part of which are made from farm products, from the operations of such law, the Secretary should exercise discretion similar to that he exercised in past years in providing price support levels for soybeans and cotton seed.

One major improvement contained in this bill is that the price would be the world price, and the support price provided in this bill would be the world price plus that added to offset American costs. This would leave no basis at all for complaints at United States production moving in world trade competitively.

This measure is being offered as a possible solution, so that it may have the consideration of the Congress and interested farmers and farm groups. We had hoped to prepare bills providing the same approach for other commodities; but time has not permitted us to do that. However, such approach could be expanded to include other commodities.

I give here a brief analysis of the measure:

GENERAL PROVISIONS OF BILL ON COTTON

First. Acreage allotments would be eliminated and no restrictions would be placed on the number of acres which could be planted.

Second. Cotton would move from the farm through the channels of the trade in this country at world prices. By means of a certificate system, farmers would receive an additional amount on their share of the domestic consumption to offset the high cost of producing American cotton.

Third. The domestic quota would be established and distributed to States, counties, and farms, based on the 5-year average production, 1952–57. Adjustments are provided for abnormal weather conditions and for minimum farm quotas for farms having 4 acres or less.

Fourth. Certificates representing each farm's share of the domestic quota would be issued to the persons sharing in the cotton produced on each farm. Manufacturers of synthetics similar to cotton would purchase certificates from CCC.

Fifth. The certificates would be used to identify cotton coming within the domestic quota, as well as synthetic materials similar to cotton.

Sixth. Domestic processors or manufacturers would be required to purchase certificates for all cottons and synthetics similar to cotton equal to the quantity of the raw cotton or synthetic used. A system of rebates for textile exports is provided for.

Seventh. Imported textiles would have to be covered by certificates in the amount of raw cotton or synthetic equivalent in those products.

Eighth. The value of the certificates would be equal to the difference between the world price and an amount to be determined by the Secretary of Agriculture, which would offset the higher cost of American production of cotton resulting from other laws, contracts, or regulations.

Ninth. Price support on the domestic quota would be available through loans. The loan level would be the world price as determined by the Secretary of Agriculture, plus the amount added for the higher cost for American production.

Tenth. Cotton acquired by CCC in price-support operations would be offered for export sale at competitive world prices.

SOIL-BANK PROGRAM

Mr. THOMSON of Wyoming. Mr. Speaker, I ask unanimous consent that the gentleman from Kansas [Mr. AVERY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. AVERY. Mr. Speaker, the opponents of the soil-bank program seem to take considerable satisfaction in deleting the appropriation for the 1958 program. The only effective charges against the short-lived program were in its poor administration at the local level. Obviously the Members making those charges did not know that the soil-bank program was administered on the local level by a county committee elected by the farmer of the respective counties. Before one dollar of Federal funds could be paid to any farmer under the soil-bank program, a member of this farmer-elected county ASC committee was required to affix his signature to a soil-bank agreement which made two certifications: First, that the average productivity of the acres placed in the program was fairly appraised; and, secondly, that the farmers had met all requirements set out by the Secretary of Agriculture. The charge of poor administration of the program or of appraisal of the potential production of acres placed in the soil bank is a direct indictment against the locally elected ASC committee. It would appear to me to be a serious charge for a Member to make against his own constituents.

If the soil-bank program is to be scuttled, what will the program be for 1958?

I hope we do not have to wait in 1958 as we did in 1956, until planting time was past before we acted on the agricultural program for that crop year.

Posing virtually this same question, Mr. Speaker, is an editorial from a leading newspaper in my district, the Topeka Daily Capital. It presents a challenge to the opponents of the soil-bank program. The editorial follows:

IF NO SOIL BANK, THEN WHAT?

Secretary Benson, of the Department of Agriculture, was understandably disappointed in the House vote to kill soil-bank payments. This program, designed to cut down the surpluses of farm commodities, was the administration's effort to solve a pressing problem.

For years the farm income has been dwindling in relation to prices of what the farmers have to buy. The surpluses of the major crops were blamed, and probably were guilty, with depressing prices. While the soil bank may not have reduced surpluses as much as anticipated, without a doubt the taking of large acreages out of production would have helped.

Should the Senate adopt the House bill the farmers will be back where they were prior to enactment of the law last year. Whether the cost of maintaining farm income by subsidies, such as the flexible-support program, would be greater than the payments for taking land out of cultivation is uncertain. The comparable costs haven't been determined, due to the short time the soil bank has been in operation.

Opponents of the soil bank and the flexible-support programs probably favor leaving the farmers of the Nation to the not too tender mercies of an open market. This, of course, would leave them helpless in the economic system in which they have little or no voice.

So long as industry, transportation, and business generally are protected by various and sundry devices, just so long must agriculture be bolstered by the Government. Otherwise the food producers will be forced into total bankruptcy, which would surely bring on deep trouble for all other elements of our economy.

ARMY AND NAVY UNION OF THE UNITED STATES OF AMERICA

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am today introducing a bill which would provide a charter for the Army and Navy Union of the United States of America. This is the oldest veterans' organization in existence, and I hope sincerely the bill will pass unanimously.

The bill reads as follows:

H. R. 7833

A bill to incorporate the Army and Navy Union of the United States of America

Be it enacted, etc., That the following-named persons, to wit: Lawrence N. Fariello, New York, N. Y.; Warden V. Ankeny, Lakemore, Ohio; Rowland N. Chamberlain, Norfolk, Mass.; Ransom C. Gaskill, Jr., Atlantic City, N. J.; John Wagner, Akron, Ohio; Leo C. DeLapp, Sr., Richmond, Calif.; Joseph P. Burger, Akron, Ohio; Clarence A. Eberle, Akron, Ohio; John Nybel, Youngstown, Ohio; Noah Eckstein, Pleasantville, N. J.; Dr. Myron Silberstein, New York, N. Y.; the Reverend Herman S. Geske, Milwaukee, Wis.; George M. Bladen, Washington, D. C.; and James M. Callahan, Victor, Iowa, and their associates and successors, are hereby created a body corporate by the name of "Army and Navy Union of the United States of America" (hereinafter referred to as the "corporation").

PURPOSES OF CORPORATION

SEC. 2. The persons named in the first section of the act, or their successors are hereby authorized to meet to complete the organization of the corporation by the selection of officers, the adoption of a constitution and bylaws not inconsistent with this act, and the doing of such other acts as may be necessary for such purpose.

OBJECTS AND PRINCIPLES OF THE CORPORATION

SEC. 3. The objects and principles of the corporation shall be—

(1) to hold true allegiance to the Government of the United States of America and fidelity to its Constitution, laws, and institutions; to defend the United States of America from all enemies, at home or abroad; to maintain constant vigilance against, and to combat, all forces which might intend the destruction of our form of government through violence, sabotage, or other subversive activities;

(2) to serve our Nation in peace as well as in war through sincere devotion to God, by fostering the ideals of faith and patriotism, loyalty, justice, and liberty; by inculcating in the hearts of young and old, through precept and practice, the spirit of true Americanism; by participating in civic activities for the good of our country and our community;

(3) to unite in fraternal fellowship those who have served honorably and those who are now serving honorably in the Armed Forces of the United States of America; to protect and advance their civic, social, and economic welfare; to aid them in sickness and distress; to assist in the burial and commemoration of their dead; and to provide help for their widows and orphans;

(4) to perpetuate the memory of patriotic deeds performed by the defenders of our country; and

(5) to do any and all lawful acts which may be necessary, useful, suitable, desirable, and proper for the furtherance, accomplishment, and attainment of any or all of the foregoing purposes.

CORPORATE POWERS

The corporation shall have perpetual succession and power—

(1) to sue and be sued, complain and defend, in any court of competent jurisdiction;

(2) to adopt, alter, and use a corporate seal;

(3) to choose such officers, trustees, and employees as the business of the corporation may require;

(4) to adopt, amend, and alter a constitution and bylaws, not inconsistent with the laws of the United States or any State in which the corporation is to operate, for the management of its property and the regulation of its affairs;

(5) to contract and be contracted with;

(6) to charge and collect membership dues, subscription fees, and receive contributions of grants of money or property to be devoted to the carrying out of its purpose;

(7) to take and hold by lease, gift, purchase, grant, devise, or bequest, any property, real or personal, necessary for attaining the objects and carrying into effect the purposes of the corporation, subject to applicable provisions of law in any State (A) governing the amount or kind of real and personal property which may be held by, or (B) otherwise limiting or controlling the ownership of real or personal property by a corporation operating in such State;

(8) to transfer, encumber, and convey real or personal property;

(9) to borrow money for the purpose of the corporation, issue bonds therefor, and secure the same by mortgage, subject to all applicable provisions of Federal or State law;

(10) to use the corporate funds to give prizes, awards, or other evidences of merit or recognition to persons or groups for outstanding contributions toward the achievement of the purposes of the corporation;

(11) to publish magazines and other publications and materials, whether periodic or occasional, consistent with its corporate purpose;

(12) to adopt, alter, use, and display distinctive emblems, seals, and insignia;

(13) to establish, regulate, and discontinue subordinate regional, departmental, and other subdivisions and local units, garrisons, or naval branches;

(14) to promote the formation of subordinate ladies' auxiliaries and youth organizations, the membership requirements of which shall be determined according to the constitution and bylaws of the corporation;

(15) to have the sole and exclusive rights for the corporation and its regional, departmental, and other subdivisions, and local units, garrisons, or naval branches to use in carrying out its purpose the name of the Army and Navy Union of the United States of America"; and

(16) to do any and all acts necessary and proper to carry out the purposes of the corporation; and for such purposes, the corporation shall also have in addition to the foregoing, in this section and subsection, the rights, powers, duties, and liabilities of the existing corporation referred to in section 18 as far as they are not modified or superseded by this act.

CORPORATION HEADQUARTERS

SEC. 5. The headquarters of the corporation shall be located in Lakemore, Ohio, or in such other place as may later be determined by action of the council of administration of the corporation, but the activities of the corporation shall not be confined to that place and may be conducted throughout the various States, Territories, and possessions of the United States.

AGENTS TO ACCEPT SERVICE OF PROCESS

SEC. 6. (a) The corporation shall maintain at all times in the District of Columbia a designated agent authorized to accept service or process for the corporation, and notice to or service upon such agent, or mailed to the business address of such agent, shall be deemed notice to or service upon the corporation.

(b) The corporation shall file in the office of the secretary of each State in which subdivisions, and local units, garrisons or naval branches may be organized, the name and post-office address of an authorized agent in such State upon whom local process or demands against the corporation may be served.

MEMBERSHIP IN THE CORPORATION

SEC. 7. Eligibility for membership in the corporation, and rights and privileges of members shall, except as provided in this act, be determined as the constitution and the bylaws of the corporation may provide.

MANAGEMENT OF THE CORPORATION—OFFICERS AND VOTING

SEC. 8. The administration and regulation of the affairs of the corporation shall be conducted as prescribed in the constitution and bylaws of the corporation, providing that—

(1) officers of the corporation shall be elected at the annual encampment of the corporation by a majority of votes cast by officers and delegates who have been chosen

by ballot by the members of subordinate subdivisions and local units of the corporation: *Provided*, That any member shall be eligible for any office within the corporation;

(2) between encampments, the administrative power of the corporation shall be vested in a national council of administration, which shall be composed of the national commander, the national senior vice commander, four or more junior vice commanders, the national judge advocate, the national paymaster, the national quartermaster, the national adjutant, the commanders of all departments, a national councilman from each department, and all past national commanders in good standing in their respective local units;

(3) upon enactment of this act, the membership of the initial council of administration shall consist of the following-named persons, to wit: Lawrence N. Fariello, New York, N. Y.; Warden V. Ankeny, Lakemore, Ohio; Rowland N. Chamberlain, Norfolk, Mass.; Ransom C. Gaskill, Jr., 214 North California Avenue, Atlantic City, N. J.; John Wagner, Akron, Ohio; Leo C. Delapp, Sr., Richmond, Calif.; John Nybel, Youngstown, Ohio; Clarence A. Eberle, Akron, Ohio; Joseph P. Burger, Akron, Ohio; Arnold J. Storlazzi, Medford, Mass.; Angelo Russo, Roslindale, Mass.; Phillip V. B. King, Rensselaer, N. Y.; Irving McGough, Flushing, N. Y.; Jose P. LoBello, Bloomfield, N. J.; Ernest C. Burrows, Woodbridge, N. J.; Russell Mytenka, Akron, Ohio; Paul E. Weigel, Akron, Ohio; Herbert Borchardt, Washington, D. C.; Albert C. Allen, Washington, D. C.; Paul Knuese, Milwaukee, Wis.; Herman S. Geske, Milwaukee, Wis.; Okey Rookstole, Akron, Ohio; Warren E. Miller, Washington, D. C.; H. C. John Russell, Falls Church, Va.; Henry W. Gerber, Atlantic City, N. J.; James M. Callahan, Victor, Iowa; Joseph C. Stehlin, Miami Beach, Fla.; George W. Carr, South Bend, Ind.; and George F. Harnois, Needham Heights, Mass.; and

(4) thereafter, the council of administration of the corporation shall consist of such number (not less than 21), selected in such manner (including the filling of vacancies), and shall serve for such terms, as may be prescribed in the constitution and bylaws of the corporation.

DISPOSITION OF ASSETS

SEC. 9. No part of the income or assets of the corporation shall inure or be distributed to any member or officer thereof except upon dissolution or final liquidation of the corporation as provided in section 16 of this act. Nothing in this section, however, shall be construed to prevent the payment of compensation to officers of the corporation in amounts approved by its council of administration.

LOANS TO OFFICERS, MEMBERS, OR EMPLOYEES

SEC. 10. The corporation shall not make loans to its officers, members, or employees. Any officer or member of its council of administration who votes for or assents to the making of a loan to an officer, member, or employee of the corporation, and any officer who participates in the making of such loan, shall be jointly and severally liable to the corporation for the amount of such loan until the repayment thereof.

NONPOLITICAL NATURE OF THE CORPORATION

SEC. 11. The corporation and its officers and members as such shall not contribute to or otherwise support or assist any political party or candidate for public office.

ACTS OF OFFICERS

SEC. 12. The corporation shall be liable for the acts of its officers and agents when acting within the scope of their authority.

NO STOCK OR DIVIDENDS

SEC. 13. The corporation shall have no power to issue any shares of stock, nor to declare or pay any dividends.

BOOKS AND RECORDS, INSPECTION OF

SEC. 14. The corporation shall keep current and complete books and records of account and shall keep minutes of the proceedings of its encampments, meetings of its council of administration, and committees having any of the authority of said council. It shall keep at its principal office a record of the names and addresses of its members entitled to vote. All books and records of the corporation may be inspected by any member entitled to vote, or his agent or attorney, for any proper purpose, at any reasonable time.

ANNUAL AUDIT AND REPORT TO CONGRESS

SEC. 15. (a) The financial transactions shall be audited annually, at the end of the fiscal year established by the corporation, by an independent certified public accountant in accordance with the principles and procedures applicable to commercial corporate transactions. The audit shall be conducted at the place or places where the accounts of the corporation are normally kept. All books, accounts, financial records, reports, files, and all other papers, things, or property belonging to, or in use by the corporation and necessary to facilitate the audit shall be made available to the person or persons conducting the audit; and full facilities for verifying transactions with the balances or securities held by depositors, fiscal agents, and custodians shall be afforded to such person or persons.

(b) A report of such audit shall be made by the corporation to the Congress not later than 6 months following the close of such fiscal year for which the audit is made. The report shall set forth the scope of the audit and shall include verification by the person or persons conducting the audit of statement of (1) assets and liabilities, (2) capital and surplus or deficit, (3) surplus or deficit analysis, (4) income and expense, and (5) sources and application of funds. Such report shall not be printed as a public document.

USE OF ASSETS ON DISSOLUTION OR LIQUIDATION

SEC. 16. Upon final dissolution or liquidation of the corporation, and after discharge or satisfaction of all outstanding obligations and liabilities, the remaining assets of the corporation may be distributed in accordance with the determination of the council of administration of the corporation and in compliance with the constitution and bylaws of the corporation and all Federal and State laws applicable thereto.

EXCLUSIVE RIGHT TO NAME, EMBLEM, SEAL, AND BADGES

SEC. 17. The corporation and its subordinate regional, departmental, and other subdivisions, and local units, garrisons, or naval branches, ladies' auxiliaries, and youth organizations, shall have the sole and exclusive right to use in carrying out its purposes the name of the "Army and Navy Union of the United States of America." The corporation shall have the exclusive and sole right to use, or to allow to refuse the use of, such emblems, seals, insignia, or badges as have heretofore been used by the corporation referred to in section 18, or which it may hereafter legally adopt in carrying out its program, it being distinctly understood, however, that nothing in this act shall interfere or conflict with established or vested rights.

TRANSFER OF ASSETS

SEC. 18. The corporation may acquire the assets of the existing corporation known as the Army and Navy Union of the United States of America, incorporated in the State of Ohio, and any auxiliary or subordinate unit thereof, upon discharging or satisfactorily providing for the payment and discharge of all of the liabilities thereof and upon complying with all the laws of the State of Ohio applicable thereto.

CONDITIONS PRECEDENT TO INCORPORATION

SEC. 19. The provisions of this act shall take effect on the filing, in the office of the clerk of the United States District Court for the Southern District of Ohio, of affidavits signed by the incorporators named in section 1 of this act, to the effect that the body corporate of the State of Ohio, known as the Army and Navy Union of the United States of America has been dissolved in accordance with law, but only if such affidavits are filed within 120 days after the date of enactment of this act.

"STATE"

SEC. 20. As used in this act, the word "State" includes the District of Columbia.

RESERVATION OF RIGHTS

SEC. 21. The right to alter, amend, or repeal this act is hereby expressly reserved.

PANAMA CANAL: UNITED STATES OWNERSHIP AND CONTROL

The SPEAKER. Under previous order of the House, the gentleman from Pennsylvania [Mr. FLOOD] is recognized for 60 minutes.

Mr. FLOOD. Mr. Speaker, I have the honor of serving on the appropriations subcommittee for the Department of Defense and also the Department of Commerce and related agencies, among which allied agencies is the Panama Canal and the Panama Canal Company. I recently returned on official business for my subcommittee from the Canal Zone. I spoke to this House the day before I left at some length on the problem and I said I would speak again on my return because of my membership upon the Defense Appropriations Subcommittee. As you know, we have been in debate on that bill until just a few minutes ago. Therefore, this is my first opportunity to make that report.

You are aware that the political situation in the Suez has magnified and dramatically pinpointed the relationship of the Panama Canal and the Republic of Panama to our country. Because of those reasons and for others dealing with the need for the further physical development of the canal, the need to widen the canal, the need to deepen the canal, the need to go back and restore, the necessity for a lake-pooling area near the Pedro Miguel locks, all of those things which are necessary and essential not only to the national defense and international commitments were part of my investigation and are portrayed in this report. I feel that it would be indelicate for me at this time to discuss the international politics, and I do not intend so to discuss them other than in passing, but I repeat these things in my address today for the purpose of emphasis because of discussions now going on in European, Middle Eastern, Asiatic, African, and American papers on the fact that there may be a powder keg in the Panama area, and in my judgment there is such a serious delicate condition that does exist.

Mr. Speaker, the Suez crisis has focused world attention on the general subject of interoceanic canals to a degree not surpassed since the debates about the Panama Canal at the start of this century. In the mounting volume of discussion and propaganda, repeated demands at home and abroad have been

made to transfer jurisdiction over the Canal Zone and supervision of the Panama Canal from the United States to an international or other authority.

Most of this clamor comes from Soviet Russia and the satellites, but some of it comes from persons who occupy high positions in the United States. Regardless of its origin or form, or the unquestionably high intentions of those who voice it, this outcry conforms to the well-known program of penetration and subversion so characteristic of the Communist conspiratorial apparatus. Portions of it have appeared even in the annals of the present Congress.

CONCESSIONARY BASIS OF SUEZ CANAL

Though Suez and Panama are the only two truly interoceanic canals, the juridical bases for their construction differ materially. The Suez Canal was built under an act of concession granted by the Khedive of Egypt to the Universal Suez Maritime Canal Co., an Egyptian corporation administered for the profit of its stockholders, who include individuals of many nationalities and several governments. Its operation was, and still is, subject to the provisions of the convention of Constantinople of 1888. This international agreement requires that the Suez Canal "shall always be free and open, in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag." Thus, this convention established its international character, for which Egypt, then a part of the Ottoman Empire, and later a severed state, was specifically charged under international law with execution of these treaty provisions.

In meeting the demands of the current Suez crisis, the principal moves with respect thereto seem to have been aimed toward the expediencies of world politics rather than toward compliance with established principles of international law, justice, and concessionary and contractual obligations. Thus, its handling has played directly into the hand of those who would destroy the juridical foundation on which the Panama Canal rests.

JURIDICAL FOUNDATION OF PANAMA CANAL

What is the nature of that foundation? In contrast to the Suez Canal, which was built by private enterprise under French leadership, the Panama Canal was constructed by the United States with Federal appropriations derived through taxation of the American people.

As described in my address to the House on April 17, 1957, shortly before departing for the Canal Zone on official duty, the legal base for the Panama Canal consists of three important treaties:

First. The Hay-Pauncifote Treaty of 1901 between the United States and Great Britain, which facilitated its construction and adopted the major points in the convention of Constantinople of 1888 as rules for its operation.

Second. The Hay-Bunau-Varilla Treaty of November 18, 1903, between the United States and the Republic of Panama, which, on the part of the United States, guaranteed the independence of Panama and, on the part of Panama, granted to the United States in perpetuity the use, occupation, and control of the Canal Zone for the construction, maintenance, operation, sanitation and protection of the Panama Canal as if the United States were sovereign of the territory, and most significantly, to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority.

Third. The Thomson-Urritia Treaty of April 6, 1914, proclaimed March 30, 1922, between the United States and the Republic of Colombia, the sovereign of the Isthmus prior to the Panama Revolution of November 3, 1903, which recognized Panama as an independent state and agreed that the title to the Panama Canal and Panama Railroad is vested entirely and obsolutely in the United States, without any encumbrances or indemnities whatever.

Here it should be pointed out that the Hay-Pauncifote Treaty is between the United States and Great Britain only, that no other nation has any treaty rights of its own as to the canal, and that whatever rights they enjoy are gratuitously granted by the United States under its treaty with Great Britain. Other nations cannot claim such rights, except Colombia and Panama with respect to the levy of tolls for the transit of troops, materials, and ships of war, and certain other privileges established by treaty. What more could an international body do to provide freedom of transit to ships of the world than obtains under the existing treaty arrangements?

UNITED STATES LOSES BARGAINING POWERS

In 1936 the original 1903 legal setup at Panama began to change with the signing of the Hull-Alfaro Treaty, which, because of opposition in the United States Senate, was not proclaimed until July 27, 1939. This treaty called for surrenders on the part of the United States of important sovereign powers and rights affecting the Panama Canal, including that of eminent domain, and authorized corresponding advances on the part of Panama, all without adequate compensation to the United States, which had borne all of the costs of construction and defense.

This erosion of the powers of the United States did not stop with the 1936 treaty. After prolonged secret negotiations started in 1953, the process was further advanced by the Eisenhower-Remon Treaty proclaimed August 26, 1955, which gave away additional valuable rights and properties, also without reasonable compensation or consideration.

Meanwhile, the United States had built the Trans-Isthmian Highway, and is still maintaining it, extended the Thatcher Highway to Rio Hato where many millions were spent on an Army base later abandoned to Panama, and had given to that country about $12 million worth of real estate in the city of Colon owned and held in the name of the Panama Railroad Co. under original concession from Colombia. In the interest of historical accuracy, it should be stated that these properties in Colon were bought from the Second French Panama Canal Co. and the title to it was specifically confirmed in the 1903 treaty with Panama. At the time of its surrender, the United States was drawing rentals therefrom approximating $350,000 annually.

The surrenders in the 1936 and 1955 treaties together with other relinquishments has served unfortunately to place the United States in a position without diplomatic bargaining power. As was clearly foreseen by competent students of the subject who, as far as I can determine, were not consulted in the course of the negotiations, these surrenders without consideration could only lead to new demands by Panama for further liquidation of the canal enterprise, the urgings for which are now being loudly voiced.

Not only that, the Republic of Panama has reportedly taken a negative attitude in the current negotiations for an undisclosed number of sites for Nike installations that are essential for protection of the Panama Canal and, indeed, for the defense of Panama itself.

By way of explanation, it should be mentioned here that under the original 1903 Hay-Bunau-Varilla Treaty these Nike sites could have been obtained by the exercise of the right of eminent domain.

UNITED STATES HAS EXCLUSIVE SOVEREIGN RIGHTS AND POWER IN CANAL ZONE

During recent weeks much has been published about demands in Panama and other parts of Latin America for denunciation of the perpetuity and sovereignty clauses in the Hay-Bunau-Varilla Treaty, along with claims for increased annuity and other benefits, which must be borne either by the United States or shipping that pays tolls, or both.

It is significant that former President Ricardo M. Arias of Panama, now Ambassador to the United States, in a recent public statement concerning canal treaties, virtually admitted that Panama is seeking further reductions of United States rights and powers with respect to the Panama Canal. He failed, however, to mention the fundamental point in the 1903 treaty that these perpetual sovereign rights and powers of the United States in the Canal Zone were granted to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority.

In the light of subsequent history, I wish to pay special tribute to the vision and sagacity of those great American statesmen, who early in this century developed our isthmian policies—Theodore Roosevelt, John Hay, Elihu Root, William Howard Taft, and John Bassett Moore. This type of leadership should be continued today.

POTENTIAL PANDORA'S BOX AT PANAMA

Suggestions for denunciation have a ring that resemble Old World power politics at their worst. If one nation can denounce treaties others could do likewise.

With the 1903 guaranty of the independence of Panama by the United States revoked in the 1936 treaty, what would become of Panama if Colombia undertook to abrogate any treaty provision that may stand in the way and declare that Panama has reverted to its previous Colombian status? With a less

definite protective obligation from the United States what would be the result of such a Colombian claim?

Would Colombia succeed in establishing again its previous rights and authority over the Republic of Panama and with it the complete ownership and control of the Panama Canal? To say the least, such a claim on the part of Colombia would present a situation conducive to a state of war between the two countries, with the operation of the canal thus crippled or endangered.

All careful students of the isthmian question know that the entire independence of Panama grew out of and is based on the Panama Canal. The economic life of that country, in large measure, depends on the canal enterprise and, with the passage of the years, this dependence will probably increase.

These are realistic facts that must be faced in any objective appraisal of the problem. In the light of the consequences that a change in the status quo would inevitably bring forth, it is undoubtedly best for all concerned that the present general relationship between Panama and the United States should continue as prescribed in solemn treaty agreements and obligations. We would consider it most unfortunate under the circumstances that Panama should press for nationalization of the canal. We do not wish to open a Pandora's box on the isthmus where other nations, which in no way contributed to the construction of the great waterway, will gain or have any treaty rights therein, except those prescribed in the existing Panama Canal treaties.

SUEZ LEGAL PROBLEMS ANALYZED

Though the historical background and legal foundations of the two great interoceanic canals differ from each other in fundamental respects, there are some important principles, stated or implied, applicable to both. It is most timely that the legal issues involved in the Suez situation have been analyzed and were presented on April 25, 1957, in a notable address before the American Society of International Law by Dr. George A. Finch, president of the Inter-American Academy of Comparative and International Law.

A distinguished scholar and experienced lawyer, Dr. Finch has added substantially to our understanding of the Suez problem. So constructive is his challenge of the legality of the Egyptian nationalization decree and so pertinent to what may later develop in some form or other in Panama, I include as part of these remarks at this point in the RECORD his entire address, and commend it for later careful study by all concerned with interoceanic canal problems.

Dr. Finch's address follows:

NAVIGATION AND USE OF THE SUEZ CANAL

(By George A. Finch, president of the Inter-American Academy of Comparative and International Law)

When the American Society of International Law was founded 51 years ago to promote the establishment and maintenance of international relations on the basis of law and justice there were many more skeptics than believers in that aspiration. Today world opinion is overwhelmingly opposed to the use of armed force to settle international disputes, certainly to the point that an offer of peaceful settlement should be made and refused before nations draw the sword in their legitimate right of self-defense. President Eisenhower's condemnation of the armed attack upon Egypt last fall represented an official expression of this generally accepted opinion; but the provocation for that attack continues to be the most imminent threat to the maintenance of peace on the basis of law and justice.

The aggression at the Suez Canal was triggered on July 26 last by the precipitate and legally unjustifiable act of the President of Egypt purporting to nationalize the Suez Canal Co. The decree transferred to the Egyptian Government all of the company's assets, rights, and obligations, and dissolved all the organizations and committees that now operate its management (art. I). The canal itself was, of course, the most valuable asset of the company. In plain language, the concession under which the canal was built and has been successfully operated for 88 out of a definitely agreed term of 99 years, to the mutual benefit and advantage of both parties to the concession contract, was arbitrarily abrogated, the company was dissolved, and its property confiscated by the Egyptian Government.

The offer of the Egyptian Government, if carried out in good faith, to indemnify the stockholders in accordance with the value of the shares shown in the closing quotations of the Paris Stock Exchange on the day preceding the confiscation was inadequate. It did not take into account the worth of the unexpired term of the concession, and no assurances were given as to the time or method of payment of the proposed compensation. The confiscation decree specified only that "the payment of said indemnity shall be effected after the Nation has taken delivery of all the assets and properties of the nationalized company." An offer to indemnify the owners from the proceeds of their own property might properly be considered unjust enrichment of the expropriator according to our legal standards.

The concession provides that at its expiration, when the Egyptian Government might lawfully resume possession of the canal it would be the responsibility of the Government "to take over all materials and supplies used in the company's maritime service and in return, to pay the company the value to be fixed, either by amicable agreement or on the basis of an opinion of experts" (art. XVI). The Egyptian Government cannot relieve itself of that responsibility by unlawfully terminating the concession.

There is no proper analogy of the so-called nationalization of the Suez Canal and the nationalization laws of other countries duly enacted incident to social and economic reforms. The Suez Canal is so impressed with an international public use that it was not subject to the exercise of the right of eminent domain for purely internal purposes by any party to the Convention of Constantinople of 1888. In a tripartite statement issued at London on August 2 the Governments of France, the United Kingdom, and the United States officially asserted that—

"The Universal Suez Canal Company has always had an international character in terms of its shareholders, directors, and operating personnel and in terms of its responsibility to assure the efficient functioning as an international waterway of the Suez Canal. In 1888 all the great powers then principally concerned with the international character of the canal and its free, open and secure use without discrimination joined in the Treaty and Convention of Constantinople.

"This provided for the benefit of all the world that the international character of the canal would be perpetuated for all time, irrespective of the expiration of the concession of the Universal Suez Canal Co. As recently as October 1954," the statement continued, "Egypt recognized that the Suez Canal is 'a waterway economically, commercially, and strategically of international importance,' and renewed its determination to uphold the convention of 1888."[1]

The circumstances under which the canal was seized and the reasons given for its seizure fail to bring this so-called act of nationalization within the sphere of what may be considered justified governmental action to promote internal, social, and economic reform. The record shows that the Egyptian decree of July 26, 1956, was an act of retaliation against the Governments of Great Britain and the United States for their declination to extend financial help to Egypt to build the high dam on the Nile River at Aswan, and the seizure of the canal was for the purpose of providing Egypt with substitute finances to build the dam.

The concession stipulates that "disputes which arise between the Egyptian Government and the company will be placed before local courts and decided according to the laws of the country." The record is devoid of any evidence that the Egyptian Government took any action in its courts against the company as a preliminary step to the abrogation of the concession.

The impact of the arbitrary action of the Egyptian Government upon those who still believe in the validity of contracts made by sovereigns is sought to be minimized by arguing that the nationalization applied only to the company and not to the canal. No one has ever contended that the Suez Canal Co. is of any nationality other than Egyptian. The decree of nationalization refers to the company as already being an "Egyptian stock company." Why, then, the decree of nationalization if it was to apply to the company alone?

The argument is likewise untenable in the light of President Nasser's speech at the time he announced his decree of July 26. "This canal is an Egyptian canal. * * * Today, citizens," he declared, "our rights in the Suez Canal have been restored to us after 100 years." Again, "The Suez Canal was built for the sake of Egypt and for its benefit * * * today, our wealth has been restored to us."[2]

Communist admirers and supporters of President Nasser attempt to maintain that his action was no breach of international law on the ground that the treatment of the company was a purely internal Egyptian matter over which that Government had exclusive control as a sovereign nation. In the view of this speaker, that position is also inadmissible. It is not a rule of international law that sovereignty confers immunity to violate international obligations. Sovereignty imposes duties as well as rights, including the exercise of good faith in the fulfillment of contracts legally made by governments with private concessionaires, as well as in the observance of the obligations of solemn treaties.

"Every nation, on being received, at her own request, into the circle of civilized governments, must understand that she not only attains rights of sovereignty and the dignity of national character, but that she binds herself also to the strict and faithful observance of all those principles, laws, and usages which have obtained currency among civilized states. * * * No community can be allowed to enjoy the benefit of national character in modern times without submitting to all the duties which that character imposes."[3]

Germany relied upon the same argument to justify on the ground of sovereignty her refusal to allow the S. S. *Wimbledon* to pass

[1] The Suez Canal Problem, Department of State Publication 6392, p. 34.

[2] The Suez Canal Problem, ibid., pp. 25–30.

through the Kiel Canal. The Kiel Canal was built by Germany within German territory, and it was conceded before the Treaty of Versailles that the canal was an internal canal under the exclusive control of the territorial sovereign. On the application of several governments parties to the Treaty of Versailles, who invoked Article 380 of that treaty, the Permanent Court of International Justice decided against Germany's contention, holding:

"The Court declines to see in the conclusion of any treaty by which a state undertakes to perform or refrain from performing a particular act an abandonment of its sovereignty. No doubt any convention of this kind places a restriction upon the exercise of the sovereign rights of the state, in the sense that it requires them to be exercised in a certain way. But the right of entering into international engagements is an attribute of state sovereignty." [4]

Notwithstanding the repeated disclaimers of the Egyptian Government that it has no intention to disregard the obligations of the Treaty of Constantinople of 1888, it is impossible to separate the legal issues raised by the cancellation of the company's concession, under the circumstances and for the reasons given for that act, from the relevant provisions of the convention.

The antecedents of that convention date back to the war between Russia and Turkey of 1877–78. At that time the Suez Canal was in Turkish, and therefore belligerent territory. The Institute of International Law at its session at Zurich on September 13, 1877, appointed a committee to study the methods by which the canal might regularly and finally be withdrawn from the jurisdiction of the common law of war. Following the recommendations of that committee, the Institute at its session at Brussels on September 4, 1879, adopted a resolution which declared: "It is of general interest to all nations that the maintenance and use of the Suez Canal for all kinds of communications shall be protected as much as possible by conventional international law." The resolution proposed "that states unite with a view to avoiding as much as possible any measure which may damage or put in danger the canal and its appendages even in case of war." [5]

The Convention of Constantinople, eventually concluded in 1888, follows closely the recommendations of the Institute. The preamble states the intention of the signatories to establish "by a conventional act, a definite system intended to guarantee, at all times and to all the powers, the free use of the Suez Maritime Canal, and thus to complete the system under which the navigation of this canal has been placed" by the Firman of the Sultan dated February 22, 1866. It refers to the convention as "sanctioning the concessions" of the Khedive of Egypt. In addition to stipulating for the free use of the canal "in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag," the convention provides for the neutrality of the canal in time of war.

The Convention requires the Egyptian Governments, within the limits of its powers, to take the necessary measures for enforcing the execution of the treaty (art. IX), and charges the agents of the other signatory powers in Egypt "to see that it is carried out" (art. VIII). Oppenheim classifies the Treaty of Constantinople as "a pure lawmaking treaty," and he construes article VIII as establishing an International Commission "for the supervision of the execution of that treaty." [6]

In flat contradiction of the pretensions of President Nasser that "the Suez Canal was built for the sake of Egypt and for its benefit," article XII of the Convention of Constantinople provides:

"The high-contracting parties, by application of the principle of equality as regards free use of the canal, a principle which forms one of the bases of the present treaty, agree that none of them shall seek, with respect to the canal, territorial or commercial advantages or privileges in any international arrangements that may be concluded."

It is submitted that the Egyptian Government cannot, within the accepted principles of international law applicable to the interpretation of the Convention, abrogate the international arrangements under which the canal was built and has been operated and protected for the last 88 years in order to subvert the canal to her own internal advantage. The motive of "territorial or commercial advantages or privileges," to repeat the words of article XII, for the abrogation of the international arrangements with the Suez Canal Company, sanctioned by the Treaty of Constantinople, is conclusively shown in President Nasser's speech announcing the so-called decree of nationalization. In addition to his braggadocio, already quoted, he linked the nationalization of the company with the building of "a strong and dignified Egypt, the Arab Egypt," industrialized and capable of competing with those who "used to suck our blood, our rights, and take them." "Citizens, today," he declared, "we are conscious of accomplishing glories and achieving true dignity. Sovereignty in Egypt will belong only to her sons."

The pretensions of President Nasser were answered by the 3 powers in their London statement of August 2, in which they said:

"They do not question the right of Egypt to enjoy and exercise all powers of a fully sovereign and independent nation, including the generally recognized right, under appropriate conditions, to nationalize assets, not impressed with an international interest, which are subject to its political authority. But the present action involves far more than a simple act of nationalization. It involves the arbitrary and unilateral seizure by one nation of an international agency which has the responsibility to maintain and to operate the Suez Canal so that all the signatories to, and beneficiaries of, the treaty of 1888 can effectively enjoy the use of an international waterway upon which the economy, commerce, and security of much of the world depends. This seizure is the more serious in its implications because it avowedly was made for the purpose of enabling the Government of Egypt to make the canal serve the purely national purposes of the Egyptian Government, rather than the international purpose established by the convention of 1888." [7]

The Egyptian defiance of international obligations is violative of another long-standing principle of international law. The Declaration of London of January 17, 1871, states: "It is an essential principle of the law of nations that no power can liberate itself from the engagements of a treaty, nor modify the stipulation thereof, unless with the consent of the contracting powers by means of an amicable arrangement."

The United States is not a party to either the canal concession or the treaty of 1888, but both stipulate for the free and equal use of the canal by all nations. Under international law that stipulation enures to the benefit of nonsignatories. [8] On the day following the publication of the Egyptian nationalization decree the United States Department of State made public an announcement in which it was said that "the seizure of the installations of the Suez Canal Co. carries far-reaching implications. It affects the nations whose economies depend upon the products which move through this international waterway and the maritime countries as well as the owners of the company itself." [9]

There has been no direct challenge to the international legality of the Egyptian nationalization decree as it affects the property rights of the company. All steps taken have been directed toward a negotiated political settlement with Egypt. The provisions of the United Nations Charter for the settlement of legal questions have not been invoked. Are the governments of the West no longer able or willing to speak in defense of the rights of private property? The decline of Western support of this fundamental human right was pointed out by the chairman of the United Nations Human Rights Commission in 1952. Mr. Charles Malik, of Lebanon, the chairman of the Commission for that year, wrote:

"The concept of property and its ownership is at the heart of the great ideological conflict of the present day. It was not only the Communist representatives who riddled this concept with questions and doubts; a goodly portion of the non-Communist world had itself succumbed to these doubts. A study of this particular debate will reveal the extent to which the non-Communist world has been communistically softened and frightened. It seems incredible that in these economic matters, which reflect indeed much more than mere economic divergencies, the Western World is so divided on itself as to be incapable of presenting a common front against communism." [10]

According to the Charter of the United Nations, the Security Council may recommend appropriate procedures or methods of adjustment of any dispute the continuance of which is likely to endanger the maintenance of international peace and security. It is specifically provided that in making recommendations the Security Council should take into consideration that legal disputes should as a general rule be referred by the parties to the International Court of Justice (art. 36). Legal disputes are defined by the corresponding provision of the Court's Statute to include disputes concerning (a) the interpretation of a treaty, (b) any question of international law, (c) the existence of any fact which, if established, would constitute a breach of an international obligation, and (d) the nature or extent of the reparation to be made for such a breach (art. 36).

It is immaterial, in our view, when the Security Council recommends what it considers the appropriate method of peaceful settlement, that any or all of the members of the United Nations involved in the dispute should have accepted the so-called optional clause incorporated in article 36 of the statute of the Court. The first paragraph of that article reads: "The jurisdiction of the Court comprises all cases which the parties refer to it and all matters specifically provided for in the Charter of the United Nations or in treaties and conventions in force."

President Nasser's refusal to agree to a political settlement and the failure to bring

[10] United Nations Bulletin, Sept. 1, 1952, pp. 248–253.

him to the bar of international justice before the principal judicial organ of the United Nations permitted him to stand before the world as an innocent party. The ill-considered policy of the governments of Great Britain and France, in resorting to force and not to legal remedies after the peaceful political overtures to President Nasser were rejected, subjected them instead of Egypt to condemnation by the United Nations and the world at large.

It cannot be denied that the Suez Canal dispute in all of its elements falls squarely within the definition of justiciable disputes laid down in the United Nations Charter. A refusal by Egypt to comply with a recommendation of the Security Council to refer the dispute in its several aspects to judicial settlement by the International Court of Justice would have kept the stigma of aggression where it originated and properly belongs, namely, upon those who seized the Suez Canal in violation of the obligations of an international contract and treaty.

It is logical to ask, what might have happened if Egypt refused to appear before the International Court or to accept a decision of the Court adverse to her position? In such case, in my opinion, the complaining states would have met the requirements of world opinion for the maintenance of international relations on the basis of law and justice, the object to which this society is dedicated. The same force of public opinion could be relied upon to support such sanctions as might be deemed to be necessary by the United Nations to fulfill its most important function, that of removing threats to world peace.

NO SUEZ CRISIS WILL BE PERMITTED AT PANAMA

Mr. Speaker, the conduct of political agitation about the Panama Canal has long been insidious and thus obscurred to public view, but now it is in the open. Conforming to the objectives of the communist conspiracy to place the United States on the defensive, it is aimed at the Panama Canal for the purpose of wresting its ownership and control from the United States. Thus, the situation created by this propaganda is fraught with diplomatic danger and uncertainty to which the United States must be alert.

The combined exercises of the United States Armed Forces in the isthmian area during the week, April 21–27, 1957, which coincided with my recent visit to the Canal Zone has already had a salutary effect. Observed by representatives of the armed services of 20 countries of this hemisphere, they served to emphasize that no Suez crisis will be permitted at Panama.

With this feeling, I have every reason to believe that our friends to the south will wholeheartedly join. Surely consideration for their own self-preservation requires such a commonsense attitude.

COMMUNIST SUPPORT FOR PANAMANIAN NATIONALIZATION THE KISS OF DEATH

As to the long-enduring and recently criticized—chiefly by the Soviets—practice of combined exercises by the armed forces in connection with the protection and defense of the Panama Canal, it should be emphasized that, with reference to the efforts of Communist powers to liquidate United States Isthmian ownership and interests, these powers have seized on the proposal of Panamanian nationalization and strongly supported it. The temporary success of the Communist effort to control the government of Guatamala is an outstanding example of the general purpose of the Communist conspiracy to penetrate and subvert Latin American nations.

That effort, after heroic action by truly patriotic citizens of this fine Central American country, failed, though at much sacrifice.

In various countries of Latin America, and perhaps to some extent in Panama itself, similar Communist efforts have been put forth. Here, for sake of emphasis, I repeat that Communist Russia wishes all ownership and control of the Panama Canal to pass out of the hands of the United States. If this could be brought about, Soviet Russia and its satellites could boast of a tremendous victory over the West and augment their prestige throughout Latin America and the world at large.

The general infiltration procedures and efforts of the Communist powers are well known in Latin American countries as in all other lands. Recent Moscow and Peiping radio broadcasts deal with the proposed liquidation of United States control over the Panama Canal.

As evidence of these activities, I include a newsstory published on May 5, 1957, in the well-known Latin American bilingual newspaper, the Americas Daily—El Diario Las Americas—of Miami Springs, Fla., which is self-explanatory. The support of organized communism for Panamanian nationalization, aside from all the equities involved, should mean the kiss of death for the proposal.

The newsstory, which is commended for later reading, follows:

RUSSIA AND RED CHINA STIRRING UP TROUBLE BETWEEN UNITED STATES AND PANAMA

WASHINGTON, May 4.—Russian and Red China have joined in a new propaganda drive aimed at stirring up trouble between the United States and Panama over the Panama Canal, American officials said.

Moscow radio, as overheard here, is telling listeners in Mexico and Central America that the recent United States military exercises in the Panama area were "intended to frighten the people of Panama."

Red China's Peiping radio in separate broadcasts to Europe makes the same charge and states that the Panama Canal belongs to the people of Panama and not to the United States. The Communist campaign has been spurred by Egypt's seizure of the Suez Canal.

Communist propagandists charge that the United States is "preparing for total occupation of Panama," and regards itself as the "lord and master of Panama, treating the people as inferiors."

American operations in the Panama Canal Zone are governed by treaties with Panama signed in 1903, 1936, and 1955. The basic treaty called for the United States to build and operate the canal.

There has been a running debate for many years over the question of sovereignty over the Canal Zone, however, and the Communist propagandists contend the 1903 treaty is illegal.

Officials said Panama understands the real aim of the red propaganda drive. They also noted that Moscow never has raised the Panama issue formally in any international forum.

But they said Russia apparently feels it may be successful in causing this country trouble and embarrassment.

Panama currently is seeking some increased benefits from the 40-mile-long 10-mile-wide Canal Zone. Bills now before Congress would provide equal pay for Panamanians for equal work in the zone and the return to Panama of Canal Zone land valued at about $25 million.

Annual tolls from Canal operations run about $36 million while expenses total about $21 million a year. Panama now receives an annuity payment of $1,930,000 annually, and may want a larger income from canal operations.

Canal tolls have not been raised since 1914 when the canal was opened. The rate is still 90 cents a ton, and the United States-run Panama Canal Company is still operating in the black.

INTERNATIONAL PROPAGANDA CAMPAIGNS UNFORTUNATE

Apropos of all these matters, informed citizens of the United States who are sincere friends of Panama are much disturbed at the propaganda campaign now being waged by certain officials of the administrative and diplomatic departments of the Government of that country to press the United States into granting ever-expanding benefits to Panama because of the canal. Apparently, the attempt is being made by such officials to portray our Nation as a culprit before the bar of international public opinion in order to secure the objectives sought; and this almost immediately after the most generous concessions made by our Government to Panama in the 1955 treaty. This indeed, is most unfortunate.

Certainly, it was believed that the 1955 treaty concessions would satisfy the demands of Panama for many years to come. But events indicate that this is not so.

Moreover, insistent demands are now being made for the emasculation of all treaty provisions under which the United States was led to undertake and complete the construction of the canal and to provide for its maintenance, operation, sanitation, and defense. All the results achieved, and now being achieved, at heavy costs borne by our Government and its taxpayers, seem to have been forgotten by these Panamanian officials. Forgotten also, apparently, is the great work of sanitation brought about by our Isthmian organizations whereby Panama ceased to be what was once regarded as the worst pest hole in the world and was transformed into a status of sanitation and health unmatched in any other tropical region of the earth.

Panama and the United States must be, and remain, friends. I respectfully submit that questions at variance between the two countries can be settled better by the two nations at the authorized council table rather than as a result of any effort by either country to pressure the other through processes of international propaganda.

This propaganda effort in behalf of Panama unfortunately aids and supports the Communist charge that kind and generous Uncle Sam is, in fact, a selfish and grasping Uncle Shylock guided alone

by imperialistic designs. That the truth is just the reverse is well illustrated by the fact that since World War II our Government, in its efforts to serve the people of the world at large, has given away more than $62 billion exacted from our own taxpayers.

It would be, indeed, unfortunate if Panama, which is not a Communist country and enjoys unique advantages growing out of the canal enterprise, should permit itself to be cast in a role in the Communist effort to liquidate the influence and authority of the United States.

Concerning the proposals for the surrender by the United States of all authority and control over the Panama Canal, I would emphasize the fact that the proposals are in no wise based on any failure by the United States to discharge in the most scrupulous manner its treaty obligations. To say the least, there can be no just reason for any such surrender unless or until this Nation shall fail to discharge its duty in the premises.

CANAL QUESTION REQUIRES REALISTIC TREATMENT

During my recent visit to Panama I had the privilege of talking to many leaders of the Republic and of the Canal Zone concerning problems of current interest—those involved in increasing the capacity of the Panama Canal and its operational improvement, as well as others of diplomatic character. Exceptional among my experiences was a helicopter flight over the entire length of the Panama Canal, which enable me to observe and study the canal picture from the air.

After such observations, I could not resist pondering what would be the result, in the event of a great emergency such as a complete closure of the canal by overwhelming slides in the Gaillard cut area, if the United States were to surrender all her authority and responsibility over the enterprise to some international or other authority.

Any such body would be without the funds or other resources essential for restoring traffic and inevitably would have to turn to the United States for the required assistance. If the United States refused such request the canal in all probability would be abandoned to the voracious jaws of the jungle, for no responsible government can assume responsibility without authority as regards a project of the magnitude of the Panama Canal.

What I have stated about the danger of complete closure is not beyond the realm of possibility as was shown by the recent menace of Contractors' Hill, which for a while threatened to close the canal. This, fortunately, was prevented by an emergency job of rock and earth removal and terracing at a cost of millions of dollars.

Also extremely clear to view from the air are the operational features of the canal with respect to its improvements for the purpose of providing increased capacity. As a result of my observations, more than ever I am of the judgment that the only wise, effective, and economic solution of its principal operational problems is through the Terminal Lake-third locks project and that the so-called sea-level design, coupled with its vastly greater costs, unprecedented engineering difficulties, and the necessity for further treaty arrangements with Panama, render that design as not being entitled to serious consideration.

Thus, the problems involved in planning the future canal are not ones for casual handling by routine administrative agencies but obviously require realistic treatment by an independent inquiry under congressional authorization. More than 10 years delay in resolving this question and a constant increase in the volume of traffic emphasize the necessity for prompt action by the Congress, which is the ultimate authority on canal questions.

PANAMA CANAL MUST REMAIN UNDER UNITED STATES CONTROL

United States Isthmian Canal policy has slowly evolved over a period of more than a century. Its culmination in the acquisition of the Canal Zone as a domain of the United States and in the construction and subsequent operation of the Panama Canal marks a highlight in the progress of man. There can be no turning back of the clock of history.

But to make unmistakably clear to the forces of world subversion, I wish to stress the point that the Panama Canal is not a project for local exploitation by any nation, but a sacred mandate of civilization assumed, with important obligations, by the United States in perpetuity. Its function, as an interoceanic public utility, is the economic and efficient transit of vessels of all nations on terms of equality with tolls that are equitable and just in accordance with the formula prescribed by law—Thompson Act of 1950.

In view of the uncertainties that have been injected into the public mind, it is the duty of the Congress to proclaim without further delay that the United States will continue to maintain, operate, sanitate, and protect it under terms provided by treaty.

The historic canal policy, which has been followd rigidly ever since the Panama Canal was opened to traffic in 1914, is best for the United States, best for the Americas, especially Panama, and best for the world at large, particularly those maritime nations whose vessels use the canal and pay tolls reflecting the costs involved in the construction and functioning of this mighty enterprise.

BENSON WANTS AUTHORITY TO BANKRUPT AGRICULTURE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from North Carolina [Mr. COOLEY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. COOLEY. Mr. Speaker, I received from Secretary of Agriculture Ezra Taft Benson today a communication which is of deep concern to this House and to the Congress. It is of deep concern to every Member, irrespective of party.

Mr. Benson has submitted to me a proposal that would deprive the farm families of America of the price supports established by law and would leave all decisions pertaining to price supports entirely in his discretion. He sent to me his language for an amendment to the farm law which would give him absolute authority to set price supports as low as he wishes or to eliminate supports completely.

Mr. Speaker, it is my opinion that this proposal, if enacted, would sound the death knell of the farm program.

The action the Secretary suggests would turn back the clock of progress to the days of the great depression and deprive farm families of the legislative tools which Congress has provided and which were operating successfully and well until the time he took office.

Mr. Benson wants absolute power over price supports. His program would mean bankruptcy for farmers before Christmas. I am certain that the farmers of America will not approve the program he has submitted. Personally, I want no part of such a program.

We remember too well the tragic bankruptcies and foreclosures of the great depression, when farmers had no program to protect them. In recent years the decline in commodity prices and the loss of farm income have been distressing and devastating. Farmers need help. I am not willing to run the risk of ruining American agriculture. If the present farm program should be destroyed not only would agriculture collapse but the whole economy of our country could tumble into another great depression.

When Secretary Benson was before the House Committee on Agriculture on May 16, I asked him directly if he recommended any changes in the tobacco program, and the Secretary said he did not. I am surprised and astonished that the Secretary has now changed his mind and wants to put the tobacco program under flexible price supports and to fix the level of such supports in the free exercise of his own discretion, from zero to 90 percent of parity. I think I speak for the tobacco farmers when I say we want no part of such a program.

The price-support program on tobacco through the Commodity Credit Corporation, from its very beginning to date, a period of more than 24 years, has resulted in a negligible loss of only $92,000 according to the CCC statement of March 31, 1957, and tobacco farmers have prospered.

Our farm program was built upon a solid base and has served well its purpose. It seeks only fair treatment for farmers. It provides them with tools which are essential to the success of any business in our free enterprise system, namely, first, a means of adjusting their production to fit their markets and, sec-

ond, a voice, like other business people, in the price of the things they produce and sell. The program simply seeks to comprehend the fact that, without Government help, agriculture is the only great segment of our economy that sells on auction markets and has virtually no bargaining power.

This program was remarkably successful prior to 1953. In each of 11 consecutive years—1942–52—prices paid to farmers were at or above 100 percent of parity.

Moreover, it is a fact that in all the 20 years prior to 1953 the Commodity Credit Corporation supported farm prices on basic and nonbasic crops at a loss of only $1,064,000,000 and that on January 1, 1953, after 20 years of operation, investments of CCC—inventory and loans—amounted to only $2,452,000,000; while in the last 4 years CCC losses have amounted to three times as much as was lost in the preceding 20 years, slightly more than $1 billion in 20 years and more than $3 billion in 4 years under Mr. Benson. CCC investments in commodities have increased to $8,211,000,000. When Mr. Benson took over the cotton program it showed a profit of $267 million. Now he advises us that losses on cotton in the last 15 months have amounted to $535 million. On dairy products alone, under Mr. Benson, we have lost over $1 billion.

Even with the great losses under Mr. Benson's administration, the cost of CCC price-support operations have been infinitesimal in comparison to the good that has been accomplished. During the 24 years prior to last January 1, farm marketings amounted to $475 billion; CCC loses at $4 billion were only a fraction of 1 percent of the total volume of agriculture.

Now, Mr. Benson proposes to scrap this program, and he offers nothing in its place but what he calls a free market at lower and lower prices for farmers. It has been evident virtually from the day he took office that it was his purpose to break down the price support program for agriculture, although in the early days of this effort he talked about, not 90 percent of parity, but "100 percent of parity in the market place."

And what has happened?

During the 4 years he has been in office, as he has been destroying the fixed support levels for the basic crops, farm prices have dropped 18 percent, while hourly wages of industrial workers increased 19 percent and dividends paid by corporations jumped by 33 percent.

Now, in these distressing circumstances, Mr. Benson requests the Congress to permit him to reduce the supports for farm prices not to 75 percent of parity, but all the way to zero, if he chooses.

I shall immediately call to the attention of the House Committee on Agriculture the letter Mr. Benson has written to me proposing specific changes in the law to permit him unlimited discretion in price support operations. The committee at an early date will review the Secretary's proposal, and I shall call before the committee all persons desiring to be heard on his proposal.

Meanwhile, I urge upon the farmers of America that they consider that during this fight to tear down our price support program we have seen wide dissensions created in agriculture, with crop alined against crop, region against region, and organization against organization. I plead with all concerned to come together in a community of effort to build a stronger, not a weaker, program for agriculture, in which our farm families will share equitably in the blessings of our free-enterprise system.

LEAVE OF ABSENCE

By unanimous request, leave of absence was granted to Mr. ASPINALL, after 1 p. m. on May 29 and May 30, 1957, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mrs. ROGERS of Massachusetts, for 5 minutes, today.

Mr. THOMPSON of New Jersey, on Tuesday next for 1 hour.

Mr. BRAY (at the request of Mr. THOMSON of Wyoming), for 30 minutes on Tuesday next.

Mrs. ROGERS of Massachusetts, for 5 minutes on Monday next.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mrs. ROGERS of Massachusetts and to include extraneous matter.

Mr. COLLIER and to include an editorial.

Mr. NEAL.

Mr. FLOOD to revise and extend the remarks he made in the Committee of the Whole today and include extraneous matter.

Mr. MULTER and to include extraneous matter.

Mr. DELANEY and to include a speech.

Mr. DORN of South Carolina and to include a speech by Dr. LONG.

Mr. FOGARTY.

Mr. DOYLE.

Mr. CANFIELD (at the request of Mr. THOMSON of Wyoming) and to include extraneous matter.

Mr. ASHLEY (at the request of Mr. ALBERT) and to include extraneous matter.

Mr. FORAND (at the request of Mr. ALBERT) and to include extraneous matter.

Mr. KEATING.

ENROLLED BILL SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H. R. 6871. An act making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

BILL PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H. R. 5788. An act making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1958, and for other purposes.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock p. m.) the House adjourned until tomorrow, Thursday, May 30, 1957, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

902. A letter from the Secretary of the Air Force, transmitting a draft of proposed legislation entitled "A bill to authorize travel and transportation allowances in the case of certain members of the uniformed services"; to the Committee on Armed Services.

903. A letter from the Secretary of the Air Force, transmitting a draft of proposed legislation entitled "A bill to amend title 10, United States Code, to authorize the Secretaries of the military departments to settle certain claims in the amount of $5,000 or less and to partially pay certain claims which are certified to Congress"; to the Committee on the Judiciary.

904. A letter from the Secretary of the Air Force, transmitting a draft of proposed legislation entitled "A bill to amend the Career Compensation Act of 1949 to provide incentive pay for human test subjects"; to the Committee on Armed Services.

905. A letter from the Secretary of the Air Force, transmitting a draft of proposed legislation entitled "A bill to authorize, in case of the death of a member of the uniformed services, certain transportation expenses for his dependents"; to the Committee on Armed Services.

906. A letter from the Assistant Secretary of Agriculture, transmitting a report on price trends and relationships for forest products, pursuant to the Agricultural Act of 1956 (70 Stat. 188); to the Committee on Agriculture and ordered to be printed with illustrations.

907. A letter from the Secretary of Health, Education, and Welfare, transmitting the Annual Report of the United States Department of Health, Education, and Welfare, for the fiscal year 1956; to the Committee on Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the

Clerk for printing and reference to the proper calendar, as follows:

Mr. DELANEY: Committee on Rules. House Resolution 270. Resolution for consideration of H. R. 7125, a bill to make technical changes in the Federal excise tax laws, and for other purposes; without amendment (Rept. No. 493). Referred to the House Calendar.

Mr. MADDEN: Committee on Rules. House Resolution 271. Resolution for consideration of H. R. 7168, a bill to prescribe policy and procedure in connection with construction contracts made by executive agencies, and for other purposes; without amendment (Rept. No. 494). Referred to the House Calendar.

Mr. PRESTON: Committee of conference, H. R. 6700. A bill making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1958, and for other purposes (Rept. No. 495). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ALGER:

H. R. 7827. A bill to provide that the provisions of the Natural Gas Act shall not apply to the sale of natural gas, as an incident of its production and gathering, by an independent producer not engaged in the interstate transmission of natural gas; to the Committee on Interstate and Foreign Commerce.

By Mr. ASPINALL:

H. R. 7828. A bill to authorize Federal assistance to the States and local communities in financing a program of atomic and disaster shelters in the Nation's schools; to the Committee on Armed Services.

By Mr. DEROUNIAN:

H. R. 7829. A bill to amend section 1461 of title 18 of the United States Code, relating to the mailing of obscene or crime-inciting matter; to the Committee on the Judiciary.

By Mr. DOLLINGER:

H. R. 7830. A bill to amend the Trading With the Enemy Act, as amended, so as to provide for certain payments for the relief and rehabilitation of needy victims of Nazi persecution; to the Committee on Interstate and Foreign Commerce.

By Mr. FORAND:

H. R. 7831. A bill to amend the Social Security Act to enable the States to establish more adequate public-welfare programs, and for other purposes; to the Committee on Ways and Means.

By Mr. HALEY:

H. R. 7832. A bill to amend section 8e of the Agricultural Adjustment Act (of 1933), as amended, and as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, so as to provide for the extension of the restrictions on imported commodities imposed by such section to all imported citrus fruits, and to sliced figs, dried figs, and fig paste; to the Committee on Agriculture.

By Mrs. ROGERS of Massachusetts:

H. R. 7833. A bill to incorporate the Army and Navy Union of the United States of America; to the Committee on the Judiciary.

By Mr. SHELLEY:

H. R. 7834. A bill to amend title II of the Social Security Act to provide that widow's insurance benefits shall become payable thereunder at age 50 in the case of a widow who is under a disability; to the Committee on Ways and Means.

By Mr. SMITH of Virginia (by request):

H. R. 7835. A bill to increase the authorization for appropriations for the Hospital Center and facilities in the District of Columbia and for other purposes; to the Committee on the District of Columbia.

By Mr. WHITTEN:

H. R. 7836. A bill to amend the Agricultural Adjustment Act of 1938, as amended, to establish a certificate and domestic parity plan for upland cotton to enable the American cotton farmers to farm and secure a fair return from the users of their products for their labor and investment, to preserve the historical relationship of cotton and competing fibers in domestic markets in the interest of the general welfare, and for other purposes; to the Committee on Agriculture.

By Mr. ASHLEY:

H. R. 7837. A bill to amend title II of the Social Security Act to provide that an individual's benefits shall not be subject to deductions on account of outside earnings after the beginning of the year in which he (or the primary beneficiary) attains age 72; to the Committee on Ways and Means.

H. R. 7838. A bill to amend section 203 of the Social Security Act to limit the deductions which would otherwise be made, on account of outside earnings, from benefits to which an individual is entitled in the year in which he (or the primary beneficiary) retires; to the Committee on Ways and Means.

By Mr. ASPINALL:

H. R. 7839. A bill to amend the act of August 2, 1956 (70 Stat. 940), providing for the establishment of the Virgin Islands National Park, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. FASCELL:

H. R. 7840. A bill to amend the Servicemen's Readjustment Act of 1944 to extend the veterans' guaranteed home-loan program by 1 year, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. FOGARTY:

H. R. 7841. A bill to authorize a 5-year program of grants for construction of medical, dental, and Public Health educational and research facilities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GARMATZ (by request):

H. R. 7842. A bill to provide that certain expenses of the Panama Canal Company and the Canal Zone Government shall be paid from tolls, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. LANKFORD:

H. R. 7843. A bill to authorize the payment from the Employees' Life Insurance Fund of expenses incurred by the Civil Service Commission in assuming and maintaining the assets and liabilities of certain beneficial associations; to the Committee on Post Office and Civil Service.

By Mr. METCALF:

H. R. 7844. A bill relating to the imposition of a tax on the importation of zinc and lead; to the Committee on Ways and Means.

By Mr. REECE of Tennessee:

H. R. 7845. A bill to amend title II of the Social Security Act to include Tennessee among the States which may obtain social-security coverage, under State agreement, for State and local policemen and firemen; to the Committee on Ways and Means.

By Mr. SAUND:

H. R. 7846. A bill to amend the act of July 3, 1926, so as to restrict, under regulations of the Secretary of State, the travel from the United States of unaccompanied minors not possessing valid passports; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. PATMAN: Senate Resolution No. 576, Texas State Legislature, favoring the passage of H. R. 221, which would authorize the Veterans' Administration to construct a general hospital within the 14th or the 15th Congressional District of Texas; to the Committee on Veterans' Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Nebraska, memorializing the President and the Congress of the United States to reject any efforts to pass any additional legislation by the terms of which money would be appropriated and made available to the States through grants-in-aid or otherwise for construction of schools and that the matter of school construction continue to be a responsibility of the several States and individual school districts thereof; to the Committee on Education and Labor.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARRETT:

H. R. 7847. A bill for the relief of Rosalia La Licata Pitti; to the Committee on the Judiciary.

By Mr. BERRY:

H. R. 7848. A bill for the relief of Robert Lloyd Painter; to the Committee on the Judiciary.

By Mr. DEMPSEY:

H. R. 7849. A bill for the relief of Mrs. Young Chong How and her daughter, Chu Fung Lau; to the Committee on the Judiciary.

By Mrs. DWYER:

H. R. 7850. A bill for the relief of Yvonne Lu Pascal; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H. R. 7851. A bill for the relief of Giovanni Gambino Morasca and Giuseppe Gambino Morasca; to the Committee on the Judiciary.

By Mr. HILLINGS:

H. R. 7852. A bill for the relief of Siufeng Huang; to the Committee on the Judiciary.

By Mr. KING:

H. R. 7853. A bill for the relief of Mrs. Wilson Bryan Key, Jr., and her minor daughter, Leilani Key; to the Committee on the Judiciary.

By Mr. LANKFORD:

H. R. 7854. A bill for the relief of Alfred G. Chroniger; to the Committee on the Judiciary.

By Mr. MORANO:

H. R. 7855. A bill to authorize the sale by the Secretary of Commerce to the Dawd Shipping Co. of two 4,000-ton repair vessels; to the Committee on Merchant Marine and Fisheries.

By Mr. MUMMA:

H. R. 7856. A bill for the relief of George Kalodikis; to the Committee on the Judiciary.

By Mr. TELLER:

H. R. 7857. A bill for the relief of Sultane P. Aboudi; to the Committee on the Judiciary.

By Mr. WALTER:

H. R. 7858. A bill for the relief of Paolo Tomaino; to the Committee on the Judiciary.

H. R. 7859. A bill for the relief of Saverio Tomaino; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Medical and Dental Schools and Schools of Public Health

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. FOGARTY. Mr. Speaker, I have introduced a bill in the House today to provide Federal funds on a matching basis for the construction of facilities for medical and dental schools and schools of public health.

The bill authorizes $60 million a year for a period of 5 years. Eight million a year is earmarked for dental schools, seven million for schools of public health, and forty-five million for medical schools.

The shortage of health education facilities today is probably the most serious bottleneck in our whole medical system. These schools which produce the general practitioners, the specialists, and the research scientists fall far short of accommodating the fully qualified and competent young men and women in America who are anxious to train and qualify in medical, dental, and public-health fields.

In 1955–56, in medical schools alone, only half of the 15,000 applicants for admission in this country were accepted. This left the other 7,500 to turn to other fields of endeavor or to go abroad for training. As a result, the number of American medical students who are forced to attend foreign schools is equivalent to the capacity of four additional medical schools in the United States.

Moreover a sharp increase in applicants is expected during the next 10 years by the Association of American Colleges, and from 1967 on, when the postwar generation will have come to age, the increase in national population and the increase in applicants for medical education will present a staggering problem. Unless we do something now to cushion that impact, the ratio of doctors to general population will drop to the point where the health of the entire Nation will be in jeopardy.

One year ago the Congress enacted a law providing $30 million a year on a matching basis for the construction of health research facilities. The first $30 million appropriated under the terms of that law was allocated in a few short months and already there are more valid applications on hand for grants than the entire $90 million authorization provides for. This research-building program is a fine one and it will add impetus to our research effort but unless the total pool of doctors is swelled we shall soon be short of research men, for the research program can draw men and women only from the total number of doctors in the country.

The Interstate and Foreign Commerce Committee has held long and thorough hearings on this subject. Hearings were held in the 81st, the 82d, the 83d, and the 84th Congresses. Early this year the committee published a staff report summarizing the facts that were brought to light in the course of those hearings. They were compelling facts and they point clearly to the need for immediate action for Federal aid on a matching basis for the construction of facilities in medical, dental, and public health schools.

I invite your attention to that fine report and urge that the bill I have introduced be considered at an early date so that it can be acted on in the first session of the current Congress.

Visit of a Great Statesman

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. KEATING. Mr. Speaker, Konrad Adenauer has been called the greatest German statesman in modern history. The record shows this is not an exaggeration.

Dr. Adenauer has been the leader and guiding light in rebuilding Germany to its present position as the mightiest industrial power of Western Europe. He has helped lay the foundations of a stable democratic society in a land wracked by totalitarian dictatorship and war. His support for the concept of a united Europe has been a moving factor in the formation of the European Coal and Steel Community. And today, Germany is taking her rightful place in erecting the military defenses of a united Western Europe.

Mr. Speaker, it is indeed a pleasure for the American people to again welcome this distinguished visitor to our land. With each successive visit, Chancellor Adenauer has been more widely recognized by our people as a man of courage, wisdom, and determination, whose vigor of mind and body belie his years.

We know him as both a great German and great European; indeed, as a champion of the free world itself.

Born in 1876 in the city of Cologne, where his father was registrar of the court of appeals, Konrad Adenauer prepared himself for the legal profession. A highly educated man, he studied law and economics at the Universities at Freiburg, Munich, and Bonn. He began to practice law in his native city, but soon entered public service as a deputy mayor of Cologne. In 1917, during the First World War, he was chosen to be lord high mayor. He occupied this office continuously from then until 1933 when he was ousted by the Nazis. He was mayor again for a brief period at the end of the Second World War. While in office, Adenauer rapidly became known as the greatest mayor in Germany. He founded Cologne's University, rebuilt its river port, provided superb housing for the workers, surrounded it with a green belt and started the famous Cologne Fair. During this same period, Konrad Adenauer served in the Prussian state council and became its president. Twice he was offered the post of chancellor of Germany in the days before Hitler. Both times he refused, preferring to remain mayor of Cologne.

When the Nazis came to power, Adenauer would have nothing to do with them. In 1933 he refused to display the swastika from the venerable town hall of Cologne. For this, he was promptly fired from all his high posts and forced to flee from the city where he had been the leading citizen. He was imprisoned for a brief period by the German Gestapo in 1934 and then retired to private life until the end of the war. Throughout the Hitlerian reign of terror he remained a staunch foe of this barbarian movement that ripped asunder the high values for which western civilization had stood through the ages.

When the war ended, Dr. Adenauer was almost 70 years old, an age when most men think of retiring. But for him it marked only the end of one public career and the beginning of a second.

Adenauer's second career has made him world famous. It began after the Second World War when he traveled throughout Germany carrying a blanket and a few slices of bread in his brief case, in an attempt to organize the Christian Democratic Party. This party was a cooperative movement of Roman Catholics and Protestants, seeking to apply Christian ethics in politics without, however, encouraging the participation of the churches themselves in political activities. A party based on cooperation of these denominations was itself a great help in attempting to build a sense of unity and stability in war-torn Germany.

Dr. Adenauer soon became president of the Christian Democrats in the British Zone of occupied Germany, and prominent in the North Rhine-Westphalia Provincial Diet. Then in 1948, when a Parliamentary Council was formed to draft a new basic law for West Germany, it was Dr. Adenauer who was elected its president. This position of leadership was continued when, in 1949, the Bundestag voted him the first Chancellor of the new Federal Republic of Germany.

This was a far different Germany from that which had existed before World War II and before the days of Hitler, when he had first been offered the job of Chancellor. His native city of Cologne was reduced from a population of 600,000 to a mass of holes and cellars inhabited

by a scant 40,000 hungry men, women, and children. Many other parts of the country were also devastated. Germany had lost her eastern provinces to Poland and was herself divided into four military occupation zones.

The United States, British, and French zones soon cooperated in the rehabilitation of Germany, but the authorities in the Soviet zone moved further and further away from their wartime allies. The Soviets concentrated on making sure that Germany would never again be a threat to their security.

Russia thus insisted on heavy reparations from Germany including the dismantling and export to Russia of a large number of industrial plants. She further made it obvious that it had become a fixed part of her defense plans to continue occupation of the Soviet zone in Germany. It was promptly cut off from contact with the western parts of Germany and a Russian satellite government installed there. Eighteen million Germans in the east were thus cut off from all hope of any immediate reunion with their fellow countrymen. Many more continued to exist in prison camps within the Soviet Union.

To top it off, of course, the spirit of the German people had been trampled upon by Hitler for 8 years and they had been led into a war upon the world. A whole generation of youth had grown up in Germany without any experience of the normal decencies of western society, to say nothing of democracy itself. Hitler had been especially strong in his denunciation of democracy. How could this Germany be turned into a reasonably happy, prosperous, united democracy—with a soul? This was the task that faced the German people under the leadership of Konrad Adenauer.

Events move so swiftly today and our lives are so caught up in their rapid pace that it is difficult to realize this was Germany less than 10 years ago. The changes that have been wrought in the land beyond the Rhine have been called a miracle, so prodigious is their magnitude. It would be an injustice to the vitality of the human spirit of all the German people to claim that what has been accomplished is the result of the actions and words of but one man, Konrad Adenauer. But it would be an equal injustice to the facts of history to deny that Dr. Adenauer has been the dynamic leader of the forces in West German life, who has guided them and given the German people exactly the type of inspiration they required in this hour. A hard-working people, blessed with natural resources and aid from the western allies—all these have moved together to bring about that which we call the German miracle. But it is not too much to say that without the Chancellor, the parts of this miracle might not have been put together.

The first thing that strikes one about postwar Germany is the amazing growth of its industrial might. In 1956 the gross national product of the Federal Republic reached a peak equivalent to $45 billion. Since 1950 the income of all employed persons has risen about 60 percent. But these advances have not been easy. Indeed, they are the direct result of hard work and self-denial. During these years of reconstruction, a steady 22 percent of the gross national product has been poured into the rebuilding of factories, homes, and capital goods that has made possible the continuing economic expansion.

Now there is talk of automation being applied to the German economy. Nearly everyone in Germany who wants a job has one. And there is a mounting scarcity of labor that has led both the unions and the employers to favor the devices of automation. Both sides are hopeful that it may permit Chancellor Adenauer's booming economy to move toward a 40-hour workweek, as well as to produce more goods at a lower cost to the public.

Chancellor Adenauer has been a strong advocate of free enterprise. Just this month we have seen the development of new plans to increase the ownership of industry by private persons. State-owned industrial plants, beginning with the famous Volkswagen automobile plant, are to be sold to individual investors through low-priced bonds. It is reported that the shares will be priced as low as $11.90 and that no one will be permitted to gain control of the company by monopolizing the purchases. Profit sharing by workers in all privately owned companies will be encouraged by investment plans operated by insurance companies and savings banks. In addition to all this, the Government is planning to make additional financial help available to people who want to buy their own homes.

At the same time that economic recovery has taken place, the Communists and the neo-Nazis have been decisively beaten. In the 1949 elections, the Communists received 5.7 percent of the popular vote. By the time the next elections rolled around in 1953, the German people slashed even this small figure to a mere 2.2 percent.

There is clearly no love of communism in the Federal Republic. Why should there be any love for this system that has enslaved 18 million in East Germany, refused to send home the many prisoners of war that remain in Russia, and refused to permit the reunification of the German Nation? Why indeed should communism be popular in Dr. Adenauer's Germany when the people there can see with their own eyes the poverty that exists in East Germany compared to their own well-being?

Communism promises a workers' paradise as an alternative to slavery under capitalism. Germany today is conclusive proof of the utter nonsense underlying this claim. In the Federal Republic, under 20th century capitalism, the people are enjoying the benefits of a fully operating, efficient economy. In East Germany, the people look with longing eyes at the prosperity of the West while they themselves live under an inefficient economic system that operates more in the interests of the Soviet Union than the German people.

Nazism has also died in Germany under the impact of Dr. Adenauer's government. In 1949, the neo-Nazis received only 1.8 percent of the popular vote and in the next election 4 years later, they tumbled to a shaky 1.4 percent. In that election Dr. Adenauer refused to seek the neo-Nazis' support. Instead, he saved his most biting condemnation of nazism and all its works for his speeches in the heart of the right-wing country.

Many feared it would be impossible to establish anything resembling a democracy upon the ruins of Hitler's Germany. But the facts of the last 12 years have shown how wrong they were. Chancellor Adenauer's government has become one of the most stable democracies in Western Europe, while communism and nazism have been vanquished.

West Germany today is well on the road toward building a humane democratic society, with protection for individual rights. But this Germany is incomplete. It is divided by the famous Iron Curtain which for many years separated the two parts of the nation. It is this division of Germany that has constituted the most important problem in German foreign policy since the end of the Second World War. Chancellor Adenauer has directed himself toward its solution with insight and tenacity.

His policy has been consistently based on the premise that a weak Germany will remain a divided Germany. It is only from a position of strength that the Federal Republic can face Soviet Russia across the conference table with any hope of gaining reunification based on free elections throughout both East and West Germany.

The events of the past year have made this problem even more difficult. It appears now that Russia is turning East Germany into a fortress from which she will send forth troops to maintain control throughout the whole satellite empire in Eastern Europe. It was from East Germany that the Soviet troops departed to quell the revolt of the Hungarian people. It is East Germany that is apparently now slated to receive Soviet atomic installations. A united Germany would eliminate the opportunity for the Soviet Union to control her satellites from the western side. It would thus further weaken her ability to keep the satellite empire intact.

In February of this year, Soviet Russia declared that reunification has become "ever more remote" as a result of the Federal Republic's participation in NATO, and her rearmament. In April the Soviets made their warning even stronger when the Soviet note said that any atomic armaments in the Federal Republic would "gravely endanger the reunification of Germany." Chancellor Adenauer has answered the Russian charges contained in these vindictive notes by stating clearly and unequivocally that his government's policy of continued membership in NATO is entirely defensive in nature. It thus offers no threat to the Soviet Union. Moreover, he has pointed out that Germany has pledged not to arm herself with atomic weapons.

But what do these Soviet policy statements imply for the future of German policy? Is it true that a policy of weakness and isolation would guarantee German reunification on the basis of free elections? A policy of weakness would

mean German abandonment of NATO and the withdrawal of NATO forces from Germany.

What if Russia should agree to recall all her forces to Poland, or even to the Soviet home border? Dr. Adenauer has pointed to the inevitable result of such a troop withdrawal. The Soviets would be only a stone's throw from Germany, while the United States would pull its troops back 3,000 to 6,000 miles. In the Chancellor's own words:

> On the one hand we would have the powerful Soviet bloc, and on the other hand a totally isolated Germany without any connection with the United States, and a number of other relatively weak European nations.

Thus a weakened, isolated Germany would be more a prey to Soviet power. Soviet Russia would have no reason whatsoever to agree to German reunification on the request of a weakened and isolated Federal Republic. Russia would gain absolutely nothing by agreeing to do this since she would have already achieved her main goal in central Europe, which is to guarantee a permanently crippled and ineffective Germany.

At the same time Russia would gain nothing by agreeing to reunification, it would lose a great deal by such a move. If current reports are correct in estimating that Russia is now using East Germany as a military base from which to keep her European satellites in line, then Russia will not willingly agree to surrender this vital base.

It seems to me, Mr. Speaker, that Chancellor Adenauer is quite correct in insisting that the only hope for German reunification lies in the alliance of a strong German Federal Republic with the free world. While reunification has not been achieved in these last years, and will not be easy to achieve in the immediate future, there is greater basis for hope in a policy of strong alliance than in one of weak isolation.

This policy of strength must be coupled with a door constantly open for negotiations with the Soviet Union that may reduce international tensions and thus lay the groundwork for an eventual settlement that recognizes the realities of Europe. These realities are, on the one hand, that the West is united and has absolutely no aggressive intentions toward the Soviet Union. On the other hand, Russia cannot expect to extend her control in Europe without risking war. Until a final settlement is achieved, NATO serves as both a deterrent to Soviet aggression and a shield that will enable the allies to defend themselves in the event war should prove necessary.

But beyond the problem of German unification and the matters of European defense, there is the growing experiment in European unity, which has excited the imaginations of us all. Konrad Adenauer has been a prime mover in these great experiments such as the Coal and Steel Community, the European Payments Union, and now the Common Market and European Atomic Energy Community. They are further reflections of Dr. Adenauer's conviction that the fate of Germany is now inextricably linked with the fate of Europe as a whole. The cornerstone of economic and political survival is cooperation between France, Germany, and Great Britain. His support for these movements, since he became Chancellor, has helped heal the old wounds that separated these powers for so many years.

The expansion of international politics to the current global struggle between the Soviet bloc and the free world has made it evident that cooperation must replace discord in Western Europe if the individual nation states are to live in security and prosperity. Modern industrial developments have further impelled the European states toward cooperation to reduce wasteful competition and organize for more efficient production and distribution. The Federal Republic, under the strong inspiration of its Chancellor, has taken a leading role in this movement so that today Germany is a respected and responsible member of the Western European community of free nations.

All of these many developments put together constitute the German miracle and the German part in the European miracle. Chancellor Konrad Adenauer has perhaps been more responsible for these events than any other single person. It is for these many reasons that we join with others in hailing our honored visitor as the greatest statesman of modern Germany.

Preliminary Public Hearings Between Defense Department and Special Subcommittee on Military Discharges, Armed Services Committee, Necessarily Postponed From June 3; Announcement Follows

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent, heretofore granted me so to do, I am pleased to produce for your information the following communication which has been sent to the 30 Members of the House who have heretofore filed companion bills on it relating to less than honorable discharges from the Military Establishment and from other interested persons.

Text of announcement follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 29, 1957.

MY DEAR COLLEAGUES IN THE HOUSE OF REPRESENTATIVES AND OTHERS INTERESTED: The previously announced target date, to wit: June 3, for the preliminary public hearings by the House Armed Services Special Subcommittee on Military Discharges (H. R. 1108) and companion bills, etc., will not begin June 3. The reason is that the House Armed Services Committee will not complete its public hearings and executive sessions on the military construction bill until about June 15 (estimated).

Promptly upon the completion of said hearings by the full Armed Services Committee, of which all members of the special subcommittee are members, these preliminary public hearings with the Defense Department as the only witnesses to be heard in said preliminary hearings, will be held.

Promptly thereafter it is planned to have public hearings in order that all Members of Congress who desire to do so, together with other interested and qualified persons, may appear and testify in public session.

You will receive notice of the date set for these preliminary hearings with the Defense Department as witnesses.

Sincerely yours,

CLYDE DOYLE,
Member of Congress; Chairman, Special Subcommittee on Military Discharges, Armed Services Committee.

(Subcommittee members: Hon. GEORGE HUDDLESTON, Jr., Alabama; Hon. A. PAUL KITCHIN, North Carolina; Hon. WILLIAM G. BRAY, Indiana; Hon. CHARLES S. GUBSER, California.)

Address by Hon. John W. McCormack, of Massachusetts, Upon the Presentation to Him of the Bellarmine Medal, Bellarmine College, Louisville, Ky., May 13, 1957

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an address by the distinguished minority leader, the Honorable JOHN W. MCCORMACK, upon the presentation to him of the Bellarmine Medal, May 13, 1957, at Bellarmine College, Louisville, Ky.

The award known as the Bellarmine Medal was established in 1955 by Bellarmine College, Louisville, Ky. Its purpose is to honor annually a person "who, on the national or international scene has exemplified in a notable manner the virtues of justice, charity, and temperateness in dealing with difficult and controversial problems."

The specific emphasis in the medal's definition of purpose is derived from the character and achievements of the college's patron, Robert Bellarmine, 16th century saint, theologian, philosopher, and educator. St. Robert lived and worked most of his life in the midst of controversy. His fairness, mildness, and dispassionate devotion to truth were the occasion of admiring wonder on the part of both friends and opponents.

The 1957 recipient of the Bellarmine Medal is the Honorable JOHN W. MCCORMACK, of Massachusetts, majority leader of the House of Representatives. He has been a Member of the United States House of Representatives since 1928. Since 1940, he has been majority leader of the House during the sessions when the House was organized by the Democratic Party. His achievements have been recognized by the presentation

of honorary degrees from 10 American universities and colleges.

Bellarmine College finds in the career of Mr. McCORMACK a notable exemplification of the qualities that the Bellarmine Medal was established to honor.

Mr. McCORMACK's address follows:

The Most Reverend John A. Floersh, Archbishop of Louisville, the distinguished president of Bellarmine College, Monsignor Horrigan, right reverend, very reverend, and reverend fathers; Your Excellency, Gov. Albert B. Chandler, Your Honor, Mayor Andrew Broaddus, distinguished and invited guests, ladies and gentlemen, I am deeply touched by the honor that has been conferred upon me. The fact that those who selected me as the recipient of this year's Bellarmine medal feel I am worthy of it, touches me very much. While I have received many honors in the past, all of which I value very much, there is none that I shall treasure more than the one you have conferred upon me this evening, and Mrs. McCormack joins with me in expressing to you our deep appreciation.

I might also say that Mrs. McCormack and I will carry away with us from Louisville fond and lasting memories of your hospitality.

Down through the ages our church has given to mankind great leaders, not only in times of peace and tranquility, but particularly in times of pain and stress. Among those great leaders is a 16th century churchman, Robert Cardinal Bellarmine, Saint Robert Bellarmine—doctor of the church, educator, scholar, diplomat, and the patron of your young but dynamic college.

I know that Archbishop Floersh, the beloved spiritual leader of your archdiocese, derives great happiness and satisfaction, and rightfully so, in the existence of your fine college.

For after years of prayer and hope, it was under his far-seeing and courageous leadership that Bellarmine College came into being—the prayers, the hopes, and the planning of many years by His Excellency, and countless of others, and the fulfillment thereof some 7 years ago.

For many generations to come will go forth its graduates, possessing a complete education, and with its motto, "In the love of truth" firmly impressed upon their minds, graduate students possessing a truly integrated philosophy of life, and as so eloquently stated in the purposes of your college, aware that there is a higher and more certain source of truth, namely, the divine revelation entrusted by God to His church, and of the further fact that there can never be any genuine conflict between the truths of reason and the truths of revelation, since all truth, on whatever level, is from God.

And I can project my mind ahead and see for generations to come young graduates leaving the hallowed environment of Bellarmine College, becoming leaders in all walks of human activity, and wielding great influence for God, for country, for mankind, for college.

In the motto of your college the word "love" is an important part. How significant and meaningful is the word "love." And how significant and meaningful also is another word, the direct opposite and the enemy of the word "love"—the word "hate."

Let us apply those two simple, but significant, words to the world of today. One could well say that the struggle today is between the forces of love and the forces of hate—that love is the origin of our way of thinking and acting, of our philosophy of life; that hate is the origin of everything destructive and in the world of today, of the Communist ideology and thought and action.

Love of God, love of neighbor, the grave is not the end; position and power is a trust and not a personal attribute. The rights of the individual are God-given, such as liberty, freedom, and the pursuit of happiness. Government is the servant and not the master; the result is popular sovereignty, democracy, and representative government, and a government of law, and not of men.

Let me convey to you a short but comprehensive picture of the results that follow with hate the origin of Communist thought and action.

Hatred of God, hatred of neighbor, the grave is the end, power is personal, might is right, destroy all who do not agree or do not submit; the result: Vicious dictatorship in the form of atheistic or international communism with the imposition of persecution, imprisonment, death, and martyrdom. And the other important word in your college motto is "truth." For it is truth that makes men and women free; and the doctrine of popular sovereignty, the people determining their own form of government, has been taught through the centuries by the great doctors of the Catholic Church. One of the most notable in the world, as well as in church history, is Robert Cardinal Bellarmine, whose feast the church celebrates today.

From the time of his ordination in 1570 to his death in 1621, the brilliant cardinal had a most fruitful life. He has left his imprint on the prominent pages of church and world history.

The period in which he lived was one of religious and temporal controversy. It has been said of him that when he spoke, his words made him seem like one inspired.

As an illustration of his brilliant mind and the deep respect in which he was held, when Pope Clement VIII nominated him a cardinal, he did so on the ground that "he had not his equal for learning."

While in the controversy with King James I of England, Bellarmine stood out uncompromisingly as the champion of the Pope's supremacy in all things spiritual; he also wrote extensively on temporal authority, and is one of the great figures of history against the absolutism of his day, and a great advocate of the doctrine of the consent of the governed. It took a brave man to take such a position in his day.

There are remarkable facts about St. Robert Bellarmine's advocacy of the principle that all just government rests upon the free consent of the governed. He popularized the principal of popular sovereignty and democratic procedures at the time when kings and emperors were in the ascendancy, with the result that today whenever a scholar writes about King James the First's pretentions about "the divine right of kings" he completes the story by describing Robert Bellarmine's role as the King's most honorable, redoubtable and invincible critic whose victory in the controversy of his day and age is a source of satisfaction to all who hated tyranny in the 17th century, and has been ratified by an overwhelming vote of approval and confidence in our own age.

For Robert Cardinal Bellarmine was the outstanding champion in the age of royal absolutism, of a philosophy of the state that is best described as "perennial." He is one of those rare figures recorded in the pages of history who has truly and effectively influenced the course of history. It was the cardinal's vocation to revivify basic truths and, by the solidity and style of his presentation, to win a new audience for sound tradition. He knew how to put first things first. Let me quote a few of his utterances on the subject of popular sovereignty, as clear as they are explicit. "Political power in general, without reference to particular forms of it such as monarchy, aristocracy, or democracy, has its immediate origin from God alone. This is so because such power is a necessary corollary of the nature of man, and consequently must have its sanction from Him who made that nature."

The next question to be decided, however, was the juridical principle that brings the state into being as a concrete reality under a particular form of government. Once more, this prince of philosophers expresses himself in unmistakable terms:

"In the second place, it is to be noted that this power rests immediately, as in its subject, in the whole multitude of the people, for the power comes from God, and God having assigned it to no particular man must have given it to the multitude."

"For it is obvious," Bellarmine continues, "that concrete and particular forms of government have their sanction from the law of nations and not from the law of nature. For it is obvious that it rests with the people as a whole to decide whether they shall set over themselves a king, or consuls, or other magistrates. Furthermore, for a legitimate reason the people can change their government from a monarchy to an aristocracy or democracy, and also the other way about, as we read happened in ancient Rome." He also believed, as we do in America, that the interests of the general public are best served by a government of checks and balances. The distribution of powers among the coordinate branches of government, executive, legislative, and judicial, is the very core of Bellarmine's doctrine.

Commenting up the desirability of the nation or tripartite division of civil administration, the brilliant cardinal resumes his advocacy of popular participation in government. "All men," he writes, "assuredly prefer a form of government in which they can each have a share, and such a form is the one that we propose because in it a man's worth and not his birth is what counts."

These words are completely consonant, not only with the American Declaration of Independence, but also with the soul of the Constitution of the United States. According to Robert Bellarmine, every official of each one of the three coordinate branches of civil administration is obliged, under God, to seek "not his own advantage but the good of the people." "The citizen," he adds, "is governed with a view to his own interest, not to that of his ruler."

There is no question but what the views on popular sovereignty or Robert Cardinal Bellarmine had a profound impression upon George Mason when he framed the famed Virginia bill of rights, and upon Thomas Jefferson and James Madison in their contribution toward framing the Declaration of Independence and later the Constitution of the United States.

It is well known that these distinguished fathers of our country were students of the teachings and political philosophy of Bellarmine and the other great doctors of the Catholic Church.

For example, when the framers of the Declaration of Independence proclaimed, "All men are created equal" they were stating in condensed form the view of the ballarmine that "in a commonwealth all men are born naturally free and equal."

When the American patriots in the Declaration of Independece proclaimed that governments are instituted among men deriving their just powers from the Government, they were reasoning in terms comparable to those used by Bellarmine that "the people themselves immediately and directly hold a political power as long as they have not transferred this power to some king or ruler."

When Thomas Jefferson, writing in the name of his colleagues, declared that "prudence, indeed, will dictate that governments long established should not be changed for light and transient causes" he was emphasizing the same principle of caution and discretion which was proclaimed by Robert Bellarmine who taught that "if there be a lawful cause the multitude may change the kingdom into an aristocracy or a democracy."

When in giving the ultimate justification to their struggle for independence the Founding Fathers appealed to God, and insisting that the people "are endowed by their Creator with certain unalienable rights"; they could have summed up their whole position in the words of Bellarmine, who wrote that "political power emanates from God."

Cardinal Bellarmine lived in a period of intense controversy. Today, you and I are living in a period of controversy, one of the most trying periods of the known history of man. The thoughts and words of Bellarmine are just as applicable today as they were in his day.

As the church has given to mankind great leaders in the past, particularly in every crisis, so has the church given to the world a great leader during the period of pain that it is now undergoing. For in Pope Pius XII the church gives not only to the universal church, but to the world, one of the great leaders of all times.

On December 23, 1956, His Holiness Pope Pius XII gave his Christmas message to the world. It was an eloquent and effective message from one of the great men of all times, churchman, scholar, diplomat. What His Holiness said on that occasion will take its place as one of the great historic documents of all time.

In a few words his message could be characterized as one "calling for stronger alliance against the Communist conspiracy." Since 1939, His Holiness has made not less than 18 Christmas messages, but this one was direct and vigorous in its broad political sense, making in effect a ringing call for realism. It was a call against appeasement, inaction, and fear. It was the church militant speaking in the light of present world conditions.

The Pope reminded the world of the grim realisms of the life of today.

Among other things His Holiness said was, "men do look upon the struggle unjustly forced upon them by their enemy as a crusade." Like the conditions of the early centuries of the church, the days of martyrdom have returned again. And like we had the crusaders and their spirit of those days, so do we need the spirit of the crusaders today, the spirit of affirmative and dynamic democracy.

The days of martyrdom exist again. Catholic, Protestant, and Jew have all suffered through the vicious persecution of atheistic communism.

To all who want life and freedom, and without respect to race, color, or creed, or geographical location, the Christmas message of Pope Pius XII, if followed, charts the road to success and to peace.

As I have said, Pope Pius XII made a ringing call for realism. It is the duty of each and every one of us to be realistic and objective in our evaluation of world conditions. In doing that we have to take the hard road, oftentimes forming our opinions contrary to our hopes and desires.

For we must realize that we are faced with a cold, sinister ideology dominated by leaders with the minds of "world killers" bent on world revolution and world domination, and that as long as those who control the Kremlin adhere to doctrinaire communism, they are prisoners of an ideology that forces them on and on in their determination to dominate the whole world and to impose communism, if necessary by force and through fear.

The Holy Father spoke to the entire world, not to communicants of the Catholic church alone. He spoke with profound knowledge of the Communist conspiracy of world domination, its intents and its purposes. He spoke with knowledge of the inhuman consequences that follow wherever communism takes over. He knows that in this battle of "Love versus hate" that all peoples without regard to race, color, or creed putting into active and dynamic operation the commandments of God, is not only the answer to international communism, but is the only sure and ultimate road to victory. For while it is necessary for us to be powerful from a military angle, Pope Pius XII also knows it is necessary for us to be powerful from a moral and spiritual angle, for he knows that the moral and spiritual forces of the world, both outside and behind the Iron Curtain, with their love of and faith in God, will be the deciding influence between victory and defeat.

From the angle of our own beloved country, it is very apparent that we have a rendezvous with destiny. Whether we want it or whether we like it or not, the United States is the leader of the non-Communist world. All persons and all peoples who want to be free under their own law, and there are countless of millions of them behind the Iron Curtain, look to America for leadership.

In forming our policies we must think in terms of realism as so well stated by His Holiness in his message of last Christmas. We cannot afford to think and act alone in terms of a dream world, one that we dream and hope for. We can pray for such a world and ask God to guide and direct us in making our contribution toward such a future world, but in the face of the enemy that confronts us, to form our Nation's policies on hope alone in the road to inaction, weakness, uncertainty and appeasement. And Chamberlain showed that appeasement is the road to war.

I have said that the world is undergoing one of the most, if not the most, trying and challenging periods in the known history of man. It is the forces of dictatorship in most vicious form, dedicated to world conquest and determined to control not only the body, but the will and the spirit of man—to try and force that will and spirit to forget their beliefs, their faith in God and his law, and to be remolded to the likeness of atheistic or international communism.

To some the present period is one of frustration, of confusion, and of defeat. To others a period of faith and confidence and ultimate victory. This trying and challenging period is one that tests our faith, our courage, and our strength.

No matter how dark the situation may be, possession by individuals and nations of deep faith might well be the sustaining difference between victory and defeat. Faith keeps alive confidence and above all, spiritual strength, which is so important in any crisis.

I have made reference to the fact that there is now a return to the days of martyrdom. The history of the past 25 years shows that the days of persecution, death, and martyrdom are not over. This has been particularly evidenced by recent events in Hungary, and one of the principal ways by and through which the vicious forces of international communism can be frustrated and stopped is by the return of the spirit of the crusader.

I emphasize the fight of the brave people of Hungary because it is a living scene in our lifetime, historic to future generations, of the sacrifices people will make to possess liberty.

Hungary is representative of the hopes of people everywhere to either regain or retain liberty.

For the rights of the individual, called liberty, are God given and therefore inherent, which man may temporarily suppress, but can never destroy.

Bellarmine knew this and taught it in his day, as Pope Pius XII and others do today.

For Hungary has taught the Communist and non-Communist world of today that the spirit of freedom and desire for liberty cannot be killed by tanks and superior guns.

And there will be future Hungarys—for example, Poland, East Germany, Latvia, Lithuania, and even in the Soviet Union itself—for the inherent desire for liberty cannot be destroyed.

In the event of such uprisings, as in Hungary, we should, we must, have a policy to capitalize the situation, because the ultimate defeat of international communism is going to be made by those who, if necessary, are willing to fight and die for their liberty. There are many Patrick Henrys in the world of today.

The brave action of the people of Hungary shows: (1) That the Kremlin masquerade of moderation is over; (2) that peaceful coexistence is exposed for what it is, an expediency to try and deceive the Free World and to lull it into complacency; (3) that severe tensions exist behind the Iron Curtain; (4) that the world killers of the Kremlin cannot depend upon any satellite nation; (5) that if we capitalize the situation, Hungary will be the turning point of this era and the beginning of the death of atheistic communism.

But we can only capitalize by sound policy and by being strong, firm, and unafraid.

It is vitally important that our people be united in this grave emergency. In connection with this, a sound, objective public opinion is necessary. For public opinion wields a tremendous influence, for good or for harm, in forming policy and in the passage of legislation in the national interest of our country.

This is a responsibility of each citizen. And in days like we are undergoing, we must think the hard way, not the easy way, like "the river flows along the line of least resistance."

Far greater at times than Presidents, Members of Congress, governors, and other elected officials is the voice and power of public opinion.

For example, 3 months before Pearl Harbor I saw the extension of the Selective Service Act pass the National House of Representatives by 1 vote, 203 to 202. Every Member who voted against this very important bill was just as good an American as I and others who voted for its passage.

There is no question in my mind but what the honest, but emotional and erroneous public opinion that prevailed against the bill played an important part in the minds of Members who voted against it.

It is in these trying days that we are undergoing, when there is neither peace nor war, we are faced with a grave emergency that a democracy experiences its greatest strain.

For, in time of peace, we can have disturbing conditions, but people can take care of them at some future election.

In time of war, public opinion, in response to the law of self-preservation of nation and individual, even when in disagreement with some governmental policy must silence itself and support.

But, in the period I term a "danger potential," when there is neither peace nor war, public opinion is usually aroused spontaneously, operates violently, is mainly based on hope, not reason, and while honestly entertained, is to a powerful extent emotional and erroneous.

We must, therefore, think along objective lines.

We must realize that we are faced by a cold, calculating, deliberate force, determined to dominate the world by any means possible.

We must realize that as long as the Kremlin adheres to doctrinaire communism, and that expediency may cause them temporarily to change their policy, that their intent and purpose never change.

We must also realize that we cannot negotiate with them on a moral level, because they hate God and His law, and they have no moral concept.

We cannot deal with them on the level of idealism because they have no idealistic concept.

As long as they adhere to doctrinaire Marxism and international communism,

there is only one level on which we can negotiate with them, and that is on the level of the law of self-preservation. For they cannot deny that this law applies to the Soviet Union and its people as it does to other nations and their peoples.

And we must be strong militarily, for the only thing the Communists respect is what they fear, and that is force and power greater than they possess themselves.

But we must also have moral and spiritual strength, for that is a reserve strength that guns and tanks cannot defeat. It could well be the difference between victory and defeat.

And we must think and act not as Democrats, not as Republicans, but as Americans.

Relief to the Hungry Peoples of the Soviet Slave Empire

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. COLLIER. Mr. Speaker, under leave to extend my remarks in the RECORD I would like to draw the attention of the House to some possibilities and some grave dangers in our Government's apparent aim to win the captive peoples of Eastern Europe away from their Soviet slaveowners.

There has been much talk recently in administration circles of providing assistance to the people of Hungary, Poland, Czechoslovakia, and the Baltic States who have for so many years suffered starvation and want as Red slaves. The idea apparently is to demonstrate the failure of communism by providing them with food and clothing which their Communist masters are unable to supply. The aim, if it works, is admirable.

But I submit there are extensive dangers in this proposal. The most important of these is that our altruism and free giving may boomerang. Instead of accomplishing our purpose of feeding the starving, and our ultimate goal of lighting for them the path to freedom, we may actually wind up bolstering the very tyranny which has caused the suffering in the Soviet orbit and which still beats the drums of world conquest.

A great American statesman who has served his country and humanity well for over 40 years has pointed the way to avoiding these pitfalls while still accomplishing our aims. As early as 1921, former President Herbert Hoover, then director of the American Relief Administration, foresaw the dangers and drafted a document to sidestep them. He undertook to feed and clothe the hungry and cold peasants and slum dwellers who for 4 years had been in the hell of Soviet slavery.

Mr. Hoover's proposals made in 1921 have been rediscovered by the Citizens Foreign Relations Committee and have been presented to Secretary of Agriculture Ezra Taft Benson. It is to be hoped that this remarkable document has been passed on to others in the administration.

Mr. Hoover recognized fully the dangers of the Kremlin taking credit for the bigness of the American heart. So, he drafted a most careful contract to be presented to Maxim Litvinov, who represented the slave owners in this negotiation. Under terms of this unusually foresighted contract, American relief supplies would have to be distributed directly to the suffering. ARA representatives, Americans for the most part, would administer the program right down to the street-corner level. The ARA would pick those Russians needed in distributing the supplies—the Kremlin would have no say in the matter at all. In short, American supplies would be controlled by American relief agents until they actually reached the stomachs of the recipients. And there was to be no propaganda claims by the Russians; indeed, there could be no such claims. It was apparent to all who received, that their Communist masters had failed them; that free Americans were willing and able to do the job.

The administration now has a copy of this contract. Additionally, it could, if willing, now call on the elder statesman of the United States, this same Herbert Hoover, for advice on how, if we are to supply such relief to the hungry peoples of the Soviet slave empire, such a program could be administered so the people in need would receive and the Kremlin would not be permitted to appropriate for the collective leadership of Russia the credit. Unless some such precautions are taken, the results of American help would be to tighten the fast-slipping control of Moscow's masters over people who after 12 years of dark terror are beginning to see the first faint streaks of the dawning of freedom.

Nuclear Giveaway

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. NEAL. Mr. Speaker, while it is not within the province of this House to usurp the treatymaking authority of the other side of the Hill, I do not think it amiss to call your attention to an international agreement now pending in that body which will affect us all.

I refer to the pending ratification of the charter of the International Atomic Energy Agency whose authority will embrace the widely heralded atoms for peace plan first proposed by President Eisenhower before the United Nations in 1953.

From that initial proposal, the President went on to declare in New York City on October 26, 1956, that the United States stood ready to make immediately available to this Agency some 5,000 kilograms of nuclear fuel uranium 235 from 20,000 kilograms allocated earlier in the year, the 5,000 kilograms to go for peaceful uses to friendly nations.

According to the best estimates, this would mean giving away some $125 million to other nations. All told, the 20,000 kilograms, to be distributed over a 3-year period, have cost the taxpayers of the United States approximately $500 million, according to best available estimates of the cost of this precious material.

Aside from its cost, however, there are graver considerations involved in a congressional decision on whether or not the Agency charter shall be ratified.

Its announced purpose is the peaceful use of the wondrous power of the shattered atom to promote health, industry, and peace throughout the world. I, for one, do not believe that the United States needs to prove much further its peaceful intentions and its philanthropy to all and sundry, including those who were our enemies during World War II.

In its organizational structure, the Agency leaves much to be desired from the standpoint of our own national interest and security.

The total membership of the Agency shall consist of 90 nations. I am told that some 80 nations have already signed the covenant with Soviet Russia and its satellites being among the first to get on this new combination band wagon and gravy train.

It would be governed by general conference of 10 members at first, with a rotation of 5 members annually after the first full year of operation.

Operation of this agency would be by majority vote, but here again, the United States will have, as it has in the United Nations, only 1 vote in contrast to the 3 satellites controlled by Russia. And beyond the satellite votes, there exists the generally sympathetic postures usually adopted by many of the so-called Asian and African members when matters affecting the Soviet Motherland come up for a vote.

Once again, it is the story of the United Nations—the United States will bear 80 percent of the cost, largely represented by our donation of 20,000 kilograms of uranium 235, but have only one-ninetieth of the operational control of the establishment which distributes the product made possible through the taxes paid by the citizens of this Republic.

As a threat to the security of this Nation, I cannot emphasize too strongly that the material to be distributed by the Agency is only two steps away from the fissionable material from which bombs are made. Some 90 percent of the processing necessary to make it suitable for bombs has been accomplished.

Think, Mr. Speaker, of the alarming possibilities should any member of the Agency fail to live up to its obligations and contractual promises once it had in its possession uranium 235. Solely on the treaty-breaking performances of a great many members of the United Nations to date, I am not so sanguine as to believe that their respect for international in-

struments would grow stronger in dealing with this precious and coveted material which American technical genius has created.

A great many careful studies have been made of this plan, and the only practical conclusion is that you can no more delineate between peaceful and military uses of uranium than you can resolve the old question of how many angels can dance on the head of a pin.

During United Nations debate on this matter, Soviet Russia contended that the meager safeguards set up in the original proposal were unnecessary. Her curious position was that in the absence of an agreement abolishing nuclear weapons, any safeguards having to do with inspection of even peaceful atomic installations constituted an invasion of the sovereign rights of a nation.

Her stand was immediately followed by the introduction of amendments by four neutralist but consistently pro-Russian United Nations members, which, although defeated, had an effect in sum total which watered down the original safeguard provisions.

And what will happen once we have made our initial giveaway of uranium 235?

I can foresee as the next logical step, a great demand from the recipients for continued billions in United States money to finance the industrial installations, to furnish the technicians, and the construction know-how necessary to utilize the raw energy of the uranium 235.

Most Members of this House are well aware that we have bought many a pig in a poke during and after World War II.

The wisdom of many of these international boondoggles has been disproved time and time again. In our case, the burned child does not dread the hot stove.

He seeks it out again and again as demonstrated in this instant case of another seizure of unwarranted international optimism.

Present Inequities in Social Security

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. ASHLEY. Mr. Speaker, through the years the Congress has, wisely I believe, recognized that people receiving social security should be allowed to supplement their benefits with a modest amount of earnings. The amount of outside earnings allowed has been increased from $14.99 per month to $50 per month in 1950, to $75 per month in 1952, and finally, in 1954, to $1,200 a year. The 1954 amendments also changed the law so that persons aged 72 and over have no restrictions on earnings whatsoever. I have been concerned, however, with some inequities which have arisen through what I am convinced must have been an oversight in the drafting of this legislation. In shifting from a monthly income test to an annual test, inequities have arisen. These problems occur in the year of retirement and the year in which the individual reaches age 72.

The $1,200 per year exemption is based on average monthly earnings of $100 a month. But to relieve problems which arise with uneven earnings, the act states that an individual cannot lose a benefit for any month in which he earns $80 or less even though he exceeds the $1,200 limit.

Let us see how the system works in a specific fact situation—first in the year of retirement and then in the year of age 72.

For instance, let us take the example of a 65-year-old teacher who finishes his school year in June and must retire. He applies for benefits on July 1. During the first 6 months of the year he had earned $2,200. When he applied for social security he already had, therefore, exceeded the amount of earnings he is allowed for the year. He is told at the social security office that the law will still allow him to earn $80 monthly, but if he exceeds this amount his benefit for that month will be canceled.

If, however, he could have retired in January, instead of July, he would have been allowed to earn $100 a month for the entire year in addition to his retirement benefit. Thus the teacher, solely because he retires at midyear, loses $20 a month in earning power during his first 6 months of retirement. This is an arbitrary discrimination without basis in reason. It puts a premium on the date of retirement which seems wholly unrealistic. Moreover, it imposes a retirement test on income earned before retirement actually takes place.

Now let us see what can happen to the same teacher in the other situation—depending in this case entirely upon the accident of when his 72d birthday occurs. He has been earning $100 per month in the last few years and has also received a maximum social security benefit of $108.50 a month. Now that he has reached his 72d birthday he assumes that there is no longer any restriction on the amount of money he can earn and still receive benefits. He, thereupon, gets another job which pays him $150 a month—or $50 more than he was earning. At the end of the year he finds out, however, that he must pay back four monthly benefits—totaling $434 because he exceeded the $1,200 a year. In other words, because of earnings after age 72, he must return benefits he received before he became 72. He also discovers, to his dismay, that the extra $50 per month—totaling $300 for the 6 months on the new job—is more than canceled by the amount he owes to social security. He must repay them $134 over the extra $300 he earned to cover his $434 debt. This repayment in many cases, constitutes an extreme hardship.

The two bills I am introducing today will cure these inequities by very simple changes in the law. The first bill makes a special provision that will allow an individual to earn $100 a month in every month of the year in which he retires. The second bill removes completely the income limitation for the entire taxable year in which he becomes age 72. The two bills place him in the same position as that of other individuals who are fortunate enough to have their retirement dates and their birthdays in January, and thus, merely by happenstance, are attuned to the vagaries of existing law.

Certainly it is unrealistic to assume that most people can retire, or have their birthday, in January and thus avoid the complicated and sometimes confiscatory workings of the present provisions. We know that, for most people, the time of retirement is not a matter of choice. Frequently it is compulsory. Often, as in the case of schoolteachers, it is governed by provisions of law. In other cases, it is at the caprice of the employer. Clearly, the month in which a man was born should not influence the amount of social-security benfits to which he is entitled.

The cost to the social-security fund of the changes I propose would by very insignificant, and are fully warranted by the equities they effectuate. I urge the Congress to take prompt action on these bills so that the unfortunate characteristics of the present system can be changed.

Shut-In's Day

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. CANFIELD. Mr. Speaker, within a few hours, many of us in this House and our friends in business and industry will be closing our desks, packing our bags, and heading for seashore, lake, and mountain resorts to enjoy the long Memorial Day weekend. We will bask in the sun, relax, and come back refreshed to face the tasks ahead with new perspective, new interest, and vigor. It is good to put aside the daily routine, to see new places and things, to look up into blue skies and hear bird songs, instead of the steady pound of typewriters and the drone of our own voices.

But there are those among us who have no hope of getting away this weekend or any other weekend. They are the shut-ins, doomed through no fault of their own to spend the days and years in wheelchairs and hospital beds. For them the fragance of spring, the white stillness of winter, the flamboyance of autumn and the lazy luxury of summer are nothing more than the pages of a calendar to be flipped over. Alone and too often forgotten, they sit by their windows and watch the seasons slip by, remembering perhaps the world outside, yearning always for some release from the bonds of pain and illness that hold them prisoners within the four walls of their bedchambers.

There is a growing movement afoot to bring some bit of sunshine, some glimmer of happiness into the lives of our shut-in friends. Since 1941, Mrs. William Francklyn Paris, of New Jersey, and Ernest Barker, of Canada, have been working through the Shut-in's Day Association to have the first Sunday of each June set aside as a day of remembrance and recognition of the shut-in. Shut-ins themselves, they understand the aching need of the shut-in for acceptance, for friendship and understanding. Thanks to their tireless efforts, carried on with Herculean vigor in spite of their own handicaps, and aided by a growing band of shut-in and non-shut-in supporters they are making steady progress. From a limited observance that first year the movement has spread out in ever-widening circles, in this country and abroad. In 1955, official proclamations marking the first Sunday of June as Shut-in's Day were issued by the mayors of 69 cities in 29 States. My good friend and beloved colleague, the late T. Millet Hand, introduced legislation in this House last year to give recognition to this day. Currently there are pending before the Committee on the Judiciary 2 bills to effect this end, 1 sponsored by my own New Jersey colleague, PETER J. RODINO, Jr., and the other by the gentleman from Pennsylvania, Mr. HOLLAND. It is my sincere hope that this session will see some action on this worthwhile legislation. But we need not sit back and wait for this bright tomorrow, we can, each one of us make this first Sunday of June 1957, Shut-in's Day in actuality. We can pay a visit to some shut-in, send him or her a cheery card, a note, or a bright bouquet of flowers We can let him know that he is not forgotten, that somebody cares, that somebody is interested in his views, willing to exchange news and experiences from the world outside for the priceless philosophy and examples of courage that so many shut-ins have to offer. We can spread the word and implement it and, while we are doing it, may we never forget that many of today's shut-ins were the bright young heroes of yesterday; the boys whose blood bought the black beaches of Iwo Jima, stained the sands of Anzio and the snows of Pusan, and paid for the freedom we now enjoy. We can say "thank you" to them this weekend by remembering them on Shut-in's Day, and by giving as many shut-ins as we can, some cause to say with all sincerity, "What is so rare as a day in June?"

Public Welfare Act of 1958

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. FORAND. Mr. Speaker, I have today introduced for appropriate reference the Public Welfare Act of 1958.

This bill proposes to bring up to date the public welfare provisions of the Social Security Act and place our public-welfare program of aid and service to the needy, handicapped, and helpless on a realistic basis in terms of present conditions. Since the Social Security Act was originally conceived and enacted in 1935, major changes and advances have taken place in its social insurance aspects and these have, in turn, greatly modified the nature of public welfare responsibilities. Unfortunately, the assistance and child welfare titles of the act have not been brought up to date as these changes have occurred and this, in turn, has made it difficult for the States to make the adaptations in their own public-welfare programs necessary to meet actual needs. This bill incorporates basic changes long advocated by the major welfare organizations and leaders throughout the country. These changes would give the States an optional alternative to the present system under which they could develop a single welfare program which would be at once more adequate to meet existing needs and more efficient in terms of costs, personnel and flexibility.

The rapid growth of our social insurance program with respect to coverage and benefits has greatly reduced the need of persons in the average situation for public assistance. As we continue to apply the insurance principle on an even wider basis by gradual improvements in our OASI program, the role of public welfare will tend to become even more specialized. This trend is exemplified in the fact that today the average age of recipients of old age assistance is 75 years and the figure rises every year. This means that it is chiefly the very old—many of whom retired too early to benefit from OASI coverage—and those with special medical needs who have to turn to public welfare for help. Some of these need only money and are entitled to receive it with a minimum of investigation to establish eligibility. But a great many others require highly individualized attention to secure the kind of care they need, frequently involving more than average financial aid to secure necessary medical and nursing care. To meet this kind of need public welfare agencies require flexible provisions and adequate staff. Similarly in the families with small children requiring aid, social problems increasingly compound financial needs. Illegitimacy, desertion, and other family problems among the recipients of public assistance make the present arbitrary division between the child welfare and public assistance aspects of the public welfare function increasingly illogical and archaic.

The States have been moving steadily toward this concept of a single public-welfare program which can provide a real floor of protection against unmet social and economic need for all people. This does not mean, however, that they are seeking a monopoly on social services. For public welfare by its very nature moves in only when family and voluntary resources are unavailable to the individual seeking help. The strong support for adequate public-welfare programs shown by voluntary groups like the Family Service Association of America, the Council of Jewish Federations and Welfare Funds, and many other sectarian welfare agencies is good evidence that there is need in our society for both.

But State and local public welfare agencies have been handicapped in making the best use of their own resources and personnel by the rigid structure of Federal aid. This bill proposes to remedy this by providing the optional alternative of a single comprehensive public welfare plan with provisions which will make possible more adequate and flexible aid by relating Federal grants to the State's financial need, placing the ceiling on assistance payments on an average rather than individual grant basis, and eliminating the present arbitrary restrictions on eligibility. In return for this greater flexibility States are required to provide assistance for all persons who qualify within their own standards of need without arbitrary exclusions such as those based on residence. The bill also recognizes individualized service as an intrinsic element in all public welfare functions thus making it possible to bring about a closer coordination of all welfare programs in a single public welfare agency. The advantage of such a simplified approach to the person who needs help, to the Administrator and to the public constitute a major argument for giving early consideration to this proposal.

In the statement which follows a more detailed explanation of the provisions of this bill is given.

GENERAL

The bill provides a new title XVI for the Social Security Act under which a State could submit a comprehensive public welfare plan for assistance to needy persons and welfare services as defined in the bill. States that wished to do so could continue to operate programs of assistance under the existing provisions of title I, IV, X, and XIV but the new matching provisions described below are applicable only to title XVI and the usual provision is made to preclude assistance payments to any individual under more than one title of the act. For most States the scope, flexibility, and financial provisions of title XVI would probably prove an inducement to change, but the optional feature would ease the transitional process and make it possible for a State, which wished to retain certain programs—as, for example, aid to the blind—on the present basis, to do so.

COVERAGE FOR ASSISTANCE

This bill makes it possible for a State to receive Federal aid for assistance to any needy person and not exclusively for those over 65, blind, permanently and totally disabled, or those meeting the restrictive definition for aid to dependent children—as at present. Administration by categorical groups would, however, be optional with the States, provided the

basis for establishing the categories was reasonable. Assistance could not, however, be paid to persons residing in public institutions other than medical institutions nor to patients in an institution for tuberculosis or mental disease.

HIGHER ASSISTANCE LEVELS

This bill would provide a more flexible, rational, and adequate financial base for assistance payments in all States by making the following changes:

First. Ceilings or the maximum payments subject to Federal aid would be increased to $75 a month for all adults and $37.50 for all children. Present maximums in old-age assistance, aid to the blind, and aid to the permanently and totally disabled are $60 a month; in aid to dependent children the present ceilings are $32 each for the first child and adult caretaker and $23 a month for each additional child.

Second. Matching on the average of all payments rather than in terms of each individual payment as at present would, however, make it possible to receive Federal matching for higher payments in cases of unusual need—provided these were offset by other payments below the maximum level.

Third. A new and simplified matching formula would replace the present complex and inequitable formula which neither recognizes the special needs of low-income States nor the great efforts made by some States to provide more adequately for their own needy. Under the proposed formula the total of all assistance payments—within the average ceilings as shown in first above—would receive a 62 percent Federal reimbursement in any State whose average per capita income was the same as that of the United States as a whole. For States above this average the percentage of Federal reimbursement would be proportionately decreased but would in no case fall below 50 percent. For States with a lower than average per capita income the percentage of Federal reimbursement would be proportionately increased but the maximum level of reimbursement would be 80 percent. Under this formula the needy in both the high and low income States would benefit: the former by the higher reimbursable ceilings and the latter by the higher rate of reimbursement.

Fourth. Welfare services provided by the public welfare agency would be subject to the same rate of reimbursement as assistance payments. Increasingly those persons turning to public welfare agencies for aid are those with special needs requiring knowledgeable service for their solution. Such service can often help speed the return of the individual to self-support, secure for him the care he needs from other sources, prevent serious or long-term future difficulties, and reduce the cost to the public of extended dependency. For example, many people needing medical care or rehabilitative service do not know what provisions are available or how to go about applying for them: Many people are lingering in general or mental hospitals simply because they have no other place to go—and no one to help them find such a place; many people living in areas where their former source of livelihood has ceased to exist need help in moving to areas of new opportunity; many children might be saved from juvenile delinquency or other forms of costly social maladjustment if their parents received helpful guidance at the crucial time or—in cases where substitute family care was necessary—the child welfare services of the public welfare agency could make prompt and adequate provision for their adoptive or foster-care placement. An advantage of this bill to the child welfare program is the fact that it permits child welfare workers to apply assistance funds to the placement of needy children requiring foster care. The grave injustice done to this neediest group of children under the present act, which denies assistance to children not living with a close relative, was pointed out by the welfare report of the Commission on Intergovernmental Relations.

Fifth. Simplified administration, with consequent benefits to those requiring public welfare aid as well as to those who do its work and pay its cost, is provided in this bill in several ways. Matching on the average of all payments, the optional elimination of categorical administration, and the provision of the same reimbursement formula for all types of aid would permit an enormous reduction in paperwork with subsequent reduction in the cost of overhead administration. The bill also requires that the program be administered by a single agency at each level of government thus eliminating costly duplication, overlapping, and confusion of responsibility. From the point of view of the individual or family requiring help the advantage of a single agency is obvious.

Sixth. Availability of benefits: The bill makes it a condition of the broadened base of Federal financial assistance provided by this new title that its benefits should be available to all qualified persons without residence or citizenship requirements. No public welfare program can be considered to be fulfilling its function as the ultimate guarantee against individual need if it arbitrarily excludes needy persons solely because of their length of residence. The very factors that make it essential for the Federal Government to share the broad public welfare responsibilities of the States make it equally essential that such aid be available to all.

Seventh. The Virgin Islands and Puerto Rico: This bill rights a long-standing injustice toward our fellow American citizens in the Virgin Islands and the Commonwealth of Puerto Rico by extending to these jurisdictions the same program provisions as apply in the States and territories.

Eighth. Confidential assistance records: This bill restores to all persons receiving assistance under this title the protection formerly required by all titles that the facts concerning their receipt of assistance be treated as confidential information.

Ninth. Personnel training: The bill recognizes the serious shortages in qualified public welfare personnel by providing special financial aid for training such personnel.

Large Importation of Woolen Textiles Harmful to the United States

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement of mine at the hearing conducted by the Office of Defense Mobilization on the effect of the importation of woolen textiles upon the American woolen industry and the threat to national security:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 29, 1957.

Mr. CHARLES H. KENDALL,
General Counsel,
Office of Defense Mobilization,
Executive Office Building,
Washington, D. C.

DEAR MR. KENDALL: I have the honor to submit my views for the record of the hearing being held on June 3 by the Office of Defense Mobilization concerning the effect of woolen textile importations on the woolen industry in the United States and the threat of these importations to our national security needs.

The woolen textile industry in the United States of America has been one of our national basic industries. It is an industry not only of importance within the general national economy, but also of tremendous importance in the Nation's national defense. Since World War II the contraction of the woolen textile industry in the United States has been so great it has presently reached a point of strategic seriousness in regard to just how long the industry might continue to survive and how long and how adequately it can be of service to our military forces in the requirements of national defense.

I am particularly interested in this alarming situation because almost 50 percent of the woolen and worsted spindles in the United States are located in the New England States. Although there are woolen textile plants in over 30 States of the Union, the industry is largely concentrated in the New England area. For many years it has been one of the backbone industries of the New England economy.

In the decade 1946–56, production in the woolen textile industry in New England has declined over 40 percent. Employment has declined approximately 50 percent. In Massachusetts, and particularly in the Fifth Congressional District which I have the honor to represent in Congress, the constant, continuing liquidation of woolen textile industries has been taking place at a tragic and serious pace. In the daily newspapers of Boston, Lawrence, Andover, and Lowell advertisements of auction sales, of woolen machinery and equipment and mill liquidations are constantly appearing. I need only mention the great Shawsheen Mills in Andover, Mass., one of the finest woolen textile plants in the world, which was liquidated at

public auction. There are the Wood and Ayer Mills of Lawrence, Mass., and many others. Hardly a week passes but there is an advertisement in the Boston papers advertising the sale of modern textile machinery and equipment. At the present rapidity of liquidation, the woolen textile industry in the New England area certainly cannot long endure.

This is an appalling and shocking situation, and it deserves the most careful examination. The causes of this situation must be found and pinpointed, and eliminated. In my view it is the duty of the Government of the United States to protect completely our national economy, and this cannot be accomplished unless the basic industries of America receive the support of their own Government.

According to my information, the principal cause threatening the woolen textile industry of the United States, and particularly in New England, is the overwhelming increase in the importation of woolen yarns and woolen woven fabrics. Within the last 10 years, the importation of woolen fabrics has increased over 700 percent and the same is approximately true of the importation of woolen yarns. The principal countries from which these importations take place are Great Britain, Japan, Italy, France, and Belgium. It is very easy to understand that these nations having a vastly lower wage pay schedule in their mills than the wage scale paid in the mills of the United States, and particularly New England, have a tremendous advantage over the industry in the United States in the American market. This advantage is due to the fact that the present tariff schedule does not offer sufficient protection to close the wage gap existing between these foreign industries and those here in America. This difference in the cost of production, which is not made up and leveled off by the present United States tariffs, I say is the major cause for the failure of the American woolen industry to compete in their own national market.

Now here in America we are proud of the American standard of living. We are proud of the fact that people in America enjoy much that makes life easier in this land of freedom. Our officials and leaders are constantly saying to the American people that the best ways and means should be constantly devised and developed not only to maintain this marvelous standard of living but to constantly increase and constantly better it and constantly make it available to more and more and more of the American people. I ask you how this can be done and at the same time subject a great basic industry such as the American woolen industry to the underpaid, yes, and underfed and ill-housed populations of foreign countries. How can this American standard of living be preserved and increased with unprotected competition of this kind. It is impossible to do it without adequate protection and every high-school student is sufficiently mature to understand this simple principle of economics.

You can't have your cake and eat it, too. I realize that is a rather trite phrase, but it certainly is completely true in this case. You cannot hold up America to the world as the land of freedom and opportunity, possessing the highest standard of living, and at the same time be undercutting this standard of living with procedures and methods the eventual effect of which would be to make life in America the same as it is in those foreign lands where life means only existence. In all of those countries constituting the principal competitors threatening the American woolen textile industry, the workers and the people are striving to immigrate to America, the land of opportunity. How long can this take place?

The answer to this question depends entirely upon the protection of American economy. In the practical operation of the Trade Agreements Act sufficient precaution must be taken to see to it that the American economy is protected to the extent at least that the American standard of living can be maintained. If the American standard cannot be maintained on a solid basis under the Trade Agreements Act, then certainly there is no other choice for the Congress of the United States but repeal of the Trade Agreements Act. As a nation, the United States of America and its people cannot be expected to give and give and give its billions and substance for the welfare of foreign nations and at the same time have the national economy threatened and thousands and thousands of jobs liquidated for the American people whose tax money is financing the giving. This is inconsistency of a serious nature. This is subjecting the American people to an impossible situation which cannot long continue.

In these times the United States of America is the bulwark of freedom in the world. This freedom is constantly being attacked by the Communist nations with all of their power and forces. The nations of the Free World depend upon the United States for protection and for their survival. To fulfill this great and grave responsibility, the national economy of the United States must first of all be completely and adequately protected. The military forces of the United States must possess every requirement and every need to do their job. The military forces of the United States, just as much as they are dependent upon airplane industries, important as they are, are dependent upon the woolen textile industry. Soldiers, airmen, and seamen must be protected against all kinds of climatic conditions. Their requirement is woolen textiles, woolen fabrics of every description, and even woolen textiles in certain types of defense mechanisms. The military forces of the United States are just as dependent upon the woolen textile industry of this country as they are upon those industries which provide the ammunition and mechanics for victory.

It is to be remembered and to be noted that it is presently the strength of the military forces of the United States which makes peace possible. So, both in peace and in war, American responsibilities as the bulwark of freedom are very gravely dependent upon the American woolen textile industry.

In view of the significance of this problem, and in view of the rapid decline of the woolen industry in the United States, I plead and urge the leaders in the Office of Defense Mobilization to take whatever steps that are open to them to provide adequate protection for the woolen textile industry of America. I urge you to consider that your first duty is to the welfare of our own country. It is perfectly obvious to anyone that when a great industry such as the American woolen textile industry is being forced to liquidate as rapidly as it is, that something very vital and serious is wrong. These wrongs must be discovered. These wrongs must be made right. The strength and power of your country and mine must come first if freedom is to continue, if life as we know it is to survive. This great bulwark of freedom, devised by man for the benefit of man, must prevail. To do so, its sinews of industry, of quality of living, and spirit cannot be weakened.

Protective action for the woolen textile industry of America is needed immediately. I urge you with all the force at my command not to postpone this action until it is too late.

EDITH NOURSE ROGERS,
Member of Congress.

Uniform Admission to the Federal Bar, H. R. 818

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. MULTER. Mr. Speaker, on January 3, 1957, I introduced H. R. 818 to make uniform the rules for admission to the Federal bar.

THE PURPOSE OF THE BILL

The purpose of this bill is to promote consistency and certainty, and to eliminate the present inequities and anomalies, in admissions to practice before the lower Federal courts.

The bill would amend title 28 of the United States Code by adding a new section 1657, so as to provide that membership in good standing at the bar of the United States Supreme Court shall be the sole requirement for admission to practice before the Federal courts of appeals and district courts, including the district court for the district of Alaska but not that of the District of Columbia. This provision would not apply to any person who is barred from practice before the district courts and courts of appeals by reason of holding public office.

THE PROBLEM

At present, the extreme diversity of admission rules in the Federal courts gives rise to many inequities and anomalies. Attention was recently called to this problem by an article in the American Bar Association Journal, volume 42, page 721, 1956. An article by Hugh Williamson, discussing the various admission rules of the Federal district courts was placed in the CONGRESSIONAL RECORD by me on July 21, 1953.

For admission to the bar of the United States Supreme Court, it is only necessary to be of good moral character and admitted, for 3 years past, to practice in the highest court of a State. Seven of the 11 circuit courts of appeals—the 3d, 4th, 6th, 7th, 8th, and 9th and the Court of Appeals for the District of Columbia—admit attorneys on this same basis. But these 7 circuits include only 29 States. In all the other States, there are special, additional requirements. One example will clarify the problem. For admission in the first circuit—Maine, Massachusetts, New Hampshire, Puerto Rico, and Rhode Island—the attorney must have been previously admitted to practice in some other United States appellate court. If all United States appellate courts adopted this rule, there would be no further admissions.

An even stranger spectacle of diversity and confusion is presented by the Federal district courts. Thirty of them will admit anyone who has been licensed to practice in the highest court of any State. But 22 others require a previous license to practice in the State in which the district court is located. It is this requirement that causes the most trou-

ble, since admission to the State bar—not the bar of the attorney's own State, to which he has already been admitted, but of the State where the Federal court sits—involves a period of residence which is often as long as a year. Other delays occur in studying for the State bar examination, waiting to be examined, waiting for the results of the examination, and waiting to be licensed. Meanwhile, an important pending case may be brought to a standstill, or lost to another attorney. In addition to delay, substantial expense may be incurred, especially by attorneys who practice in a number of Federal jurisdictions.

Like the circuit courts of appeals, particular Federal district courts have special rules of admission. Eight will admit anyone who has been previously licensed to practice by a district court in any other State. Two require examinations.

Even attorneys of the United States Government in the performance of their official duties are often not recognized in the lower Federal courts, except pro hac vice, and, even then, in association with local attorneys. Only 6 of the 85 Federal district courts make special provisions for attorneys of the United States Government.

Other anomalies arise from geography. In the Southern District of New York, a New Jersey lawyer is admitted freely, but a New York lawyer cannot be admitted in the Federal district court for New Jersey until he has been licensed in practice at the New Jersey bar. Similar situations exist in many parts of the country—for example, between New Jersey and Philadelphia, the two Kansas Citys, and so forth.

The closed shop kept by many of the State bars is in sharp contrast to the liberality of the Federal courts in admitting attorneys licensed by the States. This exercise of local monopoly simply aggravates the problem already discussed, arising from the requirement in many Federal district courts of a previous license to practice in the State where the court sits.

A recent State decision will illustrate this problem, but first a little background information may be helpful. Any members of the Federal bar in either district of California is freely admitted to the Federal district court in Arizona. But a member of the Federal bar in Arizona cannot be admitted to either Federal district court in California until he has become a member of the California State bar.

In *Application of Wasserman* (240 F. (2d) 213 (C. C. A. 9, 1956)), an attorney had applied for admission to practice in the United States District Court for the Southern District of California. He was a resident of California and a member of the State bar of Arizona though not of California. The district court denied the motion for his admission, on the ground that he was not a member of the California State bar.

In affirming this decision as not appealable, the circuit court of appeals delivered some interesting dicta:

(a) The Federal district court is an independent court and can make its own rules.

(b) On the other hand, "each—Federal district court—is considered a court of the particular State in which it sits and by which it is bounded"—page 214.

(c) It is a criminal offense to practice law in California without having been admitted to the State bar.

(d) On the other hand, California cannot regulate practice in the Federal courts.

As to the two arguments (a) and (b), it may be observed that a truly independent court would exercise its independence by determining, in its proper discretion, the admission of attorneys to its own bar. The second pair of arguments, (c) and (d), cancel each other out, so that the circuit court seems to have answered this argument itself.

Furthermore, it is hard to believe that any Federal court would permit a convict, who lost his right to practice law by reason of his conviction, to continue to practice in that court.

The circuit court then advanced its third argument, which merits serious discussion. It pointed out the danger that an attorney admitted in some other State which inadequately tested his qualifications, or who was subsequently guilty of unprofessional conduct, might be permitted to practice law in California through admission to the Federal district court. This danger, said the circuit court, "far outweighs, in our opinion, any theoretical desire that there may be a uniform rule for admission in the district courts of the United States"—page 216.

What about the equal danger that the qualifications of attorneys may be inadequately tested by the very State in which the Federal court sits?

What about the danger that an attorney admitted by the State in which the Federal court sits may later be guilty of unprofessional conduct?

The circuit court, in Application of Wasserman, has pointed out dangers but has not presented any adequate solution. Whatever rules of admission may be adopted, they would be deficient if they did not provide for revocation of the privilege upon the happening of anything that would have disqualified the practitioner as an applicant. As to substantive qualifications, the present situation is far from satisfactory; it has already been noted that only 2 of the 85 Federal district courts require examinations.

The real choice is between diversity and unity. Either the Federal courts in each State must take separate precautions against the dangers mentioned by the circuit court in Application of Wasserman, supra, or there must be a uniform system of admission to the Federal bar. If a uniform system of admission is adopted, by which attorneys admitted in the United States Supreme Court are freely admitted in the lower Federal courts, the moral qualifications of the applicants will be assured initially, as they are now. It may be necessary to supplement this system by periodic or ad hoc reinvestigations. Professional qualifications could also be assured by examinations on Federal law and procedure. But surely this matter can safely be left to the discretion of the United States Supreme Court at the time it makes the applicable rules and when it revises them from time to time as experience dictates.

THE ADVANTAGES OF THE BILL

The advantages of H. R. 818 may now be summarized:

(a) The bill would promote simplicity, consistency and certainty in admissions to practice before the lower Federal courts. By so doing, it would facilitate and economize the administration of the Federal courts, and would eliminate the present inequities and anomalies (previously discussed). In turn, the elimination of these inequities and anomalies would save much time, effort and expense of American lawyers whose practice has grown enormously in mobility and geographic extent owing to the continued expansion of economic activity and the economic role of Government.

(b) Under this bill, the admission of attorneys in the Federal courts would rest in the sole discretion of the Federal judiciary.

(c) The bill would give substance to the principle that the practice of law is a conditional privilege under the Federal Constitution. See *Ex Parte Garland* (71 U. S. (4 Wall.) 333, 378 (1866)). In that case, an act of Congress prohibiting the admission to the bar of United States district and circuit courts of any person who had not taken an oath that he had not aided in the secession was held contrary to the fifth amendment.

(d) Finally, Congress has power to regulate the admission of attorneys in the lower Federal courts under the Constitution, article III, section 1, which expressly authorizes Congress to ordain and establish such courts.

I urge the early enactment of my bill.

The Unfair Trial of Jesus of Nazareth

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. DORN of South Carolina. Mr. Speaker, I commend to the House the following excellent address by the Honorable GEORGE S. LONG, of Louisiana. Dr. LONG did considerable research on this speech and has delivered it upon a number of occasions. It is characteristic of Congressman LONG and the principles and ideals which he upholds.

THE UNFAIR TRIAL OF JESUS OF NAZARETH

(By Hon. GEORGE S. LONG, of Louisiana)

In the beginning may I say that I am attempting to tell the story of the trial of Jesus Christ from a layman's point of view, just as though I had walked into a courtroom when the trial began, not knowing anything about the case, and sat through it, and after having heard all the evidence and arguments, made up my own mind.

My conclusions and thoughts on this earth-shaking event are based on a great deal of research and study. I have read The Robe, by Lloyd C. Douglas, The Trial of Jesus from the Standpoint of a Lawyer, by Walter M. Chandler, I have personally heard the lecture of the Honorable Prince Freling, former attorney general of the State of Oklahoma on the same subject, and have studied the account of the trial in the Bible many times. I have been aided by this and by the writings of Dr. Gerald L. K. Smith. I will make no attempt to show that I am a lawyer or that I have studied the case from the standpoint of law, but will merely express a layman's viewpoint of the trial after having heard it. I wish now to give you my own thoughts and the conclusions I have reached.

I believe this was the greatest miscarriage of justice that has ever been recorded in the history of mankind. No man, as far as I know, has ever been tried by a court with all of the rules of law disregarded as they were in the trial of Jesus.

One particular point that I want to emphasize is that in that day it was the custom to try one for a capital crime in the daytime. No one was tried at night. They had no electric lights at that time—they had only torches and candles, and it was thought that by having capital crimes tried in the daytime, the witnesses could be clearly seen and a just trial would be more likely to be had. That was for capital crimes. Yet, this custom was not followed in the trial of Jesus. They tried Him at night.

Another law of that day was that if all the judges in the trial unanimously voted to convict the accused, it was presumed that they were biased and prejudiced and the accused was deemed not guilty and would be acquitted. It was said that several of the judges who tried Jesus voted "guilty" because they felt that all having voted Him guilty, He would then be freed according to the law of that day. But the officials disregarded their own law and ordered Him crucified.

They knew that Jesus had never done anything except good, but in spite of this He was crucified.

Let's consider Jesus when He first appeared, speaking as a man or as a prophet, when His mother found Him after He had been away and asked where He had been. He answered, "Wist ye not that I must be about My Father's business," but from this moment for 16 years history is silent.

Suddenly He appears on the banks of the Jordan, and is baptized of John and begins His short but glorious ministry, which ended in a judicial fiasco at Jerusalem. His ministry portrayed the character of the man.

The Jews, after they returned from captivity, looked forward to the coming of a king. Their daily prayers were of his coming. When they retired at night, they thought he might appear before the morning, and take his place on the throne of David. They were looking for a king to appear with great pomp and with a large army who would rule the land.

Jesus boldly proclaimed that "I am the King, the Son of God, and the kingdom of God is within Me."

If this belief prevailed, it meant the destruction of the ruling class, and the priests themselves, who were the representatives of the ruling classes, set out to destroy Him. Their first effort was to entangle Him in His talk, in order to assure evidence against Him from His own lips, and for this purpose they employed detectives. This is the first record in history we have of detectives. It is a sad fact that during the last days of our Master's life, His footsteps were dogged by detectives. In seeking to secure evidence against Him, one detective asked Him, If several men successively married the same woman, whose wife would she be in your kingdom?

The next detective asked Him a harder and more difficult question and one it was thought impossible to answer, and one whether answered in the negative or in the affirmative was thought would convict Him.

This man asked Him, "Is it lawful to pay tribute to Caesar?" It was thought if He answered "Yes" it would ruin Him in the eyes of the Jews, and if He answered "No," it would make Him guilty of treason to Rome. He made the remarkable answer: "Render unto Caesar the things that are Caesar's, and unto God, the things that are God's." In other words, He meant simply, in plain words—obey the laws of your state and pay your taxes. Be a good citizen—but on the spiritual side, when you come to receive God, there shall be no person or thing that you should bow down to—then give unto Caesar the things that are his and unto God the things that are God's.

That answer was the basis of the foundation of this Republic. The separation of the church and the state. It sustained Roger Williams, who pleaded for religious liberty in the depths of a Rhode Island forest. The answer simply meant that a man owed a duty to God and one to his country, and our great Republic was founded on the fact that no church, however strong, shall ever control the Government of the United States of America.

These efforts having failed, more desperate proceedings were resorted to. Jesus had been preaching in Nazareth and had had many conversions. The Feast of the Passover was approaching and His enemies knew He would be in Jerusalem, and they set out to destroy Him. It is a significant fact that the great Sanhedrin court had three secret meetings for this purpose. The first was held in September; the second in February, prior to His death, and at this meeting it was said, "It is better that one man should die rather than a nation should perish."

Just a few days after this, one act occurred which hastened His destruction. This was the sublime miracle He performed when He raised Lazarus from the dead. Immediately following this, the Sanhedrin met and decided to put Him to death.

As I said, the Feast of the Passover was approaching and they knew Jesus would be present. He arrived, and they were surprised at the ovation which He received. The first day He was there He spent not as has been said, in hiding, but in the wilderness in constant prayer.

On the 6th day of April He ate the Last Supper at the home of Mark. It must have been an impressive scene. John, whom Jesus loved, was there. Peter, who was to deny Him, was there. Judas Iscariot, who was to betray Him, was there. Jesus gave an example of humility to all when He bathed His disciples' feet.

About midnight, after the singing of psalms, they left the home of Mark, and entered the Garden of Gethsemane, so called because a wine press was located there. The disciples slept—the Man of Sorrows prayed. Suddenly a noise was heard. Soldiers were approaching. We knew it was night because they carried lanterns, staves and torches. The remarkable and inexplicable thing is that they were Roman soldiers.

When they approached, they asked, "Where is Jesus of Nazareth?" Some confusion seemed to have resulted in determining which was He, and Judas kissed the Master's cheek to indicate the man who was wanted. The impetuous Peter drew his sword and cut off the ear of Malchus, a Roman soldier. This was an act of treason against the Roman Government, yet no arrest was made for this—only one of the Gospels mentioned the fact that Jesus stopped and healed the ear of Malchus, and this was Luke. He would probably have been more apt to record it, because he was a physician.

Jesus is now under arrest and the first question that arises is—was the arrest legal? No warrant was issued, and the law, as it existed then, required that no arrest be made during the week of the Feast of the Passover. Here again we see the disregard for their own laws in their eagerness to crucify the Saviour of mankind.

As the officers started off with Him, they did not go to any magistrate first. They went to the home of Annas, the smartest, the meanest, the craftiest Jew that ever lived. He had been chief priest of the temple and had conferred the honor on his son, and at this time his son-in-law, Caiphus, held the position. It is a remarkable thing that Annas and all of his household were up, and the time must have been between 1 and 2 o'clock in the morning.

It might be said here that they chose night because their deeds were evil. They were out to kill—to manufacture evidence or to do anything in any manner to hasten the death of Jesus. One asked Him concerning His preaching—whether or not He had said He could destroy the temple made with hands and build another made without hands. Jesus remained silent and one of the servants slapped Him in the face and He simply said, "If I have spoken evil, bear witness of evil—if not, why smitest thou Me?" This was not a plea for sympathy, but for justice from their hands, which they knew nothing about, cared nothing about—justice meant nothing to those people who had set out to destroy and crucify Jesus of Nazareth.

The procession starts again and wends its way to the great halls of the Sanhedrin. The Sanhedrin was the great court of the Jews. Its members were the highest type of men without a blemish of character. They came up on graduations from lower Sanhedrin, like advancing a judge from a justice of the peace through the county and district courts and on to the Supreme Court. No man could be a judge who had indulged in usury. He had to be a man of unblemished character. There were 70 of these judges and the chief priest presided, making 71. The court was established under the direct authority of God, as found in Deuteronomy. The court had unlimited jurisdiction. It tried every conceivable kind of offense in that day and the remarkable thing was that there were no lawyers in that time. Yet, I am unable to explain the case of St. Paul, for an orator was employed to speak against him.

The court had peculiar rules, one of which should be mentioned. If witnesses testified differently in any given case, no verdict would be had. The judges simply said somebody was lying and they did not know who it was, that it was impossible to see the human heart and the human brain and they did not assume the responsibility of determining the facts and the case was therefore thrown out of court. What a remarkable tribute to a country that could secure a conviction of any criminal on such a rule of law as this. If this rule were in force today, no district judge could grant a divorce or convict a bootlegger. This was the court then to which Jesus was taken. The court was in session, with all members present, and the chief priest presiding. When Jesus was led before the court, they began to question Him and when He refused to answer, the chief priest rent His garment. This was not an error of law, but merely an act of bad taste.

Two witnesses were ushered before the court and they testified, "We heard Him say that He could destroy the temple made with hands and build another temple within 3 days made without hands." No denial was made of the statement and indeed no denial was necessary.

This is it at last. The chief priest put the question to a vote and they unanimously voted He was guilty of blasphemy and worthy of death, but to accomplish this, they had to violate the law they themselves had made. The trial was held at night, and I have pointed out under the law, a capital case could not be tried at night. The great law writers pointed out that the examination in such a case is like that of a surgical case, where light is needed, and therefore, it was the law that no capital case could be tried at night, but this law was disregarded in the trial of Jesus. They tried Him at night, against the law, convicted Him and sentenced Him to death.

Another fatal error in the trial was this—the balloting was irregular. The law was that the roll should be called—that the youngest judge should vote first, and so on up to the eldest and the high priest—the reason being that this would show that no one was influenced by his elders. This was wholly disregarded in the case of Jesus. They voted all together that He should suffer death.

Another absolutely fatal error was this: according to the laws of that time, a unanimous verdict operated to acquit the defendant. The old Jew said that in such a case bias and prejudice entered in, and they would not permit a citizen to lose his life under circumstances such as these.

The vote in the case of Jesus, was unanimous. Now, there were judges who knew Him and knew His innocence, His great character, His great courage, and they voted "guilty." Nicodemus was a judge, and voted "guilty." The greatest lawgiver of his day and one at whose feet the Apostle Paul sat, was a judge, and voted "guilty." Surely they did not do so ignorantly, and we must assume that, knowing there was a sufficient number to convict, they voted guilty in an effort to render a unanimous and hence a void verdict, hoping the court would sustain the law.

Jesus, however, is not convicted of blasphemy, but here another obstacle appeared; Rome, in her idea of sovereignty, retained always the power of life and death, and while the Sanhedrin court could render the verdict, they could not carry it into execution without the approval of Rome, and for this purpose they repaired to the Temple of the Caesars.

It must have been a beautiful morning in April when they started to the judgment seat of Pilate. Their way took them through a beautiful park where fountains were glittering in the sunlight and hundreds of doves were preening their feathers at the water's edge.

The Roman Governor at this time was known by the name of Pontius Pilate. This was, perhaps, not his name. He had been a soldier in the army of Rome and had been decorated for bravery and given the police for distinguished services in battle, and probably took the name Pilate from this occurrence.

Pilate had many of the elements of greatness, but the less said of his family, the better.

Pilate was on the judgment seat when the party arrived and immediately asked them, "What charge do you bring against this man?" They hesitated, but finally forced to prepare a charge, they named three: first "He stirs up all Jewry, from Galilee to this place." Pilate knew this charge was too vague and dismissed it at once. They charged, second, "He refuses to pay his taxes." Pilate knew this to be untrue. Third, "He makes himself the king of the Jews." Pilate was inclined to dismiss all of the charges, and took Jesus inside of the royal residence to question Him privately. He asked Him about His mission, and Jesus answered, "That I should bear witness to the truth, for this purpose I was born, and for this I came into the world."

Pilate disdainfully asked, "What is truth?" and again repaired to the judgment seat and pronounced his judgment.

He tried to avoid the issue and sent Him to Herod. He must have known of the ill feeling between Herod and Jesus, for just a few days before Jesus spoke before the great multitude and said, "Go tell that fox that I perform these miracles, and today and tomorrow, and the third day I shall be perfected." The hearing before Herod amounted to nothing except to effect a reconciliation between Herod and Pilate, who had been on bitter terms.

Jesus was now bedecked with raiment, and again led to the judgment seat of Pilate. Pilate began to temporize and to avoid the issues. He said, "I will scourge him and release him." Cowardly subterfuge of a cowardly man. If he held to his first judgment, he would have come to us as the greatest judge that ever lived. He tried again to avoid the issue; "I will release either Jesus or Barabbas, whom do you choose?" Of course, the choice was Barabbas, for the friends of Jesus were not there.

They uttered in Pilate's ears the fateful words, "If you let this man go, you are no friend of Caesar's." This sealed Jesus' doom, and consigned to destruction the Master Spirit of the age.

It is unnecessary to dwell at any length on the execution, as every schoolchild knows it by heart.

They took Him to the hill called Golgotha. My own opinion is that the cross was lifted first and Jesus nailed upon it. A cup of wine was handed Him. He seemed not to know at first what it was, but He touched his lips to it and realized that it was aromatic wine which the Jewish women always prepared for those who were to undergo execution, that their senses might be dulled when they passed through the valley of the shadow. Jesus thrust it away, preferring to cross through the shadow unintoxicated, without the aid of any narcotic or anything else. He was ready to meet his Father—was there to pay the price for the sins of the world, and die—which He did.

His physical body must have been of the finest texture. He was placed on the cross about 10:30 o'clock in the morning and at the close of the day, the thieves placed with Him were not dead and they had to break their legs to hasten death, but about 3 o'clock in the afternoon Jesus uttered an awful cry. His head fell upon His breast, and He ceased to breathe.

A great many things enter into the life of Jesus which probably may have been overlooked. One thing is Mary, the mother of Jesus. I am thinking at this particular time when the dark hour came and when Jesus hung on the cross between two thieves and had been crucified for the sins of the world—she stood close to the cross.

Of course, this merely portrays and causes to stand out the true mother love, and to show how much greater was the love of Jesus for all mankind, who gave his life for our sins. I sometimes wonder in my studies if Mary was not conscious of the fact that her son Jesus was at that moment making history that would stand throughout time.

We all know that Jesus loved His mother and was giving us the lesson of humility. One of the outstanding things that will be noted in the life of Jesus was that He was not a scholarly man, but God chose to bring His message to the people in a manner that all could understand. Therefore, our Saviour would not be considered at this time as a highly educated, or scholarly, gentleman. I am sure the jeers and hisses that were hurled at Jesus in His dying hour were also cast at His mother.

Jesus was crucified for one reason and one reason only—because He was good and evil men feared Him. He went about preaching the laws of mankind, teaching us that we are our brother's keeper, and if we have plenty in store that we should be willing to divide with our neighbors and friends without price. That this earth was created by God Almighty and all the good things put upon the earth for the use of human beings, and that we are God's creatures, and that if we follow in His footsteps and love Him, He will devise ways and means where there will be no hungry men, women, or children. Starvation will never stalk the land so long as we, His children, adhere to the teachings of Jesus Christ, and when the time has come that all men believe alike and are willing to put the teachings of Jesus into practice, there will be no war, we will comfort the sick and dying and this will be a great and glorious world to live in. We will have no need for courthouses or jails for everyone will do right because it is right and because they love their God and their Maker.

In conclusion, I would like to quote the words of a great historian: "Rest now in Thy glory, Noble Founder, Thy work is completed, Thy divinity established. Fear no more to see the edifice of Thy efforts crumble through no fault of Thine. Henceforth above all frailty Thou shalt witness from the depths of Thy divine peace, the enduring work that shall follow Thy deeds. At the cost of a few hours' suffering, which has not even touched Thy great soul, Thou hast achieved immortality the most complete. For hundreds of years the world will breathe life from Thee. Above Thee as an ensign, will be fought our hottest battles. Take possession of Thy kingdom, Thou who hast conquered death. Whither, by the royal road Thou hast pointed out, long generations of adorers shall follow Thee.

"As for us, ever more children doomed to impotence, who labor without reaping, and who will never witness the fruits of that which we have sown, let us bow before Thee, Divine Man. Thou couldst do that which we cannot do—create, affirm, act."

Out of this background of what seemed to be defeat came the greatest victory mankind has ever witnessed; namely, complete defeat translated into complete victory.

Will greater originality be born again or will the world be content to follow the bold explorer of ancient days? We do not know, but whatever unlooked-for events may come, Jesus will never be surpassed. His worship will unceasingly renew His youth. His story will invoke the noblest tears. His suffering will subdue the noblest hearts; all nations and all ages will yet proclaim that among the sons of men no one has been born who is greater than He. There will never be another who is perfect on this earth until Jesus comes again.

Development of Indian Resources

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a letter dated April 18, 1957, which I received from Commissioner Glenn L. Emmons of the Bureau of Indian Affairs, and a letter dated April 25, which my colleague [Mr.

MANSFIELD] and I wrote to Mr. Emmons. My colleague and I believe—and I know many other Senators share this view—that one of the best ways to help the Indian people develop their own human resources and tribal resources and, incidentally, become taxpayers instead of tax recipients, is through the establishment of industry and more jobs in Indian country. Unfortunately, as the facts in our letter show, the Indian Bureau is not as enthusiastic about industrialization as it is about the relocation program, which is the only and inadequate suggestion which Commissioner Emmons makes concerning the plight of the Indians on Hill 57 near Great Falls, Mont.

At this time I commend the senior Senator from Illinois [Mr. DOUGLAS] for his keen awareness of the possibilities for developing Indian resources through passage of S. 964, the area redevelopment bill, which I was pleased to cosponsor. The Senator from Illinois has set aside a full day of hearings on S. 964 before his banking and currency subcommittee to consider the Indian assistance aspects of this tremendously important legislation. The date of this hearing will be May 14. I thank my good friend from Illinois for leading out in this important effort to deal justly with the first Americans.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON INTERIOR
AND INSULAR AFFAIRS,
April 25, 1957.

Mr. GLENN L. EMMONS,
Commissioner of Indian Affairs, Department of the Interior, Washington, D. C.

DEAR MR. EMMONS: Several weeks ago you were informed of the willingness of citizens of Great Falls, Mont., to donate land on hill 57 for the purpose of establishing a reservation there. In your letter of April 18 you state that this suggestion could not be accepted by the Bureau.

You also ask that legislation to create a new reservation not be introduced. Your suggestion regarding Hill 57 and the Indians there is relocation.

"We will," you wrote, "pledge to offer to every eligible Indian who applies in person at his reservation the special relocation assistance to find a better way of life in areas where it is really available to those who are motivated to meet this challenge."

You gave no alternative to relocation, a program for which those Indians on Hill 57 who are not enrolled members of a tribe are ineligible.

As for those Indians who would be eligible, we would like to point out to you that, while we support the program, relocation in itself is no answer to the problems on Hill 57 and on the reservations of Montana and other States. Many Indians who want to relocate will do so whether or not there is a special relocation program. Others choose not to leave the land of their fathers. They are willing and anxious to work, if job opportunities are available nearby, and they have proved themselves to be skillful and competent workers in those few areas where jobs have been made available.

The Federal Government and the Indian Bureau, Mr. Emmons, do not fulfill their obligations to the Indians by offering only relocation, which frequently means moving from a rural slum to an urban slum. The Federal Government and the Bureau which you head have further obligations to our Indian citizens. One of the best ways to help the Indian people develop their own human resources, and incidentally become taxpayers instead of tax recipients, is through the establishment of industry and more jobs in Indian country.

We are aware of the modest efforts in this field by the Indian Bureau. If your Department supported industrialization with the enthusiasm with which it supports relocation, there would be no cause for complaint.

However, we note, for example, that the amount of money loaned to tribes for purposes such as industrial development has steadily decreased under your administration. As of June 30, 1956, the outstanding loans receivable and the cash balance in the revolving loan fund under the jurisdiction of your Bureau totaled $15,548,591. The amount of money on loan to the tribes has steadily decreased. The approximate amounts, by year, are: 1952, $11 million; 1953, $10.2 million; 1954, $9.5 million; 1955, $8.3 million; 1956, $7.7 million. What is your explanation of this decrease in the use of available money for development of tribal resources?

Your annual credit report for the fiscal year ending June 30, 1956, states that financing through the Bureau has increased from $22,991,070 in 1952 to $29,961,299. But included in these totals is $8,737,444 from tribal funds in 1952 and $21,216,541 in tribal funds in 1956. In other words some tribes were able to increase their own financing which is commendable. However, many tribes, including several in Montana, have practically no tribal funds. They could put to good use the money which has been steadily accumulating in the tribal loan fund under your administration.

We note, too, that the Indian Bureau has not yet submitted to the Banking and Currency Committee its views on S. 964, the area redevelopment bill which we cosponsored along with Senator DOUGLAS. A departmental report was requested 3 months ago and hearings have been in progress for some time. Passage of this bill would, in our opinion, be of tremendous benefit to Indian tribes, in that the bill would establish a program to attract industry to Indian country and help Indians establish their own industries. We cannot help but contrast your enthusiasm last year for the Indian help features of this legislation with your inaction so far this year.

To refer specifically to some of the industrial possibilities in Montana, we are following with great interest the negotiations for development of a pulpwood industry and establishment of a small sawmill on the Rocky Bay Reservation. We are hopeful that these new industries, which would provide jobs for a number of Indians, can get under way by this fall, and we shall appreciate such help as you can provide in this undertaking.

We would also like to receive from you verification of the statement, made to us verbally by Bureau officials, that arrangements will be made shortly for the northern Cheyenne Tribe to utilize its coal deposits on the Tongue River Reservation.

Along with our House colleagues, Representatives LEE METCALF and LEROY ANDERSON, we are willing and anxious to do all that can possibly be done to help our Indian citizens. We recognize the difficulties and burdens inherent in your task as Commissioner of Indian Affairs and hope that you can, as you suggested to the Indians in your letter of April 18, "meet this challenge."

We shall appreciate an early report from you on these matters, which we can discuss in greater detail at forthcoming hearings on Indian legislation.

Sincerely yours,

JAMES E. MURRAY,
United States Senator.
MIKE MANSFIELD,
United States Senator.

UNITED STATES DEPARTMENT
OF THE INTERIOR,
BUREAU OF INDIAN AFFAIRS,
Washington, D. C., April 18, 1957.

Hon. JAMES E. MURRAY,
United States Senate,
Washington, D. C.

DEAR SENATOR MURRAY: We have had several letters from you since March 21 regarding the establishment of Bureau facilities for Indians on Hill 57 near Great Falls, Mont. While the intentions of some of the citizens of Great Falls, Mont., to find ways and means of alleviating the conditions on Hill 57 are laudable, the suggestion they have advanced to designate this particular area as a reservation is one which cannot be accepted by the Bureau.

This Bureau does not have and cannot assume authority over or responsibility for this particular group of Indians any more than it could over any particular community or grouping of off-reservation Indians in any other part of the country. For years, Indians have been leaving the reservation areas and settling in other communities. Some have settled in metropolitan areas under quite unsatisfactory living conditions. Such situations, like those prevailing on Hill 57, are community problems and responsibilities of the State and its political subdivisions. The Federal Government could not discharge this task.

The many services extended to Indians living on reservation lands, including primarily services which are generally provided to our citizenry through State and local governmental auspices, have been enabled and justified as Federal responsibilities on the basis of Indian residency on trust (therefore tax-exempt) lands. The Bureau of Indian Affairs cannot, and should not, follow the Indian wherever he might go with a full gamut of services which duplicate those offered by local governments on the basis of residency rather than ethnic origin.

We understand that the great majority of the Indians who have congregated on Hill 57 near Great Falls are enrolled at the Fort Belknap and Turtle Mountain Reservations. Admittedly, these reservations are grossly overpopulated in relation to the resources base available there to afford them a living. But the Bureau does offer them alternatives in the form of very generous assistance to relocate in centers of maximum opportunity in a wage economy. Their failure to avail themselves of those services indicates a gravitation to Hill 57 by choice rather than by dint of necessity.

As you are probably aware, the act of March 3, 1927 (44 Stat. 1347, 25 U. S. C. 398d), has been construed to prohibit the establishment of new Indian reservations without enabling legislation by the Congress. Therefore, we are returning the deeds to land on Hill 57 which Messrs. Mallette propose to donate for the purpose of establishing a reservation. We would suggest that legislation not be introduced to create a new reservation, but rather we will pledge to offer to every eligible Indian who applies in person at his reservation the special relocation assistance to find a better way of life in areas where it is really available to those who are motivated to meet this challenge.

Sincerely yours,

GLENN L. EMMONS,
Commissioner.

HOUSE OF REPRESENTATIVES

THURSDAY, MAY 30, 1957

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

Almighty God, on this day of high and holy remembrance, we are calling to mind all who in times of great national trial and tribulations did not fail or falter.

Grant that our hearts may expand with pride and patriotism as we think of their incredible spirit of valor and heroism, of faith and fortitude.

The pages of history relate that they were willing to sacrifice their very all in order to gain and safeguard the blessings of freedom and democracy.

We pray that our own souls may be tempered with some finer essence of the spirit of patience and perseverance, of peace and brotherhood, of forgiveness and forbearance.

Help us daily to long and labor, to plan and pray for the dawning of that glorious day when the rule of force shall give way to the reign of reason and righteousness, and hatred and strife shall be supplanted by love and good will.

Hear us in the name of the Prince of Peace. Amen.

The Journal of the proceedings of yesterday was read and approved.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. RUTHERFORD in two instances.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 4 minutes p. m.), under its previous order, the House adjourned until Monday, June 3, 1957, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

908. Under clause 2 of rule XXIV, a letter from the Navy Club of the United States of America, transmitting the annual report of the Navy Club of the United States of America as of date April 30, 1957, which was prepared by L. R. Steffa & Associates, of Rockford, Ill., was taken from the Speaker's table and referred to the Committee on the Judiciary.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BERRY:

H. R. 7860. A bill to amend section 1 of the act of July 24, 1956 (70 Stat. 625), entitled "An act to provide that payments be made to certain members of the Pine Ridge Sioux Tribe of Indians as reimbursement for damages suffered as the result of the establishment of the Pine Ridge aerial gunnery range"; to the Committee on Interior and Insular Affairs.

H. R. 7861. A bill to provide that payments shall be made by the Secretary of the Army to those political subdivisions of the State of South Dakota which lose tax revenues because of the acquisition by the United States of real property for use in connection with certain projects in the Missouri River Basin; to the Committee on Public Works.

EXTENSIONS OF REMARKS

The Marine Corps

EXTENSION OF REMARKS

OF

HON. J. T. RUTHERFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1957

Mr. RUTHERFORD. Mr. Speaker, some 5 or 6 years ago an issue was presented to the Congress. After extensive testimony, discussion, debate, and deliberate consideration, the Congress arrived at its conclusion. This decision once again demonstrated the genius of our system of Government for sifting and sorting and finally arriving at the correct decision.

This incident to which I refer is the action of Congress on the Marine Corps bill, as it is commonly termed. At the time the 82d Congress considered this bill in 1951 it was apparent that the efficiency of the Marine Corps was being seriously impaired and its role as the Nation's traditional force-in-readiness was endangered. This caused great concern, as you can remember, not only for this outstanding military organization, but, more fundamentally, for the safety and security of our country.

As a result of Congress' searching inquiry into this vital defense matter, the role of the Marine Corps as our ever-ready striking force was confirmed by law, the Marine Corps was to be represented on the Joint Chiefs of Staff, and the size of this readiness force was firmly established by law as not less than 3 full combat-ready divisions, with supporting elements, and 3 air wings.

The occasion for my comment at this time is to express approbation for the manner in which the Marine Corps has carried their responsibility under the law. Rather than adopt an impotent, inert position the Marine Corps has continued its history of strength and dynamic productiveness in the field of military accomplishment.

Starting 10 years ago with the development of a new approach tuned to the requirement of contemporary war and equipment, the Marine Corps has effectively developed its doctrine of vertical envelopment, using helicopters to increase mobility, versatility, and security.

Today our country can be pleased with and proud of our Congress, who provided a strong Marine Corps to assure the safety of our country. I am pleased to learn that the Marine Corps has lived up to its responsibilities. In this period of crucial and critical conditions throughout the world we are at peace, and this is due, no doubt, to the fact that our Nation has a strong Marine Corps posed to support our national policy and protect our interest wherever and whenever it be required.

With one marine division in the Far East, finely trained and equipped for instant use, the enemies of our country cannot mistake the resoluteness and firmness with which the United States views the necessity of peace. This force is proof positive to those who would hamstring our country that we are ready to and capable of effectively striking down any aggressive force unleased in that area.

Dramatic evidence of the effectiveness of the Marine Corps force in readiness was recently demonstrated in the explosive Middle East. At the very moment when war eruption appeared certain, the United States Navy moved its Sixth Fleet into the area, with a Marine Corps landing force. We all witnessed the electric effect this had upon the aggressive forces then on the move. War or warlike action was averted, and the interests of the Free World were protected and advanced.

The Marine Corps has lived up to its obligation and requirement of law by maintaining 3 combat-ready divisions and 3 air wings as our Nation's first force of protection from danger and war. The will of Congress has been followed, and I am of the opinion that the efficient and effective way in which it has been accomplished is worthy of comment.

A Single Chief of Staff

EXTENSION OF REMARKS

OF

HON. J. T. RUTHERFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1957

Mr. RUTHERFORD. Mr. Speaker, I feel compelled to express some thoughts which are the result of my deep concern at this time. A reader of the press will note that in recent weeks there has been a resurgence of the long-extant movement to foist upon our country a supreme general staff ruled over by a single

chief of staff in complete dominance and control of our military forces, policy, and organization.

A glance at Congressional history reveals that this proposal has been pushed with vigor and force many times in the past 75 years. Congress, in committee and as a whole, has repeatedly and in great detail examined the philosophy and functioning of this method of military control, developed by and adopted from the Prussian system. The purported advantages have been aired and investigated and it has been concluded by our predecessors, in each and every instance, that advantages did not exist. As a matter of fact, the conclusion has been that monumental disadvantages and dangers would exist if a supreme general staff-single chief of staff was authorized. This repeated rejection by Congress of the system that led the Prussian-German people to disastrous defeat twice within 30 years is an example of the astuteness and soundness of our Congressional-legislative process. I have no fear that examination of this present proposal under objective conditions will once again result in its complete and unqualified rejection.

There is one area of this matter that I believe deserves special mention in the light of today's thinking and current conditions. The shield behind which the present sponsors and advocates of this single chief of staff scheme advance is the shield of economy. This, incidentally, indicates the clever manner in which this proposition is being promoted. All of us are vitally and sincerely interested in the question of Government expenditures and economy. Adoption of this system, from a military and national policy standpoint, would be inviting; yes, almost assuring, a debilitation of our military power and effectiveness. Leaving that aside for the moment, however, I would like to examine the economy claim we read so much about these days.

Our best yardstick, it would seem, to measure organizational efficiency is found in the business-industrial systems of our country. These organizations are continually subjected to the test of practical application and if they fail they disappear. Competition provides the test. Our industrial and business leaders of today are agreed that the greatest efficiency is developed by a decentralized organization. The more successful business enterprises have found that decentralization increases efficiency and economy, and thus builds a stronger and sounder organization. Whereas 50 years ago the single industrial emperor dominated the business scene, this strong man has today virtually disappeared—the victim of progress and efficient organization.

To adopt a single Chief of Staff—completely unified military organization would be to follow a path of retrogression and to saddle ourselves with a system proven to be uneconomical, as well as inefficient. True, we are dealing with military, not business, organization. But every indication is that it would be just as uneconomical in its military application as in business. This was pointed out by Secretary of Defense Wilson, as quoted in the New York Times of May 17, where it was stated:

> Secretary Wilson said he had been trying to "overcome the handicap of bigness" for 20 years as president of General Motors. He said neither money nor paperwork would be saved by putting the services "all together in one big pot."

The handicap of bigness that Secretary Wilson mentioned as a great problem at General Motors would be dwarfed by the handicap imposed by merging the services into one gigantic combine. Suppose you take the assets of General Motors, American Telephone & Telegraph, United States Steel, Standard Oil Company of the United States, Du Pont, and General Electric as a starter for comparison. Add to them the assets of more than 30 of the other leading corporations of the country. The resulting combination in business size, and complexity, would be less than half of the aggregate if the 3 military departments' assets were lumped into one pot. Any man who seriously claimed that it would be good business management to merge some 40 of the largest business concerns of the country into one gigantic firm would be a candidate for mental examination.

Furthermore, no matter how economical, the security and safety of the United States, as well as its traditional constitutional civilian control of the military, would prevent adoption of the supreme general staff-single chief of staff concept.

In addition to the searching Congressional inquiry in this field, the question was the subject of much attention by the Hoover Commission. This organization, dedicated without question to efficiency and economy, rejected on all counts the supreme general staff organization.

The present organization, the Joint Chiefs of Staff, provides us with the safest and surest method of advising on and carrying out our national policy. The victory of our Nation in two World Wars, when contrasted with the utter failure of the German supreme high command is ample evidence of the efficiency of this type system.

The JCS organization has been repeatedly examined in Congress and in each instance determined to be the best and soundest organizational form available. The Hoover Commission Task Force Committee on National Security concluded that there should be no change in our organization of military direction.

In dealing with this, the Task Force Report of the Hoover Commission concluded:

> There has been much loose criticism of the war efforts of the Joint Chiefs of Staff as constituting command by committee; yet there can be no doubt whatsoever that in the field of grand strategy a meeting of several minds is far safer—and in the end more sound—than the dictates of one. The responsibilities for strategic planning and the conduct of war are soundly placed by the National Security Act upon the shoulders of the Joint Chiefs of Staff, who, in turn, are under the authority, and subject to the control of, the President and the Secretary of Defense. There should be no change in this concept.

The fallacious cloak of economy and efficiency once again has been wrapped around the single chief-of-staff idea in an effort to make it more acceptable to the people of the United States. Regardless of what form it takes or what cover it has, this concept can spell naught else but trouble and disaster for the United States. It would not be a panacea, it would be an anathema—on our way of life and our constitutional form of government. I would not cry "Wolf" or "Beware of the man on horseback." But any man worth his salt and placed in the position of Chief of the Supreme General Staff, or whatever it might be denominated, would naturally and automatically acquire powers far beyond those envisaged by the Constitution. This era of total war would make this system intolerable to everyone in our country, however he may be engaged, without practical exception, for its impact would be felt and borne by all.

SENATE

FRIDAY, MAY 31, 1957

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Our Father, God, turning from memorial wreaths and from the fluttering flags on countless grassy mounds, we come once more to face the never-ending struggle to maintain, preserve, and defend the freedoms which have been bought for us at so crimson a cost. From sea to sea of the homeland this May morning, where the grass has been trod by reverent feet, and in sacred patches of alien soil where is kept the bivouac of our valiant dead, we are conscious of the crosses and the flags blending in their mute testimony, knowing that eternal vigilance is the price of liberty, especially as we front foes whose only law is expediency. In these days of destiny, as we fight democracy's battle, at home and abroad, may those crosses and those flags speak to us of strength that is increased by its spending, of life that is saved by its losing, and of greatness that is measured by its serving. We ask it in the ever-blessed name of that One who gave His life a ransom for many. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The legislative clerk read the following letter:

UNITED STATES SENATE,
PRESIDENT PRO TEMPORE,
Washington, D. C., May 31, 1957.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. FRANK CARLSON, a Senator from the State of Kansas, to perform the duties of the Chair during my absence.

CARL HAYDEN,
President pro tempore.

Mr. CARLSON thereupon took the chair as Acting President pro tempore.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

AMENDMENT OF MEDALS OF HONOR ACT

The ACTING PRESIDENT pro tempore laid before the Senate the following communication from the President of the United States:

To the Senate of the United States:

In compliance with the request contained in the resolution of the Senate (the House of Representatives concurring therein), I return herewith S. 1463 entitled "An act to amend the Medals of Honor Act to authorize awards for acts of heroism involving any motor vehicle."

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 31, 1957.*

EXECUTIVE MESSAGES REFERRED

As in executive session,

The ACTING PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed a bill (H. R. 7665) making appropriations for the Department of Defense for the fiscal year ending June 30, 1958, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H. R. 7665) making appropriations for the Department of Defense for the fiscal year ending June 30, 1958, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. The Chair asks that the unanimous-consent agreement entered on May 29, and relating to the proceedings today, be read.

The unanimous-consent agreement was read by the legislative clerk, as follows:

Ordered, That at the conclusion of its business today, the Senate adjourn until Friday, May 31, 1957, at noon; that on said day only requests for the insertion of matters in the RECORD shall be in order under a 3-minute limitation of debate; and that at the conclusion of its business on said day the Senate shall adjourn until 12 o'clock noon on Monday, June 3, 1957.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order just read be modified to the extent that the Senator from Oregon [Mr. MORSE] be extended the privilege of addressing the Senate for not to exceed 30 minutes.

I also ask unanimous consent that the order be modified so as to permit the introduction of bills or joint resolutions.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Texas? Without objection, it is so ordered.

ACTION OF THE BRITISH GOVERNMENT IN LIFTING THE EMBARGO ON COMMUNIST CHINA

Mr. KNOWLAND. Mr. President, the British Government has announced the lifting of the embargo against shipments of certain materials to Communist China. Many of the articles now to be shipped to Communist China must be considered strategic by any rule of reason. Locomotives, machine tools, trucks, perhaps entire rubber plants, may some day in the not too distant future strengthen Communist China to the point where it can feel it dares take the risk of taking over the Crown Colony of Hong Kong.

This is a calculated risk for which Her Majesty's ministers must alone bear the responsibility. When they weaken their own forces in Europe, as was recently done, we might question the wisdom of it; but as good and stout allies, we understand some of the economic reasons behind their action.

But, Mr. President, it is far more difficult to understand an action which can only strengthen our common enemies both in Asia and in Europe, for, Mr. President, up to the present time, Communist China has not agreed to a peace treaty with Korea; it has violated the armistice agreements in Korea; it has violated the armistice agreements in Southeast Asia, it still holds American citizens in prison.

I ask unanimous consent, Mr. President, to have printed in the body of the RECORD, as a part of my remarks, the official statement of the United States State Department, issued today, relative to the British action; and also an article entitled "Lifting Red China Embargo Termed Helpful to Russia," which was published this morning in the New York Herald Tribune.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

STATEMENT ON CHINA

The United Kingdom has decided that it can no longer agree to maintain a level of security controls over its exports to Communist China more severe than the multilateral controls applied to the U. S. S. R. and the Soviet bloc countries in Europe.

The United States is most disappointed by this action. It means that an agreement for the continuation of a differential trade control toward Communist China has not been reached, even though many of the nations which have been engaged in the recent talks on this subject expressed their support for such a program. For its part, the United States contemplates no change in its policy of total embargo on trade with Communist China.

AGREE TO PROPOSAL

The recent discussions among the cooperating governments have revealed that there was a wish on the part of all countries to retain a unified approach on the question of trade controls on exports to Communist China. A majority of the countries, including the United States, sought a unanimous agreement on the maintenance of a differential. The United States believed that the security interests of the free world would be best promoted by the maintenance of a significant differential. After an initial difference of opinion on the precise extent of the differential, the United States agreed to a proposal developed by representatives of a number of the participating countries. This proposal obtained the support of a majority of the cooperating governments.

BRITAIN'S STAND

The United Kingdom, however, supported by some countries, believed that there was no merit in applying a different level of controls to trade with Communist China as compared with the Soviet Union and that this differential should be totally abolished. No one advocated any reduction in the existing security controls applying to exports to the Soviet bloc countries in Europe, which controls would also continue to apply to Communist China.

The British policy announcement on China controls, while at variance with the position which the United States sought in the recent talks, makes clear the intention of the British Government to continue the application of security controls on strategic exports to Communist China, on the same basis as is presently being applied to the Soviet bloc countries of Europe.

[From the New York Herald Tribune of May 31, 1957]

LIFTING RED CHINA EMBARGO TERMED HELPFUL TO RUSSIA

(By David Lawrence)

WASHINGTON, May 31.—Sometimes it seems that, if the Communists only wait long enough, they will outtrade and outmaneuver the West. For apparently the alliance of the free world is not sufficiently sturdy or patient enough at times to maintain unity against the common enemy.

Pressed by British businessmen who want to sell their goods, the London government now has decided to relax its embargo on trade with Red China. Without getting a single concession in return, the British Government has yielded to the Red Chinese and will ship to them many of the commodities which hitherto have been banned.

This will strengthen Red China and help industrialize a country which is hostile to the West.

The United States Government is disappointed over the action and has said so publicly.

The British, on the other hand, are repeating a fallacious argument they have made often in the past—namely, that, since the goods can go into Soviet Russia, it is illogical to bar direct shipment to Red China of goods now going there indirectly.

BURDEN ON RUSSIA

The answer is that at present it costs the Soviets and the Red Chinese lots of money and takes a great deal of valuable freight space to send the goods over the trans-Siberian railway from Russia to China. Likewise, it is expensive to send by long sea voyage from Britain cargoes that can only be landed either in eastern European ports or carried to Siberian coastal ports—and all this with great difficulty and delay in certain seasons of the year.

Why should things be made easier for the Red Chinese, and the expenses of Soviet Russia cut down and her internal burden

with scarce goods eased? These are questions which the British have not satisfactorily answered. It is known here that an influential lobby in England has been steadily pressing the Conservative government to relax the trade embargo. Britain exists to no small extent on world trade, and it is a sad fact that, even in the early years of World War I, some British businessmen traded with the enemy, much to the discomfiture of the United States, then a neutral, whose goods were stopped at the time on the high seas even when destined for other neutral countries.

WAYS TO OFFSET LOSSES

The power of the trader in politics is well established. In a sense, the losers in business could be taken care of through indemnities or through purchase of surpluses. After all, if a trade embargo will help to keep the Communist countries weak and if, through trade embargoes, the military machine of a potential combatant can be kept from reaching effectiveness, the people of many Western countries might rather see the business interests compensated in some other way.

Now the Red China regime is to have access to tractors, trucks, locomotives, generators, and other vital commodities hitherto embargoed. It could lead to a breakdown of controls on the really strategic items, too. It may be the beginning of the crumbling of the alliance that has thus far kept the economic sinews of the West from helping the Communists of both Soviet Russia and Red China.

AGREEMENT WAS VOLUNTARY

It is too early to tell how Congress will react to the change made by the British. Long and earnest efforts were made in vain by the State Department to persuade the London government not to relax the embargo. Each government, of course, decides for itself, as there is no control over the policies of independent nations. Whatever has been agreed heretofore has been by voluntary action.

But if the alliance breaks down, America will have to make her own decision with respect to other phases of the embargo. Will American companies, for instance, furnish the British vendors with any goods to ship to Communist China? The rule here is that the same ban will be maintained as before on American exports, but it will be much harder to police this now since the British have begun to let down the bars.

Fifteen countries have been meeting in Paris for more than a month trying to work out a unanimous agreement on maintaining the embargo, but the talks broke down because the British wanted to go it alone.

It is an unfortunate development and must be marked up as a signal victory for the Communists in the cold war. It was handed to them on a platter by Great Britain.

GAIL BORDEN

Mr. JOHNSON of Texas. Mr. President, history is compounded of many things—war, disaster, battles, retreats, victories, conferences, treaties, and mass migrations. It is also the story of men—some good, some bad, and some who have stamped their dreams and their visions indelibly on our daily lives for all the years to come.

This is the centennial of such a man—of Gail Borden, who was responsible for one of the most familiar and most necessary objects of our civilization.

Gail Borden was a restless man with an inquiring mind that roamed as widely as his physical wanderings. He had lived in almost every State, from New York to Mississippi, when he arrived in Texas at the age of 28. He had been a surveyor in Kentucky; a captain of militia in Indiana; a flatboat crewman on the Mississippi River; and a schoolteacher in the State of Mississippi.

In Texas—then a part of Mexico—he combined the occupations of surveying, farming, and ranching. In between, he found time to help write the first State constitution, run the land office, and publish the first permanent newspaper in that area.

When Texas became a republic, President Sam Houston named Gail Borden as its first collector of customs, with an office at Galveston. He became interested in real estate and laid out the city of Houston, today the largest city in the South.

All during this period he had tinkered with a number of inventions. None of them had achieved any commercial success, even though his meat biscuit did carry off 1 of the 5 prizes awarded to Americans at the London World's Fair in 1851.

In the mid-1850's, he began the experiments which eventually led to immortality. He tackled a problem which was one of the greatest that faced our ancestors—how to assure a supply of pure milk, especially for children, that would be safe, and could be transported for long distances.

Borden thought the answer might lie in condensation. He poured into the project enthusiasm, vigor, and his own money—so much so, that within a few years he was reduced from a man in fairly comfortable circumstances to a man deeply in debt.

They were hard years for Borden. He finally obtained a patent; and on May 11, 1857, he started the world's first condensary, in Connecticut, where he would be near the largest possible market.

He was 60 years old, in debt, and starting a brandnew venture. Twice he went broke, and had to close down. The third time, he managed to break even; and from there on, it was only a question of holding on until the flood of orders started to pour in.

When he died—west of Houston—in 1874, he was known as "the world's milkman," and his condensed milk was a "must" for mothers everywhere. It remains a "must" to this day.

I do not have to tell you, Mr. President, of the tremendous impact his invention has on society, even today. It has become such a familiar, everyday object that most Americans do not realize that there was a living, breathing, and very vital man behind it.

Before he died, Gail Borden summed up his own life in the epitaph he selected. It was:

I tried and failed,
I tried again and again, and succeeded.

Mr. President, I commend to you these lines, along with the man who changed the whole history of this country as much as any other American.

A CONNECTICUT YANKEE FROM TEXAS

Mr. BUSH. Mr. President, for this occasion I have prepared some remarks entitled "A Connecticut Yankee From Texas." I hope they will appear in the RECORD following the remarks of the distinguished majority leader.

I feel that I would be doing less than my duty as a Connecticut citizen if I did not take time here to pay tribute to a noted frontiersman who came to Connecticut from Texas to found the modern dairy industry in Connecticut 100 years ago this month.

I can pay tribute to this Texan because he was in reality a New Englander who came home. I speak of Gail Borden, whose people landed in New England in the 1630's, and have enriched the life of my section ever since.

Some of the members of the Borden family who landed in New England wandered off. And one, Gail Borden, got all the way to Texas, where he utilized his New England sense of conscience and industry to help get that infant Republic and later Lone Star State underway.

Parenthetically, I should not want that statement to be indirectly assumed to be a suggestion of any lack of conscience or industry in the great State of Texas, but we can point with a little pride to those elements and characteristics of Gail Borden, which were useful at that time.

That same sense of conscience also made him aware that the high mortality rate among infant children should not be dismissed with a shrug and a gloomy, "It's the will of God." Gail Borden believed that it was his duty to help alleviate human suffering and to pave the way for a stronger and healthier Nation. His attention centered on the need of pure milk—a milk which could be transported on long treks and stay pure and sweet, to provide nourishment to all, and particularly those far from the source of supply.

Accordingly, he established headquarters in and near present-day Torrington, in my home State of Connecticut, to work with the farmers of that region to improve the quality of milk, and to manufacture the lifegiving product of his own invention—condensed milk. He chose our specific area for the reason that men with ideas have frequently chosen Connecticut—the intelligent, energetic, and progressive outlook of the Connecticut citizenry; the proximity to financial institutions; and the availability of a large consuming market.

It was in Connecticut that he opened the world's first successful condensary, starting a business new to America. The official founding date is May 11, 1857; the place: Burrville. This infant business held together for several years, as have so many other fledgling Connecticut institutions, largely on the slender thread of faith, and not much else.

But the business founded by Gail Borden, like others in our historic State, provided a product based on need, and stressing quality, in his case milk that was pure and would stay sweet for long periods of time. The condensed milk first made by Gail Borden in Connecticut played a key role in America's years of westward expansion and in helping build the healthy Nation we are today. Until his product became available, westward-bound caravans had one thing in common—the cow tied to the tailboard of every covered wagon. Connecticut-made

condensed milk came to the rescue of the migrating families of pioneers, assuring them of sustenance and good health in the then distant western reaches of America.

Connecticut is proud to possess such characteristics that a man like Gail Borden would choose it to get his real start in life—and he did not get this start until he was 56 years of age on his return to our State. And Connecticut is proud that through his effort, this State is the birthplace of the modern dairy industry—an industry which has grown nationally so dramatically that today it produces $10 billion worth of nutritious dairy foods. It is with great pride that the State of Connecticut salutes Gail Borden on this centennial of his lasting contribution to American life and health.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I should like to make a brief announcement for the benefit of Senators. On Monday it is planned to consider the House Commerce appropriation conference report, if the House acts on it by that time.

The Senate may also consider Calendar No. 328, S. 1770, amending the retirement laws for the Metropolitan Police Force, the Fire Department, and other police officers;

Calendar No. 338, H. R. 53, consolidating certain Veterans' Administration laws;

Calendar No. 337, H. R. 4136, to extend the period within which the Export-Import Bank may make loans;

Calendar No. 318, S. 1740, relating to beneficial associations and the employees' life-insurance fund.

STATUS OF APPROPRIATION BILLS AS OF MAY 31

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the status of appropriation bills as of May 31, including the title of the bill, the subcommittee chairman, the date the bill passed the House, and the status in the Senate.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

Status of appropriation bills as of May 31

Bill	Subcommittee chairman	Passed House	Status
1. 2d urgent deficiency, 1957	Hayden	Apr. 15	Passed Senate Apr. 16; approved Apr. 16, Public Law 15.
2. Additional deficiency, 1957	do	Apr. 17	Passed Senate Apr. 18; approved Apr. 20, Public Law 19.
3. Treasury-Post Office	Robertson	Feb. 20	Passed Senate May 13; approved May 28, Public Law 37.
4. State-Justice	Johnson	Apr. 17	Passed Senate May 15. At White House.
5. General government matters	Magnuson	Mar. 13	Passed Senate May 22. At White House.
6. 3d supplemental, 1957	Hayden	May 7	Passed Senate May 20. Conference report ready for House action Monday.
7. Commerce	Holland	Apr. 9	Passed Senate May 17. Conference report ready for House action.
8. Interior	Hayden	Feb. 26	Marked up.
9. Independent offices	Magnuson	Mar. 20	Hearings not quite completed; 1 or 2 more days in June.
10. Labor-HEW	Hill	Apr. 4	Hearings concluded. Markup next week.
11. District of Columbia	Pastore	Apr. 8	Do.
12. Agriculture	Russell	May 15	Hearings concluded. Markup June 5.
13. Legislative	Stennis	May 23	Senate hearings not scheduled.
14. Defense	Chavez	May 29	Senate hearings started May 23.
15. Public works	Eilender		Senate and House holding hearings simultaneously. House may report next week.
16. Mutual security	Hayden		Waiting for action on authorization.
17. Supplemental for 1958	Full committee		

I hope we can continue our work on the appropriation bills with the same efficiency and expedition that has marked our conduct thus far. We have tried to be both careful and expeditious, and I believe that if we stay on the track we will be able to dispose of these bills in good time.

AGRICULTURAL ECONOMY—RESOLUTION OF OREGON HOUSE OF REPRESENTATIVES—STATEMENT

Mr. NEUBERGER. Mr. President, the future of the family farm today presents a question that has yet to be answered with any assurance of its survival as a fundamental American institution. State legislature bodies and farm organizations are among those urging that the problem of preserving the family size farm be solved before it is too late.

I have received a copy of House Memorial No. 3, which was adopted by the House of Representatives of the Oregon Legislature during their recent session, which urges congressional action in behalf of the family-type farm operator, whose net income from all sources does not exceed $10,000 per year.

I have also received a statement of a similar nature issued by the board of directors of the Oregon Farmers Union.

Mr. President, I ask unanimous consent that House Memorial No. 3, and the statement from the Oregon Farmers Union may be printed in the RECORD.

There being no objection, the resolution and statement were referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

House Memorial 3

To the Honorable Senate and the House of Representatives of the United States of America, in Congress Assembled:

We, your memorialists, the House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas Congress has, through the years, devoted much time, effort, and money on legislative programs pertaining to our agricultural economy; and

Whereas it is generally conceded that a reasonable degree of prosperity and agricultural income is necessary at the grassroots level; and

Whereas the family type farm operator is regarded as an essential part of our democratic form of government and any Federal legislation designed to influence or maintain a measure of the economic parity between the rural and urban areas should be so designed that the major provisions thereof provide a substantial benefit to the family type farm operator; and

Whereas in recent years, acts of Congress appear to have granted special privileges to corporate and absentee ownership types of farm operations and to a large extent have ignored the family type farm operator: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon, That the Congress of the United States enact legislation or amend the various Federal laws pertaining to agriculture to the end that the economic benefits provided in such laws be basically directed toward the family type farm operator whose net income from all sources does not exceed $10,000 per year; and be it further

Resolved, That copies of this memorial be sent to the President of the United States, the Secretary of Agriculture, and to all members of the Oregon congressional delegation.

Adopted by house May 13, 1957.

EDITH BYNON LOW,
Chief Clerk.

PAT DOOLEY,
Speaker of the House.

STATEMENT OF BOARD OF DIRECTORS, OREGON FARMERS UNION

Long recognized as the solid social and economic core of American agriculture, the family farm is fighting a desperate battle for survival.

So designed by size and diversification as to gainfully employ the services of the farmer and his family and return an adequate standard of American living, the family farmer finds his future imperiled by the squeeze of mounting production costs and falling commodity prices.

He faces the handicap—along with the small-business man—of the crippling effects of the high-interest hard-money policy on both cost and availability of sufficient credit.

The family farmer has been forced into the ropes by the administration of the sliding scale of diminishing returns and a program of support prices geared only to a few basic crops and not spread to afford protection to the production of a diversified farm.

He has been discriminated against by a program so managed as to provide unfair and unbalanced competition by determinedly refusing to limit the total amount of price protection to the individual, but that has permitted and sponsored payments of excessive sums to large mechanized and incorporated land companies and individual holdings.

The family farms of this State and Nation have diminished in the last few years at a rate that should be the real concern, not only of the farmers who produce, but of the consumers who depend upon a substantial and adequate supply of food products.

Labor, faced with the challenge of automation, has problems of its own and cannot well absorb all these people who leave the land, nor do we concede that the ranks of transient labor offer reasonable answer for the family farmer.

We do not believe the consuming public will ever gain any long-range benefits of price, or security of food supply, by the coming of monopolies into the field of food production.

Therefore, it is our intention now to respectfully memorialize the Congress of these United States to give immediate attention to the present plight of the family farmer and to devise measures realistically designed

to help this vitally necessary type of productive unit.

We would respectfully point out that unless some sense of responsibility for land controls and for an equitable and stabilized price program is soon established, the family farm faces extinction.

The loss of this long recognized institution of agricultural production is certain to have serious adverse social and economic impacts upon the security of America.

THE LATE SENATOR JOSEPH R. McCARTHY—RESOLUTION BY COMMITTEE ON GOVERNMENT OPERATIONS

Mr. MUNDT. Mr. President, on Wednesday, May 29, the Committee on Government Operations held its first meeting since the passing of our late colleague, Senator McCarthy, of Wisconsin. On behalf of the chairman of the committee [Mr. McCLELLAN] and as the ranking Republican member of the committee, I should like to read into the RECORD at this point the memorial resolution adopted by the committee:

JOSEPH R. McCARTHY

Whereas the late junior Senator from Wisconsin, the Honorable Joseph R. McCarthy, served with distinction as a member of this committee for a period of more than 10 years, 2 of which he served as chairman; and

Whereas during the entire period of his service in the Senate he was a member of this committee and participated actively in its deliberations and activities, and contributed much to its legislative accomplishments, particularly with reference to the improvement of budgeting, accounting and financial reporting, in the development of better procurement, property and records management procedures, the disposal of surplus Federal property, and in effecting reorganizations of the executive branch of the Government; and

Whereas for 2 years he served as the chairman of the Senate Permanent Subcommittee on Investigations of this committee, during which time he conducted a most aggressive and courageous fight against communism, striving constantly to awaken the American people to the threat of the international Communist conspiracy to our Government and the institutions upon which it was founded: Now, therefore, be it

Resolved, That the Committee on Government Operations has heard with profound sorrow and deep regret of the death of the Honorable Joseph R. McCarthy, late junior Senator from the State of Wisconsin; and directs its clerk to transmit a copy of this resolution to his wife, Mrs. Jean McCarthy, to his daughter, Tierney Elizabeth, and to other members of the family of the deceased.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WILEY (for himself, Mr. ALLOTT, Mr. BENNETT, Mr. CAPEHART, Mr. CASE of South Dakota, Mr. CHURCH, Mr. FLANDERS, Mr. GREEN, Mr. HENNINGS, Mr. HOLLAND, Mr. HUMPHREY, Mr. JAVITS, Mr. MAGNUSON, Mr. MANSFIELD, Mr. MARTIN of Pennsylvania, Mr. McCLELLAN, Mr. PAYNE, Mr. POTTER, Mr. REVERCOMB, Mr. SALTONSTALL, Mrs. SMITH of MAINE, Mr. SPARKMAN, and Mr. STENNIS):

S. 2189. A bill to promote the increase and diffusion of knowledge of the Antarctic; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. WILEY when he introduced the above bill, which appear under a separate heading.)

By Mr. HUMPHREY:

S. 2190. A bill to waive the $1,000 limitation on the authority of the Secretary of the Navy with respect to the settlement and payment of claims arising out of the crash of a United States Navy airplane at Minneapolis, Minn., on May 30, 1957; to the Committee on the Judiciary.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. McCLELLAN (for himself, Mr. BRIDGES, Mr. ANDERSON, Mr. PURTELL, Mr. GORE, Mr. THYE, Mr. KENNEDY, and Mr. GOLDWATER):

S. 2191. A bill to amend title III of the Legislative Reorganization Act of 1946, as amended, and for other purposes; to the Committee on Government Operations.

(See the remarks of Mr. McCLELLAN when he introduced the above bill, which appear under a separate heading.)

By Mr. THYE:

S. 2192. A bill to provide greater protection against the introduction and dissemination of diseases of livestock and poultry, and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. ALLOTT:

S. 2193. A bill to amend section 8 of the act approved March 3, 1875 (18 Stat. 474), relating to the admission into the Union of the State of Colorado by providing for the use of public lands granted to said State for the purpose of construction, reconstruction, repair, renovation, furnishing, equipment, or other permanent improvement of public buildings at the capital of said State; to the Committee on Interior and Insular Affairs.

By Mr. MORSE (for Mr. NEELY and Mr. BEALL):

S. 2194. A bill to increase the authorization for appropriations for the Hospital Center and facilities in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

PROPOSED RICHARD E. BYRD ANTARCTIC COMMISSION ACT OF 1957

Mr. WILEY. Mr. President, I am pleased today to introduce, for appropriate reference, a bill to establish what I regard as a most essential organization in the executive branch—an Antarctic Commission.

This Commission would be named "the Richard E. Byrd Antarctic Commission," in honor of the great explorer whose name symbolizes man's search into the unknown, man's courage in the face of the elements, man's devotion to duty.

I introduce the bill, on behalf of myself and Senators ALLOTT, BENNETT, CAPEHART, CASE of South Dakota, CHURCH, FLANDERS, GREEN, HENNINGS, HOLLAND, HUMPHREY, JAVITS, MAGNUSON, MANSFIELD, MARTIN of Pennsylvania, McCLELLAN, PAYNE, POTTER, REVERCOMB, SALTONSTALL, SMITH of Maine, SPARKMAN, and STENNIS.

PURPOSE

The purpose of the bill is simple, and it is obvious. It is to establish a spearhead for a continuing Antarctic policy in the Government of the United States. I use each of these key words advisedly—"spearhead," "continuing," "policy."

SPEARHEAD

I use the word "spearhead" because a great many Government departments have now and will continue to have important responsibilities in the Antarctic field. At the conclusion of my remarks, I shall ask to have printed in the RECORD a list of all of the Government agencies participating in or interested in our Antarctic program.

Some of these agencies have a direct, immediate, and broad-gaged interest, such as that of the Departments of Defense, State, Interior, and Commerce. The interest of other agencies is more limited. But all told, no less than 14 separate agencies do have an interest.

In the past have these 14 separate establishments been so completely effective as we might have hoped in developing our overall United States program in this vast region? With all due respect to the many expert Government servants who have worked devotedly on this subject, I believe that the answer is "No."

I believe that the record of the past speaks for itself—that we cannot expect 14 separate agencies, without overhead direction and coordination, to do the necessary well-rounded job for us.

"Everybody's business becomes nobody's business.

This is not the sort of situation which, in my judgment, the National Security Council can indefinitely allow to persist.

We must have an organized spearhead.

CONTINUOUS

I use the word "continuous" because the establishment of a commission is the key element which is absent from the present situation.

As I explained in my comments in the CONGRESSIONAL RECORD on May 23, on pages 7499–7500, ours has tended to be an off-again, on-again, haphazard program in the Antarctic.

America's interest has been sporadic. We have sent expeditions, and those expeditions have been led and manned by great, gallant men. But thereafter, we have allowed the crews of the expeditions to be dispersed to many far different assignments, and the results of those expeditions have gathered dust in warehouses. Then, years later, we have become interested again, only thereafter once more to allow our interest to lapse. The result has been a scattered, uncoordinated, discontinuous approach. In effect, we have not done full justice to all the information compiled through the heroism, the patience, the persistence of the expeditions.

POLICY

Finally, I use the word "policy" because, in my judgment, and in the judgment of others who have worked on this Antarctic problem for a long time, we need to have a long-range national policy in the Antarctic. The time will come when we will stake out our own United States territorial claims in this area.

The time will come—must come—when we will decide how much of our physical resources—men, money, material—we will want to commit on a 5-year, 10-year, and longer basis in this area.

We cannot indefinitely postpone our decisions. We must have a national

policy, and it is only through a commission that we can establish such a policy. It is only through a commission that the President of the United States and the Congress of the United States may assure themselves that we as a nation are fulfilling our responsibility.

THE UNKNOWN

Let us understand the awesome dimensions of this challenge.

The Antarctic, as my colleagues may be aware, covers an area of 6 million square miles. This is about the equivalent to the combined areas of the United States and of Europe. It is sheathed in perpetual ice and snow. It is the world's coldest region and the least known land area. A great many parts of the interior plateau, averaging around 6,000 feet above sea level, have never been explored.

We are only beginning to know the secrets of what minerals lie locked beneath the surface. We are only beginning to understand the weather of the Antarctic, and all the many other facets of it.

This is a great frontier—a frontier as challenging as any which has ever faced this or any other Nation. We must be adequate to the challenges of this frontier, as our ancestors were adequate to the call to the North American Continent, or the call to the West, the call to the Louisiana Purchase, the call to Alaska.

And not only our national interest is involved, but the interest of many nations—friends, neighbors, allies, and others.

APPENDED MATERIAL

I send to the desk an additional statement and appended materials, including the text of the bill itself. I ask unanimous consent that these items be printed in the body of the RECORD.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill, supplementary statement, and other matters will be printed in the RECORD.

The bill (S. 2189) to promote the increase and diffusion of knowledge of the Antarctic, introduced by Mr. WILEY (for himself and other Senators), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That this act may be cited as the Richard E. Byrd Antarctic Commission Act of 1957.

DEFINITIONS

SEC. 2. When used in this act:

(1) "Commission" means the Richard E. Byrd Antarctic Commission.

(2) "Director" means the Director of the Commission.

(3) "Council" means the Advisory Council.

(4) "Commissioned officer" means a commissioned officer of the Armed Forces of the United States.

THE COMMISSION

SEC. 3. There is established in the executive branch of the Government the Richard E. Byrd Antarctic Commission. The Commission shall consist of a Director and two Deputy Directors.

FUNCTIONS OF THE COMMISSION

SEC. 4. The Commission shall—

(1) maintain a depository of information relating to the Antarctic including: (A) all records of the Commission, (B) originals or copies of records within the executive branch relating to the Antarctic, (C) books, pamphlets, periodicals, and articles dealing with the Antarctic, and (D) such other information as the Commission considers desirable.

(2) conduct such field and laboratory studies and evaluations as it considers advisable to further the knowledge of the Antarctic.

(3) assist or advise in the establishment of territorial claims to the Antarctic by the United States.

(4) enter into contracts or agreements for the conduct of such research activity, investigation, or experimentation as the Commission considers essential to carry out the purposes of this act.

(5) perform, at the request of the head of any executive agency, specific research, investigation, or experimentation in connection with matters relating to the national defense or the interests of the United States.

(6) acquire by purchase, lease, loan, or gift, and hold or dispose of by sale, lease, or loan, real or personal property necessary for, or resulting from, the exercise of authority under this act.

(7) receive and use funds donated to the Commission if such funds are donated without restriction other than that they be used to carry out the general purposes of this act.

(8) publish or arrange for the publication of scientific, technical, historical, and general information so as to further the dissemination of information about the Antarctic, when the dissemination is consistent with the interests of national security and the public interest (publication may be made without regard to sec. 87 of the act of January 12, 1895, ch. 23 (28 Stat. 622), and sec. 11 of the act of March 1, 1919, ch. 86 (40 Stat. 1270, 44 U. S. C. 111));

(9) approve the plans for and supervise Antarctic operations or expeditions conducted by, or supported by, other agencies of the United States except for operations or expeditions or parts thereof which are military in character;

(10) assist private Antarctic expeditions or research programs when such assistance is in the best interests of the United States;

(11) accept and utilize the services of voluntary and uncompensated personnel and provide transportation and subsistence as authorized by section 5 of the act of August 2, 1946, chapter 744 (60 Stat. 808), as amended (5 U. S. C. 73b–2), for persons serving without compensation;

(12) report to the President before September 16 of each year, summarizing the activities of the Commission and making such recommendations as it considers appropriate. The report shall include the recommendation of the Council and any minority views of the members of the Council.

THE DIRECTOR OF THE COMMISSION

SEC. 5. (a) The Director shall be appointed by the President, by and with the advice and consent of the Senate, for a period of 6 years and shall be paid at the rate prescribed in section 107 (a) of the Federal Executive Pay Act of 1956 (70 Stat. 736). He may be a person appointed from civilian life or a commissioned officer in an active or retired status.

(b) The Director shall—

(1) manage the affairs of the Commission;

(2) issue such regulations as he considers necessary to carry out this act; and

(3) appoint and fix the compensation of such personnel as may be necessary to carry out this act.

(c) The appointments made and the compensation fixed shall be in accordance with the Classification Act of 1949 and the regulations of the Civil Service Commission. However, the Director may employ such technical and professional personnel, and fix their compensation, as he considers necessary, without regard to the Classification Act of 1949 or the regulations of the Civil Service Commission. The Director may terminate the employment of any officers or employees, including the Deputy Directors, whenever he considers that termination to be in the best interests of the United States, except that no person in the classified service may be removed or suspended without pay unless it is accomplished under the act of August 24, 1912, chapter 389 (37 Stat. 555), as amended (5 U. S. C. 652).

DEPUTY DIRECTORS

SEC. 6. (a) The Deputy Directors shall be appointed by the Director and shall perform such duties as he may prescribe.

(b) The Deputy Directors may be appointed from civilian life or may be commissioned officers in an active or retired status. However, if the Director is appointed from civilian life, only one Deputy Director may be a commissioned officer. If the Director is a commissioned officer, both Deputy Directors shall be appointed from civilian life.

(c) The Deputy Directors shall be paid $15,000 a year.

MILITARY STATUS OF DIRECTOR AND DEPUTY DIRECTORS

SEC. 7. (a) When a commissioned officer is appointed as Director or Deputy Director, he is not subject to military authority and may not exercise command over any members of the Armed Forces of the United States except as the President may prescribe.

(b) The appointment of a commissioned officer as Director or Deputy Director does not affect his status or rank or the pay and allowances incident to his status or rank. He is entitled to receive the pay and allowances payable to an officer of his rank and length of service, for which the appropriate department shall be reimbursed from any funds available to defray the expenses of the Commission. He is also entitled to be paid by the Commission the amount by which the compensation provided for the Director or Deputy Director exceeds his annual military pay and allowances.

THE ADVISORY COUNCIL

SEC. 8. (a) The Advisory Council, consisting of 12 members, shall be appointed by the President by and with the advice and consent of the Senate. The members of the Council must be persons who are eminently qualified in their professions. So far as practicable, the members shall be chosen from various fields of endeavor so as to provide a broad field of knowledge and experience which will properly relate the activities of the Commission to the national welfare. However, the majority of the Council must be persons eminently qualified in the knowledge of the basic sciences pertaining to the Antarctic.

(b) The members of the Council shall be appointed for a period of 6 years, except that (1) any member appointed to fill a vacancy occurring before the expiration of the term of his predecessor shall be appointed for the remainder of the term; (2) the term of office of the members first taking office after the date of enactment of this act shall expire, as designated by the President at the time of appointment, 4 at the end of 2 years, 4 at the end of 4 years, and 4 at the end of 6 years; and (3) a member may be reappointed to the Council for not more than one additional term.

(c) The members of the Council shall be paid at the rate of $50 per day for each day they serve performing the functions of the Council, and shall be allowed travel expenses as authorized by section 5 of the act of August 2, 1946, chapter 744 (60 Stat. 808), as amended (5 U. S. C. 73b–2).

(d) The Council shall—

(1) meet annually on the first Monday in November and at such other times as the Chairman determines;

(2) elect a Chairman and Vice Chairman, at the regular annual meeting, to serve for the following year;

(3) review and assess the research and exploration activities relating to the Antarctic; and

(4) make such recommendations to the Commission as they consider appropriate for the advancement and dissemination of knowledge of the Antarctic.

SERVICES AND FUNDS OF OTHER AGENCIES

SEC. 9. (a) The Commission may, with the consent of the agency concerned, accept and utilize on a reimbursable basis, the officers, employees, services, facilities, and information of any agency of the United States. However, such services and facilities may be furnished only if it does not interfere with the performance of the primary mission of the agency concerned. An agency having custody of data relating to the matters within the jurisdiction of the Commission shall, upon request of the Director, make that data available to the Commission without reimbursement.

(b) Funds available to any agency of the United States for scientific or technical research, educational, or other public service are available for transfer, with the approval of the head of the agency concerned, to the Commission for such use as is consistent with the purposes for which those funds were provided. Funds so transferred shall be spent by the Commission for the purposes for which the transfer was made or for general administrative expenses until such time as an appropriation is made available to the Commission.

ACTS AMENDED

SEC. 10. Subsection 107 (a) of the Federal Executive Pay Act of 1956 is amended by adding the following after clause (22):

"(23) Director of the Antarctic Commission."

SEC. 11. Section 505 of the Classification Act of 1949, as amended (70 Stat. 762; 5 U. S. C. 1105), is amended by adding the following subsection:

"(f) The Director of the Antarctic Commission is authorized, without regard to any other provision of this section, to place a total of seven positions in the Antarctic Commission in grades 16, 17, and 18 of the general schedule. Such positions shall be in addition to the number of positions authorized to be placed in such grades by subsection (b)."

The supplementary statement and other matters presented by Mr. WILEY are as follows:

SUPPLEMENTARY STATEMENT BY SENATOR WILEY

TRIBUTE

In introducing this bill today, I want to pay tribute to those who have worked long and hard toward the introduction and enactment of such a bill.

Greatest credit of all goes to Rear Adm. Richard E. Byrd himself, who, without expectation of this recognition, had done so much and so well, prior to his untimely passing.

But, then, there are others of his coworkers who deserve much credit for carrying on in the Byrd tradition.

I want to pay tribute to Adm. George Dufek, Admiral Byrd's worthy successor, and to Dr. James Mooney, officer in charge of the Navy's Antarctic program.

And there are great numbers of my colleagues on both sides of the Hill who have likewise been interested in this subject.

I should like, in particular, to single out the distinguished chairman of the Senate Foreign Relations Committee, the able senior Senator from Rhode Island [Mr. GREEN]. Earlier this year, my colleague sent to the State Department an inquiry asking the Department to comment as regards United States policy on the Antarctic.

I may say that this well-deserved inquiry follows up on previous inquiries which were sent by predecessor chairmen of the Senate Foreign Relations Committee, including the former senior Senator from Texas [Mr. Connally].

Time does not permit me to list all of the other many Senators who have been interested in this subject. But I should like in passing to refer, if only briefly, to our associates from Mississippi [Mr. STENNIS] and from Vermont [Mr. FLANDERS].

And, of course, I need hardly state in detail the deep interest in this subject which I know is felt by one of the great lights in the Senate, the distinguished senior Senator from Virginia [Mr. BYRD], who while he is not a cosponsor of this particular bill, is nonetheless a most thoughtful observer of this entire subject.

I should also like to pay tribute to the interest which has been shown by the distinguished chairman of the House Interior and Insular Affairs Committee, our colleague from California [Mr. ENGLE].

TIME

We, the Senate cosponsors, realize, of course, that the hour is relatively late in this first session of the 85th Congress.

It will take time for the executive branch agencies to complete their study of this subject.

But it is my hope that in the not too distant future, hearings will be held on this legislation. And it is my hope that thereafter we will act to establish this Commission.

NEED FOR COORDINATION

I may say that I, for one, would ordinarily be skeptical of establishing still another instrumentality in the executive branch, since obviously there are far too many independent groups in that branch. And the whole trend of the Hoover Commission and of other studies has been toward consolidating such groups.

Nevertheless, we have learned that when there is a great need it cannot be fulfilled by a scattered, uncoordinated approach.

BILL OUR OWN

I should like to emphasize that this bill is introduced only on behalf of the Senators mentioned and myself. The bill represents the best thinking, the best judgment of drafting experts and Antarctic experts which could be mobilized on our request.

The bill is, however, our own. We will be looking forward to the results of the administration's further review of this subject with deep interest.

PROTECT OUR RIGHTS

I should like to state very clearly that one of my deep concerns with respect to the Antarctic is to make sure that the United States is fully protected as regards the claims which she will ultimately make as regards title to territory in the Antarctic.

In this connection, I have been studying with interest the law of nations bearing upon possession of territory in Antarctica.

There are a host of complex legal questions which arise in this connection. I have set out some of these questions in a memorandum which will follow these remarks.

In this connection, however, I invite attention to observations on the legal problems of title to polar and subpolar regions in the book Digest of International Law, by Green Hayward Hackworth, former legal adviser of the Department of State, volume I, as published by the Government Printing Office in 1940.

The references beginning on page 449 reflect the historic United States positions in this connection, but also reflect the myriad of problems which have arisen, and which we may expect to arise in the future, so far as territorial claims by the various nations are concerned.

THE FUTURE

Naturally, I am deeply interested in making sure that future generations will say of us that "they in 1957 did not forget the future needs of the American flag in the polar regions."

And while I am naturally desirous of protecting the rights of our flag, I am likewise desirous of promoting sound international relations.

The history of man's exploration of the polar unknown reflects many inspiring chapters of the cooperation of individuals of many nationalities.

INTERNATIONAL COOPERATION

At this very moment, the scientists of many nations contributing to the International Geophysical Year are writing a further story in splendid international cooperation.

It is so difficult to combat the elements in this area that it is obviously essential that there be such full cooperation by the scientists and explorers now at work in all parts of Antarctica.

GREETINGS TO ANTARCTICA

In introducing this legislation today, I would like to say a word of greeting to all of the men who are now manning the United States stations in Antarctica, to the men at Little America—at Byrd, Pole, Weddell, Knox, Adare, Williams Air Operations Facility Stations.

It has been my pleasure to hear from several of these men through the courtesy of shortwave operators. And I may say it gives one a real thrill to think of these modern-day Vikings serving the American flag. They are continuing a tradition, as courageous, as dedicated, as that recorded in any previous chapter of American history.

I am particularly proud that we have a very sizable contingent of Wisconsin men at these various stations. But whatever their State, indeed, whatever the land in which they or their forefathers were born, they are Americans all, and I am very proud of them.

The best tribute which we in the Congress can pay to these men is through enactment of legislation of this nature.

These are men who are willing to risk their all. Surely, the very least that we can do is to provide the top-side organization through which they will be most effective.

HONOR TO NAVY

I know that these men are proud to work with and in their respective agencies of the Government, especially, of course, the men who wear the proud uniform of Navy blue and gold. But through the proposed Antarctic Commission, the Navy (which has performed so spenlidily in conditions of adversity in the Antarctic, as it always has elsewhere as well) will be in a still stronger position to serve this great objective. And so will the other agencies of Government.

I may say that the United States Government is the only one of the major powers in the world which lacks such a coordinating body as the Commission.

SPEED UNITED STATES PROGRESS

Yet, we are the great hope of the Free World for the speeding up of progress in the Antarctic. We alone, in the Free World, have the resources. It is our national interest which is at stake even more than that of the powers which are closely adjacent to the area, because it is the United States which is the leader of the free nations of the world.

Let us not delay in fulfilling our responsibility.

Let us not allow another year to pass, another 5 years, or 10 years, before we awaken

as Dick Byrd implored us to awaken, to the challenges of this frontier.

Let us enact this bill, a bill which I humbly believe may prove to be one of the great landmarks of the 85th Congress.

FIVE APPENDED MATERIALS

There follow now the materials to which I have earlier referred, as well as other items.

The first item is a list of all of the United States Government agencies and bureaus of such agencies participating in or interested in the Antarctic.

The second is a list of the principal government-sponsored polar organizations of the foreign powers.

This list includes the organizations in all nations which have announced claims to territory in Antarctica.

It will be noted that with the possible exception of Chile, all the polar organizations listed are either autonomous units or quasi-governmental in character. Their missions vary, but all have a responsibility for maintaining their respective nation's interests in the Antarctic through, in part, the dissemination to the public of up-to-date information.

The third item is a chronology of United States activities in the Antarctic.

I may say that I am grateful to the Department of the Navy for furnishing me the factual material of the above three memoranda.

While, as I have indicated, neither the Department of the Navy nor the Department of Defense as a whole is responsible for this legislation, they have been most gracious and cooperative in fulfilling my requests for information.

And, finally, I should like to include the legal memorandum of my own—posing a few of the many problems which arise in connection with territorial claims in the Antarctic.

While these materials are of rather extended length, I believe that they are necessary to provide a satisfactory degree of understanding of this problem.

I may say that it is my intention to comment further in the Senate on this subject.

LIST OF UNITED STATES GOVERNMENT AGENCIES PARTICIPATING IN OR INTERESTED IN THE ANTARCTIC

1. Department of Defense: Joint Chiefs of Staff, Office of Special Operations.

(a) Department of the Navy: (1) Task Force 43, (2) Office of Naval Research, (3) Hydrographic Office, (4) Bureau of Medicine and Surgery, (5) Bureau of Aeronautics, (6) Bureau of Yards and Docks, (7) Bureau of Supplies and Accounts.

(b) Department of the Army: (1) Office of Chief of Staff for Research and Development, (2) Corps of Engineers (SIPRE), (3) Signal Corps.

(c) Department of the Air Force: (1) Director of Research and Development, (2) Air Force Cambridge Research Center, (3) Arctic, Desert, Tropic Information Center.

2. Department of State.

3. Department of the Interior: (a) United States Geological Survey, (b) United States Fish and Wildlife Service.

4. Department of Commerce: (a) National Bureau of Standards, (b) United States Coast and Geodetic Survey, (c) United States Weather Bureau.

5. National Science Foundation: Office for International Geophysical Year.

6. United States National Academy of Science.

7. Central Intelligence Agency.

8. Atomic Energy Commission.

9. Office of Defense Mobilization.

10. Department of Health, Education, and Welfare: (a) Food and Drug Administration, (b) National Institutes of Health.

11. National Archives.

12. Library of Congress.

13. Smithsonian Institution: (a) United States National Museum, (b) National Zoological Park.

14. United States Board on Geographic Names.

FOREIGN POLAR ORGANIZATIONS

Country: Argentina.

Title: Instituto Antartico Argentino.

Established: 1951.

Financing: Governmental.

Mission: To develop programs and provide support for scientific activities in the Antarctic, maintain collections and laboratories for research purposes, issue publications, encourage research, and stimulate public interest in Antarctic.

Remarks: The Argentine Antarctic Institute is organized as an autonomous unit with separate budget under the Ministry of Marine. Logistic support for Argentine Antarctic expeditions is provided largely by the Argentine Navy.

Country: Australia.

Title: Antarctic Division of the Department of External Affairs.

Established: 1948.

Financing: Governmental.

Mission: To direct the operations of the Australian National Antarctic Research Expedition and advise the Commonwealth Government upon all matters pertaining to Australian interests in the Antarctic.

Functions: Plans, finances, and directs logistic and scientific activities, maintains a library and archives, issues publications, and advises the Government.

Remarks: The Antarctic Division is both an operating and research agency lodged within the Australian equivalent of the State Department.

Country: Chile.

Title: Antarctic Department, Ministry of Exterior Relations Antarctic Department, General Staff of the Armed Forces.

Financing: Governmental.

Missions: The Antarctic Department, Ministry of Exterior Relations, plans the Chilean scientific problems. The Antarctic Department, General Staff of the Armed Forces, plans expeditions and provides logistic support.

Country: Denmark.

Title: Arktisk Institute.

Established: 1954.

Financing: Governmental.

Mission: To promote Arctic research, disseminate knowledge of the Arctic regions, and to maintain contact between Denmark and foreign countries in all fields connected with the Arctic.

Remarks: The Arktisk Institute has a six-man governing board which is assisted by a council of scientists and other prominent persons with day-by-day administration in the hands of a permanent official with the title of secretary.

Country: France.

Title: Expeditions Polaires Francaises: Missions Paul-Emile Victor.

Established: 1947.

Financing: Governmental and private.

Mission: To plan, support, and direct French expeditions to both the Arctic and Antarctic regions, collect and publish the results of such expeditions, and maintain archives and library for purposes of information and research.

Remarks: The Expeditions Polaires Francaises is an autonomous agency benefiting from State subsidies and subject to administrative and fiscal review by the Ministries of National Education and Finance. It is headed by a director, assisted by a management committee for administrative matters and a scientific commission which develops plans for research, reviews the results, and provides for publication.

Country: New Zealand.

Title: New Zealand Antarctic Society.

Established: 1933; suspended during World War II, revived 1949.

Financing: Private.

Mission: To collect and disseminate scientific and other information relating to the Antarctic, stimulate interest in the area, and assist explorers both New Zealand and foreign.

Remarks: New Zealand has no central governmental organization for the coordination of Antarctic affairs. The International Geophysical Year effort is being directed by a national committee. The New Zealand part of the British and Commonwealth trans-Antarctic expedition comes under the direction of a recently established Ross Sea committee. The ministry of external affairs has an Antarctic division, as have other interested ministries. Members of the New Zealand Antarctic Society participate in many of these governmental organizations.

Country: Norway.

Title: Norsk Polarinstitutt.

Established: 1948.

Financing: Governmental.

Mission: To plan and direct polar expeditions, compile results, issue publications, and maintain liaison with foreign polar organizations.

Remarks: Organized as an independent agency under the Minstry of Handicraft and Labor. It has a director and six divisions.

Country: Union of Soviet Socialist Republics.

Title: The Arctic Institute of the Soviet Union.

Established: 1930.

Financing: Governmental.

Mission: To direct scientific expeditions, conduct research, provide meteorological and other services, issue publications, and maintain a museum.

Remarks: With headquarters in Leningrad, the Arctic Institute maintains laboratories and field stations. It is part of the chief administration of the northern sea route, and its headquarters staff alone employs over 500 scientists and technical personnel. Its exact relation to the present Soviet effort in the Antarctic is not clear, but from it have been drawn the techniques, equipment, and trained personnel now in the area. Logistic support is provided in the Antarctic by the ships of the Northern Sea Route Administration. The present Antarctic expedition is under the All-Union Academy of Sciences, operating through a subordinate Antarctic Commission.

Country: United Kingdom.

Title: Scott Polar Research Institute.

Established: 1926.

Financing: Governmental and private.

Mission: To serve as a center for the collection of polar records and equipment provide expert advice on techniques of polar exploration, and provide research facilities for working up the scientific results of polar expeditions.

Remarks: The Scott Polar Research Institute started as a private organization with a small endowment. Since World War II, it has received grants from the Governments of the United Kingdom, Australia, Canada, New Zealand, South Africa, and the Falkland Islands. These grants currently account for four-fifths of the institute's income. It is organized as part of the geography department of Cambridge University with its own director and management committee. Not officially a part of the Government, the institute maintains close relations with the foreign office, colonial office, and other Government departments, partly through interlocking personnel.

CHRONOLOGY OF UNITED STATES ACTIVITIES IN THE ANTARCTIC

1790–1830: Heyday of Antarctic sealing. Based on Cook's 1772–75 reports of seals in the area, many voyages were made. In 1791, 102 vessels are known to have engaged in sealing in southern waters. During the 1820–21 season, 44 vessels were in the South Shetlands alone. The great majority of the sealers were American or British, but other

nations participated. Because sealers sought to keep secret the location of good hunting grounds, relatively little is known of these voyages. A few, of which the surviving records are extant and which have historical importance, are noted below. By 1830, the fur sealers were nearly extinct.

1819–20: J. P. Sheffield, a sealer, operated in South Shetlands.

1820–21: Numerous sealers operated around South Shetland Islands. N. B. Palmer on November 17, 1820, believed to have sighted Antarctica, south of Deception Island; Capt. John Davis on February 7, 1821, made first known landing on continent at Hughes Bay; Capt. Robert Johnson reported as reaching 66° south, 70° west.

1821–22: United States sealers, seeking seal beaches, visited islands and parts of Palmer Peninsula. N. B. Palmer accompanied by Englishman, George Powell, discovered South Orkneys in December 1821.

1822–23: Capt. Ben Morrell visited Bouvet, South Sandwich Islands, and possibly Weddell Sea.

1829–31: Capt. Ben Pendleton, first United States expedition to carry scientists, reached 62° south, 103° west.

1838–42: Lt. Charles Wilkes, United States Navy, with six ships, made first United States Government-sponsored expedition; in February 1839 visited South Shetlands and Louis Philippe Peninsula; penetrated pack off Thurston Peninsula; between December 1839 and February 1840, explored from about 160° east to 98° east, making numerous sightings and establishing fact that Antarctica was a continent.

1853–54: Capt. John Heard discovered Heard Island; during following years United States sealers were active in this vicinity, including wintering-over parties.

1928–30: Wilkins-Hearst expedition, largely financed by United States citizens and organizations, under Sir Hubert Wilkins; first airplane flight over Antarctica, in Palmer Peninsula area, November 26, 1928, with C. B. Eielson, a United States citizen, as pilot.

1928–31: Byrd Antarctic expedition, privately financed, under Rear Adm. R. E. Byrd, United States Navy, wintered at Little America I, Bay of Whales; discovered Rockefeller Mountains, Edsel Ford Mountains, and Marie Byrd Land; geological survey in Queen Maud Range; made first flight over the South Pole, November 29, 1929.

1933–34: First Lincoln Ellsworth expedition, visited Bay of Whales, January 1934.

1933–35: Second Byrd Antarctic expedition, privately financed, under Rear Adm. R. E. Byrd, United States Navy; wintered at Little America II, Bay of Whales; extensive use of aircraft, tractors, and other modern equipment; notable for the extent of scientific work, particularly in area east of the Ross Sea; an advanced weather station about 90 miles from the sea was manned for 7 months, much of the time by Admiral Byrd alone.

1934–35: Second Ellsworth expedition, based at Snow Hill Island; projected flight across Antarctica thwarted by bad weather.

1935–36: Third Ellsworth expedition, based at Dundee Island; November 21–December 5, trans-Antarctic flight from Dundee Island to vicinity of Bay of Whales; discovered Ellsworth Highland.

1938–39: Fourth Ellsworth expedition, discovered American Highland.

1939–41: United States Antarctic service expedition, officially sponsored, under Rear Adm. R. E. Byrd; established west base at Little America III, under Dr. Paul A. Siple, and east base on Stonington Island, Marguerite Bay, under Lt. Comdr. R. B. Black, United States Naval Reserve; extensive exploratory and scientific work carried on in southern part of Palmer Peninsula and in area east of Ross Sea.

1946–47: Operation Highjump, with Rear Adm. R. E. Byrd as officer in charge, and Rear Adm. R. H. Cruzen as commander, Task Force 68. Largest expedition ever sent to Antarctic, divided into three groups. Central group established Little America IV at Bay of Whales; 6 transport planes flown from an aircraft carrier to Little America IV to carry out 29 photo flights; eastern group photographed coast from 100° west to 125° west, and then eastward as far as Princess Martha Coast; western group photographed coast from 164° east to 15° east.

1947–48: Ronne Antarctic research expedition, with official and private sponsorship under Comdr. Finn Ronne, reoccupied east base of United States Antarctic service expedition; extensive sledge and aerial exploration and photographing; cooperated with Falkland Islands Dependencies Survey.

1947–48: United States Navy Operation Windmill, two icebreakers, under Comdr. G. L. Ketchum, cruised from 92° east to Marguerite Bay, making numerous landings en route, extensive use of helicopters.

1954–55: U. S. S. *Atka*, under command of Comdr. Glen Jacobsen, departed Boston on December 1, 1954; arrived Bay of Whales, January 1955; continued eastward as far as Cape Norvegia on a reconnaissance for station sites for the International Geophysical Year.

1955–56: Operation Deep Freeze with Rear Adm. Richard E. Byrd as officer in charge, United States Antarctic programs, and Rear Adm. George J. Dufek as commander, United States Naval Support Force, Antarctic, established naval air facility at McMurdo Sound, and Little America V at Kainan Bay; aircraft flights surveyed and photographed large areas of central ice dome, and one flight crossed from the Ross Sea to the Weddell Sea and return via the South Pole.

1956–57: Operation Deep Freeze II completed preparation for the International Geophysical Year by establishment of scientific stations along the coast at Cape Adare, Vincennes Bay, Gould Bay, and in the interior in the center of Marie Byrd Land and at the South Pole itself.

SOME INTERESTING AND IMPORTANT LEGAL ASPECTS OF ANTARCTIC EXPLORATION

The question may well be asked: Notwithstanding these or any other responsibilities, have our Departments of State and of Justice been giving adequate thought to the many territorial and legal questions which further exploration and/or use of the Antarctic will pose? Are they thinking in the 20th century toward the 21st century? Or are their thoughts back in terms of 19th-century legal standards?

What are a few of the points which might arise? Consider these questions: Does an act of discovery give a nation a right of possession? If so, under what circumstances?

How must that right be preserved and confirmed?

What is the relation of the doctrine of the freedom of the seas to the polar icecap floating on the sea beneath?

Should the large areas of ice which are permanently there be considered subject to the possession of any nation, since they can be inhabited and scientific stations of importance may be placed on them? Does not the increasing importance of the North Pole to aviation tend to affect this question? Or is the old assumption still acceptable that "a moving and shifting substance like the North Polar Sea ice" is within the freedom of the seas? Can the idea of a fixed boundary of a nation be adapted to a shifting surface, where there is always ice, but not always the same ice?

Then, shifting one's thought to the South Pole, is the resting of some ice on, or attachment of the shelf-ice area, at least partially, to solid ground enough to differentiate it from the icecap at the North Pole, legally speaking?

On the whole, should the same legal principles apply to that part of the Antarctic ice barrier which is afloat, as to the part which rests on solid ground? (All of it can apparently be used much as ice on land could. Almost none of it can be navigated as the open seas can.)

Must any rights gained by discovery or exploration be followed by occupation and settlement? If so, how soon must this occur? And how extensive and how dense must the settlement be?

Should the "rigor of climatic conditions in the polar regions" relax any requirement of territorial occupation? If so, must the nations exercise effective control over the area? Would control of the air above be sufficient?

If the Antarctic is not the possession of any sovereign state, how will sovereignty be exercised there? What law will apply and how will it be enforced?

If someone were murdered there, how would he be tried? Could one apply the law of the nations which sent out the expedition, an analogy to the law's following the flag on a seagoing vessel?

How can such questions be peaceably decided?

What tribunal would determine any conflicting claims?

How would title be enforced? How and with whom would title be recorded?

There follow some pertinent quotations concerning the international law of acquiring sovereignty over discovered territory by occupation. They are quoted from Oppenheim's standard treatise on international law, volume I, entitled "Peace," pages 506–514:

"Occupation is the act of appropriation by a state through which it intentionally acquires sovereignty over such territory as is at the time not under the sovereignty of another state.

"And it must be emphasized that occupation can only take place by and for a state; it must be a state act, that is, it must be performed in the service of a state, or it must be acknowledged by a state after its performance.

"Only such territory can be the object of occupation as is no State's land, whether entirely uninhabited, for instance, an island, or inhabited by natives whose community is not to be considered as a state.

"On the other hand, a territory which once belonged to a state, but has been afterward abandoned, is a possible object for occupation by another state.

"Theory and practice agree nowadays upon the rule that occupation is effected through taking possession of, and establishing an administration over, the territory in the name of, and for, the acquiring state.

"Possession: The territory must really be taken into possession by the occupying state. For this purpose it is necessary that it should take the territory under its sway (corpus) with the intention of acquiring sovereignty over it (animus). This can only be done by a settlement on the territory, accompanied by some formal act which announces both that the territory has been taken possession of and that the possessor intends to keep it under his sovereignty. It usually consists either of a proclamation or of the hoisting of a flag. But such formal act by itself constitutes fictitious occupation only, unless there is left on the territory a settlement which is able to keep up the authority of the flag.

"Administration: After having, in the aforementioned way, taken possession of a territory, the possessor must establish some kind of administration thereon which shows that the territory is really governed by the new possessor. If, within a reasonable time after the act of taking possession, the possessor does not establish some responsible authority which exercises governing functions, there is then no effective occupation,

since in fact no sovereignty is exercised by any state over the territory.

"However, it was not until the 18th century that the writers on the law of nations postulated an effective occupation, or until the 19th century that the practice of the states accorded with this postulate. But although nowadays discovery does not constitute acquisition through occupation, it is nevertheless not without importance. It is agreed that discovery gives to the state in whose service it was made an inchoate title; it acts as a temporary bar to occupation by another state for such a period as is reasonably sufficient for effectively occupying the discovered territory. If the period lapses without any attempt by the discovering state to turn its inchoate title into a real title of occupation, the inchoate title perishes, and any other state can now acquire the territory by means of an effective occupation.

"Finally, in determining the degree of effectiveness of occupation necessary to confer sovereignty, regard must be had to the extent of competing claims of other states. Thus in the dispute between Denmark and Norway concerning the status of eastern Greenland, decided by the permanent Court of International Justice on April 5, 1933, the Court attached considerable importance to the fact that up to 1931 there had been no claim by any power other than Denmark to sovereignty over Greenland."

It seems to me that more intensive and continuous thought should be given by the United States Government to the title to the Antarctic, or as to what action, if any, should be taken to confirm our rights.

A good start in such thinking was made in 1933 by that able and well-known assistant legal adviser to the Department of State, the Honorable William R. Vallance.

There should be more analysis like his article entitled "Title to Land in Antarctica," which appeared in the October 1933 issue of the Federal Bar Association Journal, beginning at page 53.

WAIVING OF LIMITATION WITH RESPECT TO SETTLEMENT OF CERTAIN CLAIMS

Mr. HUMPHREY. Mr. President, Memorial Day in Minneapolis, Minn., was marred by a very tragic accident yesterday morning, when a fine young Navy officer died and four residents of the city of Minneapolis were seriously injured, and others were less seriously injured, in the crash of a naval aircraft in north Minneapolis following a ceremonial formation flyover for the Memorial Day service. I may add that there was also considerable property damage.

I believe that the practice of flying these nontraining flights should be severely restricted, both for the safety of the pilots and for the safety of the civilian population, for the usual practice in these cases is to schedule a formation flight at the lowest permissible altitude.

Therefore, I have written today to the Secretary of the Navy and to the Secretary of Defense, requesting that a policy directive be issued banning such low altitude close-formation ceremonial flights, and generally restricting all military flights to those with a legitimate training purpose.

In the case of the collision and crash yesterday, which, by the way, was one of a series of 3 or 4 such accidents in the past year in Minneapolis, the tragedy which occurred might have been compounded to shocking proportions if one of the planes which crashed in an unoccupied space had hit a nearby playground crowded with children, which was a very short distance away.

As it is, more than a dozen citizens of Minneapolis were injured, four of them very seriously, and, as I have indicated, there was extensive property damage to several residences.

The Federal Government should prepare, I strongly feel, to recompense the victims of this tragedy at the earliest possible moment, without the necessity of taking the matter into the courts. For this reason, I have prepared proposed legislation which would authorize the Secretary of the Navy, upon the presentation of just claims in this matter, to pay amounts in excess of $1,000.

Mr. President, this proposed legislation is traditional in the Senate. I prepared similar legislation about 7 months ago in regard to another crash which occurred at the naval airbase, Wold Chamberlain Airport.

Therefore, Mr. President, I introduce, for appropriate reference, a bill to fulfill these objectives. I ask unanimous consent that it be printed at this point in the RECORD.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred and, without objection, the bill will be printed in the RECORD.

The bill (S. 2190) to waive the $1,000 limitation on the authority of the Secretary of the Navy with respect to the settlement and payment of claims arising out of the crash of a United States Navy airplane at Minneapolis, Minn., on May 30, 1957, introduced by Mr. HUMPHREY, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That the $1,000 limitation contained in the first section of the act of July 3, 1943, as amended (31 U. S. C. 223b), shall not apply with respect to claims arising out of the crash of a United States Navy airplane in the 1900 block of Pierce Street NE., Minneapolis, Minn., on May 30, 1957.

SEC. 2. With respect to claims filed as a result of the airplane crash described in the first section of this act, the Secretary of the Navy shall, within 30 months after the date of the enactment of this act, transmit to the Congress a report setting forth—

(1) each claim settled and paid by the Secretary of the Navy, with a brief statement concerning the character and equity of each such claim, the amount claimed, and the amount approved and paid; and

(2) each claim submitted which has not been settled, with supporting papers and a statement of findings of facts and recommendations with respect to each such claim.

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have my letters to the Secretary of Defense and the Secretary of the Navy printed in the RECORD as part of my remarks.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MAY 31, 1957.

The Honorable CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. SECRETARY: As you know an unfortunate crash of two Navy jet aircraft over Minneapolis yesterday has resulted in the death of 1 pilot, Comdr. Newell Olson, USNR, and the serious injury of 4 civilians. It is my understanding that this flight was undertaken as a ceremonial flight during Memorial Day exercises.

In the attached letter to the Secretary of the Navy, I have urged that a policy directive be issued forbidding such tight formation ceremonial flights made at altitudes below 5,000 feet.

I urge that this policy be considered at the Defense Department level, to apply equally to all air components of the Defense Department.

Sincerely yours,

HUBERT H. HUMPHREY.

MAY 31, 1957.

The Honorable THOMAS S. GATES, JR.,
Secretary of the Navy,
Department of the Navy,
Washington, D. C.

DEAR MR. SECRETARY: In reference to my telegram of May 30 regarding the unfortunate crash of two Navy jet aircraft in North Minneapolis, I wish to urge immediate consideration of a policy directive which would forbid the kind of ceremonial flights that resulted in the loss of Comdr. Newell Olson, USNR, and the serious injury of four civilians yesterday.

I do not feel that pilots should be called upon to make the kind of low-altitude, tight formation flights which are hazardous both to themselves and the general public below. I regret the loss of Commander Olson. He was a fine officer.

A uniform policy throughout the Defense Department forbidding tight formation ceremonial flights at altitudes of less than 5,000 feet would seem a desirable achievement.

Sincerely yours,

HUBERT H. HUMPHREY.

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have my letter to the Senator from Georgia [Mr. RUSSELL], the chairman of the Senate Armed Services Committee, along with a telegram which I received yesterday from the mayor of Minneapolis, Hon. Eric G. Hoyer, printed in the RECORD, along with copies of telegrams I have sent.

There being no objection, the letter and telegrams were ordered to be printed in the RECORD, as follows:

MAY 31, 1957.

The Honorable RICHARD B. RUSSELL,
Chairman, Senate Armed
Services Committee,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: In reference to my telegram to you on May 30, I wish to bring to your attention the attached letters which I have directed to the Secretary of the Navy and the Secretary of Defense regarding the crash of 2 Navy jet aircraft in Minneapolis yesterday, and urging that a new policy directive be issued for all air components of the Defense Department to forbid all such ceremonial flights by military aircraft as resulted in the death of 1 pilot and the serious injury of 4 civilians.

I respectfully request that the committee discuss this matter with the Defense Department to the end that serious consideration will be given to this proposal.

Frankly, I do not feel that these pilots in the armed services, who lead a hazardous enough life as it is, should be called on to fly tight-formation flights which are not for a training purpose. Of course, flying at low altitudes over heavily populated areas is simply asking for trouble.

Kindest personal regards.

Sincerely yours,

HUBERT H. HUMPHREY.

MINNEAPOLIS, MINN.

Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D. C.:

Regard tragic, airplane crash northeast Minneapolis this morning in which two Panther jets collided in midair, crashing, killing one pilot, and resulting in injuries to an undetermined number of civilians. It was my understanding that an agreement had been made that no jet operations would be made from Wold Chamberlain Airport and no jet flights would be made over the city of Minneapolis except for interceptor purposes. Was this agreement in effect at this time? If not why not demand immediate Congressional investigation to affix responsibility demand that jet operations cease immediately except for such interceptor purposes as are necessary.

ERIC G. HOYER,
Mayor of City of Minneapolis.

MAY 30, 1957.

Hon. ERIC G. HOYER,
Mayor, City of Minneapolis, Minn.:

Reurtel have requested Secretary of Navy Gates to initiate immediate investigation. Have also asked chairman, Senate Armed Services Committee, RICHARD RUSSELL, to begin investigation.

HUBERT H. HUMPHREY.

Senator RICHARD RUSSELL,
Chairman, Armed Services Committee,
Senate Office Building:

Urge immediate inquiry into new naval jet air crash tragedy involving civilians and civilian homes in Minneapolis today. Want to talk with you Friday about this situation.

HUBERT H. HUMPHREY.

Hon. THOMAS S. GATES, Jr.,
Secretary of the Navy,
Washington, D. C.:

Request an immediate investigation crash of two naval jet aircraft this morning in north Minneapolis, Minn.

HUBERT H. HUMPHREY.

AMENDMENT OF TITLE III OF LEGISLATIVE REORGANIZATION ACT OF 1946

Mr. McCLELLAN. Mr. President, on behalf of myself, and Senators BRIDGES, ANDERSON, PURTELL, GORE, THYE, KENNEDY, and GOLDWATER, I introduce, for appropriate reference, a bill to amend title III of the Legislative Reorganization Act of 1946, as amended, and for other purposes. This bill is to amend the lobbying statutes.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 2191) to amend title III of the Legislative Reorganization Act of 1946, as amended, and for other purposes, introduced by Mr. McCLELLAN (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Government Operations.

AUTHORIZATION FOR INCREASED APPROPRIATIONS FOR DISTRICT OF COLUMBIA HOSPITAL CENTER

Mr. MORSE. Mr. President, I understand that consent has been given for the introduction of bills today.

The ACTING PRESIDENT pro tempore. The Senator is correct.

Mr. MORSE. There is a bill I should like to introduce on behalf of my great friend and colleague, the Senator from West Virginia [Mr. NEELY], and the Senator from Maryland [Mr. BEALL]. I will supply the desk with a copy of the bill in a few minutes. I introduce the bill now, and ask to have it appropriately referred.

The ACTING PRESIDENT pro tempore. Without objection, the bill will be received and appropriately referred.

The bill (S. 2194) to increase the authorization for appropriations for the Hospital Center and facilities in the District of Columbia, and for other purposes, introduced by Mr. MORSE (for Mr. NEELY and Mr. BEALL), was received, read twice by its title, and referred to the Committee on the District of Columbia.

TECHNICAL CHANGES IN FEDERAL EXCISE TAX LAWS—AMENDMENTS

Mr. BIBLE submitted amendments, intended to be proposed by him, to the bill (H. R. 7125) to make technical changes in the Federal excise tax laws, and for other purposes, which were referred to the Committee on Finance and ordered to be printed.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. COOPER:

Address entitled "Approval of Atomic Agency Essential to United States Leadership," delivered by Senator CLIFFORD P. CASE to New Jersey Young Republicans at Atlantic City, N. J., and published in the New York Herald Tribune of May 25, 1957.

By Mr. MARTIN of Iowa:

Address delivered by him on May 24, 1957, at Adas Israel Synagogue, Washington, D. C., at services honoring Jewish war veterans of the United States.

NOTICE CONCERNING NOMINATION BEFORE COMMITTEE ON THE JUDICIARY

Mr. McCLELLAN. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Jack Chapler Brown, of Indiana, to be United States attorney for the southern district of Indiana, for a term of 4 years. Reappointment.

On behalf of the Committee on the Judiciary notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Friday, June 7, 1957, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

AID TO SPAIN AND GREECE UNDER PUBLIC LAW 480

Mr. HUMPHREY. Mr. President, I am happy to report to the Senate this afternoon, with regard to some recommendations which were made following a trip I made to Spain and Greece and other areas, that the Department of State has taken some action which I felt was urgently needed and overdue.

I was informed on Wednesday afternoon late that both Secretary Benson and Secretary Dulles have wired the American Ambassador at Madrid, Spain, the Honorable John Lodge, to enter into proper negotiations or to draw up the necessary agreements for the sale of 70,000 tons of wheat under Public Law 480. It is a matter of record. I was very much disturbed over the previous failure to conclude this arrangement. The Spanish people are on the verge of bread rationing. The political situation is very difficult, as is the economic situation. It is gratifying to know that action has been taken. In my visit with the Secretary of State last Sunday afternoon, I urged that this action be taken at once, before time had run out.

I am also pleased to note for the RECORD, as a result of the recommendation made from Greece, that the Department of State and the Department of Agriculture have worked together on ordering the release of local currencies generated under Public Law 480 and in the hands of the International Cooperation Administration in Greece. These funds are for economic development. They are loans by our Government of the local currency which we received from the sale of foodstuffs in Greece. For almost a year these funds have been impounded. There has been no use made of them, even though the Greeks had been led to believe an agreement had been arrived at.

I am pleased to note that when Dr. Butz, the Assistant Secretary of Agriculture, was in Greece—and I think he arrived 2 days after I left—he, too, made this recommendation. As a result of these recommendations, the Department has reconsidered and action has taken place.

Mr. CARLSON subsequently said: Mr. President, earlier this afternoon the junior Senator from Minnesota [Mr. HUMPHREY] advised the Senate that the Department of Agriculture had agreed to sell 70,000 tons of wheat to Spain. I commend the Senator from Minnesota for his diligent efforts in securing the approval of the Department for this sale. I think it will be helpful, not only in furnishing food to a country which urgently needs it, but also because it will create good will which will benefit the United States in that section of the world.

I myself did not have an opportunity to take part in the transaction, but I know some of the problems in connection with it. I may say that I think it was an excellent piece of work on the part of the Senator from Minnesota. I think that if the United States will sell wheat to Spain, Israel, and Greece, and will accept their currencies in payment, we will be rendering a real service, not only to our own Nation, but also to the countries involved.

VISIT TO THE SENATE BY STUDENTS, PARENTS, AND FACULTY OF KENSINGTON JUNIOR HIGH SCHOOL, KENSINGTON, MD.

Mr. HUMPHREY. Mr. President, I notice the gallery is filled with a number of young people today from many schools throughout our land. In the gallery happens to be one of my sons, who is a freshman, a ninth-grader in the junior high school of Kensington, Md. I know he will be angry with his Dad for mentioning this, but a number of the students are here. We had lunch together, and we are going to have the afternoon together.

I wish to note for the RECORD that some of the students of this fine junior high school of Kensington, Md., along with faculty members, and mothers, including Mrs. Humphrey, are in the gallery, visiting the Senate. [Applause.]

REPORT OF SPECIAL COMMITTEE TO INVESTIGATE POLITICAL ACTIVITIES, LOBBYING, AND CAMPAIGN CONTRIBUTIONS (S. REPT. NO. 395)

Under authority of the order of the Senate of May 29, 1957, the following report of a committee was submitted:

Mr. McCLELLAN. Mr. President, as chairman of the Special Committee To Investigate Political Activities, Lobbying, and Campaign Contributions, created by Senate Resolution 219 of the 84th Congress, as extended by Senate Resolutions 47 and 128 of the 85th Congress, I ask unanimous consent to file the final report of the committee, including individual views of certain Senators.

The committee was created in February 1956. The life of the committee was extended from January 31, 1957, to May 31, 1957. The committee has spent $163,271.26, or less than one-half of the $350,000 appropriated, returning $136,728.74 to the Treasury.

It will be recalled that the creation of the committee was prompted in part by the so-called Neff-Patman incident which was promptly investigated by another committee. Despite intense efforts to secure leads on other acts of illegalities or improprieties, if any, our committee was not apprised of any such episodes and discovered none by independent investigation.

The question whether attempts to influence any Member of the Senate improperly or illegally is one that could best be answered by the Senators themselves. As I previously reported to the Senate, our committee invited and requested each Senator to supply the committee with any knowledge or information on the subject. Of the 43 Senators who replied, only 3 or 4 reported or suggested any facts or information on the subject.

In view of the expressions of the President in vetoing the Harris-Fulbright bill, regarding questionable activities in connection with that bill, an invitation was also extended to the President, the Director of the Budget, and the Attorney General for any facts or information in their possession concerning the subjects under the committee's jurisdiction. No evidence or information was furnished to the committee from these sources.

An invitation was thereafter extended to include members of the press and the public to furnish any facts or information to the committee on subjects under its jurisdiction.

As stated in the report, facts or information furnished to the committee under these invitations and appeals, were negligible. The committee promptly instituted an independent investigation of its own on all aspects of its commitments under the authorizing resolution.

The report being filed today is the culmination and result of a broad investigation and study of the matters under the committee's jurisdiction.

The committee is confident that the report contains many constructive suggestions and is a valuable contribution to the subject matter for consideration by legislative committees in the future. The report is an extensive one. I ask unanimous consent to have printed in the RECORD a copy of the statement the Senator from New Hampshire [Mr. BRIDGES] and I tendered to the press with respect to the subject matter, which briefly summarizes important phases of the report.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATORS JOHN L. McCLELLAN, CHAIRMAN, AND STYLES BRIDGES, VICE CHAIRMAN

The final report of the Senate Special Committee To Investigate Political Activities, Lobbying, and Campaign Contributions is divided into two general subjects: (1) lobbying, and (2) campaign financing.

As to lobbying, the report is unanimous. As to campaign financing, the report is unanimous on many phases and also contains the separate views of several members with respect to other points on which unanimity was not reached.

The work of the special committee may be described generally as (1) investigatory, and (2) a study for the purpose of making legislative recommendations. The report deals with the few specific complaints received by the committee and shows also, among other things, the varied nature of legislative activities, running the gamut from activities of so-called professional lobbyists to the subtle methods of influencing legislation by work at grassroots levels, sometimes referred to as indirect lobbying. The comprehensive nature of the committee's work is shown in the report.

One of the features of the committee's extensive investigation into the activities of supporters and opponents of the Harris-Fulbright bill to amend the Natural Gas Act (84th Cong.) was the disclosure that substantial contributions to groups active on said bill had been or were being treated by the contributors as ordinary business expenses, with the result that the Government was helping to defray the cost of activities to influence legislation to the extent of approximately $1 million. At the conclusion of the committee's hearing on this phase, the income tax feature was taken up with the Bureau of Internal Revenue. As a result, the committee has been advised by the Commissioner of Internal Revenue that the conclusion reached by his Department is "that contributions to the committee [Natural Gas and Oil Resources Committee] do not qualify as allowable deductions for Federal income tax purposes" (pp. 16, 17).[1] As a result, the Government stands to collect additional taxes of around $1 million from this source alone.

Another tax aspect considered by the committee has to do with so-called institutional advertising which does not specifically point to legislation but which tends to accomplish the same result by subtle means. On this score, a matter directly under the jurisdiction of the Internal Revenue Bureau, the report observes (p. 82):

"Also worthy of special attention by the Bureau of Internal Revenue are newspaper and magazine advertisements by varied interests which do not expressly support or oppose legislation but tend to accomplish the same result indirectly by subtle means, the cost of which is also treated as a business expense."

Turning from the extensive investigation conducted and study made by the special committee on the subjects of lobbying and campaign finances—dealt with and discussed at length in the report—to the legislative problems forming such an important part of the committee's work, it is the conclusion of the committee that the best available cure for vices that exist or may result from deficiencies in existing laws in both fields is the spotlight of publicity.

In this connection, the observation made by Justice Brandeis, in coping with an analogous problem, is appropriate. He said—

"Sunlight is said to be the best of disinfectants; electric light the most efficient policeman."

AS TO LOBBYING

The report summarizes the testimony adduced before the committee; describes the nature and extent of the committee's work and investigations; gives the history and background of existing laws and operations thereunder; discusses the many problems presented for committee consideration; and contains specific recommendations by the committee, implemented by a comprehensive proposed new law.

The present Federal Regulation of Lobbying Act has been in operation since 1946, being the first Federal statute on the subject. The statute has proven beneficial but has been found, by experience, to contain a number of uncertainties on important aspects and also to be deficient and inadequate in other respects.

Some of the important provisions of the bill recommended by the committee are:

A. Title of act

The present Federal Regulation of Lobbying Act does not regulate, is not truly descriptive, and is otherwise objectionable. The committee believes that a more appropriate designation would be "Legislative Activities Disclosure Act."

B. Administration

Under existing law, the Secretary of the Senate and the Clerk of the House of Representatives are mere depositories for statements and reports required to be filed under the act. The act imposes no other duties and responsibilities except the compilation of information for publication in the CONGRESSIONAL RECORD. Under the bill recommended by the committee, the Comptroller General is designated as the Administrator and charged with certain duties and responsibilities which it is felt will result in the effective administration of the act (secs. 303, 304; p. 98).

C. Registration requirements

The committee's bill requires persons who are deemed to be legislative agents to file notices of representation, identifying themselves and their principals and stating the

---

[1] Numbers in parentheses denote page numbers of final report unless otherwise indicated.

terms of their representation. A legislative agent is defined under the act as a person who, for any consideration, is employed or retained to influence legislation, in person or through any other person, by means of direct communications to Congress. Persons intended to be included under the definition of legislative agent constitute the so-called professional group in the lobbying field. For a more detailed explanation, see page 94 under group 1.

D. Reporting requirements

Every legislative agent must file a report, setting forth his receipts and expenditures, in such form as the Administrator shall prescribe. Reports must also be filed by the following:

1. Any person who employs or retains 1 or more legislative agents and who makes an expenditure of $300 or more in any calendar quarter to influence legislation;

2. Any person who receives $300 or more in a calendar quarter as compensation or reimbursed expenses (exclusive of personal travel expenses), or both, for the purpose of influencing legislation by direct communication;

3. Any person who requests or procures another to communicate directly with Congress to influence legislation if (a) the request or procurement is in writing and is addressed or distributed to more than 1,000 persons, or (b) the expense of the communication requested or procured is paid or agreed to be paid by the person making the request or procurement, and more than 25 persons are solicited to make such communication; and

4. Any person who has made expenditures exceeding $50,000 in the aggregate within the preceding 12 months in presenting a program addressed to the public, a substantial portion of which is intended, designed, or calculated to influence legislation. (Sec. 306; p. 96 under groups 5, 6, and 7.)

It is to be observed that the foregoing includes so-called indirect lobbying activities if done on a substantial scale.

E. Penalties

The committee's bill imposes criminal penalties for violations arising from direct lobbying activities and, in order to satisfy constitutional guaranties and to promote the objectives of the act, imposes civil penalties for violations under so-called indirect lobbying activities, with ultimate enforcement of civil penalties via injunction, etc.

Penalties have also been provided for transmission to Congress of spurious communications (sec. 311, p. 101), which the committee has condemned in its report thus (p. 80):

"Practices like these which pollute the stream of our legislative processes must be eliminated."

For complete details of the committee's recommended bill and a comparison with the existing law, see pages 97–105, with explanatory data at pages 93–96.

Summarizing, the reporting requirements have been improved, the law tightened, and streamlined in a number of respects, and standards set forth which will enable those interested to determine more readily whether or not they are subject to the provisions of the act.

Throughout its consideration of the subject, the committee has been mindful of the right of each citizen to petition the Congress under the first amendment to the Constitution. Apart from the traditional right of petition, the actual exercise of such right by our citizens is recommended by Members of Congress for the reason, among others, that the presentation of the views of the citizens, either in support of or in opposition to, proposed legislation is helpful in producing constructive legislation. The exercise of the right of petition has proven to be a valuable aid to Members of Congress in their quest for legislation that will prove beneficial to the Nation.

AS TO CAMPAIGN FINANCING

The report summarizes testimony given before the committee; describes certain phases of its investigations; states the views of former Members of the Senate, political scientists, and others concerning important aspects of the subject; states the conclusions and specific recommendations of the committee; and contains a proposed new law to implement the recommendations of the committee.

The report is not unanimous on all aspects of campaign financing, the separate views of several members of the committee being stated independently in connection with certain phases.

All of the members of the committee agree, as noted earlier, on the benefits derived from the spotlight of publicity.

Some of the important changes proposed under the committee's bill may be summarized as follows:

A. Title of act

The name of the law is "Political Activities Disclosure Act." The title of the present law, "Federal Corrupt Practices Act," is not truly descriptive of the subject matter, and is misleading (sec. 266; pp. 139, 153).

B. Administration

As is the case under the Lobbying Act, the Secretary of the Senate and the Clerk of the House are mere depositories of statements and reports which are required to be filed under the Federal Corrupt Practices Act, no duties or responsibilities being imposed upon either to administer the act. As is the case under the Lobbying Act, two places are designated for the filing of statements and reports under varying circumstances. The committee proposes that the designation of the Comptroller General, as administrator, with specified duties and responsibilities to effectuate the purposes and objectives of the law, will accomplish the goal of effective administration (secs. 242, 251; pp. 139, 145, 149).

C. Reporting requirements

The reporting requirements under the committee's bill have been streamlined and extended. All political committees, with an exception later noted, are required to report. For example, intrastate political committees, which are not required to file any reports under the present act, will be required to do so under the committee's bill. Extension of the areas of publicity, as provided in the committee's bill, will, it is hoped, prove beneficial. The committee has decided that political committees whose receipts or expenditures are inconsequential should be excluded from the reporting requirements, and has therefore provided an exception in its bill, to wit, that if a committee does not receive or expend more than $1,000 in any calendar year or does not receive any contributions exceeding $100 from one person, it is not to be deemed to be a political committee subject to reporting requirements (sec. 241; p. 139).

It is also proposed that reports must be filed by those who make expenditures of $100 or more in behalf of a candidate or political committee (other than by contributions) or contribute $3,000 or more to a candidate or political committee in a presidential election (sec. 248).

D. Fiscal agent

The committee's bill provides for the appointment of a fiscal agent by each candidate, with the right of a candidate to designate himself as such (sec. 246; pp. 139, 146). Such designation will centralize responsibility and improve the reporting procedure.

E. Limitations on contributions and expenditures

As to limitations on contributions and expenditures, the committee's bill makes radical changes, briefly described as follows:

1. No limitations are imposed in presidential contests. Although the present law imposes a limitation of $3 million on contributions that may be received or expended by a political committee during any calendar year, there is actually no genuine limitation since there is no bar to the formation of any number of additional committees desired, each one of which would be competent to receive and expend $3 million in any calendar year. The committee believes that a realistic approach requires that the fixation of any limitation in presidential contests should be removed.

2. Although there is considerable sentiment for the removal of ceilings in senatorial contests as well, the committee is not prepared to recommend such removal at this time. It is the feeling of the committee, however, that the amount of any limitation should be raised substantially from present levels and that a workable and reasonable limitation would be an amount equal to the amount obtained by multiplying 10 cents by the total population of the State at the last decennial census (sec. 245; pp. 141, 146).

3. As to contests for Representative at Large, the committee recommends the same formula applicable to senatorial contests.

4. As to district contests for the House of Representatives, the committee provides in its bill that the same 10-cent formula be applied except that the Congressional district shall be substituted for the State.

5. In order to strike a balance between cases where candidates with unlimited personal funds to spend in their own behalf are opposed by less affluent candidates, and cases where candidates are unable to raise outside funds to finance their campaigns, the committee has provided in its bill for the following limitations on a candidate's personal expenditures:

(a) In a senatorial contest, a candidate shall not be permitted to spend more than 15 percent of the prescribed ceiling out of his personal funds, or $10,000, whichever is higher, but in no event more than $25,000 (sec. 245; pp. 141, 146).

(b) In a contest for Representative at Large, the same standard as for senatorial candidate is applicable.

(c) In a contest for Representative, a candidate should be permitted to spend up to 15 percent of his ceiling, but in no event more than $10,000.

6. It is proposed that expenditures made by a committee authorized to support a candidate shall be included in the computation of the candidate's ceiling, and that where such approval is lacking, a limitation of $1,000 is placed on such expenditures. Excepted from these provisions are regular State central, county and local committees, which invariably support tickets with multiple candidates, National and State and also local (sec. 245; p. 142).

7. Contributions in any name but that of the actual donor are prohibited, as are contributions in excess of $100 by a person under 18 years (sec. 151; p. 142).

8. Individual contributions have been limited by a majority of the committee to $5,000 for one candidate for Federal office, or an aggregate of $15,000 for all candidates and political committees, in any calendar year, with a further provision requiring a 1-year lag between maximum permissible contributions and subsequent ones. A further restriction has been provided that any contribution made before June 30 of each year is a violation of the statute if, coupled with contributions made the preceding cal-

endar year, the aggregate exceeds the limitations provided (pp. 142, 154).

F. Early filing dates

Earlier filing dates of reports are provided in the committee's bill in order to allow more preelection time for the perusal of reports (sec. 247).

G. Primary elections

The committee was evenly divided on the question whether primary elections should be included or excluded under the new act (sec. 241; p. 140).

H. Section 315, Federal Communications Act

The committee has recommended that section 315 of the Federal Communications Act be amended to provide for the allowance of equal broadcasting time to minority parties, upon condition that a minority party drew 5 percent of the vote at the last election, or, if a new party, presents a petition signed by 2 percent of the vote at the last election (p. 143).

I. Tax deduction

Another recommendation made by the committee is to allow taxpayers the right to deduct from gross income all political contributions up to the sum of $100.

Acknowledgment must be made of the great amount of time and effort devoted by all committee members to the important work of the committee. Despite heavy burdens, all members of the committee made extraordinary efforts to help solve the problems before the committee. The chairman wishes to record his deep appreciation to all members of the committee for their invaluable assistance.

Mr. McCLELLAN. Mr. President, I wish to acknowledge the devoted attention of members of the committee, each one of them, to the problems and work of the committee, and to express my thanks for the contribution made by each member of the committee. I also wish to acknowledge the diligent and conscientious efforts of the fine staff associated with the committee and to thank the staff for its invaluable contributions.

The PRESIDING OFFICER. The report will be received, and printed, together with the individual views, as requested by the Senator from Arkansas.

UNITED STATES CREDITED FOR GERMAN RECOVERY

Mr. THYE. Mr. President, a short time ago there was published in the Duluth News-Tribune an article reporting a tour by a group of 10 German construction leaders of the recently constructed housing projects in northeastern Minnesota. In this connection Eckehard O. Rastedter, a Berlin consulting engineer, spoke at a dinner sponsored by the Duluth building industry on May 27 and discussed the importance of American aid in the restoration of German economy since World War II.

Mr. Rastedter referred to the Berlin airlift as the most spectacular demonstration of the will of the American people to help the cause of freedom in Western Europe.

He went on to say that Germany's miraculous recovery would never have happened without the generous support of the American Government and of the American people.

Mr. President, this expression of appreciation for American aid is very timely now when the Senate Committee on Foreign Relations is considering President Eisenhower's recommendations for improving this obviously effective program.

I ask unanimous consent to have printed in the RECORD at this point in my remarks the article which appeared in the May 28th Duluth News-Tribune.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BERLIN ENGINEER CREDITS UNITED STATES FOR GERMAN RECOVERY

(By Einar W. Karlstrand)

Germany's rapid recovery from World War II damage was attributed largely to American aid last night by a Berlin consulting structural engineer.

Eckehard O. Rastedter, one of 10 visiting German construction industry leaders, made this report at a dinner sponsored by the Duluth building industry in the Kitchi Gammi club.

The group yesterday viewed Iron Range construction and today will go to Silver Bay for a tour of the Reserve Mining Co.'s townsite and other properties.

Rastedter said that the miraculous recovery of Germany would never have happened without the generous support of the American Government and of the American people.

He reported that within 6 years after the war, production and investments in western Germany reached the prewar level and shortly after surpassed it.

Germany's exports by 1953 exceeded those of the prewar period, he said.

The speaker explained that his homeland has attempted to ease the housing shortage by building or rebuilding an average of about 500,000 dwelling units a year since 1948 with the help of American capital.

"Besides providing apartments for the large number of families who need them," Rastedter said, "we have actively engaged in building or repairing a great many schools, hospitals, and churches for current needs."

The experience of the world's best architects is being used to spur German construction, he reported.

A part of this plan, he said, is the Berlin International Building Exposition of 1957 which opens in Germany's capital city June 15.

The ideas and styles conceived by the internationally known architects will be demonstrated as full-sized houses of 1 to 18 stories high. They will become regular dwelling units after the exposition.

Rastedter noted that he and his colleagues have profited tremendously from what they have seen and heard in their current United States trip.

At Biwabik yesterday they saw how a complete house is built at the Modern Home Manufacturing Co. plant and then shipped to the owner's homesite.

Later they visited Erie Mining Co.'s Hoyt Lakes housing project and shopping center and the company's taconite plant near Aurora. They also inspected United States Steel's Oliver iron mining division ore processing plant near Virginia.

The group heard three construction leaders explain how Erie Mining Co.'s townsite and plant were built. They are C. A. Stiles, chief project engineer; Col. C. D. Barker, Taconite Contracting Corp. labor relations director, and Gerald Galbreath, general manager of the Partridge Lakes Development Co.

Hans Jaeger, Gustavsburg, Germany, was so impressed with what he saw that he remarked the Federal agency in charge of the trip should have scheduled a 6-week visit in northeastern Minnesota.

Martin Ernst Abel, Wiesbaden, a technical building adviser, expressed interest in the manner personnel problems are handled in the Duluth and iron range construction industry.

Edward Barghusen, a Hamburg contractor, viewed with interest construction of concrete buildings in the area and Friedrich W. Classen, Bonn, a construction engineer, observed closely prefabricated building components.

One of the visitors, Wilhelm E. Fauner, Berlin, a professor of engineering, requested and was granted permission to try out the automatic nail machine at the Biwabik home building plant. He drew laughs from the group when he missed one of the nails.

A Hamburg architect, Heinrich P. Hans, took keen interest in Hoyt Lakes small home housing. So did Guenter P. K. Kindler, Berlin architect, who remarked that United States builders waste more materials than do those in Germany. Materials are relatively costly in Germany, they reported.

Gustav E. Kistenmacher, Heilbronn architect, observed closely school and church construction in which he is particularly interested.

Erie Mining Co.'s railroad from Aurora to Two Islands on the north shore of Lake Superior captured the interest of Ludolph D. Koehne, Hamburg. He is superintendent of construction and technical affairs for the German federal railways.

Rastedter said he was observing closely new methods used in concrete construction.

Mrs. Claire Metger, Washington, D. C., accompanied the group as an interpreter.

The visit of the German building leaders is cosponsored by the Duluth Builders Exchange, the Duluth Home Builders Association, and the International Housing Service of the Federal Housing and Home Finance Agency.

Rastedter told the dinner group that Germany suffered a complete defeat early in 1945.

"Apart from the many sufferings of the people," he said, "Germany's economy was virtually at a standstill.

"The desperate situation made it necessary to make three basic provisions: To restore transportation, to rebuild industrial plants and administrative agencies, and to provide for housing."

He said that in the reconstruction program transportation had the first priority.

"We had to restore more than 7,500 bridges," he reported. "We had to repair almost the entire system of streets and highways as well as nearly all the railroad tracks.

"This was so very difficult since we had to provide food for the population and raw materials for industry. We had to repatriate displaced persons and to rescue refugees and veterans.

"Within 3 years we succeeded in putting the federal railroads back into operation. But the real start of the reconstruction period was marked by the currency reform of 1948."

It was at that point that the rebuilding of industrial plants, administrative agencies, and housing started, he said.

Nearly all the well-known old German firms and many new enterprises started borrowing the necessary capital upon their name and reputation, the speaker related.

Rastedter said the "most spectacular demonstration of the will of the American people to help the cause of freedom in Western Europe" was the famous Berlin airlift.

"I myself lived through that blockade," he said, "and shall continue to live in Berlin, hoping that city will be once more the capital of a reunited Germany."

The German guests were introduced at last night's dinner by Eugene A. Tilleaux, Washington, training officer of the International Housing Service. Robert S. Mars, Jr., Duluth Builders Exchange president, was toastmaster. Greetings were given by Mayor Eugene Lambert and Joseph Veranth, president of the Duluth Building Employers Council.

STUDENT-INTERN PROGRAM IN OFFICE OF SENATOR NEUBERGER

Mr. NEUBERGER. Mr. President, if democratic government is to fulfill its most fruitful role, young people must be attracted to participate actively. Perhaps that was what was in the mind of Elihu Root, Secretary of State under President Theodore Roosevelt, when he told students at Syracuse University:

Politics is the practical exercise of self-government, and somebody must attend to it if we are to have self-government.

Since coming to the Senate I have tried to further interest in government among young people through a student-intern program in my office. My intern for the 1957–58 Congressional year has just been chosen by a selection committee which interviewed nearly a dozen candidates for the position on my staff.

I do not interfere in any way with the choice made by the selection committee. This notable group consists of Dr. John M. Swarthout, head of the political science department of Oregon State College, as chairman; Miss May Darling, retired Portland high-school teacher; Father David H. Fosselman, of the faculty of the University of Portland; and Mr. J. W. Forrester, editor of the Pendleton East-Oregonian. Miss Elizabeth C. Ducey, a Portland women's group leader, who is in charge of my Portland office, and Mrs. Vera M. Springer, secretary in that office, act as capable aids to the committee. I have imposed no restriction as to the religion, color, sex, or political affiliation of the student thus selected each year to work in my office.

The present intern is Larry Hobart, a young journalist with an interest in political science. After he completes his term on my staff, I understand he intends to continue study in this field. If the work in my office has contributed to his interest in government, I will consider the program a success. Mr. Hobart has written an outstanding article about his experiences as a research intern in a Senator's office. The story was published in the Sunday Oregonian of May 26, 1957, and I ask unanimous consent to have it printed in the body of the RECORD, following my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sunday Oregonian of May 26, 1957]

OREGON COLLEGE STUDENTS LEARN THE INNER WORKINGS OF NATIONAL POLITICS DURING YEAR SPENT AS ASSISTANT TO SENATOR NEUBERGER

Each year a committee of Oregon civic leaders and educators selects a graduating senior, or recent graduate of an Oregon college, to serve for 1 year as a salaried research intern in the Washington office of Senator RICHARD L. NEUBERGER.

Graduates in any field are eligible for selection if they have informed interest in the problems of government and public policy. Party affiliation is not a factor. This year's internee, Larry Hobart, is a Republican.

Purpose of the program is to offer public-spirited young Oregon citizens a year of practical experience in government as a background for future participation in community affairs or possibly for a career in government. The intern's assignments are designed to acquaint him with the legislative process as seen in the daily work of Congress. Several Senators from other States are planning to follow Senator NEUBERGER'S lead in setting up this program.

Members of the intern-selection committee include Miss May Darling, member of the State board of education, Portland; J. W. Forrester, editor of the Pendleton East-Oregonian and a member of the State board of higher education; Father David H. Fosselman, of the faculty of University of Portland; and Dr. John W. Swarthout, head of the political science department of Oregon State college and chairman of the committee.

"CAPITOL CLASSROOM

"(By Larry Hobart)

"During the past 9 months I have participated in a unique on-the-job training course in American government. As a 'research intern' in the office of Senator RICHARD L. NEUBERGER I have been witness to the daily operating routine of the 'world's most exclusive club'—the United States Senate.

"My wife, Judy, and I came to Washington in September 1956. Our closest previous touch with active politics was Judy's candidacy for president of the sophomore class at the University of Oregon. In Washington we found a strange, new, partisan world.

" 'Shoptalk' in Washington means politics. In Salem, my hometown, political discussions seemed somewhat abstract; political science courses at the University of Oregon dwelt on government structure, separation of powers, checks and balances. In Washington a crucial Senate vote can mean the displacement of a party spokesman, establishment of a political debit or a vote-getting credit, the loss of a job.

"I was riding down an elevator in the Senate Office Building the day the Senate met to organize for the 85th Congress, when the young elevator operator asked me if I had heard how Senator LAUSCHE, of Ohio, intended to vote. Rumors were flying that day as the clock approached 12 noon, and I replied that it was apparently still questionable whether LAUSCHE would line up with the Republicans or the Democrats.

" 'Gee, I sure hope he votes with the Democrats,' the operator said. 'I don't know how I'll get through school this year if he doesn't; I'll lose my job.' He was one of dozens of college students who finance their way through a Washington university by holding down a patronage position.

"Senators enjoy great prestige on Capitol Hill. Elevators are summoned at the sound of the traditional three buzzes and halted at the Senator's command. Passengers on the subway cars which run between the Capitol and the Senate Office Building must give up their seats to Senators. However, I failed to realize just how much weight the office carried in Washington until I made my first request of a Government agency.

"When I telephoned for a pamphlet containing statistical information my call was transferred from department to department, each disclaiming any jurisdiction over the material. When I finally located the correct office and placed my order I waited 3 days for the information to arrive.

"When I mentioned this communications problem to a senatorial staff member he laughed. 'You just didn't phrase your request correctly,' he said. 'You should say, "the Senator wishes to obtain the following information."' My next call was referred directly to a special Congressional liaison office; the material arrived by messenger the same day.

"The workload of the Senate is tremendous. Statistics for the 84th Congress graphically illustrate the burden.

"The Committee on Government Operations reported that between January 5, 1955, and July 27, 1956, Senators considered in committee meetings (where 90 percent of the Senate's legislative work is carried out) a total of 7,290 legislative proposals, of which 4,835 originated in the Senate. Of these measures, 3,053 were reported from committee and 1,921 became laws.

"If the Senator spent 1 hour studying and familiarizing himself with each bill and joint resolution reported to the Senate in the 84th Congress he would have put in over 380 full working days before he completed the task.

"Even if this herculean job were feasible, other senatorial responsibilities would prevent its accomplishment. It is estimated that 3,951 Senate committee meeting were held during the 84th Congress, occupying a total of 11,677 hours. Senators may serve on 2 to 3 standing committees, as many as 14 subcommittees.

"These calculations do not include time spent relative to activities of the 24 boards and commissions of which Senators are members, party and policy meetings, legislative conferences, testimony before committees, reviewing and revising committee reports, preparing speeches, maintaining correspondence and a host of other duties.

"Senators are bombarded with letters. Senator NEUBERGER'S office receives an average of 200 pieces of mail a day while Congress is in session. Communications range from pleas for legal advice in divorce suits and tax tangles to demands for a stated position on salvage of tin cans and suggestions for the development of a perpetual-motion machine, from grateful support of pending legislation to violent damnation of a proposed bill.

"In all senatorial offices an attempt is made to answer every letter from within the Senator's State; out-of-State mail receives a lower priority. Mass mailings of form letters tend to be answered in kind, due to the limitations of time and staff.

"As if the normal barrage of letters were not enough, some Senators solicit additional mail. Senate Democratic Leader LYNDON JOHNSON recently announced he had written to 39,000 Texans asking for 'recommendations and advice.' Senator THOMAS MARTIN of Iowa conducts an annual poll of voters in his State.

"Nothing is better calculated to impress the westerner with the newness of his State than a tour through one of Washington's antique homes located in Georgetown, a fashionable suburb.

"The Federal-type architecture and vertical construction are a marked contrast to the rambling one-story houses to which we were accustomed. A trip from the basement to the third-floor guest rooms is an exhausting experience.

"When we returned to our four-room apartment following one of these stair-climbing expeditions, Judy sank into a chair and announced: 'Please don't let me complain again about the housework here; it would take a week to dust that thing from top to bottom.'

"Call it patriotism or Potomac fever, sentiment or respect, there is a sense of history about Washington which affects even the most casual observer.

"When Judy insisted upon taking our 6-month daughter Jennifer with us when we visited Mount Vernon recently, I argued that a trip to Washington's home would make little impression on a baby. 'I know it's silly,' she replied, 'but I just want her to be

able to tell her own children she's been there.'

"I stood on the Senate floor on one Tuesday evening in March as the clerk called the roll for the final vote on passage of the Middle East resolution. As each Senator answered with his 'yea' or 'nay,' I couldn't help feeling a thrill of excitement. One hundred years ago such men as Stephen A. Douglas, Charles Sumner, and Jefferson Davis were discussing the Dred Scott decision in the Senate Chamber. Within minutes this vote would also be history.

"Senator NEUBERGER's research intern program was initiated in 1955. It has been highly successful in its aim, encouraging young people to take a more active interest in our Government. Dick Judd, a former Lewis and Clark student and the first intern, is now on the staff of Senator WAYNE MORSE. Eric Coorsanger, a graduate of Reed College, returned to Oregon to work with the bureau of municipal research at the University of Oregon. Thomas L. Murdock, of Klamath Falls, a Willamette University senior in political science, has been announced as the 1957–58 intern, and will take place next September.

"The program has also succeeded in counteracting, in a small way, the popular assumption that politics is a dirty business, fit only for hacks.

"'Our Government is not a theoretical mechanism to me any longer.' Voorsanger concluded, following his year in Washington. 'Nor are the disappointments and inefficiencies of Government totally without explanation, for I think I have learned that government does not exist separate from politics. Good government, likewise, depends on good politics.

"'I have learned to respect the role of compromise, but have been heartened to see the courage of a number of Members of Congress who will stand for what they believe while others care little.'

"A few weeks before I left Salem for Washington, I was discussing the year ahead with a friend. 'You must be crazy,' he said. 'Here your wife is due to have a baby within a few weeks. You just returned from the service and haven't seen your old friends for nearly 2 years. And now you're leaving for Washington on a temporary position with a politician. But,' he added, 'it should be a rewarding and exciting experience.'

"And it has been."

EMPLOYMENT OF JOURNALISTS BY UNITED STATES INFORMATION AGENCY

Mr. NEUBERGER. Mr. President, because there was some discussion on the floor last week about the practice of the United States Information Agency in employing journalists to write material for the Agency, I have asked Mrs. Blair Moody, the widow of a former illustrious Member of the Senate, and congressional liaison officer for the United States Information Agency, to provide me with the background information explaining this particular procedure.

I have received, under date of May 29, a letter from Mrs. Moody, with certain accompanying material relating to this practice of the United States Information Agency.

For the information of the Senate and of the press, I ask unanimous consent that the statement sent to me by Mrs. Blair Moody be printed in the RECORD at this point as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Charge: That the Agency buys news stories from newspapermen throughout the United States at a cost of more than $50,000 a year to create a built-in pro-USIA propaganda setup.

During fiscal year 1956, the Agency used the free-lance services of about 300 stringers scattered about the country. Most of these individuals were journalists or reporters, recommended to the Agency by their city editors, who were hired by the Agency on a word-rate basis of 2 cents per word to write special articles for use overseas. Since most of the stringers who receive assignments from USIA work for American newspapers as reporters, they hardly would be in a position to influence the policies of their respective newspapers with respect to the activities or operations of the United States Information Agency. Most of the articles obtained from these individuals related to the activities of foreign visitors to this country. The Agency believes that the things these visitors do or find out about this country are of great interest to their compatriots overseas. Their stories are considered a most effective method of conveying a picture of America to people overseas through the eyes and words of their own compatriots.

The cheapest way to get such a story—about, for example, the activities of a Vietnamese who is visiting Minneapolis—is to hire a writer in Minneapolis to do an article about the visitor, rather than send a man out from Washington to get the story. In fiscal year 1956, the Agency spent $26,821 for a total of 1,306 individual stories on foreign visitors and current events of significance (average of $20.24 per story).

In addition, the Agency in fiscal year 1956 spent $16,095 for other free-lance services, which provided materials for 7 pamphlets and 115 special magazine articles for the periodicals America Illustrated and Problems of Communism (average cost per article of $126.50).

The various stories and articles procured from stringers do not mention or publicize the activities of the United States Information Agency. Use of such stories and articles is based on a solid and demonstrable program need. The charge that use of these individuals creates a pro-USIA propaganda setup is considered to be without basis.

FLOODS IN THE SOUTHWEST

Mr. JOHNSON of Texas. Mr. President, the disaster-weary Southwest has again been battered by torrential rains, high winds, hail, and tornadoes.

The news ticker has just brought us the latest story of disaster. Flash floods have hit the city of Fort Worth and high winds have blown apart buildings in southwest Texas.

There is only one cheerful note—this time no injuries or deaths were reported and the damage was described as "slight in comparison with other recent flood and tornado disasters."

Mr. President, this whole situation puts in bold relief the tragedy of inaction. Over every wrecked building and over the grave of everyone who has been killed by these disasters should be placed the sign "too little and too late."

The news ticker also records the experiences of the House Public Works Subcommittee, which is touring the area. One of the members, Representative ED EDMONDSON, of Oklahoma, said that dams on the Navasota at Waco, Lampasas, and Ferguson would have prevented much of the recent damage.

Representative JAMES WRIGHT, of Texas, says that dams should be constructed at Laneport, Lampasas, Ferguson, Summerville, and Waco.

Mr. President, earlier in the week, I said to the Senate that we must get ahead with the program of constructing dams on the Pedernales and San Gabriel Rivers where there have occurred great loss of property and great loss of life in the past few weeks.

We are getting ready to consider the public works bill in the Senate. I hope that when it comes to the floor every Senator will have vividly in his mind the tragedy of too little and too late.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. MORSE. Mr. President, I wish to say to the people of Texas from the floor of the Senate that I do not know of any Member of the Senate who over the years has worked harder for flood-control projects everywhere in the United States than the distinguished Senator from Texas [Mr. JOHNSON].

I am sure I speak for the people of my own State and of the whole Pacific Northwest when I say that I extend to the people of Texas our deepest sympathy for the tragedies they have suffered from the terrible floods. I say to the people of Texas they have every reason to have great pride and confidence in their senior Senator, the majority leader, who has been fighting in the Senate for flood-control projects everywhere.

I wish to say to my colleagues in the Senate, both Republican and Democrat, that we ought to rally around both Senators from Texas when the public works bill comes before us, and come to the relief of the State of Texas.

Many persons do not realize that for the past several years 244 out of the 254 counties in Texas have been water-disaster areas because of drought. Now nature has completely changed its course and whole sections of Texas are being flooded.

It proves the need for man to take the precautionary and preventive steps necessary to bring, wherever possible, the forces of nature under control.

I say to the Senators from Texas that in me they have a shoulder-to-shoulder ally because I think all of us owe it to the people of Texas to give them relief in this year's public works bill.

Mr. JOHNSON of Texas. I wish to express my deep gratitude to the distinguished senior Senator from Oregon for his statement. The 9 million people of my State welcome his assistance and his cooperation. We know that the Senator from Oregon always extends a generous hand to people in need, whether they are in the Northwest or in the Southwest.

Homes would be standing today, and men, women, and children would still be alive, if Congress had acted in time.

I am hoping that there will be early and complete surveys by the Army engineers of all the principal rivers and their tributaries in Texas, where so many

lives have been lost and so many millions of dollars worth of property destroyed. I am hoping, as the result of such surveys, that Congress will take some emergency action.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. HUMPHREY. The people of Texas know, I am sure, that the leadership of their senior Senator from Texas will be responded to by his colleagues. I assure the Senator that there is one vote I have something to say about, namely my own vote, and when the flood-control projects come before the Senate in the public works bill, those projects will receive my wholewhearted support.

The State of Minnesota, on occasion, has been the victim of floods. Like the Senator from Texas, I have always felt that had we had a little vision and had we taken some preventive action, we would not have had to suffer such serious human and economic losses as ultimately took place.

I assure the Senator from Texas that his plea for action by the Senate will receive enthusiastic and wholehearted response to the limit of my capacity and ability when the public works bill comes before the Senate.

Mr. JOHNSON of Texas. Mr. President, I am grateful for the expression of my good friend from Minnesota. He and I walked along the Pedernales River together. Only last week two women and a baby started down the highway that runs along that river. A flash flood came up. The mother and baby were drowned, and the other woman spent a night in a treetop. That happened because of "too little and too late." That tragedy could have been prevented if a dam had been constructed on the river. A survey had been authorized, but no action was taken.

I am hopeful that the disaster which has occurred, and which we have been able to endure, will serve as a lesson to Congress and perhaps bring vividly to its attention the fact that an investment in flood control is the best insurance policy Congress can buy.

I ask unanimous consent that the two articles from the United Press news ticker be printed in the RECORD at this point as a part of my remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FORT WORTH, TEX.—A House Public Works Subcommittee today flew over flood-ravaged portions of Oklahoma and Arkansas in the second day of its flood and drought inspection.

The subcommittee, consisting of Representatives JAMES WRIGHT, Democrat, of Texas, ED EDMONDSON, Democrat, of Oklahoma, and EMMET BYRNE, Republican, of Illinois, made a 600-mile aerial tour over the swollen Brazos and Trinity Rivers in Texas yesterday after holding hearings in Fort Worth.

The group is trying to assess damage from recent floods, check the effectiveness of existing flood-control projects, and make legislative plans for prevention of both future floods and droughts. The region was in the throes of an 8-year drought before the torrential rains fell.

The committee flew over farms where crops once wouldn't grow because of a lack of moisture and now can't be planted because of too much. The committee saw farmhouses isolated by water, areas in cities still bearing the scars of floods, farmlands flooded, and reservoirs spilling away excess water.

EDMONDSON said the area urgently needs three reservoirs to control floodwaters and store water for use during drought. He said had there been dams at Waco, Lampasas, and Ferguson on the Navasota, they would have prevented heavy damage to agriculture. The whole basin system should be controlled, he said. EDMONDSON gave no priority to any 1 of the 3 possible dams.

WRIGHT said dams should be constructed at Laneport, Lampasas, Ferguson, Summerville, and Waco. It is probable, he said, the Congress would approve the Waco Dam and the Proctor Dam, above the Belton Reservoir.

DALLAS, TEX.—Torrential rains, high winds, hail, and tornadoes returned to a wide area of Texas last night. They caused flash floods in soggy Fort Worth and ripped apart buildings in southwest Texas.

A cloudburst dropped 2.22 inches of rain on Fort Worth in 30 minutes and sent flash floods over the tops of cars in underpasses.

High winds possibly of tornado force howled over Monahans, in southwest Texas, destroying two 1-story buildings. A host of tornadoes was sighted in that area and as far north as Fort Worth.

There were no injuries, however, and damage was believed slight in comparison with other recent floods and tornado disasters.

"REACTIONARY" SOCIALISM IN GERMANY

Mr. CURTIS. Mr. President, whenever socialism has been tried it has always disappointed. It has resulted in inflation, increased poverty, and a denial of a standard of living which otherwise might have been attained.

I should like to read an editorial which appeared in the Omaha World-Herald of May 23, 1957. The editorial recounts a happening which should bring hope to those who oppose socialism. It is entitled "Reactionary Socialism." It reads:

REACTIONARY SOCIALISM

Last week Germany's Minister of Economy, Dr. Ludwig Erhard, announced that Government trusteeship of the Volkswagen automobile works would end and that the company would be sold to thousands of small shareholders.

In other words, the Volkswagen is returning to private enterprise. Its management will be responsible to the stockholders who, in turn, expect a profit.

That's plain old-fashioned capitalism, and it's interesting to note how the Volkswagen decision is being received in Germany.

Dr. Erhard said the sale is a means of achieving a broader ownership of the means of production in West Germany. He said it is the Christian Democrats' answer to the reactionary Socialist policy of state ownership or control.

The Socialists are alarmed and angry. They recognize that the sale is highly popular with the people, so instead of meeting the issue head on and defending state ownership, they are claiming politics and charging that the moderate Adenauer government is electioneering by catering to the popular will.

To American ears these charges may sound strange but it's explained that this is not the case in Europe. Socialism is old stuff there, both the soft socialism of the Social Democrats and the hard socialism of Hitler.

The new appeal, the attractive appeal, is private ownership.

Chancellor Adenauer's economics minister says the Volkswagen sale is only the beginning. Eventually, he says, the West German Government will sell all the Government's industrial holdings, estimated at $1 billion, to private investors.

Americans, who are sometimes apologetic about the enterprise system, may learn a lesson here. If collectivist theories are old fashioned and reactionary and hard to sell to the voters in Europe, they should be doubly hard to sell to the voters in successful America. The forward look in economic systems is not Marxism, with its dreary theme of share the poverty, but the enterprise system with its widely dispersed wealth.

RECIPROCAL-TRADE-AGREEMENT PROBLEMS WITH CUBA

Mr. CARLSON. Mr. President, on May 13 I discussed on the floor of the Senate some of our reciprocal-trade-agreement problems with our neighbor to the south, Cuba.

Cuba has been a traditional supplier of sugar to the United States, and, in turn, Cuba has been a major market for wheat flour from the United States. Both commodities have been included in the preferential trade treaties negotiated between the two countries over a long period of time, and they provide the type of reciprocity in trade which I believe is true reciprocity. Each commodity represents an industry which is basic to the country and for which it has many natural advantages for production and export.

Last year, as a member of the Senate Finance Committee, I assisted in working out some of the amendments to the extension of the Sugar Act of 1948. I, for one, insisted that we grant Cuba a generous share of our sugar imports, and I did this even though technically we might be able to become self-sufficient in sugar production, although I realize it would be an uneconomic production.

At the time I made my statement on the Senate floor regarding some of our reciprocal-trade problems with Cuba, I was advised that the Cubans were proposing to build a flour mill in Santiago, Cuba, under special concessions and protection which they hoped to receive from the Cuban Government. Another group was proposing a mill at Cienfuegos.

It is generally agreed that should the Cuban Government give approval to these projects our present flour exports to that country, as we have known them in the past, would come to an end. This, of course, would mean a permanent loss of much of the Cuban market for United States wheat, as well as flour, because the record clearly shows that when a flour mill is built in a foreign country, imports of United States flour are not automatically replaced with United States wheat.

I am pleased to advise the Senate today that information has come to me that the Cuban Cabinet has informed the National Bank and its affiliates that they refused to give their approval, even

though it may mean loss in the commitment to the Santiago project.

I am also informed that the two proposed mills for customs exemption have been rejected by the Cuban Government.

Mr. President, I appreciate very much the action which has been taken by the officials of the Cuban Government in this regard. This attitude on the part of the Cuban Government and its people further strengthens my belief in the fact that reciprocal trade is a two-way street, and can be used to the mutual advantage of two countries. I hope this will become a pattern with other nations with which we have reciprocal trade agreements.

This decision will mean much to the farmers of the United States who have already been forced to reduce their wheat production from approximately 80 million acres in 1951 to 55 million acres in 1957, under Federal restrictions.

I can assure my colleagues this is important to the wheat growers of Kansas, in that in 1951 we planted approximately 18 million acres of wheat, and last year our allotment acreage was 10.8 million acres, and our actual seeding, as a result of drought and unfavorable fall seeding conditions, was 6.3 million acres.

If more countries realize that access to the United States market also means some obligations on their part not to adopt measures which will hurt or restrict the market for United States commodities, we will have accomplished much in the way of friendly trade relations.

RAPID TAX AMORTIZATION BY IDAHO POWER CO.

Mr. DWORSHAK. Mr. President, on May 28, 1957, a spirited debate took place in the Senate between the Senator from Indiana [Mr. CAPEHART] and the Senator from Oregon [Mr. MORSE] concerning rapid tax amortization by the Idaho Power Co.

In order to secure the facts concerning this matter, I addressed a letter dated May 31, 1957, to Mr. Charles Kendall, General Counsel of the Office of Defense Mobilization. I ask unanimous consent to have printed in the RECORD at this point my letter to Mr. Kendall and his reply thereto.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

MAY 31, 1957.

Mr. CHARLES KENDALL,
General Counsel, Office of Defense Mobilization, Executive Office Building, Washington, D. C.

DEAR MR. KENDALL: I noticed in the CONGRESSIONAL RECORD of May 28 the following colloquy between Senator CAPEHART and Senator MORSE covering the amortization of the Idaho Power Co.:

"Mr. CAPEHART. There, again, if the Senator from Oregon will read the letter of the Secretary, and will analyze it, he will find that that situation is somewhat the same as the one about which he was complaining, when he said he was misquoted.

"Furthermore, he said this particular job will not be completed until 1961. Does the Senator from Oregon not know that the certificate will become void if the job is not completed by 1958, and that then the company will lose the certificate?

"Mr. MORSE. But in the meantime, the company will have collected all the advantages of the fast tax writeoff.

"Mr. CAPEHART. I wish to say to the able Senator from Oregon that the writeoff is 20 percent a year for 5 years.

"Mr. MORSE. Yes; and the company will get that much for every year it is allowed to get by with it.

"Mr. CAPEHART. But the certificate of necessity will not begin until the project is finished.

"Mr. MORSE. That is just where the Senator from Indiana is completely wrong.

"Mr. CAPEHART. I am not wrong.

"Mr. MORSE. It begins immediately after it is granted. The company will write it off, on its next year's tax report. What does the Senator from Indiana suppose the company wants it for? The company wants it in order to get it to help it build the project. That is why the company wants these millions of dollars of hand-outs—namely, to help it build the dams, at the cost to the taxpayers.

"Mr. CAPEHART. Mr. President, the Senator from Oregon was never more mistaken in all his life, because the certificate cannot begin until the project is finished and until the total cost is known. I challenge the Senator from Oregon to prove that that statement is not true.

"Mr. MORSE. Mr. President, I believe in doing my book work, and I will do it; and I will raise the question tomorrow.

"Mr. CAPEHART. Mr. President, I have been engaged in business. I am sure I am right about the matter; I will be amazed if I am wrong. It is impossible to obtain a certificate for a writeoff before the job is completed and before the cost of the materials used is known."

I would like to know which Senator is correct, and also would like to have your legal opinion.

Sincerely,

HENRY DWORSHAK.

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION,
Washington, D. C., May 31, 1957.

Hon. HENRY DWORSHAK,
United States Senate,
Washington, D. C.

DEAR SENATOR DWORSHAK: This has reference to your letter of May 31, 1957, in which you quote from the CONGRESSIONAL RECORD of May 28 the colloquy between Senator CAPEHART and Senator MORSE relative to the accelerated amortization deduction as it applies to the Idaho Power Co. projects at Oxbow and Brownlee. You ask, "Which Senator is correct?" and request my legal opinion.

The last sentence of section 168 (a) of the Internal Revenue Code of 1954, which provides for the accelerated amortization deduction reads as follows:

"The 60-month period shall begin as to any emergency facility, at the election of the taxpayer, with the month following the month in which the facility was completed or acquired, or with the succeeding taxable year."

The Bureau of Internal Revenue has informed us that the foregoing is interpreted literally and that accelerated amortization may not be taken until a facility is actually completed.

Any suggestion that the amortization deduction on the cost of a facility may be taken upon the commencement of or during the construction of a facility is incorrect.

In the case of the Idaho Power Co.'s Brownlee and Oxbow Dams, the certificates place the further restriction upon use of accelerated amortization that the facilities must be in operation on of before December 31, 1958. If the target date is met, the cost of the dams may be charged against taxable income at the accelerated rate in the following taxable years.

In summary, it may be stated that the Idaho Power Co. will not be able to take accelerated amortization on either the Brownlee or Oxbow Dams until such dams are completed and in no case will they be entitled to such deduction unless the facilities are in operation on or before December 31, 1958.

Sincerely yours,

CHARLES H. KENDALL,
General Counsel.

WITHDRAWAL OF NOMINATIONS BY THE PRESIDENT

Mr. MORSE. Mr. President, at the time the nomination of Scott McLeod was pending in the Senate, the staff of the Committee on Foreign Relations was asked to prepare a memorandum concerning the number of instances of nominations submitted by administrations, past and present, having been withdrawn from the Committee on Foreign Relations. The official staff memorandum was prepared and made available to members of the Committee on Foreign Relations, a copy of it being made available to me. I used it in the debate on May 8, 1957. A part of the memorandum dealt with the case of one Seymour Rubin, to be Assistant Director of the Mutual Security Administration.

In the course of my speech on May 8, 1957, at page 6577 of the CONGRESSIONAL RECORD, I cited from the memorandum prepared by the staff of the Committee on Foreign Relations and made the following statement:

I point out that the cases I have just mentioned involved nominations during the Truman administration. We also have the case of the nomination of Seymour Rubin, to be Assistant Director of the Mutual Security Administration. The nomination was made by President Truman, but was withdrawn by President Eisenhower. So this is a procedure which has been followed in various administrations.

I have received a letter from Mr. Rubin, who is a member of the law firm of Landis, Cohen, Rubin & Schwartz.

I ask unanimous consent that the entire letter be printed in the RECORD at this point in my remarks, together with certain exhibits which Mr. Rubin filed with his letter.

There being no objection, the letter and exhibits were ordered to be printed in the RECORD, as follows:

LANDIS, COHEN, RUBIN & SCHWARTZ,
Washington, D. C., May 16, 1957.

The Honorable WAYNE MORSE,
United States Senate,
Washington, D. C.

DEAR SENATOR MORSE: I write on what I suppose might be called on the floor of the Senate a point of personal privilege. I believe you would want to correct an unfortunate inference, arising from your remarks of May 8, 1957, in regard to the McLeod appointment, that the Senate Foreign Relations Committee and/or the Eisenhower administration found me wanting in qualifications for the post of Assistant Director for Mutual Security.

The facts are:

I have been in the private practice of law since 1948. In 1951–52 I took on, at the request of the State Department and of Mutual Security Director Harriman, a short-term (2 months) negotiating job involving our relations with the NATO countries, and was fortunate enough to achieve the desired results. As a result, Mr. Harriman asked me, in the fall of 1952, to take on responsibility as his deputy for the Battle Act, with the title of Assistant Director for Mutual Security. I consented to do this, on the clear understanding that mine was again to be a short-term responsibility, that I would in any case resign in early 1953 to return to my law practice, and that the situation would be reexamined after the November 1952 elections.

On September 26, 1952, the Congress then not being in session, I was given a recess appointment by President Truman as Assistant Director for Mutual Security and Deputy Administrator of the Mutual Defense Assistance Control Act.

After the elections, President-elect Eisenhower designated Gov. Harold Stassen as Mr. Harriman's successor. In December 1952, I talked with Governor Stassen. I said that the position I held was one involving extremely sensitive relations between the administration and the Congress, and that I felt that he should have his own appointee in the position. I stated my intention of resigning before the end of the Truman administration, but expressed my willingness to remain on as a consultant for an interim and transitional period. Governor Stassen concurred in my views, and asked me to remain as a consultant during a transitional period.

On January 5, 1953, I submitted my resignation to President Truman. On January 10, 1953, President Truman accepted my resignation, effective at the close of business on January 19, 1953.

When President Eisenhower took office, therefore, there should have been no appointment pending before the Senate Foreign Relations Committee. Apparently, however, a mistake was made, and appointment papers were in fact before the committee. When, in February of 1953, a United Press dispatch stated that my appointment was pending before the committee, I communicated with the White House, and steps were taken to correct the error. It is presumably to these steps—which were the withdrawal of an appointment to a position from which I had already resigned during the previous administration—that you referred in your statement of May 8.

So far as I know, there was never any consideration of my name, and never properly could have been any such consideration, before the Foreign Relations Committee. I have never heard of any slightest objection on the part of any Senator to my recess appointment, or criticism of my conduct of my office while I held it under that appointment. I append hereto copies of letters which I received, upon my resignation, from President Truman; from the Mutual Security Director Harriman; and from the United States Special Representative in Europe, Ambassador William H. Draper, Jr. I also append a copy of a letter received from Mr. Stassen, upon my subsequent resignation as a consultant.

I would appreciate your insertion of this letter, together with its attachments, in the CONGRESSIONAL RECORD, together with such statement as you might at that time care to make.

Sincerely yours,

SEYMOUR J. RUBIN,
Attorney at Law.

THE WHITE HOUSE,
Washington, January 13, 1953.

Hon. SEYMOUR RUBIN,
Assistant Director for Mutual Security, and Deputy Administrator for Mutual Defense Assistance Control, Washington, D. C.

DEAR MR. RUBIN: In response to your letter of January 5, I accept your resignation as Assistant Director for Mutual Security and Deputy Administrator for Mutual Defense Assistance Control, effective at the close of business January 19, 1953.

You have every reason to be proud of your record of Government service, particularly during the past year, when your contributions have been most valuable. As Chief of the United States delegation, you skillfully guided the negotiation of complex tax agreements with a number of European nations, required by the Mutual Security Act of 1951.

Subsequently, you served as Averell Harriman's deputy on matters pertaining to the complicated problem of controlling trade between free nations and the Soviet bloc. I especially appreciate your accepting this complex and difficult task. In the space of only a few months, you have provided vigorous direction to the efforts of the United States Government in this field and have laid a solid foundation upon which the executive branch and the Congress will more readily be able to move forward.

You have my every good wish for success in private life.

Sincerely yours,

HARRY TRUMAN.

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF THE DIRECTOR FOR MUTUAL SECURITY,
Washington, D. C. January 20, 1953.

Mr. SEYMOUR RUBIN,
Deputy Administrator, Mutual Defense Assistance Control Act, Executive Office of the President, Office of the Director for Mutual Security, Washington, D. C.

DEAR SY: I want to record my appreciation for the effective work that you have done during these last months in the administration of the Battle Act.

I know that you came at considerable sacrifice to yourself, and I am deeply grateful to you. You had a penetrating understanding for the complicated problems that are involved in East-West trade, and brought to the administration a wise balance of all of the factors that relate to our security and national interests.

I send you all my best wishes and warm regards.

Sincerely,

W. A. HARRIMAN,
Director for Mutual Security.

UNITED STATES SPECIAL REPRESENTATIVE IN EUROPE,
Paris, France, February 2, 1953.

The Honorable SEYMOUR J. RUBIN,
Deputy Administrator for Mutual Defense Assistance Control, Executive Office of the President.

MY DEAR MR. RUBIN: Thank you very much for your letter of January 21 with which you enclosed a copy of the second semiannual report under the Battle Act.

I cannot let you leave office as Deputy Administrator for Mutual Defense Assistance Control without expressing my personal appreciation and thanks for the complete and continuous cooperation I personally, and all of us over here, have received from you and, in a very large measure, from your entire organization.

Your fine work in the mutual defense assistance control field, coupled with the outstanding job you did in obtaining relief for the United States from upwards of a dozen different national governments in the tax field, make your record of public service an enviable one which you can look back on with a great deal of pride.

My personal association with you and with so many of your associates has been one of the most pleasurable aspects of my task over here. I hope very much that the association will continue and our paths cross frequently in the days to come.

With my best wishes, I am,

Sincerely yours,

WILLIAM H. DRAPER, Jr.

FOREIGN OPERATIONS ADMINISTRATION,
Washington, D. C., September 14, 1953.

Mr. SEYMOUR J. RUBIN,
Washington, D. C.

DEAR MR. RUBIN: Many thanks for your kind letter of August 26.

Be assured I have enjoyed very much working with you and thank you for your cooperation in these months of transition.

Renewed thanks and personal regards.

Sincerely,

HAROLD E. STASSEN,
Director, Foreign Operations Administration.

Mr. MORSE. Mr. President, I wish first to read from Mr. Rubin's letter, and then to make comments.

DEAR SENATOR MORSE: I write on what I suppose might be called on the floor of the Senate a point of personal privilege. I believe you would want to correct an unfortunate inference, arising from your remarks of May 8, 1957, in regard to the McLeod appointment, that the Senate Foreign Relations Committee and/or the Eisenhower administration found me wanting in qualifications for the post of Assistant Director for Mutual Security.

I digress to point out, respectfully, that that was not my implication, and it was not my intention to leave that implication. On the other hand, if I were the appointee, I can well understand how Mr. Rubin might, at least, think there was some question as to the implication which was left in the RECORD. I certainly want any implication which Mr. Rubin thinks reflects on him to be corrected, and that is exactly what I propose to do. But I want Mr. Rubin and others to know that what I placed in the RECORD was a reference to his nomination which was contained in the memorandum prepared by the professional staff of the Committee on Foreign Relations. Mr. Rubin goes on to say:

The facts are:

I have been in the private practice of law since 1948. In 1951–52, I took on, at the request of the State Department and of Mutual Security Director Harriman, a short-term (2 month) negotiating job involving our relations with the NATO countries, and was fortunate enough to achieve the desired results. As a result, Mr. Harriman asked me, in the fall of 1952, to take on responsibility as his deputy for the Battle Act, with the title of Assistant Director for Mutual Security. I consented to do this, on the clear understanding that mine was again to be a short-term responsibility, that I would in any case resign in early 1953 to return to my law practice, and that the situation would be reexamined after the November 1952 elections.

On September 26, 1952, the Congress then not being in session, I was given a recess appointment by President Truman as Assistant Director for Mutual Security and Deputy

Administrator of the Mutual Defense Assistance Control Act.

After the elections, President-elect Eisenhower designated Gov. Harold Stassen as Mr. Harriman's successor. In December 1952, I talked with Governor Stassen. I said that the position I held was one involving extremely sensitive relations between the administration and the Congress, and that I felt that he should have his own appointee in the position. I stated my intention of resigning before the end of the Truman administration, but expressed my willingness to remain on as a consultant for an interim and transitional period. Governor Stassen concurred in my views, and asked me to remain as a consultant during a transitional period.

On January 5, 1953, I submitted my resignation to President Truman. On January 10, 1953, President Truman accepted my resignation, effective at the close of business on January 19, 1953.

When President Eisenhower took office, therefore, there should have been no appointment pending before the Senate Foreign Relations Committee. Apparently, however, a mistake was made, and appointment papers were in fact before the committee. When, in February of 1953, a United Press dispatch stated that my appointment was pending before the committee, I communicated with the White House, and steps were taken to correct the error. It is presumably to these steps—which were the withdrawal of an appointment to a position from which I had already resigned during the previous administration—that you referred in your statement of May 8.

I already have had the full letter printed in the RECORD.

Mr. President, in defense of the professional staff of the Foreign Relations Committee, I wish to say that my investigation shows they made a perfectly accurate report to the full committee. They reported only what the file showed. They were not aware of the background which Rubin points out in his letter, and therefore it was quite proper for them to make to the full committee the report in the official staff memorandum they filed. There was no intention on the part of any member of the professional staff of the Foreign Relations Committee to do any injury to Mr. Rubin.

I am very glad, however—as I always am, when any injury is being done any citizen because of any mistake of which I have knowledge which is made by anyone—to take this opportunity to make this statement, which I think corrects the record, and certainly does to Mr. Rubin the justice to which he is so clearly entitled.

Mr. President, I turn now to another subject.

The PRESIDING OFFICER (Mr. NEUBERGER in the chair). The Senator from Oregon has the floor.

THE SPEECH BY SENATOR MORSE AT DETROIT, MICH.

Mr. MORSE. Mr. President, I wish to thank the majority leader and the minority leader for granting me permission to fulfill a commitment I made to the Senate the other day, when I announced that today I would have ready a complete transcript of the tape recording of the speech I made in Detroit, at a Jefferson-Jackson day dinner on May 18, 1957, which speech caused me to be subjected to the attack which was leveled at me on the floor of the Senate a week ago Wednesday. When I said I would make the information available to the Senate today, I was not aware that there had been entered into an agreement to restrict the comments made today by Senators to insertions in the RECORD, under the 3-minute rule. The majority leader and the minority leader kindly agreed that today I should be allowed to make a statement not in excess of 30 minutes.

Mr. President, I shall make the statement without interruption, because I want it to appear in continuity in the RECORD. Then, if any Senator wishes to ask me questions about it, afterward, I shall be glad to yield for questions at that time.

Mr. President, I notify the Senate that what I shall now read into the RECORD is a complete transcript from the tape recording of my speech, of May 18, 1957, at the Jefferson-Jackson day dinner, at Detroit, Mich., dealing with the administration's handling of the Hells Canyon case, and with rapid tax writeoff benefits given to the Idaho Power Co. The press statements about this speech caused some of my colleagues in the Senate to make the criticisms and attacks on me which were made a week ago last Wednesday.

Mr. President, I shall now quote from the speech. I give the Senate my assurance that what I shall now read is the only part of the speech in which this matter was discussed. The tape is in my office, and is available to any Member of the Senate or to any member of the press who may wish to hear it. The speech was broadcast live from the banquet hall. A tape of the speech was taken by another radio station; and that tape was broadcast later on that evening or the next evening; at the moment, I am not sure whether it was broadcast on Saturday night or on the following evening, Sunday night.

I now quote from the speech:

I want to discuss this water resources issue from the standpoint, for example, of the Hells Canyon Dam issue. Why, there isn't one here who wouldn't be disappointed, I am sure, if I didn't mention Hells Canyon Dam. I want to mention Hells Canyon Dam as the great symbol of water conservation in America because it is a symbol of what ought to be. We must make it the natural resource policy of the Democratic Party, because it rests upon full development of a great river basin that has 60 percent, for example, of the potential hydroelectric power in this country. And the Eisenhower administration is cutting it down, if you follow their program, by about 50 percent. And what a shocking betrayal on the part of this administration of future generations of American boys and girls.

And the Hells Canyon Dam issue is but a repetition of the Grand Coulee issue. Don't forget, a group of bipartisan Senators—Republicans and Democrats—joined together when the private utility monopolies of this country tried to scuttle Grand Coulee. They had a friendly President in the White House, the great Franklin D. Roosevelt. They went to him and pointed out the private utility shell game. They pointed out that the private utilities were trying to build a low-head dam at Kettle Falls, and if they succeeded in building a low-head dam at Kettle Falls they would wash out Grand Coulee. And Roosevelt joined with these bipartisan Senators—Charlie McNary, of my State, a Republican; Hiram Johnson, of California, a Republican; Dill, of Washington, a Democrat; young Bob La Follette, of Wisconsin; the great George Norris, of Nebraska; and they stopped the scuttling of Grand Coulee.

The result was the greatest economic ally of the American people in World War II arose to its majesty, and without it you wouldn't have had either a great airplane armada program in World War II, nor would you have had a successful atomic energy program in World War II. And I do not intend to sit in the Senate and fail to give every effort within me of saving a great tragedy from occurring, that this Eisenhower administration is trying to foist upon the American people by its scuttling tactics on Hells Canyon Dam, because they are seeking to turn over to the Idaho Power Co. that reach of the Snake River, and if they succeed in doing it we cannot have full development, we cannot have adequate flood control, we cannot have the irrigation benefits we need.

And to tell you how far they are going, you need only look at the latest act of political immorality on the part of this administration, and I put it where it belongs, squarely on the shoulders of one man, the President himself. I do not join with Democrats that try to put the blame for the immorality of this administration upon underlings. I do not put the blame for this giveaway to the Idaho Power Co. of millions of dollars of your money, belonging to the taxpayers of this country, on one called Gray, who is the head of the Office of Defense Mobilization. The responsibility for it is the President's himself.

If you want to see a good example of political corruption, I give you the accelerated tax amortization scheme of the Eisenhower administration benefiting the private utilities of this country. Oh, says the President, when asked about it in a news conference the other day, he thought we ought to stop it. We ought to stop continuing these accelerated tax amortization certificates, but that what the Office of Defense Mobilization had done in connection with the Idaho Power Co. was within the law. It was perfectly legal. I taught law for many years, and I used to teach my students to remember that if you stay within the law, it doesn't mean necessarily that you have stayed within the realm of moralty. [Applause.] The Eisenhower administration is doing its stealing within the law, but it is just as immoral because it knows it is betraying a public trust, and history will record that this President made an honest administration out of Harding, and a statesman out of Grant. That will be the record of this administration. [Applause.]

Take a look—take a look at this kind of political thievery in connection with these accelerated tax-amortization certificates. Why did we pass a law in the first place that permitted of this acceleration of taxpayment? In order to get industry to build plants that would be useless after the war. Read the congressional debate on accelerated tax amortization. That was the legislative purpose of this bill for accelerated tax amortization. But what the Eisenhower administration has been doing has been granting accelerated tax amortization to businesses in this country whose plants will be of greater value after they are built in peacetime than if put to defense purposes. And this administration cannot present a scintilla of evidence—and they didn't before the Byrd committee the other day—that would justify a tax certificate to the

Idaho Power Co. on the basis of its being a defense plant. It is a great private utility.

And what this handout of the Eisenhower administration amounts to is millions of dollars of an interest-free loan, of money belonging to you. And that is why, before the Kefauver committee yesterday, I said as far as the morality is concerned it is as immoral in my code of ethics as Dave Beck, who reaches into the pockets of the teamsters and takes out of them an interest-free loan for his own personal purpose, whereas this administration reaches into your pockets, takes an interest-free loan out of your pocket, and turns it over, gratis, to the Idaho Power Co. to the tune of a profit for that company on a 50-year basis at 6 percent, for example, of a great many millions of dollars. But, at the same time, remember you will be paying interest that your Treasury has to borrow in order to swing the kind of a tax loss that is Idaho Power Co. makes at your expense.

suffered as a result of the savings that the

I think the time has come to call the hand of this administration, as I have been doing since 1953. That is why, for example, on the floor of the Senate I protested the appointment, for example, of Mr. Talbott as Secretary of the Air Force, you will recall. I protested him because I read the record. Many of my colleagues didn't. And I found that his whole record was a record of conflict of interest, and I forwarned the Senate in that speech that if he was made Secretary of the Air Force we would have trouble with him over conflict of interest.

There it is, for history to read; and it wasn't very long, as DICK RUSSELL, of Georgia, said on the floor of the Senate, that the prophecy of the Senator from Oregon came true.

But what did this administration do after they had to really force Talbott's resignation? They gave him a medal for meritorious service as Secretary of the Air Force. And that is when I walked on the floor of the Senate and said, "The President, instead of giving him a medal, ought to have given him a chisel."

In the minute remaining let me say likewise we must take the issue to them on the hard-money policy, because what they are doing is driving thousands of small businesses into bankruptcy with the result that you have the highest small business bankruptcy rate in the last 25 years going on today in the United States.

We have to take the fight to them on tax favoritism, to big business. We have to take the fight to them, let me tell you, on the budget. And let me make clear the military budget no longer must be allowed to be the sacred cow in American politics. It needs to be revised in the interests of millions of dollars of savings to the American taxpayers.

I close by asking you as Democrats to put on your fighting clothes, join the issue, and demonstrate to the American people that this administration must start to be driven out of office in 1958, and the job completed in 1960.

Mr. President, this morning, before the Kefauver committee, testimony was given by the chief accountant of the Federal Power Commission. I am informed that the questioning was started by the Senator from Wisconsin [Mr. WILEY], and I am informed the chief accountant of the Federal Power Commission testified along the same lines I followed in the changes I have been making in regard to the fast tax writeoff to the Idaho Power Co. I am advised he testified that the interest costs to the Treasury, resulting from the loss of revenue occasioned by the fast tax writeoff to the Idaho Power Co., figured at an interest rate of 3½ percent, would be $83 million. That is a little higher figure than I, myself, have used.

I am advised that the information obtained from the chief accountant of the Federal Power Commission at the hearing this morning was to the effect that the value of certificates to the company, based upon a 6 percent return, which he assumed to be a proper return, over the period of time covered, would amount, according to the accountant's information, to $339 million. This is $10 million higher than the figure I presented to the Senate on April 29.

So far as I am concerned, it is a very important issue, and likewise it is very important that, in the interest of the taxpayers, this kind of a giveaway program shall be brought to an end.

It is important that Congress enact, at the earliest possible date, legislation which will clarify, beyond any question of a doubt, the narrow limits within which tax certificates by way of fast tax writeoffs can be granted.

Mr. President, so far as I am concerned, I shall be perfectly willing to be judged by history and by the American people for the fighting stand I have taken in the Senate of the United States, and outside the Senate, in opposition to the action of the Eisenhower administration in granting fast tax writeoffs and providing this bonanza benefit to the Idaho Power Co., while at the same time it has opposed full development with a high Federal Hells Canyon Dam.

I quite agree with the Secretary of the Interior, Mr. Seaton, in his letter of March 11, to Dr. Flemming, then Chairman of the Office of Defense Mobilization. I think he set forth a clear case against this writeoff.

I am very glad, Mr. President, that Secretary Seaton, relatively in the last few hours, or the last couple of days, has reaffirmed his own personal judgment about the matter. He has said what many of us have said. He has said, in effect, what many of us have said from the beginning, namely, that, so far as the letter of the law is concerned, Dr. Gray can justify granting the certificates; but, I repeat, Mr. President, that hiding behind the letter of the law does not justify what I consider to be immorality so far as acts against the American taxpayers are concerned. That kind of political immorality cannot be justified.

Mr. President, the other day, in an attack upon me, the Senator from Indiana [Mr. CAPEHART] had much to say, as the RECORD will show, because I changed my judgment of candidate Eisenhower in 1952. The Senator from Indiana made some pretty strong statements in the RECORD, charging me with intellectual immorality and indulging in some other uncomplimentary and disrespectful references.

I think, therefore, Mr. President, that I ought to read into the RECORD a letter which the Senator from Indiana issued on May 23, 1952, and sent to Republicans in the United States in regard to his position with respect to candidate Eisenhower in 1952.

I am perfectly willing to stand by my change of opinion; and I am very glad if, since he wrote this letter, the Senator from Indiana has come to think more highly of the Republican candidate of 1952; but on May 23, 1952, he sent this letter to Republicans, a copy of which I received from a very prominent public official in the Middle West. The letter reads as follows:

UNITED STATES SENATE,
Washington, D. C., May 23, 1952.

DEAR REPUBLICAN: I am writing this letter because I feel so deeply that the nomination of General Eisenhower would mean the end of the Republican Party. You have probably seen a copy of the Hall survey sent out by Professor Colegrove which shows how Eisenhower would lose support of a large percentage of his present followers if he took a position on many of the vital issues now before the people. It shows that from a popular candidate, he might become a weak candidate. It is significant that Lodge and Carlson and Duff and Hoffman, who are fronting for Eisenhower in the Republican Party, are urging him to keep still on every important issue until after the nomination. In response General Eisenhower has said as plain as day that he wouldn't say anything, and he won't even get out of uniform unless the Republicans nominate him in July. I am just one Republican, but I think every single Republican has the right to say to General Eisenhower that he cannot expect his support or his vote unless he tells him where he stands on the issues, and what kind of a campaign he will conduct.

There is another thing that a lot of the Eisenhower supporters keep mighty still about—we can't win with an amateur in politics. Campaigning is a mighty complicated matter that takes a terrific lot of experience and a lot of knowledge of the different parts of the country and the different groups to whom a candidate must appeal.

The first thing an amateur political aspirant is likely to do is to destroy the party organization. Both Landon and Willkie grew a lot weaker when they failed to recognize the importance of the many thousand party workers throughout the country. Nobody, from a precinct worker on up, knows where he stands or what the future of the party organization may be.

An inexperienced candidate can also destroy his candidacy with a single wrong answer when he is campaigning. Just think of a man trying to answer all the questions that arise in a political campaign when, even at this late date, he frankly says in a letter over his own signature that he doesn't know where he stands on Fair Employment Practices.

Senator Taft has never lost an election and has campaigned his way right up to the United States Senate and to the biggest plurality Ohio ever recorded for a Republican candidate for Senator. Furthermore, I have felt all along that if Senator Taft were nominated, he would be overwhelmingly elected because he knows the kind of campaign to win. What the Republican Party needs for victory is a fighting candidate who will make the issues against the Democratic New Deal, Fair Deal, Socialist, pro-Communist crowd in Washington. We have lost three straight presidential elections just for lack of such a fighting campaign. We can't win by approving the objectives of the New Deal and the Truman-Acheson foreign policy, and then trying to persuade the people that we will do it better. That is the kind of a campaign put on by Mr. Dewey, and I think it is the kind of campaign that General

Eisenhower would put on if he follows the advice of his present followers.

I want to tell you with all the sincerity of which I am capable that I firmly believe that Eisenhower is the Democratic candidate for the Republican nomination. They want to see him nominated, because if they can't beat him they feel that he would carry out practically the same policies in which they believe. I cannot conceive how any experienced political observer could fail to see that Eisenhower is the Democratic candidate for the Republican nomination. He is getting a buildup from every New Deal columnist, every New Deal editor, Jimmie Roosevelt, Elliott Roosevelt, Claude Pepper, Leon Henderson, and the billion-dollar-foreign-spender, Paul Hoffman. They apparently feel confident that if elected on any ticket, Eisenhower would continue the Truman-Acheson foreign policy and the high taxes, big spending and inflation policies here at home. It looks to me as if the Democrats are doing a swell job of trying to arrange so that both the Democratic and Republican Parties will have Democratic candidates so that they can't lose either way.

Look at Eisenhower's close personal advisers. He stayed with George Allen in Washington, and George Allen has gone to advise him in Paris. George Allen is Truman's old pal and side-kick, appointed to high office by Mr. Truman. Does anybody honestly think that Mr. Allen wants to help elect a Republican President? The Democrats, who have been putting out the propaganda that Eisenhower is the only man who can win for the Republicans, are trying to flood all the Republican primaries. If you have any doubts that the Democrats want us to nominate Eisenhower, the answer is that they are campaigning for him right now.

Every American citizen who applies for a passport to the United States State Department, headed by Mr. Acheson, gets a circular with Eisenhower's picture on the front cover and a story about what a great man he is.

The Post Office Department has just issued a NATO stamp to persuade the public that NATO is a tremendous success and that Eisenhower is its prophet.

Eisenhower had a close association with Roosevelt and Truman for many years. It was they who built him up to an international figure. He approved the policy of appeasing the Russians in Europe. He was Chief of Staff when Marshall and Acheson abandoned Chiang Kai-shek to the Communists in Asia.

I am willing to concede that Eisenhower is a brave general, but up to now he has been a very timid candidate. Unless we can nominate Taft we may not win, and unless we nominate Taft the New Deal is going to take over the Republican Party.

Sincerely,

HOMER CAPEHART.

That letter was written on stationery bearing the heading "United States Senate."

Mr. President, the Senator from New Hampshire [Mr. BRIDGES] in the attack upon me on May 22, also had some uncomplimentary things to say because I had criticized the President. In order to keep the record straight, I think there should be in the RECORD a statement quoted from the New York Times of May 11, 1938, an Associated Press dispatch:

Senator H. STYLES BRIDGES today termed Government spending under the New Deal a vote-buying scheme and as put forth by the President of the United States nothing more than a national swindle. Senator BRIDGES asserted that many New Deal measures had been intended to save President Roosevelt's face and added, "Not once has he admitted he was wrong. Not once in nearly 6 years has any proposal of Franklin D. Roosevelt ever been allowed to go sour. Something has always been done to save his face."

Then, in the Washington Star of April 16, 1952, the following story is attributed to the Senator from New Hampshire:

Senate Republican Leader BRIDGES today accused President Truman as having used a "trumped-up appeal" and "suspect" motives in seizing the steel industry. "The President's cry of emergency is as specious as his action without the basis of law," Senator BRIDGES charged. "It is clear that the President's appeal to emergency is a trumped-up appeal. It is clear that his motives are suspect."

Then in the Baltimore Sun of April 1, 1938, the following story is contained:

Through decentralization, said BRIDGES, President Roosevelt and his workers "should be shorn of the power * * * gained by usurpation, by coercion, by threats, by the sabotaging of independent commissions, by torpedoing civil service, and by making ridiculous trade treaties with foreign nations."

Then, from a summary of Republican accomplishments in the 82d Congress, written by the Senator from New Hampshire [Mr. BRIDGES] and Representative JOSEPH W. MARTIN, JR., of Massachusetts, quoted in the New York Herald Tribune of August 17, 1952, is the following:

Republicans want no more Truman wars like Korea where the Democrat President without authority of constitution or law plunged us into a bloody conflict.

These are only a few examples, Mr. President, of the exercise of free speech by a United States Senator in criticism of a President. I wish to say I shall defend that right when practiced by Republicans as well as when practiced by Democrats.

I close, Mr. President, by once again saying to the American people from the floor of the Senate today: Woe be unto America if this precious procedural protection of freedom in the United States is ever lost on the floor of the United States Senate. Woe be to freedom in America if the time ever comes when elected officials in the legislative branch of our Government are not free to walk on the floor of the Senate and utter criticisms of a President and other executive officers which in their honest judgment ought to be made, so that the American people can be forewarned of what is happening to them, in the minds of those who represent them in the Congress.

I wish to say I direct no criticism against the Senator from Indiana, the Senator from New Hampshire, and the other Senators who Wednesday of last week attacked and criticized me. That is a precious right which I wish to guarantee to them, Mr. President. But I raise my voice once again in the Senate of the United States for the protection of untrammeled free spech, for conformance to what the constitutional fathers clearly intended when the Senate of the United States was created because they were fearful of executive power. The constitutional fathers knew the danger of giving to the executive of any State unchecked and unbridled power. They knew that one of the greatest checks which could be provided in a democracy would be to confer the right on a United States Senator to stand on the floor of the Senate or off the floor of the Senate and communicate to the American people his sincere and honest judgment as to the course of action being followed by any administration, be it Republican or Democrat.

So far as the Senator from Oregon is concerned, so long as he is entrusted with the great obligation now resting upon his shoulders, he intends to tell the American people from time to time when he thinks this administration or any future administration is following a course of action which can properly be described as an action and a course of political immorality.

ADJOURNMENT TO MONDAY

The PRESIDING OFFICER (Mr. CASE of New Jersey in the chair). If there is no further business, pursuant to the order previously entered, the Senate will now stand in adjournment until 12 o'clock noon on Monday next.

Accordingly (at 1 o'clock and 28 minutes p. m.) the Senate adjourned, the adjournment being, under the order previously entered, to Monday, June 3, 1957, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 31, 1957:

DIPLOMATIC AND FOREIGN SERVICE

The following-named Foreign Service officers for promotion from class one to the class of career minister:

Vinton Chapin, of New Hampshire.
John Wesley Jones, of Iowa.
Frederick B. Lyon, of Nevada.
Carl W. Strom, of Iowa.

UNITED STATES ATTORNEY

Edward L. Scheufler, of Missouri, to be United States attorney for the western district of Missouri for a term of 4 years. He is now serving in this office under an appointment which expired April 16, 1957.

UNITED STATES MARSHAL

Omar L. Schnatmeier, of Missouri, to be United States marshal for the eastern district of Missouri for a term of 4 years. He is now serving in this office under an appointment which expired April 16, 1957.

Richard Beal Kidd, of Arkansas, to be United States marshal for the eastern district of Arkansas for a term of 4 years. He is now serving in this office under an appointment which expires July 31, 1957.

IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066 to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

Maj. Gen. Robert Milchrist Cannon, O16163, United States Army, in the rank of lieutenant general.

EXTENSIONS OF REMARKS

A Tribute to Our Jewish War Veterans

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, May 31, 1957

Mr. MARTIN of Iowa. Mr. President, on May 24, 1957, it was my privilege to attend the annual memorial services honoring Jewish War Veterans of the United States, held at Adas Israel Synagogue, Washington, D. C., and to take part in these memorial services. I ask unanimous consent that my address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TRIBUTE TO OUR JEWISH WAR VETERANS

(Address by Senator THOS. E. MARTIN, Republican, of Iowa, at the annual memorial services honoring Jewish War Veterans of the United States, Adas Israel Synagogue, Washington, D. C., May 24, 1957)

It is a great honor to take part in these memorial services honoring the Jewish war dead. The ideals of your organization and the way in which you have carried these ideals into practice are eminently worthy of emulation.

Recently, I took the time to read part of the constitution of the Jewish War Veterans. I was particularly impressed by article II of this constitution. I would like to quote a portion of it:

"To maintain true allegiance to the United States of America; to encourage honor and purity in public affairs; to combat whatever tends to impair the efficiency and permanency of free institutions; to encourage the doctrine of universal liberty, equal rights, and full justice to all men.

* * * * *

"To instill love of country and flag in our youth and to foster such activities as will tend to perpetuate the objects and ideals of our organization."

The history of our country's struggle to secure and maintain the principles cited above is an inspiring story of purpose and devotion. The part played in these struggles by people of the Jewish faith is equally inspiring. From the first days of the Revolutionary War, American Jews have taken their place alongside men of all faiths and all beliefs in the common cause of freedom.

Early in our history the rumblings of freedom were heard in the Colonies. One of the first visible signs of the oncoming struggle was the Non-Importations Resolutions of 1765—the first real step toward independence—when a group of colonists indicated desire for freedom by refusing to trade with the English. It is highly significant that among the signers of these resolutions were nine Jews whose principal livelihood depended on such trade. Six Jews signed the more stringent agreement of 1770. But they took this action without fear because of their faith in the ideals of liberty and freedom.

When the fight for independence turned into actual war, the Jews of the Colonies carried their share of the burdens. Deeply etched on the rolls of the Revolutionary heroes are such names as Lt. Col. David Salisbury Franks who served with great distinction; Lt. Col. Isaac Franks, an aide-de-camp to General Washington; Mordecai Sheftall, who put his entire salary at the disposal of the Army physicians for the purchase of much-needed medicines and was badly wounded at the siege of Savannah; Manual Mordecai who also served on Washington's staff and who gave a fortune of $100,000 for the cause of independence; and Haym Salomon who was arrested by the British as an American spy and who later extended financial help to James Madison, Edmond Randolph, Thomas Jefferson, Arthur Lee, General Steuben, and Robert Morris and still later became the financial link between the United States and Europe. The Jews truly contributed their share of sacrifice and valor to the infant United States.

That the Hebrew played a conspicuous part in the drama of the Revolution, despite the relatively small size of his community, there can be little doubt. His aid was both military and financial. The record reads creditably on both counts.

When the tragic War Between the States broke out, Jews were found on both sides fighting for the causes in which they believed. Simon Wolf, who made an exhaustive study of that war, estimates that 8,400 Jews served with the northern army, and it was reported that John Seddon, Confederate Secretary of War, one time said there were between 10,000 and 12,000 Jews serving in the Confederate Army.

Although it is impossible to estimate accurately the total number of Jews who served in the War Between the States, some of the names and deeds of fighting Jews will live forever—names like Leopold Karpeles, who turned a retreat into a victory at the Battle of the Wilderness by rallying the northern soldiers; Benjamin Levy, the 16-year-old drummer boy who won the Congressional Medal of Honor for his bravery at the Battle of Charles City Crossroads; Leopold Blumenberg, about whom Lincoln once said, "He has suffered for us and served us well, had the rope around his neck for being our friend, raised troops, fought and been wounded"; and Edward Soloman, who served with great courage and valor at Gettysburg.

On and on this list of Jews who fought so gallantly could go. In each war there were Jews, great numbers of Jews, who compiled records that rank with America's bravest.

More than 1 million Jews have served in our Armed Forces in our country's wars. The list of Jewish heroes could go on for hours and we still wouldn't list them all. While we cannot possibly list all the Jewish heroes of World War I and World War II and Korea, we can pay special tribute to Chaplain Alexander D. Goode who, together with three other chaplains, two of the Protestant faith and one of the Catholic faith, gave their lives in the sinking of the *Dorchester* in the North Atlantic early in World War II. The story of Chaplain Goode and his fellow ministers of religion, Chaplains Clark V. Poling and George L. Fox, Protestant ministers, and Chaplain John P. Washington, a Catholic priest, is an epic of human dignity and sacrifice. As a lifeboat drew away from the stricken *Dorchester*, a young sailor who knew the four chaplains had given their life preservers to four enlisted men, saw them locked arm in arm and deep in prayer. And then suddenly the men and the ship were gone—gone beneath the icy waves.

In the First World War there were 3 Medal of Honor winners, 1 of whom is your genial and able national executive director, Ben Kaufman, 147 winners of Distinugished Service Crosses and Medals, and 982 other decorations, citations, and awards that were given to American Jews. In World War II, 2 more Jews won the Nation's highest award for bravery, the Congressional Medal of Honor, 64 men who won the Distinguished Service Cross, 27 who won the Navy Cross, and 34 who received the Distinguished Service Medal. In addition to this inspiring list there were actually thousands of additional awards and citations given to men of Jewish faith who served with distinction in the Second World War.

I have not been able to secure a breakdown of the decorations won by Jewish servicemen in the Korean conflict, but I am confident when the full story is written the pattern of service and patriotism forged by Americans of the Jewish faith in all our wars will be reproduced.

Perhaps the best description of the place of the Jew in the military history of the United States was made by Congressman Julius Kahn, of California, when he drew the first draft number for the First World War. I would like to repeat to you what he said:

"Many of the boys who go to the front will be wounded. Many of them will be killed. But Jews at all periods of the world's history have been ready to make the supreme sacrifice whenever the land that gives them shelter demands it. I know that I voice the sentiment of the overwhelming majority of the Jews of the United States when I say we will do our share toward keeping Old Glory floating proudly in the skies so that it may continue to shelter under its fold the downtrodden and the oppressed of every land."

The Jews of our country have always upheld the high appraisal of Congressman Kahn. Your record of sacrifice for the country you love has been far and beyond the call of duty. I consider it an honor to meet with you today.

International Atomic Energy Agency

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, May 31, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the text of an address entitled "Approval of Atomic Agency Essential to United States Leadership," delivered by the distinguished junior Senator from New Jersey [Mr. CASE] to the New Jersey Young Republicans in Atlantic City, and published in the New York Herald Tribune of Sunday, May 25, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

APPROVAL OF ATOMIC AGENCY ESSENTIAL TO UNITED STATES LEADERSHIP

(By Senator CLIFFORD P. CASE)

The following are excerpts from a speech by Senator CASE delivered recently to the New Jersey Young Republicans in Atlantic City:

"Nearly three and a half years ago President Eisenhower appeared before the United Nations and pledged this Nation to find the way by which nuclear forces could be dedicated to the benefit, not destruction, of man.

"His words sparked new hope throughout the world. Thus was launched an effort that is more than a key feature of the President's foreign policy. In a very real sense, it is key to our future and that of every man.

"For many years following the war the United States labored to bring about a system of international control of atomic energy. Those efforts were unavailing, primarily because of Soviet refusal to agree to effective control measures such as inspection.

"It was against this background that the President made his historic address in December 1953. He suggested a new effort that would concentrate on the peaceful uses of the atom. From his suggestion, over long months of negotiation, has developed the International Atomic Energy Agency. Last October the draft statute of the Agency was adopted unanimously by an 81-nation conference. Recently, the Senate Foreign Relations Committee opened hearings looking toward ratification by the Senate. Prompt ratification by the United States is, I believe, of the utmost importance.

"At this point in history the United States no longer has a monopoly of the nuclear energy field. A number of nations including, of course, the U. S. S. R., are engaged in nuclear development. Many others, especially the underdeveloped nations are eagerly seeking an opportunity to avail themselves of the marvelous benefits the atom can bring.

"The question is whether the United States will join with other nations in an effort to insure that the development of peaceful uses of the atom will go forward in ways which will best serve our interests and the peace of the world.

"We are faced with an opportunity that is unlikely to come again. For the first time there has been achieved well-nigh universal agreement on a plan of development and control in the atomic energy field and fortunately this comes at a time when relatively few nations are yet engaged in weapons development. We have an opportunity for leadership. If we forego that opportunity, we run the risk that others—of whose basic hostility to our way of life there can be no doubt—will exploit our failure to take the lead.

"What of the risks, it is asked, that are involved in membership in this new Agency? To that I can only say I have been unable to discover any substantial risk that can be avoided by refusing to join the Agency.

"The draft statute specifically forbids the use for military purposes of fissionable material supplied through the International Atomic Energy Agency. To insure the effectiveness of this prohibition, a comprehensive system of safeguards is provided. These safeguards are the equal, indeed the same I am informed, of any the United States now prescribes in its bilateral atomic agreements with other nations.

"Among the most important of the safeguards is the right of inspection, of free access by Agency personnel to all places, persons and data having to do with a project. This means, of course, that like any other country that seeks Agency assistance, any applicant among the Soviet satellite countries will have to submit the projects for approval and agree to continuous inspection and accountability procedures. This would at least open a window on an area now cut off from our view, though not from a major source of nuclear materials and technology.

"Qualified technical experts state that diversion of fissionable materials of the quality specified to military purposes would be most difficult, if not impossible, to achieve clandestinely. At the same time the strict accountability features in conjunction with other technical factors and the requirement that excess material be stored in Agency storehouses make it most unlikely that diversion could be accomplished secretly.

"We can refuse to join the IAEA but this does not mean we can stop the drive of other nations to secure for themselves the benefits of atomic energy. Or we can ratify the Charter and take the lead in establishing what the President has called 'an international body in which all may safely pool their knowledge and skill for the advancement of all.'

"To me the choice seems clear. We, no less than other nations, want and need 'this new instrument of peaceful progress.'"

SENATE

MONDAY, JUNE 3, 1957

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

O God, who commandest the morning, and by whose word man goeth forth to his work and to his labor until the evening, open our ears, we beseech Thee, to hear the call of far horizons and the stirring trumpets of challenge sounding the advance to a new era for mankind when the vast treasure now being paid out for defensive armaments may be channeled into avenues which shall build and not blight. As we wrestle with powers of darkness which deny the divine sovereignty and human dignity, may the reality of the faith by which we live blaze with a new fire and luster. With the faith of our fathers revitalized to a new intensity, make us more and more alert to the spiritual values that underlie all the struggle of these epic days which are molding the shape of tomorrow's world.

In this forum of the Republic, as these elected representatives of perplexed and anxious millions debate problems of human relationships which confront and almost confound them, quicken and sanctify for Thy glory and for human good their best endeavors: in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Journal of the proceedings of Wednesday, May 29, 1957, and Friday, May 31, 1957, was approved, and reading was dispensed with.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

The PRESIDENT pro tempore. If there be no reports of committees, the nominations on the Executive Calendar will be stated.

DIPLOMATIC AND FOREIGN SERVICE OF THE UNITED STATES OF AMERICA

The Chief Clerk proceeded to read sundry nominations in the diplomatic and Foreign Service.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the nominations in the diplomatic and Foreign Service be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

CONSOLIDATION OF LAWS ADMINISTERED BY THE VETERANS' ADMINISTRATION

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 338, House bill 53. My purpose in making this request is to have the bill made the unfinished business.

The PRESIDENT pro tempore. The bill will be stated by title, for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H. R. 53) to consolidate into one act, and to simplify and make more uniform, the laws administered by the Veterans' Administration relating to compensation, pension, hospitalization, and burial benefits, and to consolidate into one act the laws pertaining to the administration of the laws administered by the Veterans' Administration.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Texas?

There being no objection, the Senate proceeded to consider the bill (H. R. 53) to consolidate into one act, and to simplify and make more uniform, the laws administered by the Veterans' Administration relating to compensation, pension, hospitalization, and burial benefits, and to consolidate into one act the laws pertaining to the administration of the laws administered by the Veterans' Administration, which had been reported from the Committee on Finance with amendments.

ORDER DISPENSING WITH CALL OF THE CALENDAR

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the call of the calendar today, under rule VIII, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

TRANSACTION OF ROUTINE BUSINESS

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour, for the introduction of bills and the transaction of other routine business. In that connection, I ask unanimous consent that statements be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

CONGRESSIONAL HANDLING OF APPROPRIATION BILLS

Mr. JOHNSON of Texas. Mr. President, I wish to make a brief statement thanking my colleagues for their excellent cooperation in handling the appropriations bills.

Thus far this year the Senate has had an excellent record. Our committee has gone over the bills carefully and thoroughly. They have been considered on the floor in the same spirit. The result, I believe, has been the type of economy which the American taxpayers are demanding.

We are now entering a period in which the pace of the appropriation bills will step up rapidly. A number are on the point of being reported from the committee.

These measures are always difficult because of what appears to a widespread misunderstanding of the nature of appropriation bills. The pressures upon Congress are conflicting. There seems to be an idea that a vote on an appropriation bill is a vote for or against the President. That is an idea which Congress has consistently repudiated and should repudiate.

An appropriation simply reflects the judgment of Congress as to the amount of money adequate to finance a program. It is not an expression of confidence—or lack of confidence—in anyone.

No budget is sacrosanct. It is simply the judgment of the President and his Budget Bureau as to the amount of money the administration thinks it needs to operate over a period of time.

Congress is supposed to examine the budget, to hear the evidence, and then exercise its independent judgment. It is not supposed to vote blind acceptance or blind rejection.

We have been importuned by editorial writers and columnists to restore a number of sums on the ground that to fail to do so would be to express lack of faith in the President.

Personally, I believe that Congress will do what it should do; that is, grant the amount of money we are convinced is needed—not a cent more nor a cent less; and that applies to the defense budget, along with all the others.

We would be helped in this task if we were not under such heavy pressure to make up our minds in advance of the evidence. I congratulate the Members of the Senate for their determination to resist such pleas.

Mr. MANSFIELD. Mr. President, will the Senator from Texas yield to me?

The PRESIDENT pro tempore. Does the Senator from Texas yield to the Senator from Montana?

Mr. JOHNSON of Texas. I am glad to yield to my friend, the Senator from Montana.

Mr. MANSFIELD. Week before last the President made a speech, by telephone, to a Republican gathering in Trenton. In the speech he said that if he were given the power to veto items of appropriation bills, he could then accomplish a great deal in the way of savings.

Is it not true that the President has a 500-man Budget Bureau working on a year-around basis?

Mr. JOHNSON of Texas. As I understand, there are approximately 500 employees of the Budget Bureau, and they spent approximately $4 million in preparing the present budget, which took some 11 months, is about 1,200 pages thick, and represents the best recommendations of the personnel of that Bureau.

Mr. MANSFIELD. Mr. President, will the Senator from Texas yield further to me?

Mr. JOHNSON of Texas. I yield.

Mr. MANSFIELD. Is it not also true that insofar as the work of the Bureau of the Budget, as the budget is presented to the President is concerned, the President has the right to exercise an item veto at the time it comes to him?

Mr. JOHNSON of Texas. He does, and frequently he exercises it. If the Senator from Montana will recall, in the President's address to the Nation, he pointed out that he had reduced more than $10 billion worth of items from the Defense Department's budget, as it was submitted to him.

Mr. MANSFIELD. But he still has presented to Congress the largest peacetime budget in history.

Mr. JOHNSON of Texas. That is correct.

Mr. MANSFIELD. Now the President wishes to take away from Congress its constitutional power in the matter of appropriations and to transfer it to the Executive.

I wish to say that I agree with the distinguished majority leader that we in Congress have a responsibility, too. We will look into the budget as presented, and then we will do the best we can, in the light of all the facts and all the knowledge we have.

Mr. JOHNSON of Texas. That is exactly what I hope the Congress will do, and that is what I, myself, am prepared to do.

Mr. CARLSON subsequently said: Mr. President, earlier today in a colloquy between the Senator from Montana [Mr. MANSFIELD] and the majority leader, the Senator from Texas [Mr. JOHNSON] a discussion was held regarding the item veto, which the President had referred to in a statement to the regional Republican conference in New England. The President stated that if he had the privilege of using this item veto he could save substantial sums of money.

I should like to mention, Mr. President, that 39 States of this Union have provision for the item veto.

I have served as a governor of a State which does have such a provision, and I know from personal experience it gives the governor an opportunity to veto items in an appropriation bill which he feels are not in the best interest of the State, of the citizens, or of the budget. I think experience will demonstrate that the Chief Executive who has the responsibility to the people as a whole will not veto justified and meritorious projects. Records will show that it has not been abused and that it has resulted in actual savings to the States of the Union.

It does, however, tend to lead to legislative irresponsibility. It is easy for a member of the senate or the house of representatives of a State whose governor has the right to use the item veto, to say, "Let us put it in the appropriation bill. The governor will remove it." It works both ways.

Mr. President, I ask unanimous consent to have printed in the RECORD a list of States whose governors at present have the privilege of the item veto, and also a list of States where the partial item veto privilege prevails.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

The following States have the item veto on appropriation bills: Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Idaho, Illinois, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, New Jersey, New Mexico, New York, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, Wisconsin, and Wyoming. All five of our Territories, Alaska, Guam, Hawaii, Puerto Rico, and the Virgin Islands have the item veto.

The PRESIDENT pro tempore. Morning business is now in order.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

THE LATE PRESIDENT RAMON MAGSAYSAY OF THE PHILIPPINES

A communication from the President of the United States, informed the Senate that Senate Resolution 115 of March 18, 1957, commemorating the untimely death of President Ramon Magsaysay of the Philippines, had been delivered to Carlos P. Garcia, President of the Philippines, on May 21, and that Mr. Garcia expressed deep appreciation on behalf of the family of the late President, and the Government and people of the Philippines; ordered to lie on the table.

SIMPLIFICATION OF WORK OF FOREST SERVICE

A letter from the Acting Secretary of Agriculture, transmitting a draft of proposed legislation to facilitate and simplify the work of the Forest Service, and for other purposes (with accompanying papers); to the Committee on Agriculture and Forestry.

LEASING OF CERTAIN OIL AND GAS DEPOSITS IN ALASKA

A letter from the Under Secretary of the Interior, transmitting a draft of proposed legislation to provide for the leasing of oil and gas deposits in lands beneath inland navigable waters in the Territory of Alaska (with an accompanying paper); to the Committee on Interior and Insular Affairs.

GOVERNMENT GUARANTY OF PRIVATE LOANS TO CERTAIN AIR CARRIERS

A letter from the Chairman, Civil Aeronautics Board, Washington, D. C., transmitting a draft of proposed legislation to provide for Government guaranty of private loans to certain air carriers for purchase of aircraft and equipment, and for other pur-

poses (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

PROHIBITION OF SALE OF CERTAIN AIRLINE TICKETS

A letter from the Chairman, Civil Aeronautics Board, Washington, D. C., transmitting a draft of proposed legislation to prohibit the sale of airline tickets at a premium and the sale of such tickets under false names (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

REPORT OF FEDERAL TRADE COMMISSION

A letter from the Chairman, Federal Trade Commission, Washington, D. C., transmitting, pursuant to law, a report of that Commission, covering its accomplishments during the fiscal year ended June 30, 1956 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

AMENDMENT OF SECTION 5 OF FLOOD CONTROL ACT, RELATING TO EMERGENCY FLOOD CONTROL WORK

A letter from the Secretary of the Army, transmitting a draft of proposed legislation to amend section 5 of the Flood Control Act of August 18, 1941, as amended, pertaining to emergency flood control work (with an accompanying paper); to the Committee on Public Works.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Acting Archivst of the United States, transmitting, pursuant to law, a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent value or historical interest, and requesting action looking to their disposition (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The PRESIDENT pro tempore appointed Mr. JOHNSTON of South Carolina and Mr. CARLSON members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A joint resolution of the Legislature of the State of California; to the Committee on Armed Services:

"Assembly Joint Resolution 36

"Joint resolution relative to changing the method of computing the basic pay for members of the Armed Forces

"Whereas there is now pending before the Congress of the United States legislation, including S. 2014 and H. R. 7574, which would change the method of computing the basic pay for members of the Armed Forces; and

"Whereas the Military Establishment is desperately in need of a means for attracting and retaining persons with scientific, professional, combat leadership, and management skills necessary to maintain a deterrent power during these times of advancing technology and threat of aggression; and

"Whereas the Armed Forces do not presently have the means to enter into competition for trained personnel urgently needed for the defense of this country, and a significant factor in their inability to do so is the inadequacy of the present compensation practices now in use; and

"Whereas the proposed changes in the military pay structure are based on merit rather than longevity, will bring military pay more in line with the pay standards of industry, will offer first termers greater reenlistment incentive, and will relate pay more closely to the actual contribution of the individual in the service; and

"Whereas the change in pay structure, such as that proposed in S. 2014 and H. R. 7574, has the support of the Strategic Air Command and the 15th Air Force, as well as many other military leaders and organizations: Now, therefore, be it

"*Resolved by the Assembly and the Senate of the State of California (jointly)*, That the Legislature of the State of California respectfully memorializes the Congress of the United States to take favorable action to revise the existing pay structure now in use in the Armed Forces along the lines proposed in S. 2014 and H. R. 7574; and be it further

"*Resolved*, That the Chief Clerk of the Assembly is hereby directed to transmit copies of this resolution to the President and Vice President of the United States, the Speaker of the House of Representatives, and to each Senator and Representative from this State in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Finance:

"Senate Joint Resolution 22

"Joint resolution relative to the interest rate on veterans' home loans

"Whereas there are presently being considered before the Congress of the United States proposals which would, if adopted, result in an increase in the interest rate on veterans' home loans from 4½ percent to 5 percent; and

"Whereas such an increase in the interest rate could well place a new home out of the reach of veterans with an average income; and

"Whereas it would, unquestionably, accelerate the present decline in the building industry and, with the resultant increase in unemployment, could conceivably prove disastrous to the national economy: Now, therefore, be it

"*Resolved by the Senate and Assembly of the State of California (jointly)*, That the Legislature of the State of California respectfully memorializes the Congress of the United States, in the interests of both the veterans and the Nation as a whole, to reject all proposals to increase the interest rate on veterans' home loans; and be it further

"*Resolved*, That the secretary of the senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Interior and Insular Affairs:

"Senate Joint Resolution 25

"Joint resolution relative to the establishment of a domestic minerals program to stimulate the mining and production of strategic minerals and metals in the interests of national defense

"Whereas the threat posed to the security of the United States by the unsettled conditions abroad is such that it is imperative that the Nation, in maintaining and expanding its programs directed toward national preparedness and defense, insure the proper development of its mineral and metal resources to the end that adequate supplies of critical metals and materials essential to the production of modern military weapons and facilities be available; and

"Whereas the development and stimulation of the mining industry in California as well as throughout the entire Nation in the production of such critical metals and materials as antimony, asbestos, beryllium, chromite, cobalt, columbium-tantalum, fluorspar, iron, lead, manganese, mica, molybdenum, nickel, titanium, tungsten, vanadium uranium, and zinc, all of which are of critical importance in maintenance of the Military Establishment, can best be achieved by legislation at the national level; and

"Whereas proposed legislation introduced and pending before the Congress of the United States would, if enacted, provide a basis for the establishment of a long-range national domestic minerals program: Now, therefore, be it

"*Resolved by the Senate and Assembly of the State of California (jointly)*, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to effect a long-range program for the development of domestic metals and minerals: and be it further

"*Resolved*, That the secretary of the senate is hereby directed to transmit suitable copies of this resolution to the President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Post Office and Civil Service:

"Senate Joint Resolution 27

"Joint resolution relative to issuance of a centennial stamp in commemoration of discovery of the Comstock lode

"Whereas on January 28, 1859, diggings were commenced in the vicinity of Gold Hill, Nev., and shortly thereafter Henry T. P. Comstock claimed the Ophir Discovery, which subsequently made Virginia City, Nev., the richest and most celebrated gold- and silver-mining community of all time; and

"Whereas the Comstock was the first silver-mining camp in the United States, and its discovery brought multitudes of Americans from the East to the silver slopes of Nevada; and

"Whereas the golden memories and unforgettable history of the Comstock are deemed by the Legislature of the State of California to be of sufficient importance to warrant commemoration by every means and consequently should be recognized in the year 1959 by the issuance of a silver centennial commemorative stamp by the Government of the United States: Now, therefore, be it

"*Resolved by the Senate and Assembly of the State of California (jointly)*, That the Legislature of the State of California respectfully memorializes the President, the Postmaster General and the Congress of the United States to take whatever action is necessary to the end that a commemorative postage stamp recording this great and historical event shall be issued during the year 1959; and be it further

"*Resolved*, That the secretary of the senate be directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Public Works:

"Senate Joint Resolution 13

"Joint resolution relative to the study, design, and construction of the Park's Bar Dam on the Yuba River

"Whereas there have been frequent floods on the Feather River and the Yuba River in the State of California which have caused great loss of life and wide destruction of property and river-control works; and

"Whereas during the great flood of December 1955 damage of $75 million occurred, much of which was attributable to damage caused by the waters of the Yuba River; and

"Whereas the report of the State water-resources board indicates that a flood-control dam and reservoirs situated on the Yuba River at Park's Bar in Yuba County, costing approximately $21 million, will provide approximately 200,000 acre-feet of active storage, which will substantially reduce the flow of such floodwaters at Marysville and Yuba City: Now, therefore, be it

"Resolved by the Senate and the Assembly of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to direct the United States Army Corps of Engineers to take such steps as may be necessary to insure the construction of the Park's Bar Dam or dams at suitable alternative sites on the Yuba River at the earliest possible date in order to prevent further loss of life and destruction of property; and be it further

"Resolved, That the secretary of the senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of Oregon; to the Committee on Finance:

"House Joint Memorial 19

"To the Honorable Senate and the House of Representatives of the United States of America in Congress assembled:

"We, your memorialists, the 49th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

"Whereas Congressman BARRATT O'HARA, of Illinois, has introduced H. R. 358 to grant an increased pension for war widows of Spanish-American veterans: Now, therefore, be it

"Resolved by the House of Representatives of the State of Oregon (the Senate jointly concurring therein), That we urge the Congress of the United States of America to pass H. R. 358 without delay; and be it further

"Resolved, That copies of this memorial be sent to the President of the United States, the President of the United States Senate, the Speaker of the United States House of Representatives and to all members of the Oregon congressional delegation.

"Adopted by house May 16, 1957.

"Adopted by senate May 20, 1957.

"EDITH BYRON LAW,
"Chief Clerk.

"PAT DOOLEY,
"Speaker of House.

"ROYAL R. OVERHULSE,
"President of Senate."

A resolution adopted by the New Jersey Bankers Association, Atlantic City, N. J., favoring the appointment of a special independent citizens' commission in implementation of the recommendation of the President in his state of the Union message of January 10, 1957, to study the prevailing system of financial institutions in the country, and the supervisory bodies having jurisdiction over them; to the Committee on Banking and Currency.

REPEAL OF EXCISE TAX ON TRANSPORTATION—CONCURRENT RESOLUTION OF FLORIDA LEGISLATURE

Mr. HOLLAND. On behalf of myself and my colleague, the junior Senator from Florida [Mr. SMATHERS], I present for appropriate reference, and ask unanimous consent to have printed in the RECORD, Senate Concurrent Resolution 381 of the Florida Legislature, regular session, 1957, memorializing the Congress of the United States to enact legislation providing for repeal of the Federal excise taxes upon the transportation of persons and property.

There being no objection, the concurrent resolution was referred to the Committee on Finance and, under the rule, ordered to be printed in the RECORD, as follows:

Senate Concurrent Resolution 381

A concurrent resolution memorializing the Congress of the United States to enact legislation providing for the repeal of the Federal excise tax upon the transportation of passengers and freight

Whereas the Federal excise tax upon the transportation of passengers and freight was adopted in 1942 as a wartime tax to discourage the movement of civilian passengers and freight during World War II; and

Whereas today, 11 years after the cessation of hostilities, there continues a 10-percent levy on the transportation of passengers and a 3-percent levy on the transportation of property, which taxes while collected by the common carriers of transportation by rail, by highway, by water, and in the air are imposed upon and collected from the users of such transportation; and

Whereas millions of dollars in revenues are paid to the State of Florida by those common carriers; and

Whereas the tax upon the transportation of freight by reason of the transportation of raw materials to the point of manufacture and from the point of manufacture to processing and ultimate distribution to the consumer, frequently has a cumulative effect resulting in a heavy and burdensome tax upon the finished product and the consumer thereof; and

Whereas such excise taxes on transportation by reason of the distance from the State of Florida and the markets for Florida products, agricultural, horticultural, and manufactured, impose a heavy and undue burden upon Florida shippers and also tend to burden tourist travel to and from the State of Florida; and

Whereas the continuance of Federal excise taxes upon common carrier transportation of persons and property is no longer necessary: Now, therefore, be it

Resolved by the Senate of the State of Florida (the House of Representatives concurring), That we respectfully urge and request the Congress of the United States to enact legislation which will provide for the repeal of the Federal excise taxes upon the transportation of persons and property; and be it

Resolved, That the secretary of state be directed to transmit a copy of this resolution to the President of the United States, the Vice President of the United States, the Speaker of the House of Representatives of the Congress of the United States, and each Member of the Florida delegation in the United States House of Representatives and the United States Senate, and to the respective houses of the legislature of the several States of the United States.

The PRESIDENT pro tempore laid before the Senate a concurrent resolution of the Legislature of the State of Florida, identical with the foregoing, which was referred to the Committee on Finance.

ISSUANCE OF SPECIAL STAMP COMMEMORATING QUADRICENTENNIAL OF ST. AUGUSTINE, FLA.—RESOLUTION OF FLORIDA LEGISLATURE

Mr. HOLLAND. Mr. President, the ancient city of St. Augustine, Fla., will celebrate its quadricentennial in 1965. This celebration will be a national historical occasion of very great importance.

Reputable historians agree that this city, originally a Spanish colony, was the first continuous settlement of the white race on the North American Continent. Believing that this event is of great importance in our history, the State Legislature of Florida in Senate Memorial 414, approved by the Governor on May 24, 1957, requests the issuance of a United States postage stamp and a United States Treasury coin bearing suitable inscriptions commemorating the 400th anniversary in 1965 of the original settlement of the city of St. Augustine.

Mr. President, I concur wholeheartedly in this request of the Legislature of Florida, and, I ask unanimous consent on behalf of myself, and my colleague, the junior Senator from Florida [Mr. SMATHERS], to have printed in the RECORD at this point in my remarks, and appropriately referred, Senate Memorial 414 of the Florida Legislature, regular session, 1957, as approved by the Governor and filed in the office of the secretary of state.

There being no objection, the resolution was referred to the Committee on Post Office and Civil Service, and, under the rule, ordered to be printed in the RECORD, as follows:

Senate Memorial 414

Memorial to the Congress of the United States requesting that a special United States postage stamp and a United States Treasury coin be issued honoring the quadricentennial of the settlement of the city of St. Augustine, Fla.

Whereas the city of St. Augustine will arrive at its 400th birthday in 1965, there having been established a colony at the site of the city in 1565, as the results of an expedition from Spain commanded by Don Pedro Menendez de Aviles, a Spanish nobleman; and

Whereas reputable historians agree that this colony was the first continuous permanent settlement of the white race on the North American Continent; and

Whereas this event was of great importance in our history and deserves a measure of commemoration by the Government of the United States: Now, therefore, be it

Resolved by the Legislature of the State of Florida, That the members of the Florida delegation in the Congress of the United States be requested to take the necessary action for the issuance of a United States postage stamp and a United States Treasury coin bearing suitable inscriptions commemorating the 400th anniversary in 1965 of the original settlement of the city of St. Augustine; be it further

Resolved, That the secretary of the senate be directed to send a copy of this memorial, duly executed by the proper officers of this legislature, to each member of the Florida delegation in the Congress, to the Post-

master General and to the Secretary of the Treasury of the United States.

Approved by the Governor May 24, 1957.

Filed in office, secretary of state, May 24, 1957.

By Mr. KERR:

A concurrent resolution of the Legislature of the State of Oklahoma; to the Joint Committee on Atomic Energy:

"House Concurrent Resolution 537

"House concurrent resolution memorializing the President and the Congress of the United States of America in cooperation with our delegate to the United Nations to exert every effort and use every peaceful means possible to create an international atomic health service with powers of inspection and regulation

"To the President and Congress of the United States of America:

"Your memorialist respectfully represents—

"That the atomic age upon which we have entered has created new conditions which can adversely affect the health and welfare of the people throughout the State of Oklahoma, the Nation and the entire world through exposure to radioactive material resulting from chemical processing plants, atomic nuclear reactor installations and principally from bomb explosions;

"That through such bomb explosions during recent years there has been released into the atmosphere now circling our planet gigantic quantities of radioactive elements, a poison or substance we can neither see, feel, hear, taste, nor smell, which may be inhaled in the air we breathe, absorbed by drinking polluted water or by eating contaminated food and which is capable of changing, damaging or killing living cells and which especially induces harmful mutations of the reproductive genetic patterns thereby creating the danger of causing physical and mental handicaps to future generations;

"That it is an established scientific fact that strontium, released in hydrogen bomb explosions to the winds of the earth, is absorbed by plants throughout the world which are eaten by animals, and thus passes into milk and food supplies, and this strontium referred to by scientists as a bone-seeker "goes to" the bone where its radiations, remaining active for years, can destroy the blood-producing marrow, causing leukemia or, in time, induce cancer of the bone: Now, therefore, be it

"Resolved by the House of Representatives of the State of Oklahoma (the honorable Senate concurring therein):

"1. That the President and Congress of the United States in cooperation with our delegate to the United Nations exert every effort and use every peaceful means possible to create an international atomic health service with powers of inspection and regulation for the primary purpose of preventing the pollution of the air, water, and soil from dangerous quantities of radioactive materials or related poisonous substances.

"2. That copies hereof be transmitted to the Honorable President of the United States, to the Oklahoma delegation in Congress, to the Secretary General of the United Nations, and to the International Atomic Agency of the United Nations.

"Adopted by the house of representatives the 24th day of April 1957.

"B. E. HARKEY,
"Speaker of the House of Representatives.

"Adopted by the senate the 8th day of May 1957.

"COWBOY PINK WILLIAMS,
"President of the Senate."

A concurrent resolution of the Legislature of the State of Oklahoma; to the Committee on Finance:

"House Concurrent Resolution 538

"Concurrent resolution memorailizing the Congress of the United States of America to pass H. R. 358 without delay

"To the Senate and House of Representatives of the United States in Congress Assembled:

"Whereas H. R. 358 is pending before the Congress of the United States to increase pensions to widows of veterans of the Spanish American War; and

"Whereas the passage of this measure is necessary to adjust such pensions in accordance with the increase of the cost of living: Now, therefore, be it

"Resolved by the House of Representatives of the 26th Oklahoma Legislature (the honorable Senate concurring therein), That the Congress of the United States of America be, and it hereby is, requested to pass H. R. 358 without delay; be it further

"Resolved, That a duly certified copy of this resolution be sent to the Senate of the United States and one to the House of Representatives of the Congress of the United States, and a copy to all members of the Oklahoma congressional delegation.

"Adopted by the house of representatives the 25th day of April 1957.

"B. E. HARKEY,
"Speaker of the House of Representatives.

"Adopted by the senate the 9th day of May 1957.

"COWBOY PINK WILLIAMS,
"President of the Senate."

A resolution of the House of Representatives of the State of Oklahoma; to the Committee on Public Works:

"Enrolled House Resolution 571

"Resolution memorializing the Congress of the United States and the Appropriations Committees thereof; to direct special attention to the land-procurement practices of the Corps of Army Engineers in the Oolagah Dam area on the Verdigris River in northeast Oklahoma

"Whereas the Ooolagah Dam on the Verdigris River in northeastern Oklahoma is in the very early initial phases of construction, with work proceeding on only the first stage embankment contract on one side of the river, under the direction of the Corps of Army Engineers; and

"Whereas only a few hundred acres of land actually has been acquired for the project and with condemnation proceedings now in progress on an additional few hundreds of acres of land; and

"Whereas this $37 million project will finally take more than 70,000 acres of land in a well developed and productive agricultural and ranching area, resulting in the dislocation of several hundred farm homes and related schools, churches, cemeteries, Federal and State highways, county roads, electric power lines, telephone lines, oil transportation pipelines and gas lines; and

"Whereas the proposed lake will inundate and destroy the birthplace and home of the great Oklahoman, Will Rogers, which has become a national shrine and each year is visited by thousands of Americans who have come to love the simple and homely virtues of this great man; and

"Whereas on the lands to be taken for the Oolagah Dam project is located a sizable portion of the world's greatest shallow oil field, which has been producing oil continuously since its discovery before the turn of the century, and which today is recognized as having been the birthplace of the oil business in Oklahoma, the laboratory where secondary recovery was first tried and proven in Oklahoma and the field which has produced more oil by the water flood repressuring method of secondary recovery of oil than in any other field in Oklahoma; and

"Whereas the United States Bureau of Mines, in a report dated August 1, 1951, stated that a recoverable reserve of more than 50 million barrels of oil could be produced by today's known methods from the more than 25,000 acres of proven productive but undeveloped lands that are to be taken for the Oolagah Dam project; and

"Whereas a portion of the lands to be covered by Oolagah Lake have now been developed for the production of oil and this developed area is now producing several thousand barrels of oil each day; and

"Whereas the developed oil lands to be inundated by Oolagah Lake now gives employment to hundreds of oil field workers, pay tens of thousands of dollars each year in taxes to the State of Oklahoma and to the United States, and produces millions of dollars worth of economic wealth annually; and

"Whereas the oil field is served by a crude oil purchasing company whose storage tanks, pump stations, gathering lines, and pipeline transportation system is located on lands to be inundated by the Oolagah Lake, also, serves other oil productive areas located on lands adjacent to the proposed lake; and

"Whereas the engineering difficulties that will result for the pipeline opeartion following the building of Oolagah Dam and the loss of busness to the pipeline as a result of abandonment of that part of the oil field that will be inundated by Oolagah Lake, could make it unprofitable and economically impossible to operate the pipeline oil gathering system to serve the remainder of the oil field, and with the resulting loss of a pipeline market for that part of the oilfield adjacent to the lake, the entire oil field could be forced to shut down with a further economic loss to the entire section of the State; and

"Whereas congressional appropriations for the Oolagah project, which is a very minor part of the Arkansas Basin development program, were first made last year after almost 20 years of being seriously questioned as to the economic feasibility and the doubtful advisability of destroying a great known recoverable reserve of oil and a tremendously rich agricultural area; and

"Whereas the farmers and ranchers and oil producers of the Verdigris River area repeatedly through the years have voiced their objections to this project in personal and delegation appearances before the Congressional Appropriation Committees of both the House and Senate; and

"Whereas proponents of the project residing in other parts of Oklahoma, and other States, have envisioned great economic gains to groups of people, cities and towns, transportation users, and great industrial organizations as a result of the construction of Oolagah Dam, it was also recognized that a great displacement of people and business operations in the Oolagah Dam area must occur if the project was to be built, and, therefore, solemn assurances were repeatedly given to the people and business concerns to be displaced by said Oolagah Dam, both by the congressional committees and the personnel of the Corps of Army Engineers that, in the event of the construction of the project, every effort would be made to see that the people in the affected area would not be forced to bear unjust and undue economic hardship and loss while others are reaping the great economic gains that proponents have promised would result from the building of Oolagah Dam; and

"Whereas appraisals and purchases of land and residential properties in said Oolagah Dam area are in the process of being started

at this time by the land procurement office of the Corps of Army Engineers; and

"Whereas appraisement of property in the Oolagah Dam area is being made on the basis of assumed values in the present location with no consideration being given to replacement costs in kind in another location; and

"Whereas appraisement of many propertes in the Oolagah Dam area are being made without due recognition of the known mineral values in the form of valuable coal deposits, gas reservoirs, and oil; and

"Whereas representatives of the Corps of Army Engineers procurement office in Tulsa, Okla., are quoted in newspapers of recent date as telling oil producers and minerals owners that only in the dam site and construction area does the Government have definite plans for buying mineral holdings outright, but would seek only to acquire flowage easements on minerals and under the flowage easement agreements oil operators would be required to subordinate their operations to the basic functions of the dam and reservoir; and

"Whereas the appraisement and procurement policies being followed by the Corps of Army Engineers in the Oolagah Dam area have met with the active and determined opposition of the landowners as is evidenced by the fact that the Corps of Army Engineers only recently has found it necessary to resort to condemnation action to acquire much of the initially needed lands in the dam site and constructon area; and

"Whereas in the condemnation actions pending as of this date against the landowners in the immediate vicinty of the Oolagah Dam itself, said actions covering more than 1,500 acres which is underlaid with valuable coal deposits, attorneys representing the Corps of Engineers have petitioned the court to take the surface land rights and reserve to the present owners all mineral rights and values, and to subordinate the reserved mineral rights and values to the prior rights of the United States to flood and submerge the land as may be necessary for the construction, operation, and maintenance of said project; and

"Whereas under several hundred acres of said lands now being condemned by the Corps of Army Engineers for the Oolagah Dam project, the schoolchildren of the State of Oklahoma own one-half of the mineral rights and values; and

"Whereas the schoolchildren of the State of Oklahoma, through the trusteeship of the State school land commission, own thousands and thousands of acres of mineral rights under lands located in the remainder of the Oolagah Dam area, the Keystone Dam area, the Eufaula Dam area, and in other areas where such projects are planned; and

"Whereas the mineral rights and values owned by the schoolchildren of the State of Oklahoma in the Oolagah Dam area now under condemnation will be forever inundated and the value of said rights will therefore be eternally lost to the schoolchildren of the State of Oklahoma; and

"Whereas the schoolchildren of the State of Oklahoma will suffer great and irreparable loss of wealth if the Corps of Army Engineers continue, through the length and breadth of the Oolagah Dam area, the Keystone Dam area, the Eufaula Dam area, and in the other areas where like projects are planned, this policy of taking, without payment, the mineral rights and values belonging to the schoolchildren of the State of Oklahoma, and by force of condemnation then subordinating those mineral rights and values to the prior rights of the United States to flood and submerge said mineral rights and values: Now, therefore, be it

"Resolved by the House of Representatives of the State of Oklahoma, That we respectfully urge, request, and petition the Congress of the United States to make such inquiry into the land procurement procedures of the Corps of Army Engineers, issue such directives and take such action as may be necessary to insure the fulfillment of the intent of Congress in the protection of the rights of the people in the Oolagah Dam area and in safeguarding the mineral values and rights of the schoolchildren of the State of Oklahoma in accordance with the laws and Constitution of the United States; and be it further

"Resolved, That the chief clerk of the House of Representatives of the State of Oklahoma be directed to send a copy of this resolution to the President of the United States, each member of the Oklahoma Congressional delegation, the Director of the Bureau of the Budget of the United States, and to the Chief of the United States Corps of Army Engineers.

"Adopted by the house of representatives the 27th day of May 1957.

"B. E. HARKEY,
"Speaker of the House of Representatives."

By Mrs. SMITH of Maine:

A joint resolution of the Legislature of the State of Maine; to the Committee on Interstate and Foreign Commerce:

"Joint resolution memorializing Congress to enact legislation concerning unjustified price increases of crude oil and refined petroleum products

"We, your memorialists, the Senate and House of Representatives of the State of Maine in the 98th legislative session assembled, most respectfully present and petition your honorable body as follows:

"Whereas the American public is seriously concerned and does have increasing doubts related to what may be the unjustified price increases of crude oil and refined petroleum products; and

"Whereas remedial legislation can have consideration best at the national level: Now, therefore, be it

"Resolved, That we, the memorialists, recommend to the Congress of the United States that Senate Resolution 64 before the Senate Committee on Interstate and Foreign Commerce be considered of utmost importance; and be it further

"Resolved, That a copy of this memorial, duly authenticated by the secretary of state, be immediately transmitted by the secretary of state to the Senate and House of Representatives in Congress, the membership of said senate and house of representatives from this State, and to the presiding officers of each of the legislatures in the New England States.

"In senate chamber, April 11, 1957.

"Read and adopted.

"Sent down for concurrence.

"CHESTER T. WINSLOW,
"Secretary.

"House of representatives: House receded from its action of April 24, 1957, whereby the resolution was indefinitely postponed, and on May 22, 1957, adopted the resolution in concurrence.

"HARVEY R. PEASE,
"Clerk."

RESOLUTIONS OF THE CHAMBER OF COMMERCE OF CHARLESTON, S. C.

Mr. THURMOND. Mr. President, I present for appropriate reference and ask unanimous consent to have printed in the RECORD three resolutions adopted by the Chamber of Commerce of Charleston, S. C. The first resolution is one protesting against the continuation of the foreign-aid program; the second one protests against the enactment of Senate bill 555, the Hells Canyon Dam bill; and the third one favors the enactment of Senate bill 76, relating to the secondary boycott.

There being no objection, the resolutions were received, appropriately referred, and ordered to be printed in the RECORD, as follows:

To the Committee on Appropriations:

"Whereas the proposed budget of the United States Government for the fiscal year 1957–58 is one of the highest ever proposed during peacetime; and

"Whereas it is recognized that appropriations for the Armed Forces should be adequate to develop and maintain the most effective equipment and the best-trained personnel commensurate with the international situation; and

"Whereas in the interest of world peace and the safety of our own citizens it has become necessary to render certain military and economic aid to friendly nations beyond our borders, although there have been many instances in which huge sums of money have been spent on nonmilitary projects of questionable value in foreign countries; and

"Whereas it is believed that definite reductions in the overall budget can be accomplished without impairment to the national defense or the effectiveness of a properly safeguarded foreign-aid program of limited scope: Now, therefore, be it

"Resolved, That the board of directors of the Greater Charleston Chamber of Commerce registers its opposition to any continuation of excessively large expenditures such as are proposed for foreign economic aid; and be it further

"Resolved, That while this board of directors recognizes the possible need for a limited expansion of governmental services and the necessity for some additional personnel, it questions the necessity for the expansion contemplated in the proposed budget, specifically the creation of approximately 40 new expanded or renewed services and the net increase of 31,000 new administartive personnel; and be it further

"Resolved, That Members of both Houses of Congress should be requested to carefully reexamine these and all other aspects of the proposed Federal budget with the view of reducing departmental budgets wherever possible; and be it further

"Resolved, That it is the sense of this board that any and all savings which may be accomplished by reduction of the proposed budget be applied, first, to the reduction of the national debt, and, second, to the reduction of taxes; and be it finally

"Resolved, That a copy of this resolution be forwarded with an appropriate covering letter to both United States Senators and all members of the Congressional delegation from South Carolina.

"Unanimously passed at the regular monthly meeting, May 28, 1957.

"R. HARRY MORSE,
"Acting President.

"Attest:

"JULIAN METZ,
"Executive Director."

Ordered to lie on the table:

"Whereas the board of directors of the Greater Charleston Chamber of Commerce, has previously gone on record as opposed to the Federal Government engaging in any business in competition with private enterprise; and

"Whereas it has come to the attention of this board that legislation to authorize construction of a Federal power dam at Hells Canyon, Idaho (S. 555) is again before the Congress; and

"Whereas a similar bill sponsored by the propublic power bloc was defeated in the United States Senate in 1956; and

"Whereas we are reliably informed that S. 555, if passed, would: first, wipe out nearly $50 million of private funds already committed to the construction of an alternate three-dam development at the same site; second, authorize a Federal agency to spend more than $400 million of tax money for another Federal power project despite the fact that private enterprise capital can and will do the job if permitted, and finally, passage of this bill will delay for 7 or 8 years a power supply urgently needed in the Pacific Northwest: Now, therefore, be it

"*Resolved*, That the board of directors of the Greater Charleston Chamber of Commerce reaffirms its previously stated position in opposition to the Federal Government engaging in any business operation in competition with free enterprise; and be it further

"*Resolved*, That this board go on record as opposed to the passage of the Hells Canyon bill (S. 555) and that both United States Senators—J. STROM THURMOND and OLIN D. JOHNSTON, and all Members of Congress from South Carolina be requested to oppose the passage of S. 555 and further, that all members of the South Carolina Congressional delegation be forwarded a copy of this resolution with an appropriately worded letter of transmittal.

"Unanimously passed at the regular monthly meeting May 28, 1957.

"R. HARRY MORSE,
"Acting President.

"Attest:

"JULIAN METZ,
"Executive Director."

To the Committee on Labor and Public Welfare:

"Whereas Congress intended the Taft-Hartley Act to outlaw the secondary boycott, and such is the spirit of the law; and

"Whereas labor unions, by means of loopholes and favorable court interpretations have been able to evade the clear meaning of the law with regard to secondary boycotts; and

"Whereas the secondary boycott is an unfair labor practice which often involves, and applies severe economic penalties to innocent third parties who have no direct relationship or concern with a particular labor dispute; and

"Whereas a new bill (S. 76) introduced by Senator CARL T. CURTIS, is designed to close the loopholes which permit the existence of the secondary boycott and to expressly prohibit the secondary boycott: Now, therefore, be it

"*Resolved*, That the board of directors of the Greater Charleston Chamber of Commerce hereby endorses and registers its support and approval of bill S. 76, introduced by Senator CARL T. CURTIS and any other bill designed to eliminate the secondary boycott; and

"*Resolved*, That the Members of both Houses of Congress from South Carolina be requested to support the passage of S. 76 or similar proposed legislation and to oppose the passage of bills designed to weaken or repeal the Taft-Hartley Act or those which would tend to expand the use of the secondary boycott, and that a copy of this resolution be forwarded with covering letter to Senator CARL T. CURTIS, of Nebraska, the author of S. 76; to Senators OLIN D. JOHNSTON and J. STROM THURMOND, to all Members of the House of Representatives from South Carolina, and to the Labor Relations Department of the Chamber of Commerce of the United States.

"Unanimously passed at regular monthly meeting on May 28, 1957.

"R. HARRY MORSE,
"Acting President.

"Attest:

"JULIA METZ,
"Executive Director."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. McCLELLAN, from the Committee on Government Operations, without amendment:

S. 1535. A bill to amend the Federal Property and Administrative Services Act of 1949 to authorize the Administrator of General Services to make contracts for cleaning and custodial services for periods not exceeding 5 years (Rept. No. 396); and

S. 1799. A bill to facilitate the payment of Government checks, and for other purposes (Rept. No. 397).

By Mr. McCLELLAN, from the Committee on Government Operations, with an amendment:

S. 1408. A bill to provide allowances for transportation of house trailers to civilian employees of the United States who are transferred from one official station to another (Rept. No. 398).

By Mr. McCLELLAN, from the Committee on Government Operations, with amendments:

S. 1141. A bill to authorize and direct the Administrator of General Services to donate to the Philippine Republic certain records captured from insurrectos during 1899–1903 (Rept. No. 399).

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 18. A bill for the relief of Alessandro Renda (Rept. No. 400);

S. 250. A bill for the relief of Kyu Yawp Lee and his wife, Hyung Sook Lee (Rept. No. 401);

S. 254. A bill for the relief of Suhana M. Umanos (Rept. No. 402);

S. 255. A bill for the relief of Fumiko Shikanuki (Rept. No. 403); and

S. 303. A bill for the relief of Gaetano Mattioli Cicchini (Rept. No. 404).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

S. 252. A bill for the relief of Katarzyna Siwik (Rept. No. 405);

S. 284. A bill for the relief of Miyako Ueda Osgood (Rept. No. 406); and

S. 286. A bill for the relief of Maria Matilde Picallo (Rept. No. 407).

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. THYE:

S. 2195. A bill to remove the $1,000 limitation in the case of the settlement by the Secretary of the Navy of certain claims arising out of the crash of two United States Navy airplanes at Minneapolis, Minn.; to the Committee on the Judiciary.

(See the remarks of Mr. THYE when he introduced the above bill, which appear under a separate heading.)

By Mr. DIRKSEN (by request):

S. 2196. A bill for the relief of Annadore E. D. Haubold; to the Committee on the Judiciary.

By Mr. JOHNSTON of South Carolina:

S. 2197. A bill to amend the Securities Act of 1933 to exempt certain securities which are secured by mortgages which are insured or guaranteed under the National Housing Act or the Servicemen's Readjustment Act of 1944; to the Committee on Banking and Currency.

By Mr. IVES:

S. 2198. A bill for the relief of Victoria Kent (y Siano); to the Committee on the Judiciary.

By Mr. NEUBERGER (for himself and Mr. MORSE):

S. 2199. A bill for the relief of Reinhard Klinefelter; to the Committee on the Judiciary.

By Mr. MORSE:

S. 2200. A bill for the relief of Louis James Seligson; to the Committee on the Judiciary.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

By Mr. GOLDWATER:

S. 2201. A bill for the relief of Allen A. Stuart; to the Committee on Labor and Public Welfare.

By Mr. BEALL:

S. 2202. A bill to amend section 11 of the act of April 1, 1942, to provide for retirement of municipal and juvenile court judges for the District of Columbia; to the Committee on the District of Columbia.

By Mr. POTTER:

S. 2203. A bill for the relief of Moon Ha Sook; and

S. 2204. A bill for the relief of Margaret E. Culloty; to the Committee on the Judiciary.

By Mr. BUTLER:

S. 2205. A bill to amend section 116 (4) of chapter 10 of the Federal Bankruptcy Act; to the Committee on the Judiciary.

By Mr. NEUBERGER (for himself and Mr. MORSE):

S. 2206. A bill to amend the Bonneville Project Act to authorize the Administrator to establish priorities and preferences so as to benefit the general public and to promote diversified economic development fairly and equitably throughout the several States of the Columbia River Basin; to the Committee on Public Works.

(See the remarks of Mr. NEUBERGER when he introduced the above bill, which appear under a separate heading.)

By Mr. BARRETT:

S. 2207. A bill transferring the Heart Mountain division of the Shoshone Federal reclamation project to the Missouri River Basin project; to the Committee on Interior and Insular Affairs.

COMMUNIST INTERROGATION, INDOCTRINATION, AND EXPLOITATION OF AMERICAN MILITARY AND CIVILIAN PRISONERS

Mr. McCLELLAN. Mr. President, on behalf of myself and the Senator from Washington [Mr. JACKSON], the Senator from Missouri [Mr. SYMINGTON], the Senator from North Carolina [Mr. ERVIN], the Senator from South Dakota [Mr. MUNDT], and the Senator from West Virginia [Mr. REVERCOMB], I submit for appropriate reference a resolution favoring the presentation to the United Nations of the facts as to Communist methods of treating prisoners in Korea.

The PRESIDENT pro tempore. The resolution will be received and appropriately referred.

The resolution (S. Res. 143), submitted by Mr. McCLELLAN (for himself and other Senators) was received and referred to the Committee on Foreign Relations, as follows:

Whereas the Senate Permanent Subcommittee on Investigations of the Committee on Government Operations has held hearings and has submitted Report No. 2832 of the 84th Congress, 2d session, on Communist interrogation, indoctrination, and exploitation of American military and civilian prisoners; and

Whereas these hearings have shown that the Communists in Korea used compulsory courses of indoctrination of American prisoners, engaged in intense coercive interrogation of American prisoners to obtain military information and false confessions, and used the isolation of prisoners, the segregation of

prisoners, as well as deception, repetition, and harassment to obtain a given objective; and

Whereas the Communists in the Korean conflict flagrantly violated articles 13, 14, 16, 17, and 38 of the Geneva Convention: Therefore be it

Resolved, That (a) the Senate hereby express its grave concern as to the coercive techniques of interrogation and indoctrination employed by the Chinese Communists during the Korean conflict with respect to American prisoners of war who were captured by the Chinese Communists while serving in the United Nations Command.

(b) It is the sense of the Senate that delegates of the United States to the United Nations should be instructed to present to the United Nations at the earliest practicable time a full and complete statement of facts concerning the techniques so used by the Chinese Communists against American prisoners of war, together with violations of the Geneva Convention.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that I may proceed for approximately 5 minutes to explain the resolution.

The PRESIDENT pro tempore. Is there objection? Without objection, the Senator from Arkansas is recognized for 5 minutes.

Mr. McCLELLAN. Mr. President, on June 19, 20, and 27, 1956, the Senate Permanent Subcommittee on Investigations held hearings on Communist interrogation, indoctrination, and exploitation of American military and civilian prisoners. The hearings were run with the full cooperation of the Army, Navy, Air Force, and Marine Corps, as well as the Department of Defense.

They showed that the Chinese Communists in North Korea had a very rigid system of segregation of prisoners. Prisoners were segregated according to rank, according to race, and according to nationality. This enabled the Communist captors to tailor their indoctrination to fit a particular group of prisoners. The Chinese Communists conducted a schooling system which was compulsory, and which lasted for approximately 1 year. The courses totaled 13 in number, and were given under titles such as "The 60 Big Families in the United States" and "Illegality of Truman's Order Moving Troops Into Korea." Coupled with this forced schooling, the indoctrination program contained a very heavy diet of Communist news. For example, among the publications available for reading was the New York Daily Worker.

Interrogations for the obtaining of military information and for securing false confessions were more or less constant. It was not uncommon for an American prisoner to be kept in solitary confinement for months, during which period he would receive poor food, as well as inadequate clothing and inadequate medical attention. While in solitary confinement and subjected to rough treatment, such as handcuffing, he would be interrogated day after day. Harassment, deception, the writing of personal histories, the writing of essays, and walking conferences, all were part of the interrogation system. As a result of this harsh treatment, many false confessions were obtained.

Soviet Russia had key personnel in every major section in the Communist Prison Command in North Korea. There was a Russian who served as liaison for interrogation and indoctrination. Several Soviet propaganda experts actively supported the Chinese in carrying out this part of their program. In addition to the Soviets, there were two western newspapermen, namely, Allen Winnington, a foreign correspondent for the London Daily Worker, and Wilfred Burchett, an Australian newspaperman, who were primarily responsible for the preparation of propaganda. The prepared written propaganda was approved by a Central Peace Committee which was in charge of all prisoners, and its work was supplemented by the individual Prisoners of War Camp Peace Committee. In addition, there was a Communist newspaper entitled "Towards Truth and Peace." Attendance of prisoners was mandatory at such propaganda devices as the Lenin Debating Society, the Stalin Dramatic Society, as well as various oratorical contests.

Mail was released by the Communists to the prisoners only when it reflected bad news, thereby creating worries and loneliness on the part of the prisoners. The Communist captors attempted to develop informers among the prisoners by using a simple system of reward and punishment to gain their cooperation. Thus, more and better food, cigarettes, candy, alcohol, parties, and freedom from physical labor were used to gain some objective.

Our hearing established that the Communists flagrantly violated Articles 13, 14, 16, 17, and 38 of the Geneva Convention. These violations deal with solitary confinement, shackling of prisoners, exposing prisoners to the curiosity and insults of the local populace, failure to give adequate medical attention, failure to properly mark their clothing, physical maltreatment, mental torment, and forcibly being made to work.

The members of this subcommittee strongly feel that the matters developed through our hearings are of grave concern to the people of the United States. The methods and techniques of the Communists in the treatment accorded American prisoners of war should be brought to the attention of the entire world.

It is the subcommittee's recommendation that the United States Delegate to the United Nations present to the United Nations the facts as to Communist methods of treating American prisoners in Korea.

REMOVAL OF LIMITATION IN SETTLEMENT OF CERTAIN CLAIMS BY SECRETARY OF THE NAVY

Mr. THYE. Mr. President, a terrible tragedy occurred in Minneapolis on Memorial Day, last week. Two United States Navy jet airplanes collided over a heavily populated area of the city, and crashed to the ground, killing 1 of the pilots and hospitalizing 6 residents of north Minneapolis. One of the Panther jets crashed and exploded in the street, damaging 6 houses, 2 of them beyond repair.

A formation of four Panther jets had just completed a ceremonial "fly over" as a part of a Memorial Day observance. The planes were rolling out of formation when the wing of one plane caught that of another, while traveling at a rate of some 330 miles per hour. One of the planes landed in a vacant lot, and the other crashed in a nearby street, exploding in a mass of burning gasoline.

The unfortunate victims of this tragedy must be compensated for the losses they have suffered. On May 31, I sent the following telegram to Secretary of the Navy Gates:

I wish to urge that every action be taken to expedite the settlement of claims as a result of the Memorial Day jet crash in Minneapolis. I am prepared to introduce the necessary legislation in the Senate. Please keep me advised of the status and action taken on such claims.

Mr. President, pursuant to this telegram, I now introduce, for appropriate reference, a bill which would remove the $1,000 limitation on the ability of the Secretary of the Navy to settle claims arising out of incidents such as this one.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 2195) to remove the $1,000 limitation in the case of the settlement by the Secretary of the Navy of certain claims arising out of the crash of two United States Navy airplanes at Minneapolis, Minn., introduced by Mr. THYE, was received, read twice by its title, and referred to the Committee on the Judiciary.

LOUIS JAMES SELIGSON

Mr. MORSE. Mr. President, I introduce, for appropriate reference, a bill for the relief of Louis James Seligson. The bill is designed to discontinue any deportation proceedings and to cancel any outstanding order and warrant of deportation, warrant of arrest and bond.

In introducing this bill, Mr. President, I wish to state that I am concerned to note that on one occasion Mr. Seligson refused to take the stand and testify that he had never been a member of the Communist Party. I wish to make clear at the outset that I hold no brief for his refusal to take the stand at his Ellis Island hearing in 1954. However, I understand that he did so testify under oath on two separate occasions, and in the Ellis Island proceedings the nature of the proof against him was of dubious probative value.

I have also been advised that he has under oath claimed that he is not now and never was a member of the Communist Party. When the representation was made to me in regard to the introduction of this bill I asked Mr. Seligson point blank if he was a Communist or had ever been a Communist. He assured me that he had never been a Communist and was not then a Communist.

I would be less than honest, Mr. President, if I did not say this bill has given me great concern, because I fully appreciate that the introduction of such a bill on behalf of anyone who has been under attack like that aimed at Mr. Seligson is always ammunition for those who

seek to smear a public official. But, Mr. President, in my position I happen to believe that it is my duty to give consideration at all times to what I consider to be moral values and humanitarian principles.

I am introducing this bill only for the purpose, Mr. President, of having the Committee on the Judiciary take a look at this case before this man is deported to Argentina, because of these facts.

I do not know Mr. Seligson. Representations have been made to me, however, by prominent people, and in one instance by a very prominent business official, that a great injustice will be done if this man is deported.

Mr. President, it is not so much Mr. Seligson himself with whom I am concerned, as it is his two young sons who are American citizens. It seems to me that the important consideration in this case is the future of these two young Americans. It is true that the mother and father are divorced, but I am advised that Mr. Seligson is in daily contact with his children, and that he and his former wife jointly contribute to the support of the boys.

It would seem to me tragic to separate these two young boys from their father and, for all practical purposes, make them fatherless. It is my understanding, and a question on which the Judiciary Committee will want to satisfy itself, that all of the evidence against Mr. Seligson involves activities in the 1930s. Under those circumstances, it would seem only humane to resolve whatever doubts exist in favor of enabling these two youngsters to have as many contacts as possible with their father.

Mr. President, I understand that Mr. Seligson was brought to this country from Argentina when he was 6 years old, and that, therefore, if he were to be deported to Argentina now, he would be at a distinct disadvantage in making an adjustment to that country's way of life. In any case, his two young sons would be deprived not only of their father, but probably of his financial support as well—at least for the period during which Mr. Seligson would need to orient himself in a strange land.

Therefore, Mr. President, from a purely humanitarian point of view, it is my judgment that for the reasons I have set forth it would be better to keep Mr. Seligson in this country, where he is subject to surveillance if necessary, rather than to deport him.

I ask that the bill be received and appropriately referred, and that the bill be printed in the RECORD at this point, as a part of my remarks.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2200) for the relief of Louis James Seligson, introduced by Mr. MORSE, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That the Attorney General is authorized and directed to discontinue any deportation proceedings and to cancel any outstanding order and warrant of deportation, warrant of arrest, and bond, which may have been issued in the case of Louis James Seligson. From and after the date of enactment of this act, the said Louis James Seligson shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and order have issued.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MANSFIELD:

Four commencement addresses delivered by him at Billings, Mont., Butte, Mont., Great Falls, Mont., and Dubuque, Iowa, respectively.

By Mr. MONRONEY:

Statement prepared by him on the subject of floods, letter addressed to him by Welcome W. Wilson, regional administrator of Civil Defense, dated May 31, 1957; and articles published in Oklahoma City Times of June 1, 1957, and Tulsa Tribune of May 31, 1957, all relating to flood damage in Oklahoma.

NOTICE OF CONSIDERATION OF CERTAIN NOMINATIONS OF CAREER MINISTERS

Mr. FULBRIGHT. Mr. President, as acting chairman of the Committee on Foreign Relations, I desire to announce that the Senate received on May 31, 1957, the nomination of the following Foreign Service officers for promotion from class 1 to the class of career minister: Vinton Chapin, of New Hampshire; John Wesley Jones, of Iowa; Frederick B. Lyon, of Nevada; and Carl W. Strom, of Iowa.

Notice is given that the nominations will be eligible for consideration by the Committee on Foreign Relations at the expiration of 6 days, in accordance with the committee rule.

RESIGNATION OF GEORGE M. HUMPHREY, SECRETARY OF THE TREASURY, AND NOMINATION OF ROBERT B. ANDERSON

Mr. MARTIN of Pennsylvania. Mr. President, I wish to join with my colleagues on both sides of the aisle in expressing regret at the resignation of the distinguished Secretary of the Treasury, George M. Humphrey.

Secretary Humphrey's decision to return to private life, while not entirely unexpected, will be regarded by most Americans as a great loss to our country.

In his 4½ years as the chief fiscal officer of the United States, Secretary Humphrey furnished an example of outstanding public service. He applied to the grave responsibilities of his high office the same sound, constructive policies which guided his career to success in private enterprise. In him were exemplified the initiative, courage, and vision of those who built our Nation's greatness.

Secretary Humphrey offered no easy or speedy cure-all for our national problems. He battled constantly for a strong, dynamic, and expanding economy to support the American way of life. His philosophy of government was founded on clear thinking, sound logic, and the highest patriotism. He was unswerving in his belief that stability, security, and progress could not be achieved without wise fiscal policies, balanced budgets, a sound currency, and the defeat of inflationary pressures.

As a member of the Senate Committee on Finance I greatly appreciated the benefit of his views on taxation and related matters. His clear and concise statements always went directly to the heart of the issue under discussion and were most helpful in establishing a better understanding of what would best serve the welfare of the United States and its people. I am sure that I speak for my colleagues of the Finance Committee, of both parties, in saying that he will be greatly missed.

It is most gratifying to know that an able and highly respected citizen, with a distinguished record of public service, has been nominated to succeed George Humphrey as Secretary of the Treasury. Robert B. Anderson will bring to that office a rich background of experience as Secretary of the Navy and Deputy Secretary of Defense. His pledge to carry forward the wise fiscal policies of Secretary Humphrey gives assurance that his service will continue to advance the strength and security of our Nation.

Mr. SMITH of New Jersey. Mr. President, I regret that I was absent from the floor last Wednesday when the resignation of the Secretary of the Treasury, the Honorable George M. Humphrey, was called to the attention of the Senate. Because of my high regard for this great, outstanding American, I should like to add a few words of personal appreciation.

George Humphrey is one of that generous class of talented and able citizens who relinquish highly important positions in private industry to give their valuable services to the Nation. The great economic advancement of the United States during the 4½ years of Mr. Humphrey's service as Secretary of the Treasury attests to the splendid caliber of his service. His valued advice was instrumental in putting a halt to the inflationary trend into which this country was propelled prior to 1953. Through his efforts the Nation has experienced the benefits of a great tax reduction, and it is now heading toward the third straight year of a balanced budget. At the same time, we have financed the heavy but necessary program of defense, and have expanded legitimate welfare services to all our people.

His warm personality is well known to his many friends on both sides of the aisle, and I know that I express the deep regret of all members of both House and Senate because of the circumstances that compel his return to private life. Our country is stronger and sounder because of the years George Humphrey has spent in Washington. To Mrs. Smith and me it has been a great privilege to know Secretary and Mrs. Humphrey as warm personal friends. We shall miss them sorely. Our affectionate best wishes go with them.

It is a great gratification to us all to realize that Mr. Robert B. Anderson, who

will succeed Secretary Humphrey, has a distinguished record as Secretary of the Navy and Deputy Secretary of Defense. He has announced that he expects to carry forward the aims and ideals of his predecessor, and it is reassuring to know that the Treasury Department and the fiscal affairs of the Nation will continue to be administered by such capable hands. We wish him every success in his new post.

Mr. President, I desire now to make a request for unanimous consent.

The PRESIDING OFFICER (Mr. THURMOND in the chair). The Senator from New Jersey has the floor.

THE FOREIGN AID PROGRAM

Mr. SMITH of New Jersey. Mr. President, in the magazine This Week of Sunday, June 2, there is an article by the Honorable Christian A. Herter, Under Secretary of State, entitled "Why We're Still Sending Money Abroad."

This is a very important contribution to the pending discussion on the subject of foreign aid, especially at a time when the Senate Committee on Foreign Relations is considering the administration's bill for fiscal 1958.

I ask unanimous consent that the article by Mr. Herter be printed at this point in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY WE'RE STILL SENDING MONEY ABROAD

(By Christian A. Herter, Under Secretary of State)

This is the first article I have written since I have become Under Secretary of State. I am writing it because I earnestly desire to place the case for foreign aid before the American public. And I welcome the opportunity This Week magazine has offered me to give my views.

I do not expect that everyone will accept all my conclusions. But I do know from many years in public service that the successful operation of a democracy springs from an informed and intelligent citizenry. The mutual security program has now been presented to Congress, and a knowledge of just what it proposes is necessary to an understanding of the current discussion.

Actually, the program is not as complex as it is sometimes made to appear. Let me state it for you simply: the administration is requesting approximately $3.9 billion for two distinct and separate purposes abroad.

THE BREAKDOWN

First, it asks that $2.8 billion be added to our own Defense Department budget for allocation to 41 nations overseas—in other words, for military aid both in the form of arms and of such financial assistance as will permit their economies to support those arms. This sum will be used to build up the military capabilities of these nations so that they can better protect themselves and, through this added strength, serve as an effective Free-World bulwark against the aggressive intentions of international communism.

Second, the administration asks for approximately $1.1 billion to be used for economic aid to help certain nations establish a sound base for self-development. Economic development for such vitally needed public works as improvement of harbors and roads will in the future be on a loan basis. This figure also includes our program of technical cooperation and some grant assistance to meet emergency situations.

These, in broad terms, are the objectives of the proposed new mutual-security program.

Before we examine its details, come back with me to the anxious September of 1947. A special Congressional committee, which I had the privilege to head, was abroad to study European recovery needs. At this time the full expansionist drive of the Communist forces has not yet shown itself, but the danger signals were there. Western Europe, torn by war, was their prime target. The President, Secretary of State Marshall, the Congress, and the American people thought it was in our own best interests to help restore Europe's prewar economy. What our committee saw in 3 busy months convinced us that both the need and the danger were very great—that the job of European recovery had to be tackled as the first challenge in the struggle later to be called the cold war.

How successful was the Marshall plan, established at that time to meet this emergency? I think the answer to that question will surprise and hearten you. The program visualized was short range—$17 billion allocated over 4 years to stimulate Europe's recovery. In actual fact, the program took 5 years and cost only $13 billion. At its conclusion Western European productivity was 40 percent greater than before the war.

And in the process, our own economy progressed rapidly as a direct result of renewed faith in the stability of Europe and of increased international trade. Communism in Western Europe was arrested—no single foot of European territory has been taken by the Soviet since the plan began.

In the last 3 years no Marshall-plan country in Western Europe has received 1 cent of new economic aid. Together these countries now spend more per year for defense alone than they received for economic recovery in all the five Marshall-plan years together.

I think this record should give the public confidence in the whole concept of foreign aid, even if it is judged by the single standard of our own self-interest.

Now, let's look ahead and consider some questions with relation to the new security program pending before Congress.

1. Why is it necessary for us to give military aid? Couldn't some of these foreign nations do more to help themselves?

First of all, let's see how great the threat of aggression still is. The Korean war showed Communist ambitions in true perspective. The knowledge that the Soviet possessed the formula for the hydrogen bomb multiplied the danger. The United States decided to enter alliances with other nations interested in maintaining a free world. We undertook to give them support in developing mutually agreed forces by supplying items of equipment and other assistance they could not afford. The United States helps maintain 200 Free-World army divisions—of which the 19 we ourselves can reasonably afford are part. Through this program the Free World is defended by twice the number of fighting ships we have in our own United States Navy. And double as many planes are ready to oppose aggression as the United States alone could put in the air.

The story of Korea is a good example of why military aid is to our advantage. At present Korea has an army of 700,000 men, well-trained and equipped with American arms. They are holding the line against a combination of North Korean and Communist Chinese forces equipped mainly by the Soviet. It costs approximately $600 a year to maintain one Korean soldier in combat readiness. The annual cost of maintaining an American soldier along the same line in Korean would be about $6,000. And the drain on our manpower would be prohibitive.

Similar figures could be given for such allies along the rim of the Communist world as Taiwan, Vietnam, Pakistan, and Turkey.

2. What about economic aid and technical assistance? Isn't this part of the program just a handout?

On the contrary, it is a vital part of the overall job, with direct long-term benefits to the United States. Bear in mind that the threat of Communist subversion is as powerful as the direct military threat. Since World War II, 19 new nations have emerged in Asia and Africa. Often these new nations are faced with grave problems in trying to establish stable governments. It is in such a climate that Communist subversion thrives.

It makes sense to keep these countries in the Free World family; it is deep in the American heritage to help others to achieve and keep the basic rights our own forefathers won so dearly.

To do this we have two principal tools: Technical assistance and economic development.

Technical assistance is simply sharing our know-how in such fields as public health, education, agriculture and industry. Economic development envisages the best use of such natural resources as a country may have and the gradual maturing of a nation's agriculture and industry. The intention of the present program is that economic development shall be handled on a loan basis through a development fund. This would contribute to greater efficiency at less cost to the American taxpayer.

The cost of this phase of the program is small compared to the military part—roughly a cent-and-a-half out of six cents of your tax dollar that goes into mutual security. But it is of vital importance.

3. Must this economic aid go on and on?

I believe that United States Government assistance should end as soon as the economies of these countries are stable enough to attract private capital. We naturally hope that this will happen as rapidly as possible. What we do now will hasten that process, although it cannot but be recognized that the process is a slow and arduous one.

4. What use is it to help neutrals like India?

Many of the so-called neutrals, because of strategic location, size of population, vital resources, or political influence, are of great importance to both the Communists and the Free World.

India, for example, is the world's largest democracy. She faces the urgent problem of raising the standard of living of people who have existed in poverty for many centuries. It is in our own interest to help see that her democratic methods succeed. If we can successfully aid India's own efforts in rasing living standards, this may also materially benefit us as well.

5. What mistakes have we made in past years? What new approaches have we learned from such mistakes?

One mistake has been the wishful thinking that this program was a short-term, emergency operation, and that it could be financed and conducted on a "crash" basis, year by year. All Americans should realize now that the program, at approximately its present size, will be required for the foreseeable future unless international communism gives adequate proof that it has renounced its determination to attempt to dominate the world by force or subversion.

In my opinion ther can be many legitimate differences of opinion with regard to the details of administration of this overall program. One mistake, I think, is that the presentation of the program to the public has been too complicated. I am sure that in this, as in any other large program, some mistakes have been made. But I cannot see any possible relinquishment of the mu-

tual-security program at the present time, or even in the immediate years to come, without very serious danger to the whole Free World.

THE TWO-PART PROGRAM

In order to make clear the purposes which the 1958 mutual-security program will serve, we are making a sharp separation between aid that helps the military preparedness of a country and aid involving straight economic development.

So here, once more, is the basic breakdown of the total program, as presented by President Eisenhower and Secretary of State Dulles:

We are asking that 75 percent of the money go for military aid—a less than 10 percent addition to the Department of Defense budget.

We are asking that the remaining 25 percent go for three purposes: economic development funds, emergency-grant aid and technical assistance funds. These will be identified separately and made as largely as possible on a loan basis. Funds for developmental assistance, which are for long-range projects, will be administered through loans authorized on a 3- to 5-year basis rather than a yearly one.
